Members of the Devils Lake Sioux Tribal executive committee have contended that, in compliance with Federal regulations, they should have been consulted on the appointment of a judge when law and order enforcement was returned to the Bureau.

However, the Bureau, apparently feeling that it wanted to appoint a man who would do its bidding, has never consulted the committee.

One member of the committee said that it was pushing a local attorney for judge because it felt that he would possess a knowledge of the law and would make independent decisions.

The Bureau, however, has a convenient explanation for not abiding by regulations and consulting with the committee on the appointment.

According to the Bureau, there is no duly constituted tribal governing body on the Devils Lake Reservation, so the Assistant Secretary of the Interior granted an exception to the regulations so that judges could be appointed without confirmation of a tribal body.

Actually, the committee held an election last May under the constitution and bylaws of the tribe and the superintendent of the agency swore them in 5 days later.

To further explain its action, the Bureau wrote in a letter from Washington to the area director at Aberdeen, S. Dak.: "Regulations do contemplate that where a tribal governing body exists, it will be given the opportunity of ratifying or confirming the appointment of such judges. However, the Secretary of the Interior may at any time make an exception to the departmental regulations and such an exception has been made in this instance."

In effect, what the Bureau is trying to say is that there are regulations but they only need to be followed when the Government sees fit to do so.

We can imagine what respect for our laws would be generated if certain people were told they would need to abide by them only when they had the inclination.

Such inconsistency can only result in the loss of respect for laws and regulations, for actually people have no idea when they will be followed or when they will be flouted with the blessing of authorities.

Considering the failure of the Bureau to abide by regulations in the appointment of a judge, it is no wonder that there sometimes appears to be a lack of respect for law enforcement on the reservation.

It is up to the Government to first set a proper example, which they have failed to do by ignoring Federal regulations.

Air Force Under Secretary Douglas Speaks at Third Annual Airpower Banquet at Madison, Wis.

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. DAVIS of Wisconsin. Mr. Speaker, Madison, Wis., the capital of the Badger State, is the host city for Truax Air Force Base. Thanks to a series of

commanding officers at Truax who have been community-relations conscious, and to the presence in Madison of a group of younger leaders of the community who have served Truax both in and out of uniform, the Madison-Truax relationship has served as an example for air defense bases throughout the Air Force. A day-to-day understanding between Truax and the city of Madison has probably reached its most solid effectiveness under the present base commander Col. Frederick Nelander. Leaders in fostering community understanding have been Collins Ferris, a Madison banker who doubles as chief of staff of Wisconsin's Air National Guard, and was Truax's first commanding officer after its reactivation following the outbreak in Korea; Arlie Mucks, Jr., of the Madison Chamber of Commerce and Foundation, an Air National Guard officer; and Robert Skuldt, manager of the Madison Municipal Airport, also an Air National Guard officer.

For the past 3 years, the Madison Chamber of Commerce and Foundation has sponsored an annual airpower banquet at which the civilian and military leaders of the community have been brought together. The speaker at the first banquet in 1954 was one of the Badger State's native sons, Air Force Chief of Staff Gen. Nathan Twining. The 1955 speaker was Gen. Benjamin Chidlaw, then commanding general of the Air Defense Command. This year's speaker was the Honorable James H. Douglas, Under Secretary of the Air Force.

I have been honored with an invitation to each of these three airpower banquets, and this year was privileged to introduce Mr. Douglas.

Mr. Speaker, it is my pleasure to insert herewith the text of Secretary Douglas' remarks at Madison on April 24, preceded by my own introductory comments:

Tonight I want to tell you a story.

Once upon a time—it seems so very long ago—when skies were dark and clouds hung low upon the earth, a fair maid named Truax met and kept steady company with a handsome young man named Madison. It was a war-time affair, and when necessity no longer threw them together, it faded fairly quickly. Truax packed her trunks and returned to her mother in Washington. Madison, glad to be free from his wartime obligations, went his carefree, growing way. He grew ever taller, always stronger, happier, and more prosperous than ever before. People liked his company. A well-known national magazine said he was about the finest company to be found anywhere.

But then the skies darkened and clouds hung low upon the earth again. Lightning struck half way around the world in a remote place that few people outside the University of Wisconsin knew much about—Korea.

And one morning a very grim looking woman with a Washington accent stood on Madison's doorstep. There were no pleasantries, there wasn't time for pleasantries. Her message was brief: "Madison, you remember my daughter Truax. She needs you, you and your neighbors need her. I'm on my way to Korea. Take good care of her."

Madison was a man of honor, and so he and Truax were married. Some folks said it was a shotgun wedding. Others said it was strictly a marriage of convenience. In either case, they said, it couldn't, wouldn't last.

But this has been a most successful union, as those of us gathered in this third family reunion will testify.

The marriage has not always been serene, of course not. But what marriage is?

There have been misunderstandings to be sure. But what marriage doesn't have misunderstandings?

Day by day, and for the most part, there has been understanding, respect, appreciation, determination to make a go of it. And what marriage ever succeeded without them?

This is not a fairy tale, it doesn't have a "they lived happily ever after" ending. This is a story of a successful marriage, the kind that members of the family work at and keep working at.

Madison, like most handome, high-spirited men, doesn't like to be ignored by his mother-in-law. He didn't like it last month, for instance, when his mother-in-law visited Truax without bothering to look him up or to speak to him. But did he sulk in silence or rant in rage? Happily he did not. Rather he sent two of his favorite and ablest sons, Bob and Arlie, to Washington to call on his mother-in-law, make a few suggestions relating to family etiquette, remind his mother-in-law, first, of his need to be kept informed, and second, that he had some important investments and interests that needed to be protected.

Since that time, another outstanding member of the family, Fred, who is closely tied to his mother, and always wears a favorite uniform furnished by his grandmother—but who is nevertheless a great favorite of his father—called a family meeting which has done a great deal to improve the understanding and good feeling of all the family.

And so as a friend of the family, it is my pleasure to congratulate you on the success of your family relationship and to thank you for inviting me to attend this third family reunion.

Our speaker tonight, in terms of this story, might be referred to Madison's brother-in-law. Certainly he is one of the Air Force's finest, most devoted sons. A native of our neighboring Iowa, he is a resident of our neighboring Illinois. A lawyer by profession, a businessman in practical experience, he is a public servant out of a keen sense of public responsibility.

Along his busy pathway he has followed the course of civic duty. World War I found him in uniform; 1932 found him as Assistant Secretary of the Treasury. World War II found him as a colonel in the Air Force, Chief of Staff of the Air Transport Command.

Among his varied business interests he has found time to serve as a trustee of the University of Chicago, a member of the executive board of the Boy Scouts of America, and other positions of high civic responsibility.

In March of 1953, President Eisenhower designated him as Undersecretary of the Air Force, a position which he has continued to hold under two Secretaries.

He is one of the Air Force's most devoted servants, and it is my pleasure to welcome the Honorable James H. Douglas to the Second District of Wisconsin and to the city of Madison tonight.

REMARKS BY THE HONORABLE JAMES H. DOUGLAS, UNDER SECRETARY OF THE AIR FORCE, BEFORE THE CHAMBER OF COMMERCE ANNUAL AIRPOWER BANQUET, MADISON, WIS., APRIL 24, 1956

Ladies and gentlemen, I am honored by your invitation to attend this annual airpower banquet, and I welcome the opportunity to report on our Air Force, and Air Force problems, to a community that is as airminded as is Madison. For those of us who spend pretty long days in the Pentagon in planning and justifying and explaining requirements, it is always a healthy and rewarding experience to get to an Air Force installation, and to get a little acquainted with the community upon which the officers and airmen of a wing or squadron rely for the neighborly interest and encouragement that we all find essential to satisfactory living. This is particularly so when one finds not only a keen interest in airpower, so evident in this audience, but also the active day-to-day support that you give to Air Force activities at Truax Field. We in the Air Force greatly admire your fine contribution to this cordial and constructive base-city relationship. And we hope you share the pride we take in what has been accomplished. We in the Air Force regard the Madison-Truax partnership as something to be sought after and achieved at scores of bases across the Nation where high-performance aircraft are operated close to residential areas. This community-interceptor base relationship problem recalls a clipping I found on my bureau one evening during the efforts of my wife to instill in me a higher tolerance, and perhaps affection for cats. The clipping read: "No man likes a cat until a smart cat likes a man, then he becomes a cat lover." Perhaps no community likes interceptors until a smart interceptor squadron likes a community, makes its defense mission understood, and makes an intelligent effort to minimize noise and hazards. Then perhaps the community becomes an Air Force lover.

The community-Air Force partnership has never been more at a premium than it is today. The development of atomic weapons and long range aircraft have created a new situation. For the first time in the history of our Nation we find ourselves within range of the atomic striking force of a potential enemy. This potential enemy has an overwhelming strength on the ground, and has little dependence upon sea lanes, so the one instrument of military force upon which we can rely as a deterrent to Soviet military aggression, and for survival in the event of attack is air atomic striking power and air defense.

So long as a potential enemy has the capability to inflict great damage upon us we must accept the heavy burden imposed by the cost of a modern air force in terms of manpower, money and national resource. This is no small matter as at present the service departments account for more than half of the national budget, and the Air Force for nearly half of that amount. The objective of our program is first of all to develop and maintain an air atomic striking force so powerful that no potential enemy can resort to full scale war as a rational means of achieving his goal. We are adding to this deterrent a strong air defense comprising fighter interceptors, and Air Force and Army ground-to-air missiles. And the striking force is supplemented by a tactical Air Force which supports our ground forces and may be particularly useful in meeting limited aggression.

Our organizational or program goal for these forces is 137 wings, including 11 troop carrier wings. Let me review our progress toward meeting this goal. As an Air Force consists primarily of men, bases and aircraft and missiles, we must look at three principal areas of activity. First, the development of a personnel force that is sufficiently large, skilled and dedicated to perform a wide range of difficult and challenging jobs. Second, the development of a system of bases so located and constructed as to support the effective use of our personnel and aircraft; and third, the development and rapid introduction into operational use of new and improved aircraft and missiles.

In the personnel field we are moving ahead with our program to procure, train, and hold the people who have the stamina, aptitude and skill needed to maintain and operate the intricate aircraft and electronic components which provide the basis for modern air power. We have talked a lot about this

increasing skill requirement over the past several years, as there are still those who think of military training as physical training and close order drill. This is no longer the case in any of the services, and I think we find the greatest requirement for technical skills in the Air Force. There are enough tubes and bulbs in one of the F–89 aircraft used by your National Guard squadron here to make 80 home radio sets. The maintenance crews on this plane must deal with an electrical system that is just as complex as the combined circuits of a city power station. In the cockpit of a B–47 the aircraft commander and his copilot have about 350 switches and controls to operate and check compared to 130 for the B–29. There are endless examples, but these will leave no doubt that we have a vastly greater need for technical knowledge and skills than we had 10 years ago. Also, when we consider the increased cost and speed and striking power of today's combat aircraft, we realize that there is less margin for indecision or error in judgment on the part of our pilots and other aircrew members than there has ever been.

Our number one problem is technical skills. In order to bring our newly enlisted airmen into their first productive assignment as quickly and economically as possible, we have streamlined our training programs. For the 65 percent of our recruits who are selected to attend formal technical schools we have shortened the period of formal basic training from 11 to 6 weeks. At the technical schools they are taught to perform specialized duties in the repair and maintenance of specific powerplant or communizations equipment—a procedure which enables them to qualify for productive assignments early in their first enlistment. Those who choose an Air Force career are later selected to attend advanced courses where they can acquire a broader knowledge of career fields in which they can progress to the highest grade.

Our improved reenlistment rates during the past year have produced a tremendous saving in training cost. For instance we were able to reenlist 11,000 more airmen during the first 4 months of this fiscal year than during the corresponding period of the preceding year. It is hard to put a sure cash value on this accomplishment, but I am advised that such reenlistment meant that we were able to retain skills which cost us about $160 million to produce. The cost of the pay raise for the same period was less than $50 million so we may be said to have paid for the pay raise three times over. In addition to the pay raise we have taken many constructive steps over the past year to increase the attractiveness of an Air Force career. Among other things we are providing better choice of assignment, fewer transfers and additional payment for the cost of transfers.

The problem of retention of skilled airmen is far from solved. We have not been able to achieve a satisfactory reenlistment rate among our people who are highly skilled in such technical fields as electronics and aircraft maintenance. Industry competition is too strong. We must continue to provide inducements that will increase the attractions and satisfactions of an Air Force career.

Although the matter of retaining our technically skilled airmen has been and is our most critical problem, we are also trying to reduce the separation rate of commissioned personnel—especially those who are completing their first period of service and represent a large investment as pilots and crew personnel. To keep pace with the increased complexity and performance of aircraft, we have had to raise the level of qualifications and proficiency for our pilots. They receive more preflight instruction; more flying time; and the demands upon them are constantly increasing as faster and more advanced aircraft enter the Air Force inventory. Inducements aimed at this group include better BOQ's and more adequate family housing, more stable assignments and the proposed increase in the number of our regular officers.

As a final comment on the personnel element of our buildup, I want to emphasize that the highly trained, skilled and career-minded, officer and airman are the all important factor in the air power equation. Today the airmen who operate radar equipment guarding the approaches to cities packed with millions of people are charged with a tremendous public trust. Also, the responsibility of the aircraft commander of a B–52 may well give us pause. His aircraft represents a cost of more than $8 million, and in the event of war he might be called upon to deliver nuclear weapons against the aggressor. There are factors that account for our emphasis on quality as we build to our 137 wings and 975,000 officers and airmen.

One of our most acute problems in carrying out our expansion program is that of developing an adequate base system to support Air Force training and operations at home and overseas. Since 1950 nearly $5 billion of construction has been completed, and nearly $2 billion of work is under contract. The 1957 military construction program will authorize an additional $1.2 billion for Air Force base construction. This immense program serves two vital needs: to support of the Air Force expansion from some 48 wings in 1950 to the programed 137, and also to accommodate conversion from World War II aircraft to the fast, heavy jet aircraft of today. We will have homes for the 137 wings when that goal is reached in June of 1957, but there will be deficiencies in operational facilities, in recreational facilities and particularly in family housing.

Family facilities at most of our bases today are inadequate and many of our people have to rent or buy homes at a considerable distance from their work and often homes unsuitable to their needs. Progress is being made to remedy this situation. Overseas, more than 14,000 units are under construction or planned. And nearly 50,000 are programed in this country. The first of these are under construction under FHA title 8 financing. More than 500 title 8 units are programed for your local base.

In the field of weapons development we have introduced an impresive number of new and improved aircraft into combat units during the past year. Our first B–52 wing is in training at Castle Air Force Base in California. The performance of this plane has exceeded our expectations. Equipped with a nuclear bomb, the B–52 is clearly the single most significant weapon in our whole military arsenal. My respect for the B–52 was enhanced by a flight in one several months ago, which included an effortless climb to 40,000 feet in a matter of minutes and refueling contacts with a tanker at 15,000 feet.

Also during the year we have equipped several tactical wings with the B–57 light bomber and with F–100 supersabres, the first operational model of the century series aircraft, and the fastest of our operational fighters.

The F–101 has completed it testing and is on order. This is the long-range fighter that can carry nuclear weapons, fly escort or reconnaissance missions, or act as a long-range interceptor. It is a big fighter, and weighs about as much as the old B–17, our World War II flying fortress.

The F–102, a Delta-wing interceptor, with electronic equipment that will guide it to bomber aircraft under all conditions of weather, day or night, has shown up well in tests and is getting into substantial production. Armed with rockets which can destroy an attacking bomber, these planes are scheduled for delivery to the Truax interceptor units.

In the day-fighter class we have the F–104. This latest air-superiority weapon has performed well at supersonic speeds in its long period of tests and in the public demonstration this month. I believe it is the fastest, highest-flying fighter in the air.

The F–105 is a supersonic fighter bomber and in flight testing. It will be a highly effective weapon for the tactical mission.

During 1955 the C–123 went into operation as an up-to-date troop carrier aircraft capable of using rough fields for landing and takeoff. This modern troop-carrier plane is being supplemented by the larger turbo-prop C–130.

In the transport field the C–133 will fly shortly. It has a range of 3,500 nautical miles, a payload capacity of more than 50,000 pounds and a speed much higher than that of our C–124 Globemaster. The C–133—in spite of its great size—can use fields suitable for present transports.

Great progress has been made in the guided missile field, and the major share of public interest in recent months has focused on the intercontinental ballistic missile and intermediate range missile development. In the ICBM field the Atlas has been under development by the Convair Division of the General Dynamics Corp., San Diego, Calif., for a number of years. The Titan is being developed by the Denver Division of the Martin Co. of Baltimore, Md. For the IRBM or Thor program, the Douglas Aircraft Co. of Santa Monica, Calif., has been assigned development responsibility.

In the airbreathing category we have under development two intercontinental missiles, the North American Navaho and the Northrup Snark. These have a range and destructive potential comparable to the ICBM's, but might soon be vulnerable to air defense weapons.

Our own progress in relation to Soviet airpower is today receiving careful examination. Particularly serious concern has been expressed regarding our long-range missile program and Soviet developments in that field. And we are not unaware of Khrushchev's statement made only yesterday.

You can be sure that we recognize the tremendous potential which long-range missiles have for the delivery of nuclear explosives, and the importance of having them available in our arsenal at the earliest time. You can also be sure that we are bending every effort to the development of both the intercontinental and intermediate range ballistic missiles, and also toward the early availability of Snark and Navaho. Perhaps the ballistic missile approaches being the absolute weapon. It has our highest priority. But I think it falls into perspective when I say we do not foresee a situation in which it will completely supplant our manned aircraft.

Also it does not appear that achievement of a Soviet IRBM ahead of us would necessarily greatly damage our deterrent position. The Soviet already has sufficient short- and medium-range striking power to accomplish near its borders what could be accomplished with the intermediate-range ballistic missile. Even their achievement of the ICBM would not immediately affect our ability to inflict vast damage with manned bombers. And our striking power should remain an effective deterrent so long as it is judged capable of inflicting unacceptable damage.

Now, let me summarize briefly what kind of airpower, and what level of airpower, we have achieved through the programs I have just discussed.

At the beginning of this calendar year we had 128 wings operational, 116 of which are apportioned among our 3 major combat elements: the Strategic Air Command, the Tactical Air Command, and the Air Defense Command. This force is supported by nearly

300 major bases in this country and overseas.

In the Strategic Air Command, which is our most powerful agent of deterrence, we have today the ability to destroy an enemy's warmaking capacity and his will to fight.

In the Tactical Air Command we have a highly mobile light bomber and fighter-bomber force that can destroy enemy troop concentrations and lines of communications and can employ atomic weapons. These units can also—from forward bases and by refueling—supplement strategic strikes against interior targets with their atomic armament.

In the Continental Air Defense Command we have a constantly increasing capability to detect, intercept, and destroy invading bomber aircraft before they reach our vital target centers. Behind a network of radar which guards our northern approaches and coastal flanks, our manned interceptors, such as those here at Truax and the Army anti-aircraft missiles and artillery are ready for instant action against an attacker. The Navy as well as the Army plays an important part in our air defense.

Troop carrier and Military Air Transport Service supplement each other in providing tactical airlift for the Army and an overseas lift to meet the D-day requirements for all the services. The Military Air Transport Service, comprising more than 500 4-engine aircraft, is extremely useful in serving our forces overseas in peacetime and is necessary to meet the logistic requirements of modern warfare.

Your Air Force is making progress in bringing advanced aircraft and weapons into operational units. Its combat potential is expanding. We should not, however, for a moment be complacent about our situation or our program. We have unsolved problems. We have need to reexamine requirements frequently. We are strong today. We must be alert to stay strong for tomorrow. We must move ahead fast in developing new and improved air weapons and in converting them rapidly into operational use. For this task we are fortunate in the experience and wisdom of our Chief of Staff, General Twining, of Secretary Quarles, the Secretary of Defense, and our Commander in Chief, the President.

We Must Not Forget the Polish People

SPEECH
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, on May 3 the free people of the world pay homage to Polish Constitution Day, which the Poles themselves are prevented from observing because of the Communist conspiracy that presently dominates their land. Since the current tactical maneuvers of the Soviet Union are leading people to expect some changes in its policies toward the satellite countries, it would be well to examine the situation with reference to Poland.

The Polish Constitution was brought into force on May 3, 1791—just 2 years after our own, and was inspired by the same faith in freedom. Shortly thereafter Poland was again occupied by a foreign aggressor and remained occupied until 1918. The freedom after World War I was short-lived because the conspiracy of Hitler and Stalin showed its first fruits in the brutal partition of Poland. Stalin—and now his heirs—have prevented Poland from regaining its freedom until today.

But what of Soviet Russia's new tactics—their talk of reducing tensions and of peaceful coexistence? There are some palace revolutions occurring in Poland these days which follow the pattern of Moscow itself in removing those Communists of the Stalin cult. These changes, rather than giving the people their rights, are merely shifting the rank of certain Communists.

When Boleslaw Bierut, chairman of the Polish Communist Central Committee, died recently, the world wondered who would succeed him as the top Polish Communist. His successor was Edward Ochab, whose previous record forecasts little change for the better.

But throughout the Communist domination the gallant Poles have never lost hope of eventually realizing their legitimate ambitions for independence and the right to form a government in accord with the popular will of the people. All the information we have confirms the fact that the Poles are as bitterly opposed to communism as they were to any foreign domination.

These people must not be allowed to lose hope. They must feel certain that we who still hold freedom dear have not forgotten them. They need such reassurance that we are giving in the Congress today. And you may feel certain that our words and sentiments circulate rapidly through the Polish nation.

While being cautious of the Soviet Union's new tactics, we can still utilize them. Let us repeat over and over again that we are awaiting some positive results of their propaganda words. Let us encourage the enslaved peoples to maintain their pressures on their Soviet rulers. Eventually the irresistible forces that topple all tyrants must sweep the Communist conspiracy out of every corner of the earth.

Political Stress on Domestic Issues Threatens United States International Future

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith an editorial which appeared in the April 23, 1956, issue of Export Trade and Shipper magazine:

POLITICAL STRESS ON DOMESTIC ISSUES THREATENS UNITED STATES INTERNATIONAL FUTURE

A substantial marginal percentage of United States exports in the past 10 years has been made possible only because of dollars which were available to foreign buyers through grants and loans of United States taxpayers' funds, Government expenditures for offshore procurement, and similar temporary means. And as such expenditures are further reduced, as must be the case if only gradually, the volume of United States exports must inevitably decline unless there is a compensating increase of United States tourist expenditures—and of United States imports.

Given a reasonable break, over a period of years, it is not only conceivable but probable that aggregate dollar earnings of other countries will increase enough to pay not only for the present volume of United States exports, but to permit a gradual increase of exports to new high levels. But will we be given a reasonable break? This depends largely on the attitude of our own lawmakers in Washington.

The administration, ever since the President's message of March 30, 1954, has been pressing for foreign economic and trade policies based on a realistic approach to international economic conditions. The Congress last year grudgingly granted a small part of this program, in the form of a seriously emasculated H. R. 1. The only progress this year is represented by approval by a majority of the House Ways and Means Committee of H. R. 5550, now awaiting clearance by the Rules Committee for action on the floor.

Much more is involved in this situation, however, than the future of American exports, important as they are. The underdeveloped areas of the world are clamoring for economic development, for industrial plant and equipment, for technical aid. To the extent that United States capital goods manufacturers can supply the equipment, they will be pretty well assuring for themselves a future market, both for replacement and future expansion.

But the ability of United States producers to supply the capital-goods needs of the Far and Middle East, Africa, and Latin America, depends in the last analysis on the future availability of dollar payment; and by law, even the credit facilities made available by Eximbank must be predicated on sound banking practices in appraising the future ability of the concerned country to pay in United States dollars.

Here is where the Communist trade drive is threatening economic penetration of the underdeveloped areas. By accepting goods in payment, barter transactions in fact, they have a strong tactical advantage over us and over other free world nations. Already a number of the concerned countries are strongly neutralist, others are veering in that direction, and from neutralism it is not a very long jump into some form of economic association with the Communist bloc.

Meanwhile what are we doing to counter the Red offensive? At the very least, Congress is dragging its feet on H. R. 5550, on H. R. 6040, and on every other phase of the President's program to liberalize our international trade policies. Solicitude for domestic minority groups is blinding many Congressmen to the international threat that hangs over us. And grossly exaggerated emphasis on the income of the uneconomic fringe of our farm population continues to result in overproduction of many crops, which we are dumping under Public Law 480 and in other subsidized ways, in competition with the production of many of those very countries to which the Soviets are making enticing overtures.

Nobody can deny that there is a farm problem—due in large part to too many farmers working too much marginal land. Nor do we deny that acceptance of more imports of quite a few varieties would probably force temporarily painful shifts, of labor and capital, in certain industries. In shooting wars the price of victory has been the lives of many thousands of American boys. Are some readjustments in our domestic economy too great a sacrifice, too high a price, for victory in an economic war?

Election year politics have involved severe criticism of the Department of State, both by Democrats and isolationist-protectionist bloc Republicans, on the grounds of bad judgment in the handling of international problems. Without entering into this debate, we would emphasize that the real threat by the Communists today is on the economic front, and the glaring weakness of our international relations has derived in major part from our failure to adapt our foreign economic policies to the modern international economic environment.

This failure cannot be laid at the feet of the Department of State or any other administrative agency. The blame rests squarely on the Congress, or at least on that considerable number of Senators and Representatives who have persisted in allowing the clamor of pressure groups, within their constituencies, to deafen them to the deterioration of America's international position—for which they have themselves to blame.

The cost of rational foreign economic policy, in terms of internal economic adjustments, would be small indeed as compared with the sheer calamity to America if Communist economic penetration should succeed in driving a further wedge between us and that third of the world's entire population which exists—some barely exist—in the politically sensitive underdeveloped areas of the world today.

To Protect the Welfare Funds

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. MACK of Illinois. Mr. Speaker, I was very much impressed with the editorial applause given the Senate Subcommittee on Welfare and Pension Funds headed by Senator PAUL DOUGLAS, of Illinois.

Senator DOUGLAS has done a commendable job in this field and I wish to include the following editorial from the April 27, 1956, issue of the Illinois Tradesman as part of my remarks. The editorial follows:

TO PROTECT THE WELFARE FUNDS

In an era when all too many congressional committees have resorted to headline-hunting and vaudeville performances, the conduct of the Senate Subcommittee on Welfare and Pension Funds—headed by Senator PAUL DOUGLAS [Democrat, Illinois]—has been exemplary and constructive.

The committee has looked into the handling of these funds with an impartial and objective approach. It has looked not only at malfeasance and some bad practices by business firms but at the lessons to be learned from the great number of honestly administered welfare and pension funds.

It has found, for instance, that over 75 million Americans are directly covered or affected by the funds that have been developed in recent years. It has acknowledged the necessity of Federal legislation to insure their sound operation and to protect the rights and equities of individuals.

Average Americans who get their information from the daily papers are apt to have the seriously wrong impression that, because corruption makes news and honesty and integrity are rarely given public appreciation, all welfare funds are mishandled.

This misconception, to the extent that it is believed by sections of the public, is a serious danger, because millions of working Americans have benefited from the welfare and pension funds—in many cases established by unions and management through collective bargaining.

The AFL–CIO will strongly support most of the Douglas subcommittee recommendations. We have pointed out, in resolution and in speech, that welfare funds are a sacred trust, and that their handling must meet the highest ethical standards. Basic legislation designed to protect the workers' equities while leaving flexibility in the collective bargaining area will be welcomed by decent unions, decent management and the public.

Senator DOUGLAS, who has always set a high standard of legislative activity, has, through the work of his committee, once again performed a great public service.

What-For of Loose Immigration

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. GATHINGS. Mr. Speaker, as an ardent supporter of the McCarran-Walter Act, I include as a part of my remarks an article by George Todt which appeared in the Valley Times, San Fernando Valley, Calif., of April 10, 1956:

GEORGE TODT'S OPINION—WHAT-FOR OF LOOSE IMMIGRATION?

The Supreme Court of the United States repeatedly has held that no alien has the "right" to come to this country, and that it is an inherent aspect of sovereignty of any nation to control the admission of aliens.

There are at least four groups working overtime inside America to destroy the McCarran-Walter Act who blithely ignore what the Supreme Court has held to be correct. They are (1) professional politicians who would sell out American interests in return for minority bloc votes; (2) professional immigration promoters; (3) pinks and sincere but misguided "liberals," and (4) out and out Reds.

Most of the "bleeding hearts" who rail against the Immigration and Nationality Act, or McCarran-Walter Act as it has come to be known, all too often betray abject ignorance of its provisions. Their inspired "arguments" usually consist mainly of emotional diatribes against straw men. Prominent in their harangues are such explosive items as "racism," "discrimination," and "arbitrary actions." High-powered pressure groups spread their slanted propaganda with greater effect than it deserves. This is only accomplished at all because a large segment of the mass communications media in America is always to be found at the beck and call of the selfish and unfeeling conspirators who would sell Joe Doakes into the future bondage of collective—and veddy, veddy Socialist—world government. Their aim is to turn America into an international dumping ground for the world's surplus people.

Now just what are some pertinent facts which concern this matter in reality? In the first place, most of us may be in for a shocking surprise. Competent experts estimate that there are already 5 million illegal immigrants in the United States today. Perhaps it is more appropriately time for a head count—and subsequent roundup—of those who have unlawfully sneaked inside this Nation in defiance of her laws and duly constituted national sovereignty.

It would also be interesting to learn what number of bona fide American citizens in the ranks of labor are out of work today—or on welfare rolls—because they cannot obtain the jobs which are presently being held down by these 5 million of unlawful residents on our soil. These outlaws—for that is precisely what they are—should be swiftly rounded up and sent to their homelands before there is any further loose talk of bringing in additional droves of refugees and displaced persons about the globe.

Those who yell loudest for increased immigration above and beyond the McCarran-Walter Act usually pose as the great friends of labor. Yet it becomes increasingly difficult to see how hordes of cheap workers flooding into this country can have any beneficial effect upon the American working man—in or out of unions. As long as there are millions of unemployed here—why bring in more bodies by the millions to seek nonexistent jobs?

The McCarran-Walter Act was passed overwhelmingly over the veto of former President Harry S. Truman in 1952. A special committee of the Senate had spent 4 years in working out details of the bill. A tremendous amount of study, research, and investigations went into the finished product. As it was written, it was endorsed by the Immigration and Naturalization Service, the Department of Justice, the Visa Division, and other interested divisions of the Department of State, by the Central Intelligence Agency, and by other executive departments. More than 100 patriotic, civic, and religious organizations gave the bill their unstinted endorsement. The only opposition came from the American Committee for the Foreign Born and from the National Lawyers Guild, both of which have been cited by the Attorney General and the House Committee on Un-American Activities as Communist fronts.

Actually, the McCarran-Walter Act excludes, without partiality, Fascists, Nazis, and Communists from this country—and it would be difficult for any fair-minded person to see how it could have been written with any greater degree of fairness than was incorporated within its provisions. The hysterical, emotion-packed propaganda against it today stems, in largest measure, from those giddy do-gooders who insist that the rich Americans owe the rest of the world its living—at United States taxpayer expense.

We should have for ourselves either an effective immigration system, or none at all. If the latter philosophy is to prevail—why, then, tear down the bars and allow anybody to come here who wishes to do so. Such an invasion by the international dissatisfied set would quickly accomplish the destruction of the traditional American way of life in short order and impoverish our citizens, but so what? Our one-worlders would be happy, wouldn't they? What could really be more important than this?

Petition Opposing Alcoholic Beverage Advertising in Interstate Commerce

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. HUDDLESTON. Mr. Speaker, under leave to extend my remarks, it is my pleasure to submit herewith, for the RECORD, a petition which I have received from the members of the Alabama

Woman's Christian Temperance Union in my district:

PETITION

To our Senators and Representatives in Congress:

We, the undersigned, respectfully petition you to exercise the proper discretion vested in you by passing legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air, a practice which nullifies the rights of the States under the 21st amendment to control the sale of such beverages. At a time when 1 out of 10 drinkers is becoming an alcoholic there should be no encouragement to increase the use of such beverages. Children and youth are being misled to consider them harmless, especially by the powerful audio and visual suggestions of radio and television.

Mrs. H. F. Bryan, Mrs. W. M. Key, Sr., Mrs. Madge L. Craig, Mrs. R. L. Byars, Mrs. K. C. Gilbert, Mrs. J. G. Campbell, Mrs. A. Patterson, Mrs. J. L. Smith, Mrs. D. J. Duffee, Mrs. L. M. Smith, Mr. T. W. Ward, Mrs. A. W. Baker, Mrs. R. H. Outlaw, Mrs. J. D. Norman, Mrs. Wallace Norman, Mrs. C. S. Sherman, Mrs. E. K. Ross, Mrs. C. E. Allen, Mrs. A. W. Holmberg, Mrs. J. J. Chisolm, Mrs. B. B. Gillespie, Mrs. H. H. Murdock, Mrs. J. E. Dillard, Mrs. A. R. Allen, Mrs. P. A. Morgan, Mrs. V. Pennington, Mrs. Bertha Wallis, Mrs. W. A. Coggin, Mrs. Joel Appleby, Mrs. Lizzie Lumpkin, Mrs. Katherine Truss, Mrs. E. R. Ferguson, Mrs. A. D. Spiegle, Mrs. W. B. Norton, Mrs. Ernest B. Box, Mrs. Bessie Thornhill, Mrs. H. H. Vann, Mrs. A. C. Lee, Mrs. W. H. Savage, Mrs. Marjorie Geno, Mrs. E. T. Etheredge, Mrs. G. S. Theros, Mrs. Alice N. Coleman, Mrs. Zula Roper, Mrs. A. E. Whitehouse, Mrs. Kate Boyle, Mrs. G. D. Shubert, Mrs. W. H. Sharp, Mrs. Catherine Dillard.

GOP's Espousal of Soil Bank Is Tinged With Politics

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, the Republican administration's sudden espousal of a soil-bank program presents an interesting case history in political expediency. Newspaper columnist Drew Pearson in his May 5, 1956, column covers some of the history of the administration's reversal of position on a soil-bank bill.

I was interested in Mr. Pearson's analysis because I introduced an acreage conservation bill—H. R. 5942—last year on May 2, 1955. My bill is a soil-bank bill.

The administration and its Department of Agriculture opposed my bill as late as November of 1955 for the same reasons that it opposed the Honorable FRED MARSHALL'S bill. In essence, the administration's opposition to a soil-bank program was that it would be too costly.

However, as the second session of this Congress approached, the Republican administration became frantic over declining farm income. It had to hit on some gimmick to regain lost ground with hard-hit farmers. The soil-bank plan looked good to the Republicans, so they clasped the program to their bosoms with fervor. In addition, the administration wanted pre-payments—borrowing on next year's income—so that money would be paid out before elections.

The administration has also overemphasized what a soil-bank bill will do. In the newspaper ads that were run in the newspapers by Republicans during the month of February an effort was made to create the impression that immediate passage of a soil bank would put hundreds of millions of dollars in farmers' hands by spring planting time. The newspaper ads did not point out that this would be replacement income and not new or additional farm income.

I believe that farmers saw through the ad, and that explains why so few ballots were sent in to support the Republican's appeal for action. I know that the number of ballots my office received was less than two dozen.

Here is the full text of Mr. Pearson's column on the administration's attitude toward the soil bank:

THE WASHINGTON MERRY-GO-ROUND—BENSON REJECTED SOIL-BANK PLAN

(By Drew Pearson)

The backstage maneuvering over a farm bill have been happening with such lightning speed that the press, let alone the public, can't keep up with it. Seldom, however, has politics been so wrapped up in any legislation, even in an election year.

With dire reports coming from the farm belt following Ike's veto of the farm bill, the Republicans were almost frantic in their desire to pass something to put immediate cash in the farmer's pocket. Secretary of Agriculture Benson was also frantic in his desire to get credit for the soil bank.

Appearing before the House Agriculture Committee, Benson was asked by Chairman HAROLD COOLEY, North Carolina Democrat:

"Mr. Secretary, you have presented something you call the soil bank. But you overlook the fact that in 1934 we spent $637 million starting to build up the soil of this country. And from that year on, we continued to build up the soil. Every year that you've been in office, however, you have asked us for less and less money for soil. You asked us last year for $175 million and we voted you $250 million.

"And now suddenly you want what you call a soil bank.

"I remember last February," continued COOLEY, "I wrote you a letter asking you in detail about setting aside an acreage reserve in the form of a soil bank. And you kept my letter from February until July. Then, after conferring with all your assistants, you finally answered that it was too expensive and impractical.

PREELECTION BONUS

"Now, can you tell me today," concluded COOLEY, "one authority you need for a soil bank that you don't already have in the bill passed 20 years ago by the Democrats?"

Benson turned to his lawyers for advice. Before they could answer, COOLEY continued:

"I can think of two—authority to make long-term contracts with farmers and authority to protect the future basic allotments of farmers.

"All right," said COOLEY, "you send me in writing the authority you need and we'll pass it."

Benson, however, didn't warm up to the idea at all. He wanted a brandnew bill. The White House also asked for authority to make advance payments to farmers out of the soil-bank program to the tune of $500 million.

This pre-election bonus outraged Democratic leaders in general and Congressman JAMIE WHITTEN, of Mississippi, in particular.

"If a Democratic President were to recommend paying the farmer part of his 1957 income in 1956, just before the November election, as Eisenhower has recommended," observed WHITTEN, "the press would carry big headlines accusing the Democrats of trying to borrow the farm vote—which incidently would be borrowing it with the farmer's own money loaned against his own next year's depleted income."

BRANNAN PLAN

His dander up, WHITTEN called his Appropriations Subcommittee and O. K.'d a $1,200,000,000 appropriation based on the old Henry Wallace soil-bank bill which had been on the statute books for 20 years. This would have given an immediate payment instead of borrowing against the future.

The House Rules Committee, however, rejected the appropriation on the ground that the Henry Wallace law needed amendments.

COOLEY offered a 29-line amendment to the Henry Wallace soil bank law which brought it completely up to date.

Republicans, however, refused to accept it. What they wanted was not a modernized revamped Democratic bill, but a new bil bearing the trade mark of Benson and Eisenhower.

After counting noses, the Demorcatic high command figured it was short 20 House Republicans necessary to pass the Whitten-Cooley soil plan.

So overnight, COOLEY proposed a modified Brannan plan with a subsidy to farmers.

"If you want to put money in the farmers' pocket," he told Republicans, "let's do it outright without any subterfuge. Let's not borrow from their next year's income.

"You already have a Brannan plan for wool, a crop chiefly raised by the big Republican sheepmen of Utah and Wyoming," argued COOLEY. "And Benson is supporting sugar at 98 percent of parity—a crop highly important to his State of Utah. So let's be fair and vote the Brannan plan for other crops."

There were howls of protest from Republicans, however, and the modified Brannan plan was dropped.

The Impact of Population and Industrial Growth on Our Nation's Metropolitan Areas

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address of Mr. LeRoy D. Owen, of Los Angeles, Calif., president, Society of Industrial Realtors, before the 31st annual meeting of the American Industrial Development Council, San Francisco, April 12, 1956.

Mr. Owen, in his notable address, stresses that sober reflection must be given to the shifting sands of our popu-

lation and the impact it is creating on our metropolitan areas in various parts of the United States. A sound balance between the Nation's industry and agriculture is essential to our economic stability.

He further points out that if our social and economic structure is to remain stable and sound, we must spread our constantly and rapidly increasing population throughout the country and prevent the concentration of population in the metropolitan areas and in certain States. This ever-growing and shifting population should be distributed more equitably, if we are to prevent the neglect and abandonment of the development of our natural resources which these people are leaving behind in the States that are being vacated.

Mr. Owen's statement is obviously the result of profound thought and study, and in my judgment merits careful consideration:

THE IMPACT OF POPULATION AND INDUSTRIAL GROWTH ON OUR NATION'S METROPOLITAN AREAS

When Mr. Clawson, your program chairman, invited me to speak at this conference of the American Industrial Development Council I was delighted to accept. There is much in common between your organization and the one which I have the honor to represent—the Society of Industrial Realtors.

Today the memberships of both the council and SIR are composed of industrial development representatives of railroads, utility companies, real estate managers of large corporations, representatives of banks, chambers of commerce, and State industrial development commissions.

Many SIR's, particularly among our associate membership, are also members of the American Industrial Development Council. This similarity of membership indicates a mutual and common interest in the purposes of both organizations. Your members and those of SIR have a definite interest in the orderly development of industrial enterprises.

I should like to talk to you briefly today on the subject, The Impact of Population and Industrial Growth on Our Nation's Metropolitan Areas. It is a definite problem which confronts us.

It is my belief that we as citizens of the United States are not giving enough thought to this subject and therefore it behooves such organizations as the AIDC and the SIR, along with all similar organizations, to pinpoint the facts in the hope that constructive future planning will bring beneficial results to our Nation and prevent undue deterioration of our metropolitan areas.

There are three facets which must be considered.

1. The rapid growth in population of our metropolitan areas, namely, New York City, Philadelphia, Pittsburgh, Chicago, Detroit, Cleveland, the bay area of San Francisco and Oakland, and Los Angeles.

2. The growing menace of traffic congestion with its slaughter of Americans on our highways, and, lastly

3. The agricultural problem, occasioned by the falling off of farm income, overproduction and maldistribution of agricultural products.

Presently, it is estimated that there are approximately 165 million people in the United States. In 1975 it is estimated this figure will be over 221 million, an increase of 35 percent.

We are not giving proper attention to the problems occasioned by this growing population and the shifts which are taking place. Farm population dropped 3½ percent from 1953 to 1954.

Thirty-one and one-half million persons moved during the year ending April 1955. Of this group 22.1 percent were rural, nonfarm, or suburban residents.

Stanford Research Institute in August 1955 completed an intensive study of population trends in the United States through 1975. This report is not only factual and enlightening, but, if the deductions are sound, it is a forceful warning of difficulties ahead for many sections of our Nation.

The Pacific region—Washington, Oregon, California—has had by far the highest inmigration among the regions of the United States, averaging about 330,000 per year from 1940 to 1954. The estimated annual in-migration from 1955 to 1975 for the region will be 364,000. Estimated population in 1975—29,439,000, an increase of 75.9 percent over 1954.

The East South Central region comprises the States of Kentucky, Tennessee, Mississippi, and Alabama. From 1940 to 1954 these States lost population by out-migration of over 125,000 per year. The estimated annual out-migration from 1955 to 1975 for this region is 138,000 people. Estimated population in 1975—13,100,000, an increase of only 12.1 percent over 1954.

When we recall that the overall population increase for the United States is estimated at 35 percent from 1954 to 1975 these figures, for these two regions; namely, the Pacific and the East South Central States, are startling and point to problems ahead.

Our major cities are growing. In recent years the rate has stepped up decidedly. Pressures due to population growth have increased to such an extent that our people should be concerned. No metropolitan area is free from these problems:

1. Traffic congestion.
2. Increased taxation.
3. Lack of adequate school facilities.
4. Increasing blight of downtown areas.
5. Concern as to changing property values.
6. A growing crime rate and juvenile delinquency.

This concentration of population in our metropolitan areas is a severe drain on our national income, a challenge to our economy, our present efficiency, our know-how.

Traffic congestion in our metropolitan areas is taking millions of productive hours from our economy. Greater mobility is necessary, but there is grave doubt that it can be obtained. In many cities it is physically impossible, the cost too great.

Traffic congestion in major urban centers requires special consideration. A general highway program can ease the urban problem somewhat if it provides new bypass highways around urban centers. But the solution to urban traffic congestion requires much more than this.

Involved are all the possibilities of traffic engineering and the use of different modes of mass transportation.

In 1920 there were 9 million motor vehicles registered in the United States. Today there are about 60 million. By 1965, conservatively, there will be 81 million.

It is estimated the Nation is spending about $40 billion each year to get people and things from place to place by motor transportation, an amount which is about one-tenth of the value of all goods and services provided in the Nation each year.

The Citizens Traffic Safety Board of New York has recently estimated that traffic delays have cost its citizens more than $1 billion a year, which included wages estimated at $350 million.

In Chicago a few years ago buses were stationary 20 percent of their trip time; now they are stationary 40 percent of the time, due to traffic delays.

This result is inevitable when we try to force thousands of automobiles and trucks on city streets, of the same original width which accommodated the horse and buggy vehicles of our youth. Our cities are out of date, made so by the automobile.

An improved national highway system, one advocated by President Eisenhower, will help bring a liquidity in the movement of people, which will tend to assist our metropolitan areas.

Distance is less important than time. A realistic highway system in the United States will create time and serve our population well, protect metropolitan property values, and assist in curtailing the shameful slaughter and maiming of our citizens through traffic accidents, which, in 1955, killed nearly 38,500 people; with an estimated cost for medical bills, property damage, and other expenses of nearly $5 billion.

In thos sections of our country where improved highways have been constructed dividends from benefits have been large.

Agricultural areas have been brought closer to the metropolitan centers. Time has been saved in moving products to the cities. Industry has moved from the metropolitan areas to rural communities with sufficient land for future expansion at sensible prices. Employees have ideal living conditions near their employment, free from traffic congestion.

Rural communities profit through this partnership with industry, taxes are tempered, out-migration of people is not a necessity because of new employment, and generally the economy of the community is stabilized.

Recently, we contacted our associate members, representing Chrysler, General Motors, and Westinghouse, to inquire as to their company's experience in locating plants in rural areas. Within recent years 22 plants have been located in farming communities and employ 32,400 people. These moves have proven sound, both from the standpoint of industry and the community where these plants have been located. Certainly, it has been beneficial to our metropolitan areas, with no loss sustained.

I have corresponded with Secretary of Agriculture Benson and enjoyed a luncheon date in Washington with Undersecretary True D. Morse relative to the pending farm bill in Congress and more particularly to the proposed soil bank program.

This program asks the farmer to refrain from planting or utilizing all of his land, and to curtail production. This approach is not typical American. It is contrary to the spirit of our people. It is a negative approach to solving the problem. It is an economic waste to permit land or buildings to remain idle or vacant. It is unsound to discharge productivity of any kind.

I have suggested to Secretary Benson that it should be brought forcefully to the attention of those both in rural and metropolitan areas the desirability of encouraging the establishment of industrial plants in rural areas in close proximity to metropolitan centers.

This is a positive approach for the utilization of land which might become a part of the soil bank and tend, even in a small measure, to improve the agricultural situation on a permanent basis.

Land, considered for the soil bank, might well be used for industrial development and thus create additional income for the farmer from rent or through the sale of a portion of his property.

The establishment of industrial plants in rural areas creates employment for our agricultural population, with an increasing number of available hours for nonfarm labor due to mechanization of agricultural pursuits.

Industries may purchase rural property at reasonable prices to meet present and future demands. Current high prices of industrial property in metropolitan areas is a present deterrent to industrial development.

Employees welcome the opportunity of working in rural areas which provide fine residential subdivisions within easy access—free from traffic congestion—to their employment, and an opportunity to enjoy living advantages not obtainable in metropolitan areas.

You may be interested in Secretary Benson's response to the above comments and suggestions. He rightfully points out that a sound balance between the Nation's industry and agriculture is essential to economic stability. He is of the opinion that the rural-development program, which President Eisenhower recently described as "soundly conceived and basic approach toward solving a highly important social and economic problem," is a step forward in the permanent solution of economic stresses in many sections of our country.

"An important objective of the rural development program is increased industry in rural areas and encouragement of an economy in which farmers supplement their incomes through work off the farm." The Department of Agriculture, "using facilities of the Federal Government" is endeavoring to aggressively encourage "farm, business, and other local leadership in trade area and community development programs.

"Over 20 States have now taken the lead in the rural-development program through organization and planning for work in one or more counties in each State."

He concludes with this statement: "Rural development is the concern of the business and industrial as well as the agricultural community. In many rural areas of extremely low income, better agriculture and more efficient farms are only half the answer; industry, vocational training in nonagricultural skills, better management of community resources must proceed parallel to improvement in agriculture."

I readily admit that I am confused. Certainly I do not have the answer to the surplus with which we are confronted. I'm convinced it is due to Federal tampering of basic economic principles some year ago and I believe Secretary Benson and President Eisenhower are sincerely trying to correct a difficult condition which exists in our agricultural regions.

After analyzing population figures, the movement of people from one section to another, the growth of our metropolitan areas, the increase of population in many States—notably in the West—and, at the same time, the continued loss of population in other States—notably Kentucky, Tennessee, Alabama and Mississippi—what basic conclusions do we reach?

As I see them, perhaps they can be enumerated as follows:

1. The population growth of the United States with estimates indicating a population in 1975 approaching over 221 million people is certain to require good planning to eliminate maladjustments.

2. If the social and economic structure of the United States is to remain stable and sound, we must spread this growing population throughout the country and prevent the concentration of population in metropolitan centers and certain States.

3. We should give more attention to the development of natural resources of those States which are rapidly losing population to encourage the establishment of industry in those States to provide a livelihood for the people and otherwise discourage them from seeking new homes to insure a better way of life.

4. Recognizing that people will move from place to place and that it will be difficult to control the growth of our cities in certain States, we must be alert in providing those necessities which are essential to accommodate the people in these areas. This involves a realistic and practical development of our transportation and communication facilities. More highways and more mass transportation facilities will be needed. The decentralization of industry should be encouraged, away from our cities, and adjacent to residential areas, to eliminate transportation as much as possible on our highways.

A realistic zoning plan, with due regard to residential, commercial, and industrial property, is most important for the future protection of any growing community.

Careful planning is needed to insure a well-balanced economy between industrial and residential areas which will spread the tax load, and, in turn, make it possible to provide essential utilities such as sewers, water, power, and adequate school systems.

I hope that you as members of AIDC will agree with me in some of the thoughts expressed today. Your council, the Society of Industrial Realtors and other business and civic organizations can well give thought to the ever-changing conditions which confront our people. If we so direct our energies sincerely we shall make a definite contribution to the welfare of this great Nation.

Origin of Christian Time

EXTENSION OF REMARKS

OF

HON. ELIZABETH P. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mrs. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mr. Willard E. Edwards which appeared in the Honolulu Star-Bulletin on December 31, 1955. Mr. Edwards is the originator of the perpetual calendar. He informs me that the question of amendments to our calendar is on the agenda of the United Nations Economic and Social Council. The article follows:

ORIGIN OF CHRISTIAN TIME

(By Willard E. Edwards, originator of the perpetual calendar)

Dionysius Exiguus is credited with introducing, between A. D. 525 and 533, the system of reckoning years according to a Christian era. He computed the incarnation of Christ as March 25, 753 A. U. C., the date of the vernal equinox at that time, and March 25 is still celebrated as Lady Day or Annunciation Day.

He took the date of birth as 9 months and 7 days after the incarnation date. This placed the Nativity on December 31 at the end of the Roman year 753.

To calculate the birthdate anniversary for A. D. 525, Dionysius took the date of the vernal equinox, March 20 in that year, and again added 280 days. He thus obtained December 25 as the 525th anniversary, and December 25 has been used ever since as the fixed date for Christmas. It was first made a legal holiday in Rome in A. D. 534.

Dionysius also fixed March 25 as the beginning of the Christian year in order to commemorate the incarnation. This practice continued in general use until the Gregorian calendar reform in 1582. It also continued in legal use until 1752 in England and in America. We find the Latin dating expression "Anno incarnationis Dominicae"—in the year of our Lord's incarnation. We also find "Anno ab incarnatione Domini nostri Jesu Christi primo"—in the first year of our Lord Jesus Christ from the incarnation. The latter expression is usually shortened to "Anno Domini primo."

Without doubt, the incarnation is one of the most important tenets of the Christian Church. It therefore seems certain that Dionysius definitely intended the Christian era to begin on March 25, 753 A. U. C. to commemorate this important event.

(The designation A. U. C. is from Ab Urbe Condita, or Anno Urbis Conditae, and means dating from the founding of the city of Rome.)

However, some chronologists reject the incarnation date. Possibly they are non-Christians, or perhaps nonbelievers in the incarnation. In any case, they take the day following the calculated birthdate of Jesus as the beginning of the era. This date is January 1, 754 A. U. C. It is accepted as January 1, A. D. 1, and therein lies a discrepancy.

MEASURING TIME AND DISTANCE

In measuring time from any reference point, one year is not accomplished until 12 full months have elapsed. It is reasonable to assume that Dionysius was well aware of this fact and that he called the incarnation year merely "the first year." It is also reasonable to believe that he called the anniversary date of March 25, 754 A. U. C. the beginning of the second year, or "the year one." See the accompanying chart.

Ordinal numbers indicate the order in a series, as 1st, 2d, 3d, etc. Cardinal numbers tell how many, as 1, 2, 3, or I, II, III, etc. In the dating of years, Roman cardinal numerals should not be read as ordinals. Anno I Domini, or A. D. I, should be read "in the year one of our Lord." It includes the period between the end of the first year and the end of the second year, counted from the incarnation.

Counting from the beginning of A. D. 1 is the same as counting from the beginning of the second year. For instance, it is agreed that from January 1, A. D. 1 to January 1, A. D. 1956 is 1955 years. Still 1956 is the 1956th year only if January 1, A. D. 1 is used as the starting point.

Such a system is equivalent, in measuring distance, to saying that from the 1-inch mark on a ruler to the 11-inch mark is 10 inches. Yet from the 11-inch mark to the 12-inch mark is the 11th inch only if we start measuring from the 1-inch mark.

WE START COUNTING FROM ZERO

However, it is convenient and logical to start measuring from the zero point on a ruler, 1 inch before the 1-inch mark. See any engineer's scale. We both count and measure from zero, not from one. The first or prime meridian through Greenwich is the zero meridian. Zero is a real number, 1 less than 1, and is correctly shown as the first numeral (0, 1, 2, 3, etc.).

But whether zero is shown on a ruler or merely understood, we customarily start measuring from the beginning of the scale markings. We do not start from the 1-inch mark.

And so it is with counting or measuring time. We start counting the daily hours with and from zero or 0000, the beginning of the day or the zero hours. We do not start measuring or counting hours from 1 a. m. or 0100. Neither is there any logical reason for starting to count the years of the Christian era from the year A. D. 1.

After 1 hour has elapsed, we can record the figure 1 or 0100. After 1 year has elapsed, we can record the figure 1 or A. D. 1. This is the logical way to count or record time, whether it is in units of hours, days, years, or centuries.

The first day of each year could also be called the zero day, or January 0, a day apart from any week. This New Year's Day holiday, followed by 52 even weeks, would allow our annual calendar to become fixed and perpetual.

This is proposed in the perpetual calendar, a plan now being studied for possible international adoption by the United Nations.

There is nothing to be gained by cherishing or defending a mistake, misunderstanding, or outmoded custom of the past. Having two systems of counting time is confusing and contrary to reason. Counting years from the year 1 is an awkward and misunderstood way of reckoning.

It seems certain that Dionysius Exiguus did not intend the designation A. D. 1 to be used for the first year of the Christian era. He was a scholar, a theologian, and an astronomer. Although he made a mistake of 4 years in calculating the Nativity, it is extremely doubtful that he started counting from the year one.

DATING FROM THE INCARNATION

He dated the beginning of the Christian era (Christ on earth) from the Incarnation. His first year was from March 25, 753 A. U. C. to March 25, 754 A. U. C. He called March 25, 754 A. U. C. the beginning of the second year, or A. D. 1, because that was 1 year after his calculated incarnation date. This second year (A. D. 1) was from March 25, 754 A. U. C. to March 25, 755 A. U. C.

Dionysius deserves more credit and understanding than he has previously received from chronologists and historians.

Prior to his time January 1 had been used as the beginning of the year. However, Dionysius fixed March 25 as the beginning date to impressively commemorate the Incarnation. This date was then used for over a thousand years, until the Gregorian calendar change was made in 1582.

At that time, the beginning of the Christian year was moved forward 84 days from March 25 to January 1. This allowed the entire year 754 A. U. C., as we now know it, to become recognized as the year A. D. 1. It also allowed a near coincidence between January 1, A. D. 1 and December 31, 753 A. U. C., the latter date being the birthdate of Jesus as calculated by Dionysius.

This caused the mistaken conception of the Christian era beginning with the Nativity and having its first year dated A. D. 1.

It is therefore fitting to recognize Dionysius' beginning date for the era as being moved from March 25, 753 A. U. C. to January 1, 753 A. U. C. This preserves the Incarnation origin and places the dating of our years on a mathematically sound basis. It also reduces to 3 years the error between the new accepted birthdate of Christ (December 31, 749 A. U. C.) and the practical beginning date of the Christian era.

A dating system is intended to show the passage of time from a reference or starting point. January 1, 1956, was the 1,956th anniversary of the Christian era. The era was then 1956 years old, and the year 1956 should be thought of as the 1957th year. Throughout this 1957th year, events will be recorded as occurring in 1956, since the era will not become 1957 years old until January 1, 1957.

Wedding anniversaries are readily understood. When we marry, we are beginning the "zero year," or first year of marriage. After 1 year has elapsed, we have our first wedding anniversary. Its number is anniversary No. 1, the marriage is 1 year old, and we are then beginning the second year. Counting years of the Christian era is no different. The principle is exactly the same.

TIME IS A MEASURABLE DURATION

Dionysius dated the years of the Christian era from the Incarnation. He fixed March 25 as the beginning of the Christian year. The first year was called simply "Anno incarnationis Dominicae"—in the year of our Lord's incarnation, or "Anno Domini primo"—in the first year of our Lord.

After the end of the first year, events in the second year were correctly dated Anno I Domini, or A. D. I. This year date, the year 1, later became incorrectly thought of as "the first year of our Lord."

In recognizing the Christian era as beginning with 753 A. U. C., this first year should never be shown as A. D. 1. It may be shown as A. D i, for "Anno incarnationis Dominicae," or as A D. 1st, for "Anno Domini primo." It may also be correctly shown numerically as A. D. 0, for "the zero year."

The beginning of the Christian year was changed from March 25 to January 1 in 1582. January 1, A. D. 1 then became mistakenly accepted by some as the beginning of the Christian era. This was due to its proximity to the calculated birth of Jesus.

However, evidence points to the wisdom of accepting January 1, A. D. 1 as the first anniversary of the Christian era. Therefore, the beginning date of this era should be recorded as January 1, 753 A. U. C. General agreement on this date will prevent dating confusion. It will not change our numerical A. D. dating, but it will put it on a mathematically sound basis.

Time is a measurable duration, and the years should be recorded exactly as we record wedding anniversaries. January 1, 1956, was the 1956th anniversary of the Christian era. The year 1956 is the 1957th year of this era. The 20th century will then be correctly recorded as beginning with January 1, 1900, and ending with December 31, 1999.

This period is the natural and the popular conception of the century. Let us be rational and consistent in recording the years, especially when it can be done so easily.

A Just Pension for Veterans and Their Widows

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter dated May 4, 1956, which I have received from Ray J. Tucker, of Metropolitan Barracks No. 370, Veterans of World War I of the United States of America, McKeesport, Pa., concerning a "just pension" for veterans and their widows:

METROPOLITAN BARRACKS NO. 370,
VETERANS OF WORLD WAR I
OF THE UNITED STATES OF AMERICA,
McKeesport, Pa., May 4, 1956.

Hon. ELMER J. HOLLAND,
Member of Congress,
Washington, D. C.

HONORABLE SIR: The veterans of World War I wish to call your attention to a condition that is deplorable in this great land of ours.

Veterans of all previous wars of our country have been recognized in their old age, but for some unknown reason, we have become the forgotten man and we insist that corrective measures be started to see that these men and women who were hailed in 1917–18 as the flower of this Nation's youth and as heroes who offered their all on the altar of our country in its hour of need, be given the same just consideration extended all previous war veterans.

We should be given adequate security in our twilight years to enable us to stand shoulder to shoulder with pride and serene dignity among all our fellow citizens. We ask your support to call to the attention of Congress our demands for a just pension, automatically, for every veteran reaching age 60 (without regard to his financial status), and the same pension to his widow when the veteran passes on. We also demand hospitalization when needed for all war veterans, without the pauper's oath and without any discrimination because of the war served.

These are the most urgently needed things at present and must be considered if we are to keep alive the patriotism of future generations. When the growing generation reads of the recommendations of a committee (headed by a general drawing down a generous pension from his country), that veterans be denied pensions, hospitalization, and other benefits, they will be shocked and will look askance at the recruiting ads which stress the gratitude the Nation has for its boys and girls who serve our beloved flag, especially in war.

This attitude at a time when billions are being poured into aid programs for foreign countries (some of which were our enemies in 1917–18 and again in 1941–45) will convince the young blood of our Nation that it is a poor choice for them.

Your consideration and support will be appreciated.

Yours truly,

RAY J. TUCKER.

Salk Vaccine Outlook Still Far From Enough

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. McCORMACK. Mr. Speaker, I include in my remarks an information article on the Salk vaccine outlook written by Jane Krieger and appearing in the New York Times of April 22, 1956. Throughout the country there are millions of persons deeply interested in this matter.

The article follows:

SALK VACCINE OUTLOOK: STILL FAR FROM ENOUGH—SUPPLY IS LAGGING BEHIND DEMAND AND THE DISTRIBUTION IS UNEVEN

(By Jane Krieger)

The big question about the Salk polio vaccine is no longer whether it is safe but when there will be enough to go around. The best answer the Government's Public Health Service could give last week was that it "hoped" vaccine supplies would be adequate to give most children under 15 and pregnant women at least one shot by July 1.

Why, after a year of commercial production, is the vaccine still in short supply? How much has been produced and where has it gone? Who is eligible to receive it now? How is it being distributed? What are the prospects that you and your family can get the vaccine this year?

CURRENT OUTLOOK

This is the picture as the Public Health Service and the drug manufacturers now see it:

The vaccine shortage: This is due simply to the requirements of production and testing. Polio vaccine cannot be turned out like aspirin. In fact, the Public Health Service says the technical problems inherent in making the Salk vaccine "are among the most complex in the field of large-scale bio-

logic preparations." There is a delicate balance between inactivating the live polio virus used in the vaccine and retaining its ability to produce immunity. The whole process takes about 4 months—including a month and a half for testing. This is not unduly long; it takes about 2 months to make smallpox vaccine, up to 6 months for diphtheria vaccine. But the demand for these drugs is no longer widespread and they can be stockpiled. There hasn't been time yet to stockpile the Salk vaccine; demand is at least twice as great as supply.

Production and use: Since last April 12, when the vaccine was put on the market, 47,127,000 shots have been released by the Public Health Service. Of this, 32,829,000 shots have been allocated to the States and Territories for distribution; 13,723,000 went to the National Foundation for Infantile Paralysis which gave them free to 1st and 2d-graders last year; 11,000 were exported and 564,000 went into commercial channels before the Government established distribution controls last May.

MOST 5-TO-9'S

Upward of 20 million youngsters—including almost the entire 5-to-9 age group—have received some vaccine.

Priorities: The Public Health Service recommended last week that the States give priority to children under 15 and expectant mothers. But this is only a recommendation. Each State sets its own priority schedule depending upon the number of children in each age group, the prevalence of polio in its area, and supply and demand. State priorities vary greatly—New York, for example, gives priority to children from 6 months to 15 years; Virginia, to the 1-to-10 group, Washington (where demand has been relatively low) to everyone under 20 and pregnant women.

Distribution: When a batch of vaccine is ready for release, the Public Health Service parcels it out among the States on the basis of child population; each State decides how much of its allocation is to be distributed free and how much through private physicians; the pharmaceutical-house salesmen decide which physicians to sell it to and the physicians decide which patients to sell it to.

Take New York State, for example. The Public Health Service wires Health Commissioner Herman Hilleboe that it is holding 50,000 shots of, say, Lilly vaccine for New York. Commissioner Hilleboe wires back that the State will buy 35,000 shots for free distribution through various public agencies and doctors, and that Lilly's salesmen may sell the rest directly to private New York physicians.

Theoretically, the drug salesmen then sell to doctors on a first-come, first-served basis. But with polio vaccine at a premium, inevitably some salesmen give it to their best customers first and other use it to persuade doctors to buy other products made by their company. Doctors, by and large, are observing the age priorities. But since there is not enough vaccine for everyone who has priority, a doctor may distribute his limited supplies to his best patients first.

FREE DISTRIBUTION

As for free shots, the system varies widely from State to State and even from city to city. New York State distributes roughly 70 percent of its vaccine free and New York City offers one free shot for every pre-school child as long as its supply holds out. Michigan, which has a long tradition of free vaccination, distributes all of its polio vaccine free. So do several Southern States. Iowa, on the other hand, has distributed only 12 percent free; New Jersey, about 47 percent. In many States, county and State medical associations have exerted telling pressure against free vaccine on the ground that it is "socialized medicine."

The prospects: The Public Health Service went haywire on its optimistic supply predictions last year and is not making any more forecasts. Unofficially, however, health men figure that between now and July 1 the vaccine manufacturers should turn out something approaching 25 million doses. That would be enough to give 1 shot to roughly 80 percent of unvaccinated children under 15 and pregnant women.

What it comes down to, then, it this: If you have a family physician your chances of getting the vaccine for your eligible children this summer are better than if you approach a strange doctor. But even your family physician may not be willing to give second shots until all his eligible patients have received their first injection. If your children are 15 or older you will probably not be able to get them the vaccine at least until next winter. As for adults, there are no plans for injecting them until the supply picture has improved radically.

Miami Daily News Urges Prompt Congressional Consideration of H. R. 10469

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. FASCELL. Mr. Speaker, on April 12 I introduced H. R. 10469. This bill calls for an orderly gradual termination of the GI home-loan guaranty program which is due to expire July 25, 1957.

It provides for a full 3-year extension of benefits for disabled World War II veterans. All others would receive a 1-month extension for every 2 months of active World War II service, up to a maximum extension of 3 years.

The Miami Daily News, Miami, Fla.'s oldest newspaper, in an editorial April 28, 1956, points up the need for immediate congressional action on extension of the GI home-loan guaranty program. H. R. 10469 accomplishes this and it is now before the Veterans' Affairs Committee. This program has proven to be vitally important to our entire economy. It has profited the entire populace, both veteran and nonveteran alike. I am hopeful that it will receive prompt consideration.

I urge each of the Members to read the editorial which follows:

ACTION IS NEEDED ON GI HOMES BILL

Congress should reach an early determination whether or not to extend the veterans' home loan guaranty program now due to expire in July 1957. Nearly everyone concerned is agreed the program must come to an end some time; the only question is when and how.

As it stands, less than 4 million out of the estimated 15 million World War II veterans have availed themselves of the right to buy homes with Government-guaranteed loans. For veterans of the Korean war housing benefits do not expire until 1965.

Representative DANTE FASCELL, of Miami, has introduced an amendment to the Servicemen's Readjustment Act of 1944, the so-called GI bill of rights, which would extend the housing benefits for 3 years and provide for an orderly termination of the program. Not all eligible veterans would be given the 3-year extension from July 1957. The extended period would be automatically afforded to all wounded veterans, but the length of extension for others would depend upon service. An additional month would be given for each 2 months of service between September 15, 1940, and July 26, 1947.

The Eisenhower administration is opposed to any extension at all, holding that a reasonable time has already been given veterans to exercise their rights. Proponents of extension argue, however, that the average age of a veteran buying a home has been 32 years. As of the first of this year, there were 2,218,000 veterans under 29.

If there is to be no extension, the fact should be established as far in advance of the expiration date as possible in order to avoid a last-minute rush. An orderly termination such as the Fascell bill proposes would soften the impact of a rush by veterans to get in under the wire. In the case of such a last-minute stampede, builders fear a shortage of homes and appliances resulting in inflationary prices.

It is particularly important to Miami's vast home-building industry that Congress settle the matter at the earliest possible moment.

Polish Constitution Day

SPEECH
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. BARRETT. Mr. Speaker, on May 3, friends of Poland celebrate the 165th anniversary of an instrument that marked a milestone in the history of a brave people—the Polish Constitution of 1791. The constitution was an attempt to do away with an outmoded government and replace it with a modern parliamentary system. By instituting drastic reforms it afforded the possibility of sound, progressive national life. In the light of the years which have followed it can be considered one of the greatest achievements in Polish history.

But in celebrating Polish Constitution Day in 1956 the true friends of Poland do not dwell overlong on the victories of the past—they examine the present and look toward the future.

The present times are indeed times of trouble. Poland today has been made the satellite of an ancient enemy, Soviet Russia. It has been subjected to ruthless, thorough, relentless sovietization. It has been flooded with Soviet propaganda, its press forced to reproduce Soviet articles, its moving-picture theaters to exhibit Soviet pictures. Soviet specialists and technicians swarm over Poland. The Polish economy has been twisted and bent to meet Soviet needs. Soviet officials occupy key positions in the army, in the secret police, and in the administration.

The teaching of religion has been suppressed, in line with Communist philosophy. Hundreds of the adherents of religious orders have been thrown into prison. The Catholic Church has been completely subordinated to the sovietized Polish Government. The children

of Poland are being taught to turn their backs on the God of their fathers. They are being made to forget the ancient cultural traditions which have been the glory of their homeland.

But though the present may be dark, the future is not without hope. The year 1956 may, indeed, bring new opportunities for greater freedom undreamed of a short time ago. The latest revelations of the Stalin reign of terror in the U. S. S. R. have turned the spotlight on a fundamental weakness in any regime based on forced labor, oppression, and murder: the dictators' haunting fear of being liquidated, just as they themselves have liquidated others.

Nothing should instill more hope in the hearts of an appressed people than the knowledge that their slave masters are divided amongst themselves. In the words of an old saying "When knaves fall out, true men come to their own."

The heartfelt wish of the American people, and of their representatives in Congress, is that the day may not be far distant when the true, freedom-loving people of Poland "come to their own."

Jonathan Daniels and the "Quiet South"

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. UDALL. Mr. Speaker, I believe our school integration crisis tests the real fiber of our country in a way it has not been tested for many years. Too, I am convinced that if the moderates in the South are listened to—men whose first loyalty is to the law, who are not afraid of change, and who seek always to widen the common ground between their followmen—we will work out this problem in a way which will enhance the best traditions of our country.

One of these moderates is Jonathan Daniels who edits the Raleigh (N. C.) News and Observer. Asked to appraise the segregation problem in his region, Daniels recently recently wrote the letter printed below to his friend Roger W. Remington, of the Bangor (Maine) Daily News:

DEAR ROGER: There are a thousand miles between us but the policy of your Bangor Daily News "to tend to affairs in our own backyard for the most part and not stick our noses into distant regional matters" is pretty much the policy, too, of the News and Observer in Raleigh, N. C.

Yet at the same time I can appreciate your statement that "this segregation thing seems to be burgeoning into something approaching a civil cold war, and so even we Yankees way off in the northeast corner of America have a stake in it." I agree with you.

I think more and more as the tensions grow around this problem in this southern part of the Nation that real national unity today depends upon more national understanding of the problem.

And I have a feeling that somehow we newspapermen, North and South, have failed to a considerable degree in serving that understanding. That ought not to be the case. Someone has said that in recent months there have been more northern newspapermen looking at the problem on the Southern scene than would normally be expected to cover a war. Some of them undoubtedly have come South to find the facts to meet the already fixed views of their editors and readers back North.

They have found what they wanted—and the fault for that lies with some southern factmakers as well as Yankee factfinders.

I believe, however, that the great majority of newspapermen who have come South to cover this story have sought conscientiously to cover the story objectively (whatever that may mean). Unfortunately, the trouble in all the reporting may lie in the journalistic fact which brought all of them southward: That news is conflict, whether it be an affray on State Street in Bangor or a collision between the Russian and American delegates in the United Nations.

If you came now out of Maine into this beautiful southern spring you could certainly find the facts of cold Civil War. There are white southerners of prominence and great articulateness who say that never will they let one Negro child enter one white school.

And you will find, too (not silent) Negro leaders who demand that there be complete intermingling in all the schools tomorrow—or yesterday.

Such white southern leaders readily speak in cold defiance of the law—though the methods they urge are usually devices of evasion rather than those of open and stubborn refusal to comply with the law.

On the other hand, such Negro leaders, confident that the Court is on their side, have too often acted in ways which have incited angers rather than served solutions.

Probably I waste time in telling you about these two groups of active and articulate persons. What they say and do is speeded to Bangor on the news wires—indeed to the last mile of Aroostook and all around the world. What you don't get—and I don't know how you can get it—is the news about the troubled heart of the South. It is troubled and torn. The great mass of white southerners are much like the people of Maine. The will to cruelty here is as limited as it is around Bangor. The love of America and respect for its law is as great here.

And the odd thing is that the prejudice against the Negro which the North sees in the South is here also accompanied by much affection for Negroes.

Do not misunderstand me: the South has not always been fair or just to the Negro. It has not understood his aspirations or given him the dignity to which all human beings are entitled. That troubles many southerners as it has naturally angered many Negroes. The South has made willing and indigenous advance in fairness and justice.

But the South knows that much of the present social and intellectual inferiority, which is often stated as reason for denying the Negro the new rights ordered by the Court, derives not merely from race but from disadvantage imposed in the past.

There is reason for troubled hearts in the South. The danger is not so much that the South will defy the law as that it will by one device or another deny its children, white and Negro together. The pattern attracting attention in more and more Southern States is a retreat from public schools which they cannot control. Neither Maine nor any other State in this mobile Nation is too far off to have a stake in that.

More ignorance in the South would not only bring disaster to our hopes at home, it would also mean that those thousands of southerners, now year by year dispersing to all parts of the Nation, would bring only ignorance with them. For the South, I said recently, those who propose abandonment of the schools proposed something beyond secession from the Union. They urge secession from civilization.

That secession, of course, will neither be defended nor suppressed by troops. It will not be prevented by northern impatience with a South which may seem to many anciently recalcitrant in its ways. Thousands of southerners who cherish education for their children and all the children of the South will fight at home—where the fighting can be tough—against any such educational secession.

They will not be helped by anger and impatience from abroad—from Bangor, for instance, or Boston, or New York.

Between the extremists on this question in the South there is a great, troubled, honest, hopeful body of southerners who believe that all the children can be safely and creatively served within the law. But if any man in Maine believes that will be an easy business, he had better stay with his complacency in Bangor.

If a man from Maine does wish to serve in a problem in which, indeed, the whole Nation has a stake, I would beg him to remember that between the contending thunders from the South, there is a quiet South, too, of thousands of southerners more troubled than angry, more prayerful than articulate. Their silence may be ominous. It may be the mark of hope. Exterior impatience could only serve to drive them into the company of the angry extremes which have already seized all the microphones.

If I were a man from Maine, I hope I would remember that there is a gentle South, an orderly South, a South with hopes as precious as this first spring.

As a southerner, I know that what the South needs from all the North to the very tip of Maine is not its impatience but its prayers.

Sincerely,

JONATHAN DANIELS.

A Bombshell Fizzles

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Star of Saturday, May 5, 1956:

A BOMBSHELL FIZZLES

Some people must have been holding their breath when a Senate committee began its investigation of Murray Chotiner and his clients. For judging from many of the accounts of this affair, Vice President NIXON was going to be in pretty hot water before the committee got through.

Now Mr. Chotiner has come and gone. We know that he was Mr. NIXON'S campaign manager in 1952. We also know, although less emphasis was put on it, that he served in similar capacities for Senator KNOWLAND and Chief Justice Warren. We know that he represented some clients who are not exactly the kind of people one would be anxious to take home to meet the wife and children. And, finally, we know that his activity in behalf of the clients took him to the Department of Justice, where no favoritism was shown him, and to the White House in behalf of two airlines, both of which lost their cases.

But as the smoke drifts away, it is clear that the political bombshell has fizzled out. Mr. Chotiner, at least as far as the rec-

ord shows now, did nothing improper, nothing that scores of other lawyers are not doing every day for their clients. There is not a particle of evidence that Mr. NIXON had anything to do with these cases, or even that he knew about them. And certainly no one is going to contend that anything improper was done at the White House or by the Department of Justice.

What, then, was the excitement all about? Well, this is a political year. Mr. NIXON is a prime political target and it is to be expected that the Democrats and their partisans will take pot shots at him—maybe, even, that they will not always aim above the belt. This may be upsetting to Mr. NIXON'S partisans, but they should not lose too much sleep over it. Their man can take care of himself in this kind of politicking.

Democrats Loading Their Elephant Guns

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Sunday's Washington Star entitled "Democrats Loading Their Elephant Guns":

DEMOCRATS LOADING THEIR ELEPHANT GUNS

(By Frank R. Kent)

The type of campaign the Democrats plan to make this fall was somewhat stupidly revealed last week by Chairman Paul Butler of the Democratic National Committee on the Meet the Press television program. Not that there was much of a secret about it, but the naive, not to say crude, manner in which this brash young Indiana politician proceeded to outline what he intends to do was, to say the least, unusual.

LINE NOT PAYING OFF

So far as the President is concerned, Mr. Butler affirmed that his health was bound to be an issue, that the Democrats would emphasize his "lack of leadership" and his "failure to keep his promises." This, of course, is what the Messrs. Stevenson and KEFAUVER have been for weeks throatily asserting in their frantic effort to bag delegates for their August convention. It is also the theme upon which Senators such as MORSE of Oregon, and HUMPHREY of Minnesota, steadily harp. However, it seems more or less clear that this line is not really paying off. For one reason the health issue becomes ridiculous when compared to the Democratic performance of four times nominating the late F. D. Roosevelt, whose crippled state made him a vastly worse health risk than General Eisenhower, and the care taken to prevent his true condition from being fully understood by the American people contrasts most unfavorably with the complete frankness of this President and his doctors.

It is also true that the "lack of leadership" and "failure to keep his promises" allegations have fallen flat because they are so obviously partisan and so feebly supported that they are not taken too seriously even by the Democratic propagandists. Considering these facts, it was not surprising when Mr. Butler was asked what he had to say about Vice President NIXON'S now openly announced candidacy for renomination that his avid eyes brightened and his voice became more vibrant when he said, "Oh, we are certainly going to train our biggest guns on him." At the moment that is the Democratic strategy. Mr. NIXON is to be made the villain. Already, the Democratic cartoonists and the egghead intellectuals are concentrating on selling the American people on the idea that if Mr. Eisenhower is reelected (which seems fairly certain) and should he die before his second term ends (which, according to his doctors, seems most improbable) then the diabolic NIXON would become President.

Of course, if these things happen, that would be true—but not many balanced persons think either that they will happen or, if they did, that it would be an unmitigated calamity. The truth is that in the past 4 years Mr. NIXON has been the target for one of the most venomous and vindictive propaganda attacks leveled at any public man for a long time. When, after his "big-gun" statement, Chairman Butler was asked whether he thought that Mr. NIXON had been a bad Vice President, he dodged the question by declaring that Mr. NIXON, in his campaigns, had made shameful insinuations against his opponents. In effect, Mr. Butler said when NIXON ran for the Senate and House in California he had charged his opponents with being "subversive" and in 1952 had even reflected upon the patriotism of "that great President," Mr. Truman. Of course, this was not true. What Mr. NIXON did say was that the Truman administration had been "soft" on communism.

NIXON HELD JUSTIFIED

Certainly, no one who recalls Mr. Truman's frequent statements that the Alger Hiss case was only a "red herring" and who, among other things, remembers the manner in which he ignored the FBI's warning and information concerning the late Harry Dexter White, can feel that Mr. NIXON was not fully justified in what he said. Of course, when Mr. NIXON ran for the Senate, his opponent was Representative Helen Gahagan Douglas. Mrs. Douglas, a very handsome movie actress, was not a Communist and no one said she was. Nevertheless, she was affiliated with some very leftwing organizations and was an ardent radical of the extreme New Deal and Fair Deal type. Mr. NIXON did not libel her at all, but he did beat her very badly.

Enough has been said to show that Democratic "big guns" from Mr. Butler down are all being primed for an assault on Mr. NIXON. But they have little material and a poor case. Nor is Mr. NIXON a helpless, tongue-tied individual. On the contrary, he is one of the most effective and hard-hitting campaigners in the country, as his political and journalistic critics will find out before long. There are already signs that instead of a liability to the President he will turn out to be an asset. He is able, honest, forthright, and attractive. His record is clean. None of the charges against him can be made to stick. The Republicans are lucky to have him as the Eisenhower running mate. Certainly Mr. Eisenhower thinks so.

Immunity Under the Fifth Amendment

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial appearing in the Shreveport Times of April 30, 1956, entitled "Court Has Two Views About Immunity":

COURT HAS TWO VIEWS ABOUT IMMUNITY

Somewhat unnoticed generally, the United States Supreme Court recently made some emphatic statements in support of the principle of immunity contained in the fifth amendment. They came in the decision holding that the city of New York was not justified in removing a municipal college professor who had pleaded the fifth amendment when questioned about his possible Communist associations or activities.

Perhaps even less generally noted was the fact that these current contentions of the Supreme Court were very much the opposite of its own similar contentions in a previous case and indicated that the Court takes one position concerning immunity in cases involving capitalism and another position on cases involving communism—being against immunity in the former and for immunity in the latter.

In the current New York City College decision, the five-man majority opinion, written by Justice Tom Clark, contained a number of strong observations about the importance of the fifth amendment and the right of the individual to claim immunity from answering questions in any type of case. The opinion stated that the right of refusal to testify "has been recognized as one of the most valuable prerogatives of the citizen."

But in 1937 the Supreme Court said, in another decision, and with all of the liberal justices of that Court concurring, that the immunity privilege was not important. In an opinion at that time, the late Justice Cardozo, one of the most liberal Justices of that day, wrote:

"It (fifth amendment immunity) might be lost and justice still be done. Indeed, today as in the past, there are students of our penal system who look upon the immunity as a mischief rather than a benefit and would limit its scope or destroy it altogether. * * *

"No doubt, there would remain a need to give protection against torture, physical or mental. Justice, however, would not perish if the accused was subject to a duty to respond to orderly inquiry."

Justice Hugo Black, on the Court in 1937 as he is now, concurred in the Cardozo opinion that fifth amendment immunity did not really amount to much and also concurred in the current Clark opinion that it is "one of the most valuable prerogatives of the citizen."

The 1937 case was one which dealt with business interests supposedly engaged in illegal operation. For them, use of fifth amendment immunity was something terrible, in the opinion of the Supreme Court. The current New York City case is in the field of efforts to destroy Americanism and its liberties. Here immunity is of the highest importance, the Court holds.

In other words, the Supreme Court in these two separated decisions, has held that immunity is not important in cases involving economic liberties but it is highly important in cases involving so-called political liberties, even where the latter type of immunity might mitigate against welfare of the Government of which the Court is a part.

Independence for the Handicapped Through Employment

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. BUDGE. Mr. Speaker, it is with a great deal of pride and satisfaction

that I request the privilege of inserting in the CONGRESSIONAL RECORD a copy of an essay entitled "Independence for the Handicapped Through Employment," by Alaire Dickson, a student at Gooding High School, Gooding, Idaho.

Miss Dickson's essay won the $1,000 first prize in the 1956 national essay contest conducted by the President's Committee on Employment of the Physically Handicapped. Miss Dickson and the four other prize winners will receive their awards from Vice President NIXON at the annual meeting of the President's Committee on May 17 here in Washington.

The competition for this contest brought entries from 36 States, with more than 10,000 students participating.

The essay follows:

INDEPENDENCE FOR THE HANDICAPPED THROUGH EMPLOYMENT

(By Alaire Dickson, Gooding High School, Gooding, Idaho)

The man sat there, looking at the letter he held in his hand. From this letter his gaze shifted to the pile of books on his smoking stand and from these books he looked across the room and on out through the window across the wide expanse of snow covered lawn until his gaze at last rested on a solitary tree, outlined against the horizon in the dusk, its branches bare and gaunt.

A woman entered the room but paused and left quietly knowing that the man was deep in concentrated thought. How many times in the last year she had seen him sitting with the same quiet look on his face.

This man was her son and he had once been happy and full of life.

After his return from the war he had been different. He was still cheerful at times but for the most part he was despondent and sat in his chair in the way she had just left him. He was now a cripple, ranked among those others who were physically handicapped. He had lost his left arm and leg in one of those maddening surges up the Korean hills.

When he was first released from the hospital he had spent long hours reading accounts of the physically handicapped and their successes in the world. He had started his adjusted way of life with hope and optimism. But things had not quite worked out for him as in his stories and he had gradually become disheartened and discouraged.

As the man in the chair gazed at the tree in the distance, he thought back over the past few months. He had tried, hadn't he? He did have a degree, didn't he? If circumstances weren't the way they were, he would have a job and be looking forward to settling down and establishing a place for himself and his community. But no, that was impossible. How could a cripple find work, degree or no degree? People just did not want to be bothered with someone physically handicapped when there were plenty of able-bodied men available. American people, who have so much to be thankful for and look forward to, were so busy and wrapped up in their own affairs that they could not be bothered by a disabled person. He supposed it might be hard for these people to keep their emotions under control if there was a person around to be pitied. But wait, was he being entirely fair?.

This letter from the Plainview Construction Co. was the answer to his last application for work. It was like a stack of others in his desk. All polite and all saying that maybe later * * *. Yes, maybe later but he was going to keep trying. Others such as Hank Viscardi, who was a cripple, had found good jobs for thousands of the physically handicapped; and Eddie Axlrod, who had started a crusade for the handicapped even though he did not have long to live himself. These others had kept on trying until they had accomplished something. These were only two of the thousands who had made successful lives. He laid down the letter and picked up his pipe.

It was a warm, sunny day toward the last of January, and the inneroffice of the Plainview Construction Co. was flooded with sunlight.

The big man behind the desk rang for his secretary, and asked her, "Miss Larson, will you please send in Mr. Thames?"

Soon Mr. Thames entered the inneroffice, and after the usual greetings he seated himself and waited for his boss to explain why he had sent for him. The big man offered Mr. Thames a cigar and then began to speak.

"Do you remember that young man who was in about a month ago? The one that had his left arm and leg shot off in the war?"

Mr. Thames replied that he did remember the same young man.

"The point is," the big man continued, "we do need another blueprint man, and I have given a lot of thought to the idea of employing that young man. At first I didn't feel I wanted to be bothered with even an interview, but then after he had gone I began to think of the matter in a little different light, I sent for you because I wanted your opinion. I have looked up the records on this man, and he was a top man in college before he went to war. I think he is just the man we want. What do you think?"

Mr. Thames sat there for a moment looking at his cigar. "You know, Bill, ever since that young man was here and applied for that job I have been thinking a lot about it, too. That man should have the same chance for happiness as anyone else, and I feel it is part of our job as American citizens to do all that we can to make it easier for him and for other physically handicapped persons, too. What good are we as citizens if we cannot even try to help fellow men like him to have a small bit of the security that we could give him? And you know, Bill, that statistics and records prove that the physically handicapped are the top workers in most cases."

The big man answered:

"I am glad you approve because I wasn't sure just how the rest of the staff would take having someone around that they had to—well, sort of look out for."

"Now, wait a minute, Bill. I think you've got the wrong idea right there. That man doesn't need anyone to look out for him. One of the things he would hate the most would be a feeling of his fellow workers pitying him. He is really no different from you and I; he has had bad luck but he doesn't want to be carried around on a pillow. All he needs is a chance to prove what he is worth, and it is up to you to provide that chance.

"Thanks a lot. I just wasn't quite sure what to do. Let's keep this little talk confidential and wait and see how the rest of the employees take it.

"Sure, Bill. I don't think you will regret hiring him."

The mother of the disabled man was busy in her kitchen preparing a light lunch to be eaten out on the terrace. It was a warm, balmy evening, the kind of an evening that didn't come often in this part of Vermont during the summer months. She looked up from her work and began to talk to her son who was leaning against the table with his one arm over his crutch.

"Hasn't this been an enjoyable summer? So different from last year. You know, son, I was down at the market this afternoon and I overheard two men talking about you. The one man was telling the other about your new leg. He was saying that you had gotten so you hardly limped at all and that that was very exceptional for only having it fitted 6 months ago. Then he asked, "Wasn't it wonderful about your job down at the Plainview Co.?" The other man replied, "It was grand that you had such a good outlook toward the future." It wasn't until then that I noticed that that man carried a red and white cane."

Her son turned away and picked up a plate of date bread and made his way out onto the terrace where he contentedly seated himself and thanked God for his good fortune. He was now among the lucky of the physically handicapped. He now had security and respect and he had something to work for. Yes, life in general, was good.

The big man named Bill sat behind his desk and watched the leaves fall from the big maple outside his office window. This had been a good year, business was good and he was satisfied. He felt good, he had done something worthwhile besides earn money in the past year. He had not known before how wonderful it felt to do for someone else. Yes, employing the war veteran had done great things for him. He felt a new responsibility toward his fellow men and he liked that feeling. This next year he was going to do all he could to help other handicapped people in his community. After all, that was the least he could do. He had been surprised at the way all his employees had picked up and had done better as a result of their respect for the handicapped man. He was even considering investing some money in some way to help the handicapped. Yes, this had been a full year.

Two Weddings

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, my good friend Bert Gipple, of the Galesville Republican, makes a very interesting commentary on the recent marriages of Grace Kelly and Margaret Truman in the April 26 issue of the paper. Mr. Gipple sold his newspaper several years ago, but he is still active in community affairs and writes a column every week, at the age of 85. He is one of those independent editors who freely speaks his own mind and whose paper always had an editorial policy.

I know many Americans share the same views as those expressed in the editorial; our colleague, Congressman USHER BURDICK, wrote in like vein in a recent newsletter.

Under leave to extend my remarks, I am asking that Mr. Gipple's editorial be printed in the CONGRESSIONAL RECORD and I call my colleagues' attention to the article, knowing that they will draw their own conclusions:

TWO WEDDINGS

Don't blame the American press for the space given in news columns, pictures, syndicate stories and other play-up of the marriage of an American actress to the prince of a European principality who lords over the 368 acres which comprise his domain, and within is the greatest gambling establishment in the world, which provides the revenue for its government.

The press was merely supplying the demand of millions of readers, for something sensational, and the newspapers went to it for weeks before and afterward, even to stat-

ing the hour the "royal" pair retired to the nuptial couch.

Scarcely an article of the bride's apparel was left undescribed; how 35 designers and work people were engaged six weeks on her gown alone; how her diamonds and other jewels glistened; how thousands in resplendent uniforms and other garb packed the palace and cathedral or swarmed outside for the two marriage ceremonies; how scores of newspapers took ship across the seas to watch every move and cable every detail; that a special representative of the President of the United States was sent to express congratulations. The whole a grand show in which a fortune was expended for fanfare.

A few days later, in a simple ceremony in a little church in a small Missouri city, the same church in which her parents were married, another young woman was united in matrimony—the only child of a former President of the greatest Nation on earth. A woman whose name and charming personality were known the world over. The bridegroom was a newsman—a worker, not a playboy. The bride's costume was not elaborate; the diamond on a finger blazed no brighter than that of thousands of brides in the ordinary walks of life. The father who gave the bride away was in semiformal day dress. As one reporter stated, it was the same kind of wedding ceremony as that of any small town girl in any small town. To the last word it conformed to the traditional American spirit. There was no palatial yacht awaiting the couple to carry them away on their honeymoon.

Which of these weddings attested Americanism is for the world to decide. And in these turbulent times that decision is important.

Virtue and the Farm Bill

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

VIRTUE AND THE FARM BILL

The House has acceded to the request of the President and has passed legislation providing for the soil bank, which was the most important single proposal in the President's farm program as presented to Congress in his message of January 9. The bill calls for a total of $5.7 billion in additional farm spending over the next 4 years.

Though the President had asked only for the soil bank, on the desirability of which the administration and Congress were in complete agreement, it was probably expecting too much to suppose that Congress could resist the temptation to try to load it down with amendments of its own, designed to make itself solid with groups that might not stand to benefit from the soil bank. In some cases it failed to marshal the needed strength, but in several others it succeeded. The latter included at least one of the provisions that had been singled out specifically for criticism by the President in the massage accompanying his veto of the original omnibus farm bill. This was a provision calling for mandatory supports for the principal feed grains other than corn—rye, oats, barley, and grain sorghums.

In calling for enactment of a soil-bank bill the President had taken into account the frequently repeated refrain of the Democratic leaders that it was imperative to get additional income into the hands of the farmers this year. This, in fact, was the sole basis on which the opposition attempted to reinstate 90-percent price supports in the bill vetoed by the President—a policy which, as one commentator recently put it, "is like prescribing a diet of sugar for a diabetic."

Congress had procrastinated so long before giving the President the soil bank when he first asked for it that it would have been of little use so far as increasing farm income this year was concerned. The President, in making his second request for the bank, therefore proposed that any farmer who formally contracted to withdraw acreage from surplus crops under the bank's provision receive an advance on the payment he was to receive after the contract had been carried out.

This, needless to say, put the Democrats, who had been demanding immediate cash for the farmer, in a highly uncomfortable position. Should they approve the proposal for prepayments and thus permit the administration to take credit for getting purchasing power promptly into the hands of the farmers? Or should they block the administration's plan, and run the risk of alienating perhaps an equal number of farm votes? And if they chose the latter course, how would they rationalize their action?

In the end they chose the second course. This would seem to be dubious even from a political standpoint. But the opposition has insisted on making it a little ludicrous as well, by attempting to clothe their decision in the robe of moral rectitude. Their position, it would seem, comes down to this: It is politically moral for you yourself to pump out additional income to the farmer if you do it through 90 percent rigid supports, a mechanism under which the producers of crops already in surplus are encouraged to increase that surplus; it is immoral when someone else proposes to raise farm income through an apparatus which is based on the sound principle that to be eligible for additional income the farmer must cooperate in reducing the farm surplus.

United States Faces Shortage in Scientific and Engineering Manpower

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following statement by David Sarnoff, chairman of the board, Radio Corporation of America, before the Subcommittee on Research and Development of the Joint Committee on Atomic Energy:

STATEMENT BY DAVID SARNOFF, CHAIRMAN OF THE BOARD, RADIO CORPORATION OF AMERICA, BEFORE THE SUBCOMMITTEE ON RESEARCH AND DEVELOPMENT OF THE JOINT COMMITTEE ON ATOMIC ENERGY, UNITED STATES CONGRESS, APRIL 25, 1956

Mr. Chairman and members of the committee, permit me to congratulate your Subcommittee on Research and Development and its able Chairman, the Hon. MELVIN PRICE, upon your initiative in undertaking an earnest inquiry into the problem of scientific and technological manpower. I fully share your concern in this area and therefore consider it a privilege to appear here today.

The existence of the problem is by this time fairly common knowledge. There has been no dearth of warnings about the shortage of trained men for our vast and ever growing industrial complex.

What is needed, however, is a thorough examination of the whole field, including a systematic collation and appraisal of suggested solutions, as a basis for recommending practical action. This, as I see it, is the heavy assignment shouldered by your subcommittee and it can count, I feel confident, on the understanding and cooperation of industrial, educational and military leaders.

An important byproduct of the inquiry, of course, should be a clearer appreciation by the American people as a whole of the dimensions and urgency of the problem. Under our way of life, an enlightened and sympathetic public opinion is indispensable in attacking and surmounting major challenges. This is especially true where, in Congressman PRICE's words, "the emphasis must be on Federal leadership," because "only the Federal Government has the resources and prestige" required for adequate and effective action.

American security and industrial strength, two goals which are completely intermeshed, are today dependent upon our success in overcoming present shortages and assuring an expanded reservoir of scientists and physicists, trained engineers and technicians. This hardly needs to be proved, it is so self-evident. There is no substitute for brains and practical skills in a technical age like ours. Automation, it is true, is advancing with giant steps. But every step, if it is not to turn into a stumble, demands additional contingents of qualified personnel.

The best machines and weapons are worthless if there are not enough competent men to operate them. What is more, neither machines nor weapons will long remain the best unless research and development are maintained at a high level and dynamic tempo, which in turn calls for a constant accretion of specialized personnel.

Science and technology have long been the hallmarks of our American civilization. Throughout the world, our industrial and technical progress is described as Americanization. American supremacy in these fields is historic.

It is extremely disturbing, therefore, to learn that Soviet Russia is already turning out engineers at a greater rate than we do. It comes as a shock to be told that if the present trends continue, the land of communism will, within a decade or sooner, outstrip the United States across the technological board. In the struggle between freedom and communism now underway, this is a situation that we cannot afford to view complacently.

I skip the supporting statistics. These will no doubt be developed in other testimony. Besides, your subcommittee has already done a necessary and splendid job in collecting and publishing, just last month, the basic facts on "Engineering and Scientific Manpower in the United States, Western Europe, and Soviet Russia." Those facts leave us little margin for smugness.

Of course, a police state can and does compel its youth to enter careers of its own choosing. It conscripts minds as ruthlessly as it conscripts bodies. That kind of regimentation, thank God, is ruled out in our country. Other methods, wholly within the framework of our cherished freedom of choice, must be developed and put to work.

We must not let our natural revulsion against the fallacies and the crimes of communism and its dictators lead us to underrate the capacities and abilities of the Russian people. Their youth are made to feel it is their patriotic duty to study and acquire knowledge and skill in the fields of science and technology. The Soviet Government even goes so far as to extend special privileges to its scientists and engineers.

In America, science and technology have long been so all-pervasive, so familiar, that they are taken for granted. Some of the aura of excitement and adventure which surrounded them in an earlier period has begun to fade out.

We must rekindle in our youth that sense of adventure in pushing forward the horizons of science, research, and invention. They must be helped to feel the thrill of delving into the mysteries of chemistry and physics, electronics, atomics, and aerodynamics. They must be made conscious of wonderful scientific worlds to be explored, mapped, and opened up for the good of all mankind.

That task belongs primarily to the schools. But parents, industry, the press, and social organizations can play a vital role.

Despite the many opportunities for gainful employment in the technical fields available and widely advertised—the fact is that not enough young Americans are taking up scientific careers. Why? Many guesses have been made. But it is vitally necessary that concrete knowledge replace guesswork on this score. Why should not these young Americans themselves be questioned on that subject? It seems to me that a survey or poll of students in the senior year of high school and the freshman year of college—the critical years of career decisions—might well provide information helpful in drawing more qualified people into engineering and related fields.

Our economy and our national safety alike will suffer seriously unless we act now and vigorously to solve the urgent problem of technical manpower. The immediate lack—already an embarrassment to large and small companies—will not cure itself. The diagnosis must be made and the therapy prescribed.

Long-term treatment is essential; but interim measures, short-term remedies, are also vital. The recommendations I should like, with your permission, to put on record today are in that short-term category. They are not presented as cure-alls, but simply as measures that could go a long way toward ameliorating the present critical situation.

A current shortage of teachers in scientific and technical subjects is generally recognized as one of the immediate problems. Several months ago, at a dinner of the National Security Industrial Association held in Washington, D. C., I proposed the establishment of what I described as a "National Educational Reserve." It would comprise qualified teachers of mathematics, physics, chemistry, engineering and related subjects, to be drawn from the ranks of industrial technology.

I suggested that industry release—with full pay, for at least 1 year—a reasonable number of men and women for teaching assignments in nearby educational institutions, particularly the upper grades in high schools. This unique Reserve could also mobilize persons who have reached the retirement age in the military services and in industry, but whose experience and knowledge would make them competent and inspiring teachers. It could take in, also, qualified people willing to teach in night schools without taking leave from their industry jobs.

The number of teachers furnished by any single company would be too small to entail hardship for the plants, offices and laboratories from which they are detached. But, if drawn from a wide list of organizations, it could be large enough to give new impetus to the teaching of sciences in our school system. This would be especially true at the high school level, which is at present the tightest bottleneck.

I envisage this educational reserve, of course, as a temporary expedient, let's say for 5 years, to help meet an immediate need, while more permanent solutions are being worked out. Moreover, whether the initiative is taken by industry or Government or, as would be more likely, by both, the plan itself would naturally be drawn with the consent and cooperation of school authorities, who would prescribe the courses and regulate the instruction.

As we all know, many men and women who normally would have become teachers of the sciences have gone instead into industry, where the economic rewards are more attractive. The fact that teachers are generally underpaid, that many of them can do better in private jobs, enters into the equation of teacher shortages and must be remedied. That aspect, too, I hope, will be covered in the course of this inquiry.

Meanwhile, it is a fact that industry has siphoned off some personnel from the educational system. It would seem to be industry's obligation to recognize this fact. But, obligation aside, industry would be well advised, as a matter of clear self-interest, to help replenish the reservoir of trained manpower by stimulating relevant studies at all educational levels. Its current hunger for engineers and other specialists will turn into a serious famine if existing conditions are not quickly improved. Industry must take a leaf from far-sighted conservationists, who plant two trees for every tree they cut down.

I am quite confident that, in the main, industry will cooperate with an educational reserve. The public is not fully aware of the extent to which corporations today are providing scholarships, fellowships, and other inducements to promote the study of engineering and science. Some of them, in addition, are contributing funds to help maintain or enlarge educational institutions related to their particular fields of enterprise. The Radio Corporation of America, I am pleased to be able to say, has been among the pioneers in such endeavors. All of which attests, if any proof were needed, that industry is in a mood to support any practical undertaking likely to increase the flow of trained manpower into its ranks.

The teachers in the proposed educational reserve would obviously be persons with backgrounds of practical experience. Thus they could bring into the classroom the breath of living reality. They would help to stimulate that sense of adventure in technical careers to which I have already alluded. They would inspire many an able and imaginative student to follow the scientific and technological disciplines into the college years. Enthusiasm is contagious.

To make the project attractive, teachers enrolled in the Reserve should be given recognition and status through membership in an organization somewhat similar to the various national military reserves. I believe it should be set up on a national scale, perhaps by an act of Congress, with membership carrying appropriate titles, diplomas, and the like. The educational reservists would thus be recognized, and rightly so, as a vital element in the equation of national security.

I have presented this concept in broad terms. There may be flaws in it which a detailed formulation could correct. Since its presentation the response to the proposal from many quarters has been impressively favorable. I trust that we can move ahead without undue delay, because each passing day makes our problem more difficult.

It is the unique nature of science that the more it accomplishes, the more remains to be accomplished. Every new invention or discovery, far from narrowing down the perspective, opens up exciting new horizons of exploration. Science, of which engineering is a part, is never static or finished. Its every achievement marks a new beginning. Though rooted in the past, its thinking and its mood are ever geared to the future.

In attacking the problem of manpower, we must, therefore, also gear our planning to the future. Nuclear energy, as the most recent development, with almost limitless prospects of growth and useful application, necessarily plays a large role in the planning. The awesome destructive aspects of this new force in our lives are overdramatized, to the point where its beneficient potentials are obscured.

We must bring home to the youth of the Nation the truth that nuclear energy is essentially a force for good, capable of creating a world of abundance to match men's most optimistic dreams. With this in mind, I wish to make another recommendation:

To signalize the importance of the scientist, the physicist, the engineer, the man of technology in the dawning age of nuclear power, I suggest the construction of atomic reactors on the campuses of a selected and limited number of American colleges and universities. This step would serve many purposes directly and indirectly in line with the attainment of the goals we seek.

These reactors would operate to stimulate the interest of students in matters scientific. They would help to enhance the prestige of the physical science departments of the various schools involved. These factors in turn would help to build up the enrollment of young people in the technical fields.

The presence of the reactor would provide a living laboratory, to heighten the realism of instruction. It would enable the student to get a glimpse of his own role in the nuclear future. Under the guidance of competent teachers, it would stir him to visions of applying this force for constructive purposes. The impact on the student, in short, would be at once inspirational and practical.

Incidentally, each reactor could be utilized to furnish power for the operation of the college or university where it is located. In this way the actual or prospective science student would not only have the possibility of working on a reactor in being, but would be permitted to see nuclear energy in its peaceful use.

Gentlemen, to insure the continuation of technological progress in our country, to guarantee American security, we must solve the problem of specialized manpower. We must, without further delay, devise and implement means of attracting ever-increasing numbers of our ablest young men and women to scientific studies. Every new student carries the possibility of important contributions to science, research, and invention. We must nourish that possibility and encourage its expression.

Experience has taught that the beginnings of our progress as individuals and as a Nation have often been found in tiny seeds. The steam engine was born in a tea kettle; the airplane came out of a bicycle shop; the automobile first sputtered and moved in a small carriage shop; and broadcasting started from an amateur station in a private garage. Today, the architects of our future are largely the young people in our schools. We must stimulate their vision of achievement and open to them the paths to its realization.

The problem of adequate-trained manpower, underlined for us by the progress in Soviet Russia, must be met promptly and with full recognition of its immediacy and urgency. I am convinced that if all of us face up to the challenge now, America can solve this problem and maintain our leadership in science and technology.

Perspective on Airpower

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in

the RECORD, I include the following editorial from Sunday's Washington Star:

PERSPECTIVE ON AIRPOWER

President Eisenhower has given a sense of perspective to the current Senate inquiry into the status of our air power. As he has just told his news conference, the fact that we seem to be lagging behind the Russians in the production of intercontinental bombers like our B–52s should not be allowed to obscure the overall picture of our strength in the skies. Nor should it be taken to mean that some sort of "crash program" must be launched forthwith to insure that we will have more such bombers than the Soviet Union.

Actually, the B–52s of our Strategic Air Command represent only one part of the aerial might of the United States. The other parts, as the President has said, ought not to be overlooked or underestimated. They include our globe-circling overseas bases and our great fleet of B–47 medium bombers. They include also by far the most powerful of the world's naval aircraft and carriers. In these categories—forward bases, planes like the B–47 and an incomparable flying Navy—we are decidedly superior to the Russians, even though they may be threatening to surpass SAC, 3 or 4 years from now, in the field of intercontinental superbombers.

The President has spoken commonsense in declaring that it is not necessarily true that we must keep ahead of the Russians, numerically, in the B–52 class. Their requirements differ from ours, and ours from theirs. So our airpower must be tailored accordingly, with emphasis on quality and with a constant awareness that "it is vital that we get what we believe we need," and not just quantity to match the quantity of Soviet intercontinental bombers. When the Defense Department presents the full picture to the Senate investigators, then the American people, as Mr. Eisenhower has suggested may find that our total sky strength promises to keep on being second to none.

The Tragedy of the Marines in the Creek

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I call to your attention, and that of my colleagues, an editorial appearing in the Christian Science Monitor on Thursday, May 3, 1956. Being a member of the Armed Services Committee, I feel this editorial is very pertinent:

THE LESSON OF RIBBON CREEK

The problem which has been agonizingly dramatized in Parris Island's Ribbon Creek is one so deep and so wide that it reaches into every home, every schoolroom, of the land. It has always been just as deep and wide. For it is this:

How to implant the hard virtues without stamping out the tender ones. How to instill loyalty, obedience, discipline, a sense of duty, fortitude, and resolution, and at the same time preserve the equal values of compassion, affection, initiative, and individuality.

Every parent, every teacher—whether he will or no—faces this question daily. The difference between their task and that of the military commander is but one of emphasis. If it may be said that the trend of the times has carried modern parents too far in one direction, then it must be said that the continuing shadow of "the ordeal of battle," as Marine General Pate puts it, has kept the military oriented too single-mindedly, perhaps, toward the other.

For it is upon the hard virtues that military necessities make hard demands. And military (and naval) services of all nations stress them. Every nation has need of especially trained elite units which stress them even more. The prime American example is the Marine Corps. And the men in the ranks of that corps have been products for over half a century of the Parris Island system. But, says the marines' commandant with forthright frankness, "these men are products of a system which also produced the tragedy of Ribbon Creek." And he promises the American people to do something about it.

As to the mechanics of the system and its reorganization: Marine combat units are organized much as are the Army's—officers in command of companies and most platoons, in continuing and direct contact with the men. But marine trainees are organized into companies almost the size of battalions, with few officers and with all platoons under sergeants. General Pate promises that there will be greatly increase officer supervision.

This alone would require the premise that officers are, ipso facto, more skillful and humane than sergeants—a shaky assumption. The core of the trouble has been that all instruction and, in effect, most discipline have been left to the drill sergeants. Supervision from the officer level above and appeals from the recruit level below have tended to stop at a chasm which yawns between the experienced and well-entrenched corps of noncoms and the commissioned officers. The latter are largely submerged in administrative duties.

The drill instructors of today, no doubt, are less experienced than those of the old Marine Corps. As to that General Pate is correct. But we doubt seriously that the system is any less vulnerable to petty tyranny and brutality than before World War I and during the 20 years after, when there were no citizen marines and the public didn't care.

All of which leads back to the essential problem. This the Marine Corps must solve, no matter how much the drill instructors are supervised by officers; else drinking and capricious punishment could spawn another tragedy some day. The whole Nation must face it too. For signs multiply that American society is failing to teach many of the strong virtues—and not succeeding spectacularly with the others.

Fluoridation of Drinking Water

EXTENSION OF REMARKS
OF
HON. MARTIN DIES
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. DIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NATURAL FOOD ASSOCIATES,
Atlanta, Tex., May 2, 1956.

Congressman MARTIN DIES,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DIES: Artificial fluoridation of public-drinking water is a hoax on the American people. Last week the Texas Medical Association voted unanimously not to indorse it and voted further not to let the subject come up again for 5 years.

The simple truth is that the United States Health Department is trying to force mass medication on the American people.

There should be a congressional investigation of this matter. The security of our Nation is endangered by the instillation of fluorine in our Army, Navy, and Airbases.

I know that you are very busy but this matter is vitally important now. If you would like to have scientific information about this subject I will be glad to send it to you.

Sincerely,

DR. JOE D. NICHOLS, M. D.

No Disarmament Pact in View

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. MULTER. Mr. Speaker, Mr. Roscoe Drummond in the following article entitled "Where the Disarmament Talks Stand," makes a number of intelligent observations on the current U. N. disarmament talks in London. The article which appeared in the May 6, 1956, issue of the New York Herald Tribune is worthy of the attention of our colleagues:

WHERE THE DISARMAMENT TALKS STAND
(By Roscoe Drummond)

If we are going to understand what hasn't been happening at the U. N. disarmament talks in London, we have to dissect some of the diplomatic double-talk. This clarifying statement comes from British Prime Minister Sir Anthony Eden: "This (disarmament) is just the kind of question we have to consider and examine in the light of the discussions we have had, and we would be wise to do that for the purpose of getting results rather than for any other purpose." What Sir Anthony is really saying, I think—and he can be vague with the best of them—is that nothing has been settled, that nobody wants to take the blame for ending the negotiations, and that we ought not to make things worse by using harsh words. That's true, but we also ought not to make things obscure by using mellifluous words. Harold E. Stassen, chief American delegate to the meeting, threw his own shaft of darkness on the situation with this report at his London press conference: "There has been important progress and significant steps to move together. The areas of disagreement remain more important than the areas of agreement."

What Mr. Stassen is really saying is that progress seems significant only because so little has been made in the past and that, actually, no disarmament pact is in sight at all, anywhere, as far ahead as anybody can see.

Of course, the discussions should continue—and they will. The Soviet Union does not want the discussions to break down even if they do not want them to produce any universal disarmament at this stage. And our position should be visible for the whole world to see—a willingness to make a solid beginning of arms reduction based on a system of inspection which would rule out the danger of a surprise attack.

But the ingredients of a workable, disarmament-inspection system are not within reach, and the last thing the West can afford to do is to start down the road of a paper disarmament treaty which cannot be wit-

nessed and policed to make sure that it is being totally observed.

The ingredients are simple if both sides want an inspection that works. They are (1) sufficient inspection on both sides that will prevent the surprise use of nuclear weapons; (2) an agreed level of forces, both conventional and nuclear, which does not destroy the deterrent balance of power between the Communist world and the free world.

When Mr. Stassen says that "important progress" has been made, he means only that if you rule out the biggest issue of arms inspection, the Soviet and Western proposals for arms cuts are nearer today than at any time since the talks began.

When Mr. Stassen says that the "areas of disagreement remain more important than the areas of agreement," he means there is no real meeting of the minds whatsoever on arms control and inspection.

There are two tremendous gaps between the Soviet and American positions. We have accepted the Soviet proposal for "ground inspection"—inspection of nonatomic installations, depots, arsenals, and staging bases. Moscow has not accepted the American proposals for air inspection. We have offered to exchange full inventories of military establishments. Moscow has rejected it.

We have advocated that U. N. treaty inspectors have unimpeded access to the agreed areas of inspection. No strings. No limitations. Moscow ties inspection to the U. N. Security Council which, through the veto, enables the Soviet Union to impede access whenever the Soviets so willed.

I can discern no evidence that the Kremlin wants to make any mutual disarmament possible now. Obviously it wants to keep talking disarmament in order that it can maintain the appearance of pressing for disarmament. But U. N. statistics show that the Kremlin increased its military spending last year by 12 percent.

There is an understandable reason why the Soviets don't want to accept mutual disarmament at this time. They no doubt feel that soft words and continuous talk will cause the West by itself to relax its defenses.

That would be fatal. True military strength will not build the peace, but it is the shield to the free world without which there would be no chance of building the peace.

Los Angeles Seeks More International Air Travel Out of Los Angeles International Airport—Board of Supervisors Unanimously So Resolve

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention, and that of my other colleagues, a memorandum of minutes of the Board of Supervisors in Los Angeles County, Calif., relating to international air travel out of Los Angeles International Airport:

The board met in regular session. Present: Supervisors Kenneth Hahn, John Anson Ford, Burton W. Chace, and Roger W. Jessup; and Harold J. Ostly, clerk, by James S. Allison, deputy clerk. Absent: Chairman Herbert C. Legg.

• • • • •

IN RE CHAIRMAN PRO TEMPORE

On motion of Supervisor Ford, unanimously carried (Supervisor Jessup being temporarily absent) it is ordered that Supervisor Chace be and he is hereby appointed chairman pro tempore until the return of Chairman Herbert C. Legg.

• • • • •

Minute Book No. 426, page 37:

IN RE APPLICATION OF KLM ROYAL DUTCH AIRLINES FOR PERMIT TO OPERATE OUT OF LOS ANGELES INTERNATIONAL AIRPORT: ORDER SUPPORTING AND INSTRUCTING CLERK TO SUBMIT PETITION TO CIVIL AERONAUTICS BOARD, WASHINGTON, D. C.

On motion of Supervisor Ford, unanimously carried, it is ordered that the request of the KLM Royal Dutch Airlines for foreign air carrier operating permit out of Los Angeles Airport be, and the same is hereby supported by this board, and that in view of the destiny of Los Angeles as one of the greatest international airports in the world, it is ordered that the clerk of this board be and he is hereby instructed to petition the Civil Aeronautics Board in Washington, D. C., urging serious consideration of said application in order that there may be speedy establishment of a direct Los Angeles-Amsterdam air connection.

I, Harold J. Ostly, county clerk of the county of Los Angeles and ex officio clerk of the board of supervisors of said county, do hereby certify that the foregoing is a full, true, and correct copy of the original minutes of the board of supervisors, as entered in Minute Book No. 426, page 37, in re application of KLM Royal Dutch Airlines for permit to operate out of Los Angeles International Airport: Order supporting and instructing clerk to submit petition to Civil Aeronautics Board, Washington, D. C.

In witness whereof, I have hereunto set my hand and affixed the seal of the board of supervisors, this 26th day of April 1956.

HAROLD J. OSTLY,
County Clerk and ex officio Clerk of the Board of Supervisors of the County of Los Angeles, State of California.
By JAMES S. ALLISON.

Federal Highway and Highway Revenue Acts of 1956

SPEECH
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10660) to amend and supplement the Federal-Aid Road Act approved July 11, 1916, to authorize appropriations for continuing the construction of highways; to amend the Internal Revenue Code of 1954 to provide additional revenue from the taxes on motor fuel, tires, and trucks and buses; and for other purposes.

Mr. MACK of Illinois. Mr. Chairman, I strongly favor this legislation as it is essential that we have a sound highway system throughout our entire country. It is vital to our commerce and industry, and it is necessary for the Federal Government to take the leadership in developing an adequate system of interstate highways. I have always favored a sound interstate highway system and I have consistently supported all sound proposals to attain this goal. However, I did not feel justified to vote for the highway proposal submitted during the last session of Congress, as the financing provisions of this legislation were not equitable.

I feel that the committee has done a remarkable job in considering this legislation. They have included the best features of the highway proposals and have endeavored to equitably distribute the load to pay for the highway program. They have used extremely sound judgment in including the Davis-Bacon provisions in this legislation as this provision will have a stabilizing effect and will protect the individual communities when the constructon program is underway.

Mr. Chairman, our highway system is today entirely inadequate. It has not only contributed to highway accidents but has actually formed a roadblock for commerce throughout the country. This bill with its long-range aspects will eliminate most of the present inadequacies and will contribute much in the further development of our country.

Soviet Union Taking Lead in Airpower and Missiles Race

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. MULTER. Mr. Speaker, permit me to direct the attention of our colleagues to Mr. Stewart Alsop's column entitled "Missiles and the President" which appeared in the New York Herald Tribune for May 6, 1956. It is as follows:

MATTER OF FACT
(By Stewart Alsop)
MISSILES AND THE PRESIDENT

WASHINGTON.—In this era of complacency, the most cogent warnings are blithely disregarded. For example, former Assistant Secretary of the Air Force Trevor Gardner has written two articles in Look magazine citing undenied facts to prove that this country is losing both the airpower and the missiles race to the Soviet Union. Hardly anybody has paid much attention. Perhaps more attention would have been paid if it had been known that the second Gardner article, on the missiles race, was written in the hope that it would be read by President Eisenhower, and that the President would recognize in it a special, hidden meaning. The story goes back to last November, when the President, at a meeting of the National Security Council at Camp David, again took up the reins of Government after his heart attack. At the Camp David meeting, the President was briefed on the major problems confronting his administration. Gardner, together with Deputy Secretary of Defense Reuben Robertson, and one or two others, was assigned to brief the President on the missile problem. The President was told how, in midsummer, almost certain knowledge had come into the hands of the Government that the Soviets were already testing medium-range missiles. He was told how a decision had very recently been taken to start a new missiles program to attempt to match the Soviet achievement in the medium-range field. And the cumbrous organization of the whole missile program was described to the President.

After his briefing, the President asked certain angry questions. And that is why Gardner's second article, "Our Guided Missile Crisis," should have had a special significance to the President. Toward the end of the article, there appears the following paragraph, which Gardner italicized:

"Why did it take from August to November to make a decision to proceed with the medium-range missile? Why is the present organization so filled with committees? Why wasn't one man put in charge of the entire programs at an early stage? * * * Won't interservice rivalries and the multiplicity of programs result in a slow-down of intercontinetal ballistic missile progress? Why isn't the ICBM given a clear top priority over other missiles programs?"

These are, in paraphrase, precisely the same questions which the President asked the assembled moguls of his administration at Camp David, after he had been briefed on the missiles crisis by Gardner and Robertson. The questions remain unanswered—a point which Gardner, when he wrote the article, undoubtedly hoped would strike the President.

The President has, in fact, recognized from the first the huge significance of the evidence of Soviet success in the missile field. After the evidence became available, and while the President was vacationing in Colorado before his heart attack Secretary of the Air Force Donald Quarles wrote a memorandum for him on the missile problem.

The Quarles memorandum took the line that the Soviet achievement was important, but not decisively important, in view of the continuing superiority of the United States in the air-atomic field. The memorandum recommended progress in the missile field with all practicable speed.

The President revised the memorandum in his own hand, underlining the decisive importance of the Soviet achievement, changing "all practicable" to "all possible," and assigning top priority to missile development. Again, at the Camp David meeting, as the questions paraphrased by Gardner suggest, the President made it abundantly clear that he was deeply disturbed by our relative lack of progress in the missile field. He said that he was determined to get someone to run the missiles program the way it ought to be run, even if he had to do the job himself.

Yet, the President's angry questions still need answering, and, as Gardner proves beyond question in his article, the missiles program is still inadequate and badly organized. It is not really being run by any one. Why?

Gardner asked the same question in his article: "How can all this happen, many citizens will ask, when the President himself is a great general? It happens because * * * the communications system he relies on simply isn't working."

This is another way of saying that the built-in resistance in the vast bureaucracy of the defense establishment to the needed drastic change in the organization of our missile effort has, so far, proved too strong for the President to buck—about as disturbing a conclusion as it is possible to imagine.

Gen. Milan Stefanik

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. REUSS. Mr. Speaker, many of us paused briefly last Friday, May 4, to mark the anniversary of the death of Gen. Milan Stefanik. Stefanik was a Slovak and one of the great leaders of the Slovak people. But he was more than a mere national figure. He was a man respected in the years during and just after World War I, and revered in memory now, as a true statesman in the cause of all the democratic values which Americans and Slovaks alike hold dear. Though 37 years have passed since his tragic death, we can never forget what he did and stood for. His life will always give new inspiration to all believers in freedom and justice, whether they now enjoy and vigilantly defend the blessings of liberty in the United States, or are suffering under the tyranny of a cruel dictatorship behind the Iron Curtain.

Support of Our National Parks Is a Public Responsibility and a Public Privilege

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to herewith present a timely and significant article appearing in the Christian Science Monitor under date of Thursday, May 3, 1956.

SUPPORT OF NATIONAL PARKS: A PUBLIC RESPONSIBILITY

In addition to efforts of those charged with immediate responsibility for the national parks—efforts now being carried forward in the National Park Service's Mission 66—the private citizen has a vital role in helping to safeguard these natural treasure houses of beauty and inspiration.

THE NATIONAL PARKS: A HERITAGE WORTH SAVING

(By Max K. Gilstrap)

WASHINGTON.—A massive effort to save the national parks from further despoliation and even eventual destruction has begun to gather momentum. Its continued progress will depend upon how much Americans treasure their priceless scenic and historic heritage, on how much support they give to the protective efforts now under way. Only an aroused and vocal public—the people who own the parks—can insure that the parks and monuments will be saved.

Of greatest significance, Conrad L. Wirth, Director of the National Park Service and originator of the bold, imaginative Mission 66 program to provide urgently needed parks preservation over a period of 10 years, has enunciated his unequivocal stand to keep the park areas free from any activities that would impair their natural state as envisioned by the park founders.

Affirming that the National Park Service's fundamental policy of protection has not changed, Mr. Wirth says, nevertheless: "There are situations and conditions in the national park system to which I object. * * * As rapidly as it is feasible to do so we hope to remedy them, meanwhile preventing others from developing or becoming established.

"We definitely do not want the national parks to be resorts as that word is commonly understood," says Mr. Wirth.

Challenge anticipated

Along with this heartening policy statement, the best news the Nation could have with spring in the air and the wilderness beckoning is the hearty reception that has been given here in Washington to Mission 66.

Park officials warn, however, that the assistance program in the national parks has just begun after long years of neglect and that the upward trail ahead is beset with the obstacle of general apathy and the challenge to promote public enlightenment. These must be met before the peaks of parks preservation are reached. Even then, continued vigilance and efforts will be necessary.

Park enthusiasts have been pleased with the reception given the Park Service's Mission 66 plan. President Eisenhower enthusiastically approved the program, and his administration authorized a very substantial increase in the Park Service's rather modest 1957 appropriations request.

Not to be outdone, Congress, with a warming glow of appreciation for the Nation's great scenic and historical shrines, increased the appropriations again.

As it now stands, the House has passed a 1957 national parks appropriation in the amount of $67,688,000 and the Senate has approved one of $68,020,000. All that remains is the minor task of adjusting the differences in conference.

What about the Mission 66 program after 1957?

Budgetary plans for the succeeding 9 years will follow a funding schedule set forth in the Mission 66 report and in a booklet, Our Heritage, published by the Park Service. As the program rolls forward, revisions will be made according to needs.

Besides yearly appropriations necessary to carry out the program, certain authorities will be needed to facilitate operations. Thus three bills have been introduced for this purpose. These bills, recognizing Mission 66 as a 10-year program, would be an expression of congressional approval of the entire program.

Public briefed

In brief, there are five things the public should know about Mission 66 at this time, according to Howard R. Stagner, assistant chief of the Mission 66 staff:

1. The program will go forward only so long as the American people are actively behind it.

2. Mission 66 is basically a conservation program. However, it necessarily includes a great deal of construction. But it will not invade areas that must be left alone, nor intrude upon significant features. Only adequate and properly designed developments will be installed. Relocation of developments that now intrude will be accomplished.

3. Mission 66 is a 10-year program, and while every area will benefit, not all areas will benefit during the first few years. To be practical and fair, the Park Service will take care of the most urgent needs first.

4. The Mission 66 plan for any area must be scaled to its anticipated future use. In the past, when travel grew from 100,000 to 200,000, the problem could be met merely by expanding facilities. Jumping from 1 million to 2 million is a far different problem. It cannot be met merely by expanding, but will require a different plan of operation if the basic purposes of the national parks are to be fulfilled.

5. The national park system cannot continue to absorb the expanding recreational needs of the Nation. The expansion of State, county, and municipal parks and recreation areas must go on concurrently. Other places are needed to provide local recreation and special uses for which the national parks, with a distinctive national purpose, are neither well situated nor suited.

Mr. Wirth expresses deep appreciation for the support being given Mission 66 by the public, the press, the administration, and Congress. He asks for public patience and restraint as the Park Service strives to strike

a proper balance between use, preservation, and development. He assures that each area will receive fair and proper treatment in accordance with the urgency and extent of its needs.

Mr. Wirth says that as Mission 66 goes forward its guiding principles are the fundamental preservation and public use of the national parks. "These principles will prevail," he says; "it is only our practices, the way of meeting the objectives, that change with the times. Our national parks must be used if they are to be of their intended value to the Nation, but that use must not destroy or impair their distinctive features and inspirational quality and atmosphere."

PARKS ARE NOT RESORTS

(By Conrad L. Wirth, Director, National Park Service)

WASHINGTON.—One of the many blessings that we enjoy in this free country of ours is a magnificent heritage of scenic beauty and historic shrines in the national-park system. The people of this country have entrusted the National Park Service with responsibility for passing this heritage on to generations yet unborn, a heritage unimpaired for their use and enjoyment. I speak for all of us in the National Park Service when I say that we shall carry out that trust.

Mission 66, a program of conservation formulated by the National Park Service, recommended by the Department of the Interior and the President, and now given general approval of the Congress, is directed to the fulfillment of the original purposes of parks use and preservation. We are enjoined by the 1916 act creating the National Park Service to promote and regulate the use of the areas entrusted to our keeping for the purpose which the act defines.

The Mission 66 report rightly declares that substantial and appropriate use is the best means by which this basic purpose is realized and is the best guaranty of perpetuating the system.

Thus far, thanks to the fine backing of the Department of the Interior and the splendid cooperation of conservation and civic groups and information media throughout the country we have been successful in fighting off such threats to the parks as:

The building of an aerial tramway far up the slopes of Mt. Rainer; carving up a quarter million acres of unique rain forest from Olympic National Park; construction of a dam which would drown some 19,000 acres of Glacier National Park; erection of a television tower atop a historic landmark on the Oregon Trail; and the installation of a whole series of reservoirs in the majestic wilderness of Kings Canyon National Park.

Had these and other proposals been successful they would undoubtedly have resulted in impairment of the parks.

An examination of the Mission 66 proposals will disclose the special stress given to enlarging and strengthening the Service's interpretive program. This program makes for a fuller appreciation of our heritage; we value it also because such appreciation carries with it a stronger attitude of protectiveness toward the parks.

We are endeavoring, in Mission 66, to provide adequately for those kinds of enjoyment that are suitable and nonimpairing, by installing more campgrounds in proper locations; by improving our trail systems so that more people may be induced to take to the trails; by applying proper protective measures to back-country and other wilderness areas; and by correcting, as rapidly as possible situations—many of them of long standing—which today's volume and pattern of use have rendered undesirable, but which cannot be corrected overnight.

With respect to this latter effort, let me cite two examples from Yellowstone.

1. The old canyon development was placed close to the rim of the magnificent Grand Canyon of the Yellowstone; it is now in the process of being moved back from the rim, at considerable expense to both the concessionaire and the National Park Service.

2. The impact of heavy public use that results from the concentration of facilities close to Old Faithful has caused considerable damage to the formations; it is the plan of the Service eventually to move these developments away from the formations.

Mission 66 contemplates actually moving out some of the facilities from certain areas of the parks system, the redevelopment and improvement of others, and the encouragement of communities adjoining the parks to care for the ever-increasing numbers of park visitors.

In Everglades National Park, we have determined that, if there are to be any overnight accommodations at all, they shall be only those needed to permit visitors to obtain an understanding of the park. In other words, they would be solely an adjunct to interpretation.

In some instances, the gradual expansion of facilities near focal points of interest has produced a difficult problem of protecting some of the most valuable treasures of the parks. We have long been aware that some of these situations need correction. We have moved, and will continue to move toward such correction as rapidly as we can overcome some of the economic difficulties involved and when the necessary public support has developed.

We definitely do not want the national parks to be resorts, as that word is commonly understood.

Another thing. We have resisted, and shall continue to resist pressure and extensions of national park road systems which are not fully justified. Our principal task today, as far as roads are concerned, is to make them safe for today's travel, but not to make speedways of them.

It is certain that the national park system cannot meet all the needs of the American people even for the types of outdoor recreation that all would agree are proper, or at least acceptable. Therefore, an important part of mission 66 is to encourage other agencies to assume their fair share of the load. There is room, too, for highly developed resorts such as Sun Valley, but at sites elsewhere than in the parks.

There are situations and conditions in the national park system to which I object. Many of these were not objectionable years ago when first installed, but changing conditions and increased use have made them inconsistent with the national park concept today. As rapidly as it is feasible to do so, we hope to remedy them, meanwhile preventing others from developing or becoming established.

In moving toward our goals, it is particularly important that we keep a sense of proportion and that we do not, by poorly timed moves on relatively minor matters, defeat or endanger objectives of greater importance.

My hope is that we shall be able fully to achieve the goal of mission 66. I hope at the end of 10 years, when the National Park Service will observe its 50th anniversary, to be able to say:

"The parks have been developed and staffed to provide facilities of all approved types, sufficient to meet the needs of those who visit them, at the same time guaranteeing the continued protection and preservation of the natural and historic heritage of which we are the trustees for the American people."

'Copter Service

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. MAILLIARD. Mr. Speaker, with the advent of ultra high-speed travel by air, many of our cities are seriously considering the problem of the increasing delays in airport-to-city transportation. It is a marked inconsstency in our air travel planning to develop faster flight facilities only to defeat this advantage by continuing to rely on antiquated and time-consuming passenger service from outlying airports to adjacent metropolitan areas.

To meet this problem, the Civil Aeronautics Board has authorized helicopter service for three of the major city airports. However, the need for expansion of this authorization to include more of our traffic-congested cities has not been recognized by the Board. Indeed, for several years, the Board has even refused to grant hearings to several other cities throughout the Nation, including my own city of San Francisco, which deserves to be heard on this question. Passenger service requirements can be well demonstrated by these areas. To further deny them a hearing is to compound the effects which delay in establishing helicopter service will certainly bring in the anticipated airport-traffic increase of the coming years. In the hope that action will be taken to give the problem formal consideration, I am submitting the following editorial from the San Francisco Examiner of Tuesday, May 1, 1956:

'COPTER SERVICE

Every major airline serving San Francisco has now placed orders for jets or turboprops or both. The near advent of these high-speed planes makes more necessary than ever a helicopter passenger service radiating from San Francisco International Airport to all principal cities of the bay region.

The turboprop will shave 28 minutes off the Los Angeles-San Francisco flight time, doing the run in 1 hour and 7 minutes. But if the flight is completed at a morning or evening rush hour, as many of them are, a traveler bound for Berkeley will need another hour and 7 minutes by car to get there. A helicopter could do it in less than 15 minutes.

The pure jet will knock 3 hours off the New York-San Francisco flight time, making it in 5 hours. After that swift journey, a crowded airport bus on a crowded freeway will seem a horse and buggy to the traveler. A helicopter could deposit him downtown in 7 minutes.

Three cities—New York, Chicago, and Los Angeles—now have such 'copter service. Every large metropolitan area needs it, for it is the one way to outwit surface congestion.

Thus far, however, the Civil Aeronautics Board and Post Office Department have refused to grant mail subsidies for helicopter operations in additional cities. Without subsidy the service is not possible.

Such cities as Detroit, Philadelphia, Boston, and Cleveland have the same interest

in this matter as San Francisco. We suggest our Bay area officials and Congressmen take the lead in forming these cities into a bloc that can make itself heard before the CAB and Postmaster General.

Federal Tax Policy for Economic Growth

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "Federal Tax Policy for Economic Growth" by Representative WILBUR D. MILLS, of Arkansas, before the 44th annual meeting of the United States Chamber of Commerce, Statler Hotel, May 1, 1956:

In the decade since the end of the Second World War, the American economy has dramatically demonstrated the vigor of its basic growth-generating forces. Apart from the mild recession of 1949 and the drop in 1954, the Nation's economic growth has been remarkably steady. For the decade as a whole, the private economy has grown at an annual rate of about 3½ percent in constant 1955 prices.

One of the most important factors in this growth is the character of the people of this country. Our perpetual dissatisfaction with present achievements, our alertness in recognizing problems and our welcome acceptance of the challenge they present, and the nearly universal conviction that better ways of living are to be had if we apply the proper effort, imagination, and creativeness in our undertakings—these attitudes are the well springs from which our material progress flows. Our spirit is that of the quest; the rewards to that spirit are daily unfolded before us.

The economy's performance since the end of World War II confirms the importance of sound public policy in providing the setting in which this spirit can impel our private-enterprise economy to new achievements. An instrument of this public policy has been the Employment Act of 1946 and the executive and congressional machinery which it established.

Recently, the Tax Policy Subcommittee of the Joint Committee on the Economic Report concluded an intensive study of the impact of the Federal tax system on the economic development of the Nation. Drawing on this study, I should like to suggest certain economic principles for Federal tax policy and offer some suggestions as to the nature of the revisions necessary for a more rigorous observance of these principles in our tax law.

THE LEVEL OF TAX REVENUES

In the fiscal year 1955, the Federal Government's net budget receipts amounted to $60.3 billion. On the basis of recent information it now seems that net receipts for fiscal 1956 may run as much as $3 billion greater than the $64.5 billion estimated in January of this year. During the past 10 fiscal years, the people and businesses of this country have paid to the Federal Government $494.1 billion. I mention this staggering amount only to remove any doubt you might have that I am perfectly well aware of the fact that taxes are high.

In recent years, we have become increasingly aware of the fact that a close relationship exists between the amount of money the Federal Government collects and spends and the level of activity in the economy as a whole. Although we still maintain that the basic purpose of taxation is to raise revenue to finance expenditures, we also recognize the fact that when Federal Government activities represent one-fifth of the national income, the manner in which those activities are financed will have significant economic consequences.

It is generally agreed, for example, that when the private economy is not fully using available resources, reducing taxes relative to spending will have a stimulating effect. It is also generally agreed that when the economy is pressing hard on available resources, increasing taxes relative to spending will help to repress inflationary pressures. Once the level of Government spending has been determined, changing the level of tax receipts is an effective way to minimize economic fluctuations. We cannot afford to neglect this important tool, since these fluctuations represent significant obstacles to the attainment of our objective of steady economic growth. Recessionary movements interrupt the process of growth by leaving some of our growing resources idle, while inflation makes continued growth more difficult to maintain.

Our first principle, therefore, is that the level of taxes should be related to the level of Government expenditures by the need for full use of growing productive resources and stability in the general price level. In practice, this means that we should move in the direction of reducing deficits or increasing budget surpluses during times of inflationary pressure, using at least some of our surplus for purposes of reducing debt. In times of recession, on the other hand, we should not be reluctant to move in the direction of deficits if these are needed to maintain full employment.

It now appears that we may well end fiscal year 1956 with a budget surplus as much as $2 billion, considerably in excess of the $200 million estimated for the year in the President's January budget message. The suggestion has been made that a budget surplus of this size makes possible, in fact requires, tax reduction. I am sure no one will argue with the point of view that, all other things being equal, tax reduction is a desirable course of action. We should bear in mind, however, that this healthy budget surplus is primarily the automatic result of the sharp rise in personal and corporation incomes in 1955 and not the result of corresponding reductions in expenditures. If, as it appears likely to many, that rise should resume during the course of the year, devoting any substantial portion of the budget surplus to tax reduction might well result in strong inflationary pressures which would cancel out, through price increases and general economic instability, the benefits from lower tax liabilities. It is possible, of course, that as we go further into 1956, the prospects for continued economic expansion may weaken. If persistent economic weakness should appear, tax reduction to stimulate private demand would be entirely appropriate.

Some maintain that top priority should be given to tax reduction lest continuation of present high rates destroy the spirit of quest which I have identified as a prime source of our Nation's growth and development. The actual growth record of the economy over the past decade, coinciding with the highest peacetime tax rates we have ever known, I believe, shows that this danger has been exaggerated. Present tax rates are certainly too high for the long run. At the present time, however, I am more concerned about the short-run inflationary dangers in premature or ill-timed tax reduction.

One might well ask, "if we cannot provide tax reduction now, with a budget surplus of the size now anticipated, and with the country at peace, what hope for tax cuts is there?" I think the chances for tax reduction are excellent. If we exercise the proper fiscal responsibility and integrity, if we insist that Federal tax policy reflect the need for avoiding both inflation and recession, these chances will be greatly enhanced. If we succeed in moderating short-run economic fluctuations, we can count on a steady growth over the next decade which will make possible substantial reductions in effective Federal tax rates.

RESPONSIVENESS OF THE FEDERAL REVENUE SYSTEM TO ECONOMIC FLUCTUATIONS

The legislative record of the postwar decade demonstrates the willingness of the Congress to make adjustments in fiscal and monetary policy to offset recessionary and inflationary movements, once these movements are recognized. However, a considerable period may elapse between the time economic disturbances get under way and the time adequate objective evidence with respect to their character and direction is available. The Congress cannot be expected to legislate significant changes in, say, individual income tax rates on the basis of forecasts of short-run economic fluctuations, it must wait until a basic need for such changes is clear. During this lag, however, the economic disturbances may gain considerable momentum, thereby increasing the difficulties in taking appropriate action. To the extent that our fiscal and monetary system contains automatic features for offsetting fluctuations, the problems of economic stabilization facing the Congress and the administration are reduced.

Our present tax system contains a number of such features. Chief among these are the individual and corporation income taxes. Other elements of the Federal revenue system respond sluggishly to changes in national income. In the interests of strengthening the automatic countercyclical responsiveness of the tax system, therefore, we should avoid tax changes which would weaken our income taxes and force heavier reliance on other elements in the revenue system. For example, proposals for shifting to a general manufacturer's sales tax to finance income-tax reductions or to impose constitutional limitations on income-tax rates, thereby requiring relatively greater use of consumption taxes, not only would violate generally held concepts of fairness but would represent a serious threat to economic stability.

The automatic stabilizing capacity of income taxes depends on the size and composition of the tax base, the degree of effective progression in the tax-rate structure, and the promptness with which tax payments are made. In all but the last respect there is considerable room for improving the built-in flexibility of the income taxes.

For example, only about 40 percent of what the Department of Commerce describes as personal income enters the individual income-tax base, and some of the types of income which are most sensitive to broad changes in economic conditions are not fully subject to tax. Of course, considerations other than those of strengthening built-in flexibility must be taken into account in determining the appropriate tax treatment of various kinds of income and expense. Nevertheless, it must be recognized that a tax proposal which would have the effect of partially or fully sheltering income from tax will involve a cost—perhaps a significant one—in reducing the capacity of the tax system automatically to damp down undesirable economic fluctuations.

Very considerable improvements can be made in increasing the effective progression of the tax-rate structure. We have heard a great deal in recent years about the allegedly pernicious effects of income-tax progression on incentives and, therefore, on economic growth. This question, among others, was

carefully explored last year in the study conducted by the Subcommittee on Tax Policy. Taking full account of the testimony of the most extreme critics of the present tax structure, it is fair to report as the conclusion of this study that most of the criticism of the individual income tax is not properly directed against progression per se, but rather against the level of the whole rate schedule.

The study also revealed, by reference to statistics from tax returns, that effective progression in the individual income tax is considerably less than that suggested by the statutory tax-rate schedules. At the present time, for example, less than one-fifth of individual income-tax revenues is produced by marginal rates above the first bracket. Moreover, when full allowance is made for all the income received by the taxpayer, the data show that for individuals with adjusted gross incomes over $100,000 effective rates varied, in 1951, from 37 to 68 percent and averaged about 45 percent.

These data suggest to me that we can greatly strengthen effective progression in the individual income tax, and thereby fortify the ability of the tax to counteract economic fluctuations, without increasing the level of individual income taxes. In fact, if it were possible to broaden the tax base, we could both increase progression and lower tax rates at the same time. There are, admittedly, substantial difficulties in pursuing this objective, but the rewards would be very great indeed.

THE FEDERAL TAX SYSTEM AND BALANCED ECONOMIC GROWTH

The excellent postwar record of the American economy in maintaining steady growth is due, in large part, to the fact that we have maintained an approximate balance between consumer expenditures and capital outlays. When this balance is upset, economic difficulties quickly follow. A rate of growth in consumption in excess of investment results in a faltering in the rise in living standards because of the failure of productive capacity to keep pace with the expansion of consumption needs. On the other hand, too rapid a rate of capital formation means sacrifices of current living standards and threatens idle capacity and disorganization of further growth. Imbalance between consumption and investment, therefore, can be a seriously destabilizing development.

On the whole, the Federal tax system has contributed toward maintaining an appropriate balance between consumption and investment. Both business and consumers have had to forego—over the last decade—some of the gains that would have been possible had the world been less troubled by international tensions and conflicts. But the sacrifice has not been markedly one-sided. In the interests of continuing economic growth and stability in the present environment of world affairs, we want to avoid unsettling shifts in tax burdens.

I do not mean to suggest that any adjustment in relative tax burdens would be unwarranted. There are numerous ways in which our tax system can and should be modified to provide a fairer distribution of the total tax load. Such adjustments are always timely, given due regard to their revenue effects. I do mean to caution against broad shifts in the balance between consumption and investment impacts of taxation which do not accord with basic economic requirements. Relatively heavier tax burdens on consumers in order to ease taxes on business would clearly not be in order when slackening economic growth is associated with lagging consumer demand and idle plant and equipment. By the same token, we would want to avoid heavier relative tax burdens on business at a time when rising consumer demand was inadequate to induce the desired rate of growth in industrial capacity.

Balanced economic growth also requires that taxes fall as neutrally as possible among all taxpayers. It is in this respect that I believe the maxim about taxation for revenue purposes only is most meaningful, for the use of tax devices to effect particular economic results is, on the whole, a dangerour policy to pursue. The present tax law is replete with preferential provisions for special tax-paying groups and measures up poorly to the standard of neutrality.

A common characteristic of these preferential provisions is that they tend to induce taxpayers to use the resources at their disposal in a different manner from that which would be called for by prudent management in both business and personal life. We pride ourselves on the effectiveness with which the price system, operating in free markets, acts to signal consumers, investors, and managers to use their resources in the most efficient way possible. Special tax provisions often introduce considerations which are at variance with the signals of the market place. If the benefits from these special tax provisions are great enough, they may outweigh market considerations. The result will be interference in the allocation of resources and therefore a lower total real value for the product of the economy.

Any one of the present preferential provisions, by itself, may well be quite laudable. But we have to recognize that a tax benefit to encourage any one industry or group necessarily means willingness to deter the growth of others not equally favored. Much of the legislative history of our tax system is a reflection of the efforts of some such group to obtain for itself tax concessions similar to those previously extended to another. It is simply a basic fact of our fiscal life that the more preferential treatment we give any one taxpayer or group of taxpayers, the less we can give to all others.

We must also recognize how great a responsibility is assumed in providing preferential tax treatment. These provisions represent value judgments about the type of economic activity most essential to the process of economic growth. This is the very type of decision which virtually all of us feel cannot be safely made except by the impersonal mechanism of the price system.

A fundamental objective in formulating tax policy should be to strive for neutrality and uniformity in the application of our tax laws. Greater uniformity would eliminate or reduce distortions in economic development, provide us a much fairer tax system, and greater automatic responsiveness to changes in levels of economic activity.

THE FEDERAL REVENUE SYSTEM AND THE COMPETITIVE POSITION OF NEW AND SMALL BUSINESS

Apart from the sentimental attachment that all of us have to new and small businesses, there is, I believe, a sound scientific basis for emphasizing their importance in our economy. They represent often the concrete expression of the creativeness and imagination which are basic resources for economic progress. A constant stream of new businesses is our best assurance that established companies will continue to face the challenges which are so important in the development of new products and new and better production methods. A large number of small businesses is required to insure that control over the use of resources, output, and prices is widely diffused, and therefore that these resources will be most efficiently used.

Tax policy must prevent tax discrimination against small and new business. It must avoid reinforcing those pressures in the economy for the submergence of such businesses, either by failure or by amalgamation with larger business units. The rise in mergers and other consolidations in recent months is one of the factors that suggests the need for reexamination of public policy in this area. Even though these mergers do not necessarily involve small companies, the increasing concentration of business which they frequently produce threatens the continuing independence of small firms. Data on the rate of business failures, over 90 percent of which refers to small businesses, are also cause for concern. The information supplied by the SEC–FTC, while not conclusive, strongly suggests that small businesses are not sharing the rewards of the current high level of business activity on an equal basis with their larger competitors.

Tax considerations are frequently identified as major factors working against small and new companies. Although it is difficult to determine the significance of these considerations, we must be alert to this type of possibility and scrutinize both the existing tax law and all new tax proposals for their implications in this respect.

To recapitulate, Federal tax policy for steady economic growth should (1) relate the levels of Government revenues and expenditures to the need for full use of growing productive resources and stability in the general price level; (2) strengthen the income tax in order to increase the built-in stabilizing capacity of the Federal tax system. I hasten to add, parenthetically, that this is not to be construed as urging a bigger income-tax bite; (3) maintain a careful balance between those elements of the tax system which rest most heavily on consumption and on investment and seek greater neutrality among taxpayers; and (4) protect the competitive position of small and new businesses.

I would like to outline, very broadly, the type of tax revision implied by these recommendations.

In the individual income tax area there is considerable need for greater effective progression of tax liabilities, particularly in the low- and middle-income range. I mean that the starting rate in many of these brackets is too high. In recent years, about 80 percent of individual returns have been subject to tax at only the first bracket rate. For these taxpayers, progression in effective tax rates depends largely on the number of dependents claimed. A substantial improvement, both in the distribution of tax burdens and in the automatic responsiveness of the tax, would result if ways could be found to split the present first bracket and provide a lower starting rate.

Furthermore I do not believe that the interests of a truly progressive income tax are well served by a marginal rate structure which reaches 91 percent. It has been repeatedly pointed out that these upper rates are largely fictitious. The Statistics of Income for 1952, for example, show that out of 13 million returns with itemized deductions, only 1,279 returns reported taxable income to any part of which the top marginal rate was applicable. That's less than one one-hundredth of 1 percent.

These high rates are part of the vicious circle in which the income tax has been ensnared. When we have rates so high taxpayers make determined efforts to obtain preferential treatment for various types of income and expenses. To the extent that they succeed the tax base shrinks, thereby reeinforcing the need for high tax rates. It seems to me, therefore, that we should concentrate on restoring the shrunken tax base while at the same time reducing the top marginal tax rates. These might top off at, say, 65 or 70 percent, depending on how successful efforts to broaden the tax base are.

In this connection high priority should be given to the present treatment of capital gains. Most experts in taxation agree that,

because of the taxpayer's control over the realization of capital gains and losses, it would not be practicable or desirable to treat such gains and losses like ordinary income and losses. While recognizing the need for some differential treatment, I think it is highly doubtful that the present preferential treatment is best suited to meet the problems that arise in this tax area. The present treatment offers strong inducements to middle and upper bracket taxpayers to convert ordinary income into capital gains and to seek legislation which extends capital gains treatment to an ever-widening array of receipts. Even a cursory review of the present capital-gains basket reveals a large number of income items which involve neither a capital asset nor a sale or exchange.

The basic problems in the capital gains area are of definition. A determined effort should be made to resolve these problems. At the very least, proposals for further extension of capital-gains treatment as a relief device should be resisted.

In the area of taxation of business income one of the most pressing problems is the treatment of net operating losses. The basic purposes of providing a carryover of net operating business losses appear to be disregarded by the present law which makes these carryovers prime booty acquired in the process of business combination. The transferability of these losses has been a major contributing factor in the recent merger movement. The technical problems in this area are certainly thorny, but revision is urgently required.

Much can be said in favor of the accelerated depreciation provisions included in the 1954 code, although they are not entirely irreproachable. On the other hand, coupled with capital-gains treatment for gains realized on the sale of assets depreciated under the new provisions, Treasury revenues may seriously suffer, and more important, uneconomic replacement practices are encouraged. Sound economic replacement practices should be encouraged. It would be a highly desirable reform to limit the accelerated depreciation provisions to assets with normal useful lives somewhat greater than the 3 years stipulated in the present statute and to modify the application of capital-gains treatment to depreciable property.

Another problem concerns the appropriate treatment of dividend distributions. We are all aware of the undesirable bias which the present corporation income tax may impose against external equity financing. The individual dividends-received credit and exclusion are not, in the view of most disinterested tax experts, the appropriate approach to the solution of this problem. I think these provisions should be eliminated in favor of some provision at the corporate level for putting dividend and interest payments on a par.

In the excise area, efforts are currently being made to simplify a wide range of technical provisions, primarily relating to compliance and administration. We must begin to give consideration to reduction or elimination of a number of excises which have differentially adverse effects on business-cost structures and competitive relationships. The taxes on transportation, on communications, and on business machines and equipment are cases in point, although not the only ones.

Finally, our estate and gift taxes should be substantially modified. At the present time, they produce only very modest revenues and, therefore, do not well perform the basic function of any tax. Moreover, the structure of these taxes is such as to invite tax avoidance. Even more so than in the case of income taxes, progression in the estate and gift taxes is fictitious. On the other hand, there are other elements of these taxes which contribute toward the merger of small family businesses into large public companies. Revision of our estate and gift taxes should seek to make them more truly progressive, more productive of revenue, and at the same time less biased against family enterprises.

I must acknowledge that I've carved out a large order in my last remarks. We have recently witnessed the magnitude of the undertaking involved in even a comparatively modest revision of our internal-revenue laws. On the other hand, the interests of steady economic growth are more compelling, surely, than consideration of the difficulties involved in large-scale tax revision. This revision is necessary if we are to develop a tax system which is fair and which conforms to sound economic principles.

As a postscript, I should like to add that the extent to which such revision entails a net loss of revenue to the Government must be given careful consideration in the timing of legislation. I do not know whether it would be possible to undertake these constructive reforms with no net revenue loss. Some tax experts argue affirmatively on this question. If this is not the case, however, we should attempt to gear any revision program to periods in which tax reductions are called for to sustain economic growth. The present economic condition of the country, as I have suggested, does not appear to warrant or even permit any significant reduction in revenues, unless we are willing to impose heavier responsibility on the Federal Reserve System to contain inflationary pressures. Should the economic outlook change, however, we should be ready with a program for general tax revision and reduction. I hope that the discussion today will make some modest contribution in stimulating interest in such a program.

H. R. 5550

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include the following resolution which was forwarded to me by William G. Daugherty, president, Ohio Glass Workers Protective League, Newark, Ohio:

We, the undersigned, respectfully petition and memoralize you, in accordance with amendment 1 to the Constitution of the United States of America, to refrain from enacting H. R. 5550 and instead to bring the General Agreement on Tariffs and Trade before the Congress of the United States in accordance with the treatymaking provisions of the Constitution, for the following reasons:

1. Passage of H. R. 5550 would impair the right of petition and redress guaranteed in our Constitution, since tariff policy and foreign commerce would be made subject to determinations by an international agency.

2. H. R. 5550 would hinder labor and business from obtaining effective action by the Congress of the United States, as guaranteed by article 1, section 8, of the Constitution, which declares: "The Congress shall have power to lay and collect taxes, duties, imposts, and excises * * * to regulate commerce with foreign nations, and among the several States."

3. H. R. 5550 would remove from Congress its full and effective freedom to exercise its constitutional responsibilities in these fields.

4. H. R. 5550 would remove tariff and trade policy determinations from the Federal Government and subject them to an international organization in which the people of the United States are not adequately represented and where the United States delegate would have but 1 of the 35 votes, the same as the Grand Duchy of Luxembourg, Haiti, and other countries with populations less than many cities and States in this Nation.

Now, therefore, we request that this petition and memorial be formally placed before the Congress of the United States.

OHIO GLASS WORKERS PROTECTIVE LEAGUE,
WILLIAM A. DAUGHERTY,
President.
JAMES BURDEN, *Secretary.*

Poland's Defiance of Moscow

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Star of May 7, 1956:

POLAND'S DEFIANCE OF MOSCOW—POLES DUE TO CITE ISSUES THAT WOULD NEVER HAVE BEEN RAISED UNDER STALIN

(By Dorothy Thompson)

Monarchies provide a legitimate succession through the king's bodily heirs. Constitutional republics like our own provide for it in written law. In Great Britain and France the ultimate repository of authority was fixed, only after generations of struggle, in the lower house of parliament, representative of the whole people.

By such means states are assured of the basic requirement of stable government—continuity.

The two previous Soviet governments were both based on seizures of power and naked force—Lenin's by revolutionary upheaval, Stalin's by the camarilla he built around his person, through which he became a more absolute ruler than any 15th century czar.

The Russian Communist Party has neither exercised authority nor been trained to do so. It has merely rubberstamped edicts to give the appearance of authority. Therefore an inner political crisis must develop.

This crisis cannot be confined to the Soviet Union. Stalin's authority extended to all the satellite states, whose governments, without exception, are based on seizures of power under protection of threat of Russian arms. Though theoretically independent, these states, in reality, have been totally subservient to Moscow. In effect they have been colonies.

But in reconciling itself to Tito, the Russian Government also established the right of all states outside Soviet frontiers to work out their own destinies. By posthumously challenging Stalin in the Soviet Union, it is encouraging a revisionist attitude toward his policies in the satellites.

This is especially discernible in Poland, the only satellite that fought with the Allies and whose treatment cannot be justified as meted out to a defeated enemy—a nation in which burns the fiercest patriotism in Europe, and one which, historically, has no reason to trust Russia.

Regardless of the fact that Poland has a Communist-Socialist government, no government of an acutely national conscious nation can successfully establish its legitimate right to govern as the instrument of a foreign power, especially when the power has re-

peatedly manifested its enmity toward the nation as such.

The pulse, therefore, of the present strength or weakness of the Soviet Union can best be taken in Warsaw.

The Polish Government is showing no fear of Stalin's successors.

Directly, or through the controlled press, it has raised four issues that, it is safe to say, would never have been aired under Stalin.

The Government has presented a list of Polish Communists liquidated in Russia between 1938 and 1942, claiming these were 80 percent of the party's membership.

It has arrested two top men of the security police.

The Association of Polish Writers has demanded immediate trial of informers who have denounced patriotic Polish writers to the security police.

The press has demanded clarification of the massacre of Polish officers in the Katyn Forest during World War II.

To raise this fourth issue is daring indeed. The Polish Government in exile in London was recognized by Stalin until it demanded an investigation of the Katyn Forest massacre, by the International Red Cross.

Furious at the implication that the Russians rather than the Germans may have committed this atrocity—a suspicion subsequently evidently supported—Stalin, in fury, broke off relations with the London government and created, in Kiev, the Lublin government, subsequently installing it in Warsaw with Russian bayonets.

Can it be that Russia's own creation now is prepared to make overtures to the Poles still in exile?

The Warsaw government may be overreaching itself. But such symptoms indicate that it is, apparently, no longer afraid of the Kremlin.

The National Water Supply

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Exeter News-Letter, Exeter, N. H., Thursday, May 3, 1956, entitled "The National Water Supply":

Although Exeter is indeed fortunate in its abundant supply of municipal water and rural residents in the region seem to find an undiminishing supply in private wells, the picture in many parts of the country is one of anxious concern.

Geologists estimate that of the 4,300 billion gallons of water released over the United States daily in the form of rain or snow, only 1,300 billion gallons go to streams or into underground water supplies. The remainder is absorbed by plants or returns directly to the atmosphere through evaporation.

And while the present demand for fresh water is only 200 billion gallons, by 1975 the need is expected to jump to nearly 300 billion. Surprisingly, irrigation and industry together account for over 90 percent of inland water usage with the remainder being used by home dwellers. Industry is constantly developing methods of reclaiming water for reuse, but irrigation methods require improvement to eliminate waste, especially in the agricultural West and Southwest where water demands cause the greatest anxiety.

The hope of the future, especially in arid sections of the country, is the progress being made in conversion of sea water. Present calculations indicate the converted sea water costs about 10 times as much as undistributed irrigation water and about four times as much as municipal water.

Don't Return Enemy Property

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. COLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I filed with the House Interstate and Foreign Commerce Committee on April 30, 1956, in support of my bill H. R. 80 to authorize the immediate sale of Government-held properties of the General Aniline & Film Corp.:

Mr. Chairman, I welcome the opportunity of explaining my reasons for the introduction of H. R. 80, which would amend the Trading With the Enemy Act by authorizing the immediate sale of alien properties after a finding by the President that it is in the national interest to do so and impound the proceeds of the sale until final judicial determination of legal ownership. This bill is identical with one I introduced in the 83d Congress, H. R. 5988.

The principal properties of the General Aniline & Film Corp., a multimillion dollar corporation under the control of the Alien Property Custodian, is located in the district which I represent, and the thousands of employees of that corporation, as well as other residents in that area, are vitally interested in, and affected by, the eventual decision which the Congress will make with respect to the ownership and management of these properties.

Since I first looked into this matter, I was, and still am thoroughly convinced that our Government should get out of the business of operating these industries which were seized at the outbreak of the last world war from our former enemies, Germany and Japan. The employees of the corporation are anxious for the Federal Government to be eliminated and normal private enterprise operations be established so that the company can grow and prosper.

There are two decisions this committee and the Congress must make in this matter: Should the properties be returned to their prewar owners and, in the case of the General Aniline & Film Corp., were the former owners enemy aliens? In the latter issue, our Supreme Court has ruled that, since some of the stockholders of the parent company were German nationals, the status of enemy ownership attached to the entire corporate ownership. Therefore, we can dismiss that issue from our further consideration since it has already been adjudicated by our courts. Our attention can now be centered in the question of whether to return the properties in kind or hold the proceeds in ecrow pending settlement of the pending suits. The legality of such procedure seems to be well established according to the brief submitted by the Department of Justice in this matter.

Under existing law, the Government cannot dispose of vested alien properties if the seizure itself is challenged by legal action. In the drafting of the Trading With the Enemy Act that provision was a very fine idea, and unquestionably a very considerate thought—during the heat of the last World War. It was intended to protect those who were not actually our enemies at the time of seizure.

The only trouble with the thought is that the objective could be so easily thwarted because the Germans learned back in World War I how to hide, or cloak, their ownership of various properties. As a result, we have seemingly endless lawsuits with their inherent delays, all to the disadvantage of this country. Delays will continue to consume time until 1 of 2 things happen: either the Congress is softened up by time and pressure until it returns the property to former owners, or our Government loses its lawsuit in the litigation instigated by the claimants, and is required to reconvey the properties. In either event we, the United States Government and the American people, lose.

We should look into history, or the record, on this subject. There we will find that the same influences were at work immediately after World War I as are occurring now. We find that it took the Congress 10 years—from 1922 to 1932—to realize it had made a mistake when it returned the properties held by citizens of our former enemies at the end of World War I. The same parties were involved then as they are now—Germany and the United States.

I sincerely believe that H. R. 80 is the most expeditious form of getting the Government out the chemical, dye, photographic, and duplicating-machine business in respect to this subject of war reparations of World War II, and at the same time do justice to the former owners. In brief, we would abide by the treaty with our World War II allies (the Paris Reparations Agreement) and, too, the agreement we signed with the Federal Republic of Germany, our former enemy.

Instead of operating these seized industries in question, we would sell them as provided in the Trading With the Enemy Act law, retain the proceeds in our Treasury to await the outcome of any litigation—paying in money those former owners who proved their claims and who were not our enemy.

By passage of H. R. 80, lawsuits could still continue, the qualified and proven claimant would be paid money instead of being handed a going and thriving American company. The Office of Alien Property (the custodian) could be cut back to a litigating agency, and the claims of our own citizens who have been wronged in two world wars could be paid.

I do not think that any of us can deny the fact that as long as these large corporations remain in the hands of our Alien Property Custodian there will be strong pressures and well-financed efforts by the former owners to regain the assets.

Allow me to forecast to you what will happen if these vested assets are returned to their former owners as is seriously urged upon the Congress by some persons.

A return of these properties would:

1. Require substantial and indefinite appropriations from the Federal Treasury.

2. Reverse the present policy of the United States and its World War II allies with respect to reparations, and deprive this country completely of all reparations.

3. Open up a huge pork barrel to the old enemy cartels without whose backing Hitler could not have forced the world to the very brink of disaster.

4. Provide a gift or windfall of some $200 million to individuals and organizations, some of whom are not even of German or Japanese nationality.

5. Enable the recapture, through devious means, of the huge business enterprises by the very persons they were taken from—in some instances in both world wars.

6. Endanger the security of secret processes essential to the defense of the United States.

These, as I see it, are the principal objections to a return of the properties. But

let us look at these objections more closely.

The first point is appropriations, the cost to us as taxpayers, and I don't need to remind you of the widespread demand these days that taxes be reduced.

The value of all of the vested properties under consideration here is better than a half billion dollars. That is the basic cost figure with which we must begin.

Around $225 million of these properties have already been liquidated and the moneys transferred to the Foreign Claims Settlement Commission and disbursed to thousands of our citizens (prisoners of war,; internees, both civilian and military; religious organizations, etc.) who were the victims of suffering or damage, one or another, in the last war. So, over $225 million must be replaced immediately in our Treasury if the policy of property return is adopted.

This is what we might call a downpayment, and that is exactly what it is.

However, all of the property under question here is valued at well over a half billion dollars. This is property now held by the United States Government, and if it is given back, it must be replaced in our Treasury. So with a return we will make the second downpayment of around $300 million if our Government makes good on its promise to compensate our own citizens for their war damages. Now we are up to the half-billion dollar mark.

And there could be more, much more. For instance, what about enemy property located in the territories of our allies? Under our leadership, all of them seized this enemy property. And they also agreed to retain it. Also, they gave up in return for such retention the right to any other reparations from our former enemies. These are our agreements. We made them.

Now, if we reverse ourselves and return the property we have in our possession, who is going to pay the bill of our allies for the damages which their citizens suffered? Remember, this is our doing. After the United States made these arrangements by international treaties and agreements, our allies certainly had a right to rely on us. So now if we reverse ourselves certainly we will be called upon to pay this additional bill, and maybe we will have to do so.

This will add at least $300 million to our cost—that is, the amount of property our allies reported to the Interallied Reparations Agency they had seized.

Now our total is over $800 million—over three-quarters of a billion dollars. That is the price tag attached to the policy of property return. Do you want to buy it? I surely do not.

Now, let us look at the second point, reparations. This is a point that seems to be overlooked generally.

Much has been said in the press and in congressional hearings about the sanctity of private property—that governments should not seize it—and that such seizure is a complete reversal of our historic policy, followed in World War I—of retaining custody of enemy private property during hostilities, and then returning it after the war is over.

Yes, that is what we did in World War I, but that turned out to be quite a mistake—one that cost the United States billions of dollars. Anyone can be forgiven for making a mistake once, but to make the same mistake twice is both foolish and unpardonable.

After World War I we returned the enemy property we had seized—and received in return Germany's solemn promise that she would pay the war claims of our citizens. Of course, Germany defaulted. We gave up our collateral in return for a scrap of paper. Many of these claims are still unpaid.

Thirty years have passed—another world conflict is history—and in 1953, mind you—just 3 years ago—Germany again solemnly promised to pay these World War I—not World War II—but World War I claims. She says she will do it over a period of 26 years. If she does—I say "if"—some of our citizens will have waited about 56 years for the payment of their claims against Germany.

Will Germany default again? You may say we should not speculate on such a question, but the prospects are not bright you must agree.

World War II is over—the victorious allies met with their defeated enemies—the subject of reparations was under consideration—everyone knew of Germany's default on reparations after World War I—no one wanted that to happen again—so it was agreed that the enemy property that had been seized in the territory of each of the allies, would be retained by them—in lieu of any other reparations payments.

Remember that—"in lieu of any other reparations payments." We lost once—neither we, nor our allies, want that to happen again. Germany has agreed to this plan. In 1952, she signed the Bonn Convention agreeing that this property should be retained by the allies as their only reparations—and agreeing that she would compensate her own nationals for their losses due to property seizures by the allied powers.

Now this made sense. It would appear that we had refused to make the same mistake of World War I all over again.

Remember what I said about Germany's earlier default?

But listen to this. On March 7, 1954, Chancellor Adenauer appealed to the United States to return the vested German property.

So—just 2 years after another solemn agreement—the Bonn Agreement of 1952—we have the first move to cancel it.

So here we go again—down the same old disastrous and costly road. This German appeal is based on the historic policy of the sanctity of private property. Can't we see that we are talking about reparations—and not private property?

Can't we remember that obtaining reparations after fighting a victorious war is also a historic policy?

Can't we see—are we so blind not to see that the pressure to enact this legislation for return of the properties is coming from a few selfish people—the old notorious cartels that backed the Nazi machine in its attempt at world conquest? How blind and stupid and softhearted and fickle do they think we are?

This leads to my next point.

Under point 3, let's look at the cartel angle involved here. The name, "I. G. Farben" is notorious the world over.

Here is the world's greatest chemical trust—the one that gave to the murderous Hitler the technical know-how he needed. The one whose branches, spread throughout the world, constituted the greatest network for economic espionage ever seen. The one that was able to keep from us the secrets of synthetic rubber, among other things, when we needed that knowledge for our war effort. And the same one—I. G. Farben—that ordered destroyed—and the orders were carried out—a nitrocellulose plant located at Afton Lake, N. Y. Nitrocellulose is the basis of high explosives, and the plant was destroyed—on orders from Germany—at the time Hitler started his invasion of Europe. It took us 2 years to replace that destroyed potential of war production.

These are the type of people a return of the property would aid—these and their fronts—not the little man, the little German, for whom it may be possible to generate some sympathy, but the big business tycoons and the international financial brigands.

That brings me to the next point—the windfall, bonus, or gift—call it what you will—that would be involved in a return of the property, and this is the most compelling argument of all against the proposed return.

When these properties were seized, they were much smaller than they are today, both in size and in value.

Their increased values all were brought about by American management backed by American labor and American know-how.

Let's look at just a few of them—increase in value since 1942: General Aniline and Film Corp., from $35 million to $106 million. Schering Corp., from $1,300,000 to its sales price of $30 million. Spur Distributing Co., from $1 million to $3,300,000. Karl Lieberknecht, from $365,000 to $6,500,000.

These are just a few. The increased value of all the properties—this windfall, bonus, or what have you—is close to $200 million. Of all the giveaways this is the most flagrant and unjustified. You may wish to be a party to such an outrage, Mr. Chairman, but I hope you will excuse me.

Let us go to the next point.

It is the plan of the United States and its allies, solemnized by international agreements and treaties to not only keep this enemy property, but to try and make sure that it would never again fall into enemy hands.

In World War I, the then Custodian, after he had sold the German Bosch properties to citizens of our country, proudly announced that never again would this company fall into alien hands. Within a very few years, however, Robert Bosch, of Germany, had regained ownership of the corporation. The American purchasers had resold the firm to its original owners.

Came World War II, and Bosch property was again vested in our Alien Property Custodian. It was sold again in 1948, but this time in order to forestall a return to alien ownership, the certificate of incorporation was amended so as to restrict the ownership of the stock to American nationals.

The same thing was done when Schering Corp. was sold. This technique was applied in other sales.

Our Government believed that these companies should move into the American economy, and stay there.

That is one of the basic purposes of my bill, H. R. 80, to sell these companies into our economy. And they should be kept there.

All this leads me to my last point. One that involves the security of our Nation, and should be of paramount importance in your consideration.

Let us use but one example—General Aniline & Film Corp.

This is the major holding of our Alien Property Custodian, the largest single reparation we have, and the greatest I. G. Farben property taken from our former enemies by any allied custodian. This company has two of its principal plants in my district, as I have said, and consequently I am greatly interested in it, as well as the entire alien property problem.

This company has many secret processes that today are part of our defense effort. Some of them are so secret that it would be dangerous to even apply for a patent, and thereby risk exposure. It is working closely with our Government and the Department of Defense.

This property was vested from a Swiss corporation, now loud in its protestations of neutrality and innocence. The Department of Justice says that this Swiss claimant was and is a cloak for I. G. Farben of Germany.

The reluctance of the Swiss to come to issue and trial of this question, and they brought suit in 1947 for return of the property, would indicate there is more here than meets the eye.

Now we know the Germans are expert at cloaking or hiding their external assets. We learned that in two world wars. They want this company with its treasure trove of dollars and know-how—American-developed know-how and American dollar earnings.

Representatives of the Swiss cloak deny this, and have even testified they want to "Americanize" the company, that they will

sell it to Americans, but only after it is first returned to them.

Now if this were true, all they would have to do is to stipulate with the Department of Justice so as to allow our Government to make the sale. The lawsuit would then continue for the money resulting from such a sale. This is just what my bill would allow.

The Department of Justice conducts these sales in public to the highest qualified bidder. It has done so for years, and the sales have been successful. In this way, the retention of this great corporation by American owners could be made certain.

But no—the Swiss cloak won't agree to this. They want General Aniline back in their hands and what they will do with it no one can be sure.

They, by this stand, obviously want more than money.

Mr. Chairman, this problem has beset the Congress for many years since World War II. It is saturated with cross currents of conflicting interests, pressures, influences, and lobbyists. It is time to have it settled with finality. Both Democratic and Republican administrations have endorsed the provisions of H. R. 80—it has no partisan conflict. I urge that you make possible prompt action by the Congress at this session by reporting favorably H. R. 80, or some bill of similar nature and purpose. Thank you for your attention and consideration of these views.

Sell Enemy Assets

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. COLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement filed by my colleague, Representative LEO W. O'BRIEN, before the House Interstate and Foreign Commerce Committee, April 30, 1956, in support of his bill, H. R. 3608, and similar bills which would allow the Attorney General to sell vested enemy assets seized during World War II:

Mr. Chairman and members of the committee, I, too, am very glad to have this opportunity to appear here today and say a few words in behalf of my bill, H. R. 3608, which is identical to that I introduced in the 83d Congress (H. R. 5896) and pertaining to the same subject, the Trading With the Enemy Act.

This resolution is also identical with that of my distinguished colleague, also from New York, Congressman COLE.

Like him, I have the sincere hope that this legislation will be acted upon by this committee.

I believe that our Government should be relieved of the very heavy burden, and duty, of operating the industries seized as reparations from our former enemies, Germany and Japan, during World War II.

If there is litigation involved, then let this matter be settled by our courts. I trust and believe in, and I am sure you do, too, our system of jurisprudence.

My colleague, Congressman COLE, has in detail explained the ramifications of the vested property subject. He has described the errors we made following World War I.

I say, let's not do that again.

In brief, I most sincerely subscribe to the remarks of Representative COLE for the good of this country.

I am more than generally acquainted with the subject before this committee. As you know, the most important and largest vested property—or single seizure involved here—is the General Aniline & Film Corp. One of its very main manufacturing operations, or plants—the oldest dye manufacturing plant in this country—is located in my district—the Albany, N. Y., area.

Our Government retains it as an I. G. Farben cartel holding—a former enemy possession located in the United States.

A Swiss corporation, known as I. G. Chemie but more generally referred to as Interhandel, has sued this Government for its return. This they have the right to do.

But as I understand it, they are close to losing this lawsuit in the American courts—after an 8-year fight. The suit was dismissed, and with prejudice, by the United States District Court for the District of Columbia unanimously. This was for failure to produce required documents on the court's order. However, and in spite of 8 years of litigation, the court gave the Swiss corporation another 6 months' grace in which to produce these documents to prove ownership. An appeal was made to the United States Supreme Court, which refused—unanimously—to hear the case. May I say here that time continues to drag on, and that the same documents, awaited for more than 8 years now, are still awaited.

Now, here is an interesting point which I would like to bring to the attention of this committee. The Swiss firm, I. G. Chemie or Interhandel, lays claim that under the laws of its country, Switzerland, it cannot obtain release of the necessary documents to conclusively establish ownership. Yet, on the other hand, they are the plaintiff seeking the protection of our courts.

Our Department of Justice will tell you, if you ask, that when its lawyers visited Switzerland under court order to inspect the documents claimed to be held by I. G. Chemie, or Interhandel, that the Swiss Government immediately seized these documents and has kept them under lock and key ever since.

Such an order was also given to the attorneys for I. G. Chemie or Interhandel here in the United States, and our Department of Justice opened its files to them.

I think this an important point for the consideration of this commmittee and one to bear in mind.

I also think that this incident tends to set the scene for what has been going on now for some time on this subject—the pressure for return for these properties—and as exemplified by Chancellor Adenauer's request for return of the properties just 2 years after he signed an agreement that the United States shall retain these vestings as our only reparations of World War II.

On another interesting point, the Swiss newspapers—comparable to our own daily financial publications, have reported expenditures by I. G. Chemie, or Interhandel, of over $400,000 in 1954 and around $350,000 in 1955 for the lawsuit and attorney fees in the United States.

This, of course, is the action to gain return of the General Aniline & Film Corp. This is a little over $750,000 in only 2 years. This, mind you, is for only 2 years and the claimant, I. G. Chemie, or Interhandel, filed its suit against this Government around 8 years or so ago. I wonder how much their total bill is now, overall, in this particular case?

I cite these figures without any insinuations of wrongdoing in any way. They are large enough, however, to be given consideration by this commmittee.

I might add that the articles, appearing in the Swiss financial newspapers, were connected with complaints by stockholders of Interhandel. And complaints which inquired as to where these funds were spent. The articles I have read merely gave totals without a breakdown of expenditures.

May I leave these thoughts with you as I think they should be given consideration.

In conclusion, I believe that this problem should be disposed of as quickly as possible—for economical reasons to this Government, and I sincerely believe there is every fairness in my bill and/or that of Congressman COLE'S which will expedite this matter and still leave the door open to a legitimate and qualified claimant who is not a former enemy.

Thank you for the opportunity of appearing here today. I hope that you will consider my remarks as part of the record of this hearing.

Amends in Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of May 7, 1956:

AMENDS IN POLAND

As part of its de-Stalinization program, the Red regime at Warsaw has now announced that it intends to restore pensions and honors to the survivors of the non-Communist Polish Home Army. In effect, this means that some amends are at last going to be made for one of the blackest and most ignoble of Soviet deeds in the Second World War.

For the Polish Home Army was that brave force of resistance fighters who in 1944 staged a great uprising against the Nazi occupiers of Warsaw. They did this on the assumption—backed by Moscow's radio broadcasts—that they would have help from the massive Soviet military might that was then idly deployed within a stone's throw of the city. But their appeals for aid went unanswered, except for what little the faraway Western allies could send them by air. As for Stalin's Russia, it deliberately turned a deaf ear to them, callously letting them be crushed by Hitler's troops—and it did so for a brutally Machiavellian political reason.

The reason was simply this: That Stalin had already worked out his plan to convert Poland into an enslaved Red statellite country when the peace came, and so he saw to it that the heroic non-Communist home army was decimated to keeping with that plan. Moreover, in the postwar period, he and his henchmen in Warsaw siezed, deported and jailed many of the officers and men of that army, and through all the years that have since passed these patriots, together with their families, have been treated as "enemies of the people." There have been few baser acts in modern history.

But now, according to the Warsaw Reds, this great wrong is to be righted. It cannot be righted, of course, although the mere fact that it has been acknowledged, and that compensatory action is to be taken, should be of some comfort to the victims. As for the overwhelming majority of the Polish people, they bitterly remember the evil done their Home Army and they will not be satisfied until the overall crime of their forced communization is wiped out and their country made free again.

NATO Expansion Urged

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Sun-Telegraph of May 5, 1956:

ON FOREIGN POLICY: NATO EXPANSION URGED

(By E. F. Tompkins)

This week, Secretary of State Dulles attended in Paris a Foreign Ministers' meeting at NATO.

Last week, he announced that he would have in his portfolio some ideas to expand NATO into wider fields and activities.

"The North Atlantic Treaty Organization," Mr. Dulles said, "already serves as an indispensable instrument of the Atlantic community. But the time has come, I believe, to consider whether its Organization does not need to be further developed."

The suggested venture calls for skeptical scrutiny.

Mr. Dulles observed that organizations like NATO are of two kinds—those that have a temporary function, which are allowed normally to lapse, and those that expand and endure.

NATO was set up for emergency service—as a rampart against Communist aggression—and was obviously intended to expire when its work should be done.

FOR GROWING NATO

But, when Secretary Dulles said:

"We believe that the North Atlantic Treaty Organization ought to be in the class of organizations which grow rather than those which dry up because they were only designed to serve a limited purpose which may in due course be fulfilled."

Here was an expression of the bureaucratic mind. In international affairs, as in domestic politics, when an agency has been established, they who operate it or subsist on its patronage acquire a vested interest in it.

Their interest impels them to keep the agency alive and to make it grow, even when it is no longer useful. New agencies are constantly created, but old agencies are seldom permitted to die, or even to remain static.

MORE BUREAUCRACIES

This is a recognized law that explains the proliferation of bureaucracies at home and abroad. The State Department, accordingly, wants NATO to be a perpetual bureaucracy as well as a growing one.

Mr. Dulles said:

"The North Atlantic Treaty Organization * * * in its own distinctive way contains the possibilities of great development. It was, to be sure, conceived primarily as a military alliance * * * but the organization can and should be more."

Now, in what respects? Mr. Dulles was asked if political and economic possibilities were not the only means whereby NATO could be made to grow.

The Secretary of State solemnly replied: "I would say we are thinking on both."

Moreover, the Secretary specifically observed that a revised NATO need not be confined to its present geographical region. Thus the new NATO concept clearly emerges.

ATLANTIC UNION PLAN

Consciously or not, Secretary Dulles has taken to Paris the Atlantic Union plan to institute world government by enlarging and extending the North Atlantic Treaty Organization.

For several years, the Atlantic Union Committee has been futilely backing a congressional resolution to support its plan.

If the State Department, operating through NATO, can put life into the scheme, much time—and many tax-exempt contributions—will be saved for the internationalists.

Results and Prestige

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. AVERY. Mr. Speaker, under leave to extend and revise my remarks, I would like to insert in the RECORD an editorial, entitled "Results and Prestige," which appeared in the Manhattan (Kans.) Mercury under date of April 20, 1956.

Written by the editor of that newspaper, Mr. Bill Colvin, the editorial clearly indicates that the conduct of international relations is the concern of everyone; and that only through the efforts of representative mediation can national differences be peacefully adjusted. The United Nations organization merits fair, but yet constructive, analysis by all citizens when we consider the general good which can be achieved through its designated objectives.

The editorial, which follows, cites an example of what can be achieved:

RESULTS AND PRESTIGE

International agreements being what they are worth on the world market today an all-out, tickertape, Fifth Avenue parade may not be in order for the pact brought about between Egypt and Israel.

Nevertheless, and acknowledging that those peoples have previously framed near-worthless agreements, the cease-fire that Dag Hammarskjold has effected should elicit hosannas, congratulations and definite sighs of relief in the Western World.

All is not solved in the cease-fire. The U. N. secretary-general has his work cut out for him yet. And considering the bloody history of the area extending far into early biblical days there is no assurance of permanency if, as and when Dag bats 1,000 percent.

But for the moment, in light of the dark prospects of war just recently, Hammarskjold brightened things considerably.

In so doing he has not only caused the free nations to breath easier but he has made a new convincing argument for the United Nations as an instrument of peace without armed enforcement.

Congratulations to All in A-Test

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. RODINO. Mr. Speaker, as one vitally interested in our civil-defense program, I wish to join in the tribute paid to the people of New Jersey in the following editorial which appeared in the May 3 issue of the Newark Star-Ledger:

CONGRATULATIONS TO ALL IN A-TEST

New Jersey's civil defense officials, and most particularly, the public, deserve a big bouquet for their part in Tuesday night's statewide "Operation May Day" test.

Every community in the State responded to the "Red alert" by setting off its warning sirens and the response of the public in all areas was generally described as excellent.

Of course, there were a few isolated instances of public indifference that must be expected in any large scale maneuver involving all the people of a populous State. But the test as a whole was a great success and congratulations are due all around.

The Parris Island Report

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Thursday, May 3, 1956, in which the newspaper discusses and comments on the recent tragedy that occurred at the marine base at Parris Island:

THE PARRIS ISLAND REPORT

The Parris Island tragedy of Sunday night, April 8, in which six Marine recruits were marched to their deaths by drowning in a tidewater creek created nationwide grief and indignation. It required unsparing investigation, complete candor as to any top-level official laxity, and reforms that would not undermine the basic methods that make Marines about the best fighting men in the world. These demands seem to have been fully met in the report of the court of inquiry and the accompanying statement of larger scope by the corps Commandant, Gen. Randolph McC. Pate.

The court finds—and this is a charge that awaits the process of proof and rebuttal in the general court-martial ordered—"that Staff Sergeant McKeon at the time he marched his platoon into Ribbon Creek was under the influence of alcohol to an unknown degree." It asserts that he drank vodka in the morning, afternoon, and early evening of that day while on duty as drill instructor. This charge, if true, helps to explain what the public found incomprehensible in the strange behavior of the leader of this death march.

Other findings of fact as to Sergeant McKeon will be read in relation to this central charge: he knew that some members of his platoon could not swim; he was quoted as saying that "those who couldn't swim would drown"; he "took no measures to insure that the water area in which he was about to lead his platoon (as a punitive act) was safe to enter."

But, not imposing upon the admiration and gratitude the American people feel for the Marines, General Pate did not retreat from the question whether there was something wrong at Parris Island besides Sergeant McKeon. He straightforwardly admitted there was. Senseless acts in the nature of hazing occurred occasionally in Marine training. Since World War II practices had

crept into the handling of recruits that were not only unnecessary but also did not comport with the dignity of the individual or his self-respect. Rare in the past, these had increased somewhat in recent years because of lack of mature judgment on the part of a certain few drill instructors.

So, declining to limit the issue to an inexperienced drill sergeant, and acknowledging that the Marine Corps itself was on trial, General Pate reorganizes training and command, lays down new lines of more exacting supervision and monitoring by officers, and promises to "preserve the best features of the present system, eradicate any existing deficiencies, and prevent others from occurring in the future." Actual training of recruits will remain with the same men who give them orders in battle, "the men who are the backbone of our corps, the noncommissioned officers." On this essential he does not yield.

General Pate has dealt with this tragic incident in a spirit of compassion, firmness but commonsense that does not lose sight of the fundamentals. One bad day at Parris Island shocked the Nation, but that Nation cannot forget those countless other days far back into the past when word that the Marines had landed lifted the hearts of fighting men and the people back home who knew that grueling training guaranteed victory over a cruel enemy, shortened wars and saved American lives.

Disabled American Veterans Endorse Extension of GI Home Loan Guaranty Program and Principle of H. R. 10469

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. FASCELL. Mr. Speaker, extension of the GI home loan guaranty program must become reality in this session of Congress. It is now due to expire July 25, 1957.

This portion of the Serviceman's Readjustment Act of 1944 has not burdened the American taxpayer. It instead has been to a large degree self-supporting. It has enabled the World War II veteran to become an integral part of his community through becoming a homeowner. Owning our own home was a privilege that only a limited few Americans could take advantage of prior to the enactment of this act. Through the act's home-loan guaranty provisions millions of veterans—yes, millions—now can say that they, too, own a small part of these great United States.

I ask you, What better could we do than to offer and allow our veterans an opportunity to own their own plot of land and their own home?

Is it too much to ask that we give them nothing other than an opportunity to purchase a home by merely guaranteeing their loan? I am sure that there are none who would or could objectively object to the granting of this consideration to our veterans.

Some 11 million veterans have not yet used their entitlement. Others have used only a part and still have a portion of their benefit remaining. Many of these World War II veterans are just now reaching the age and stage of financial responsibility where they can profitably afford to become homeowners.

Should we now take away their opportunity to purchase a home under the terms of this act merely because they have not yet reached this state? I think not.

Instead, I believe we should extend this proven program now, in this session of Congress. Let us allow ample time for these other millions of veterans to adequately prepare themselves so that they, too, can join in owning their own small part of America.

A bill I introduced April 12, 1956, will accomplish this. It provides for a gradual termination of the program over a maximum period of 3 years from the present expiration date July 25, 1957, by allowing a 1-month extension for each 2 months of active World War II service. It goes one step further and provides all disabled World War II veterans with an extension of 3 full years.

Maj. Omer W. Clark, of the Disabled American Veterans, has written me a letter wherein he states that his organization would endorse any reasonable extension of the GI home loan guaranty program and that H. R. 10469 definitely falls in this category. The letter follows:

DISABLED AMERICAN VETERANS,
Washington, D. C.

Hon. DANTE B. FASCELL,
House of Representatives,
Washington, D. C.

DEAR MR. FASCELL: The provisions of H. R. 10469, the bill which you introduced to amend section 500 of the Servicemen's Readjustment Act of 1944 to provide an additional period for World War II veterans to obtain guaranteed loans have been considered together with the information contained in the reprints of the CONGRESSIONAL RECORD concerning your reasons for believing that this is desirable legislation. There has also been noted H. R. 10884, a bill introduced by Mr. MURRAY of Illinois, on the same general subject but somewhat different in its time provisions.

It is my opinion that the Disabled American Veterans is definitely desirous of seeing that otherwise eligible veterans are enabled to obtain guaranteed loans after the present deadline of July 25, 1957, and to that end should be recorded as favoring any reasonable proposed legislation seeking to extend the time limit. The bill you have introduced is definitely in this category.

Sincerely yours,
OMER W. CLARK,
Director of Legislation.

Library Services Bill

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the New York Times, New York, N. Y., Saturday, May 5, 1956, entitled "Library Service Bill":

The library services bill, H. R. 2840, is now before the House. The list of sponsors is bipartisan.

This bill would grant a total of $7,500,000 a year for 5 years to States matching the grants. The objective is to bring books and other library services to rural families who have none at all, and to improve library services for an additional 53 million Americans whose libraries are inadequate. The States and localities will have complete authority under the program established by the bill.

In the great cities we are accustomed to impressive library service. Our cousins in the villages and on the farms are entitled to it too. This legislation would stimulate the extension services of the various States and the regional cooperative services based on metropolitan centers. The funds proposed are modest, the period limited. It is believed that local communities in rural areas, having tasted the advantages of good libraries, would then wish to continue the services with local and State funds.

The free public library is a vital symbol of educational opportunity, and it is to be hoped that Congress will pass H. R. 2840.

Attorney Charles J. Rozmarek's Warning

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader-Evening News of Wednesday, May 2, 1956, in which the newspaper comments on the address of Charles J. Rozmarek, president of the Polish-American Congress, who recently spoke in Wilkes-Barre:

MR. ROZMAREK'S WARNING

Two paragraphs in the address of Charles J. Rozmarek, president of the Polish-American Congress, at a dinner meeting in Wilkes-Barre under auspices of the northeastern Pennsylvania division, should be called to the attention of Government officials in Washington for their guidance. These are the ones we have in mind:

"Anyone who thinks that the destruction of Stalin as a demigod by the present Red rulers marks a basic change in Soviet policy, reveals an appalling ignorance of the true nature of communism. Aggression, slavery, subversion, and world conquest form the very basis of communism.

"Those who govern Russia today denounce Stalin, so that the blame for all the bloody Red crimes of the past, in whose guilt they share, would fall on the head of Stalin alone. They know that their rehabilitation in world opinion would help to relax our guard."

In 1944, Attorney Rozmarek and his associates in the Polish-American Congress warned the Government not to place any trust in Communist promises. The tragic results of the Government's failure to heed this advice long have been apparent.

The 1956 warning is no less important. Attorney Rozmarek has been in the forefront of the fight against communism 2 decades, and he has learned a great deal about the workings of the system in a key post that has given him access to information and practices on an international scale. He has dealt directly with the victims of communism, and he knows, from bitter and costly experience, how it operates. There is no guesswork in his views.

The Reds are past masters at deception and treachery. The record is replete with evi-

dence of their duplicity. Not one positive step has been taken by them recently to lend substance to their smiles and honeyed words, so we must assume their objective remains the same.

America cannot afford to make the same mistake twice. It might be fatal. That is why Attorney Rozmarek's warning should not be taken lightly.

Nationalism or Internationalism

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of May 7, 1956:

NATIONALISM OR INTERNATIONALISM?—WILL NATO CEASE AS MILITARY COALITION AND BECOME POLITICAL-ECONOMIC AGENCY?

(By Constantine Brown)

The dwindling group of conservative Republicans in the Senate is seriously worried over the planned transformation of NATO from a military coalition to an international political-economic agency.

They say frankly in Senate cloakrooms that this is definitely a preliminary step toward an Atlantic Union and eventually toward world government. This is what the extremist internationalists in this country have been advocating for some time as the only solution for permanent peace.

Despite assurances given them by the State Department spokesmen that nothing of the sort is in Secretary Dulles' mind and that a rectification of NATO has become necessary because of changing world conditions, they continue to look askance at the activities of the NATO foreign ministers in Paris.

At this time it is still difficult to see how Congress, regardless of its subservience to the wishes of the executive branch on foreign policy, could agree to abandon its right of control over the distribution of taxpayers' funds in favor of an international agency.

This would mean abandonment of our sovereignty. But the conservative Senators (and the suspicions of the Republicans are shared by some Democrats) feel that in its drive to end the cold war and assure what optimists believe to be peace in our time, the administration might be prepared to go far to reach that goal.

These Senators see considerable significance in the fact that Secretary Dulles spurned only last March the suggestion of Italy's President Giovanni Gronchi for changing the NATO's face and transforming it from a military into an economic and political organization.

The concept was not that of President Gronchi alone. It was hatched in Rome and Paris as a means to obtain further economic support from American appropriations earmarked for military defense.

The idea was to aid underdeveloped regions in NATO areas. The French hoped to reduce tension in North Africa and also in their central African empire without heavy expense to their own taxpayers who were already balking at the existing small levies.

Paris had already suggested Morocco and Tunisia be made members of NATO. The Italians hoped to spend the thus-diverted NATO fund for relief in southern Italy—without raising taxes on the prosperous industrialists in northern Italy.

These facts were known to the administration and are believed to be responsible for Mr. Dulles turning down Mr. Gronchi's trial balloon.

The evident flop of NATO as a military coalition necessitated, in the minds of some of our policy makers, a change of strategy to prevent a serious disillusionment of the American people who have spent tens of billions to erect what was described to them as a "wall against further Soviet expansion."

It is at this juncture that the believers in One World were able to press their case subtly. What happened behind closed doors in the councils of the administration is little known. But the fact remains that Mr. Dulles changed his tune. He is now discussing in Paris the Italian-French proposal and the form under which they could be presented to Congress and be made acceptable.

What worries our Senators is that nationalism is stronger today in Europe and Asia than ever before. It is only in the United States that internationalism is cherished particularly by a small but powerful minority of so-called intellectuals who have for years branded nationalism as jingoism and isolationism. And both these, it is argued publicly, sow the seeds of discord in the world and are responsible for the precarious conditions in which we live.

These arguments have an impact on the American people who are highly prosperous and hope to remain so by agreeing to peace at any price.

Thus while the rest of the world, without exception, has become in recent years strongly nationalistic, there is a drive to convince the American people that the path of internationalism will lead to a lasting and permanent peace.

International relations are a two-way street, although for the last 10 years they seem to have been a one-way avenue in which we were the givers and our allies, or so-called allies, were the receivers.

The danger of the new policy, as the conservatives see it, is that we are going into a blind alley. In the demands of our allies in continental Europe our policymakers see the dawn of a new great era of unity and brotherhood of all nations (eventually including the Communists whose avowed aim is to destroy us).

But our allies who proposed the present scheme are prompted by only two objectives: to desist from further defense preparations and expenditures and use the American taxpayers' money for their own purpose.

Durham Believes Richard Nixon Will Help Ike Campaign

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. YOUNGER. Mr. Speaker, it seems to me that the information obtained by the Inquiring Reporter is especially revealing when you consider that the information comes from Durham, N. C.; and the following column is by the Inquiring Reporter from the Durham Sun in the May 4, 1956, issue:

DURHAM BELIEVES RICHARD NIXON WILL HELP IKE CAMPAIGN

Today's question: As a running mate, do you think NIXON will help—or hinder—Eisenhower's chances?

All five of the persons questioned on today's topic said that NIXON will help President Eisenhower in his efforts to stay in the White House.

Today's question was submitted by John E. Allgood, 2020 Wa Wa Avenue, to whom the Durham Sun has forwarded $1. The Sun will pay $1 for each question used.

The answers:

B. J. Ross, 2607 Cascadilla St., salesman: "Personally, I think NIXON will help Eisenhower. He has proven to be a good man already and the voters will keep that in mind. I think Mr. NIXON has served his country well and, for that reason, will give Eisenhower a boost."

Zack Downey, 3029 University Drive, construction worker: "Mr. NIXON will help Eisenhower. He has impressed many with his efforts thus far. Sure, he has some enemies, but most folks, particularly the Republicans, must realize that he has been a valuable part of the successful program carried out by Eisenhower's administration."

Mrs. R. C. Denson, Duke Homestead Road, housewife: "I think he will help Mr. Eisenhower. Certainly if Eisenhower didn't feel that he would be an asset, he never would have given him the opportunity to be his running mate. With some effort, I think Eisenhower could have talked NIXON out of running with him again. He didn't. That indicates to me that Eisenhower himself must feel that NIXON will help rather than hurt him in trying to remain in the White House."

R. G. Earp, Leesville Road, clerk: "Because he has done a good job thus far, Mr. NIXON will help Eisenhower. He has a good record as the White House's top aid to the President. There are some, naturally, who have tried to talk against NIXON. That doesn't worry me. Any man in his position will have some opposition. I think NIXON has a pleasing way about him. He appears sincere and, above all, the President must think he has done a good job. If Eisenhower didn't feel that NIXON could help him, I think he would have tried to plant a few roadblocks here and there to discourage him from running."

John Mabry, 408 South Miami Boulevard, fruit-stand attendant: "Mr. NIXON will help the President in his campaign. He and Eisenhower have formed a good combination thus far. There is no reason to think that the two will not continue to run our country in a good manner. I think the President trusts NIXON and realizes what a good man he is. With Eisenhower's confidence in him, NIXON can do nothing but help the President win again."

Petition

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. ROGERS of Colorado. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a petition that I have received from some of my good constituents from the city and county of Denver.

The petition is as follows:

We, the undersigned, voters of your district, wish to express our approval of the following bills, and respectfully urge you to do all in your power to see that they are passed: H. R. 7922, H. R. 8000, H. R. 9004, H. R. 9331, H. R. 9902, and H. R. 9430; in

order to protect the rights of public safety and freedom from annoyance.

Any acknowledgment can be made, with regard to the petition, to the first signer.

May M. Waller, Rosina Williams, Mabel Hobbs, Emma A. Livingston, Florence M. Brase, Jessie MacKay, Blanche Doughty, Mildred C. Barber, Blanche Burrows, Lillian F. Sullivan, Alice L. Welton, Mary R. Lindsey, Belle D. Ryan, Mrs. Mary Denter, Mrs. Hilma Gardner, T. H. Waller, Eva J. Walter, Margaret M. Kain, Denver, Colo.

Library Services Bill

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, as one of the sponsors of the library services bill, may I take this opportunity to thank the members of the Education Committee and Rules Committee for bringing this legislation to the floor.

My constituents in Ohio's 22d District are extremely fortunate in that they have outstandingly good library facilities, and they make good use of them. We are justly proud of the famous Cleveland Public Library. Other Ohio cities like Toledo, Cincinnati, Columbus, Dayton, Akron, and Youngstown have fine libraries, too.

But Ohio is also an agricultural State. The Ohio Development and Publicity Commission reports that some 80 percent of Ohio's area is still farmland and that Ohio stands 11th among the States in agriculture, Library service in these rural areas is quite inadequate. For example:

Libraries in 1 county—Adams—received less than 11 cents per capita to operate their service in 1954. The combined income of the 2 libraries in this county was $2,300.

Another—Morrow—received 18 cents per capita. Four libraries in this county had a combined income of $3,150.

Libraries in 15 counties in Ohio rereived less than 50 cents per capita to operate their service in 1954.

Libraries in 29 counties received between 50 cents and 99 cents for service in the same year.

Thus exactly half of Ohio's 88 counties were getting less—and many much less—than a dollar per capita for library service. The amount of money required for minimum library service has been established by the American Library Association as $1.50 per capita. This standard was established in 1948 and does not take into account the inflation of the last 8 years.

Ninety-nine of the 271 public libraries in Ohio received less than $7,000 as an operating budget in 1954. That amount is not enough to hire one librarian, rent space, pay for heat and light, and have money left over to buy an adequate supply of books.

A survey by the Ohio State Library showed 850,000 residents of the State with inadequate service.

Mr. Speaker, libraries in my district will receive none of this money since the program is limited to communities with less than 10,000 population. But I am happy to support this legislation in the interest of hundreds of thousands of citizens of my State, in addition to some 27 million people throughout this country, who are without access to modern library services.

I urge that favorable action be taken on this library services bill.

Self-Help Abroad

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recent editorial from the New York Times in which the newspaper comments on President Eisenhower's foreign-aid message to Congress:

SELF-HELP ABROAD

When President Eisenhower sent his foreign aid message to Congress more than a month ago he described the program as "indispensable to the security of every American citizen." That, we believe, describes the situation in a nutshell. The authorization of over $4.5 billion that Congress is asked to approve for the next fiscal year is not a relief expenditure, a giveaway program or any other form of charitable enterprise. It is the sum considered necessary to insure the continuing security of the United States, apart from the funds—many times larger—spent directly on our own military establishment.

As Secretary Dulles described this "hard-earned taxpayers' money," it is part payment for the "national insurance policy" we have had to take out against potential Soviet aggression; and it ought to be considered in the same light as all the other defense expenditures that run to more than $40 billion a year. The only difference is that this small fraction of the total is spent in various forms of assistance abroad. Most of it, as a matter of military necessity, goes for direct military or so-called "defense support" purposes, the latter being defined as budgetary and economic aid needed to enable our friends and allies to have the armed forces necessary to resist aggression. The question naturally arises, does the peaceful front the rulers of the Soviet Union are now turning to the wolrd mean that we can afford to let our guard down? To ask the question is to answer it. Obviously we cannot afford to do so, although the ostensible slackening of the Soviet military threat makes the temptation stronger every day.

This is where the necessity of imaginative, vigorous, dynamic statesmanship on the part of both the administration and the Congress comes in. Until the imperialists who rule Russia show by positive action that they are no longer interested in pushing outward the limits of the Russian Empire we must keep our defensive strength at high level. But at the same time we have to recognize that military strength is worse than useless without moral strength; and moral strength in very large and important parts of the world—including the neutral areas—requires the positive, nonmilitary kind of assistance in improving the economic and social condition of our fellow men, without involving them in political entanglements, that only one free nation can given to another. Some of this may be done, as Mr. Dulles suggested, by private investment; but for a long time to come most of it will have to be done through governments. It involves long-term planning; and the relatively small amount that the President has asked for this purpose can be but a mere beginning.

Certainly economic-aid programs are expensive; but to place all our faith in mere military aid and its concomitants is to bury our head in the sand and invite both moral and political diasaster. Both kinds of assistance are needed, and the United States can afford both kinds. In fact, at the present stage of world affairs, the United States cannot possibly afford not to engage in both kinds, with the stress increasingly on the economic and social progress that flows naturally from a peaceful and flourishing democracy.

Strange Inconsistencies of Americans for Democratic Action

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. SHEEHAN. Mr. Speaker, as David Lawrence in the Washington Star of May 7, 1956, so ably points out, among the group of so-called liberals who are attacking Vice President NIXON and the Republican Party are leaders in the Americans for Democratic Action, whose actions are in no sense liberal. Mr. Lawrence's article is as follows:

STRANGE INCONSISTENCIES OF ADA—RAUH'S PART IN HUGHES CASE SEEN NEVER FULLY EXPLAINED

There's an old saying that "people in glass houses shouldn't throw stones" and it might be applied in one of the issues facing Adlai Stevenson and the group of so-called liberals who have been trying to smear Vice President NIXON with unproved charges.

Mr. Stevenson has not said a word to the American people, for example, about the strange behavior of the chairman of the Americans for Democratic Action, an organization which supported him so enthusiastically in 1952 and from which group he drafted some of the principal advisers in his campaign.

Does Mr. Stevenson approve of what the chairman of that group did recently in trying to get a United States Senator? Will Mr. Stevenson accept support from the ADA once more? The question is raised in the current issue of the Saturday Evening Post in an editorial that has stirred political circles in Washington. Its full text follows:

"Two months seems long enough to wait for some indication as to how the faultlessly tailored members of Americans for Democratic Action feel about their chairman, Mr. Joseph L. Rauh, Jr.

"There are good reasons to wonder. On February 3, one Paul H. Hughes was acquitted in a New York Federal court of two charges of perjury. One charge was that Hughes lied when he testified previously that he had overheard Mr. Rauh talk on

the telephone with Brig. Gen. Telford Taylor (retired), another ADA official, concerning arrangements to give financial assistance to Harvey Matusow, the in-and-out witness who recanted testimony he had given in several trials of Communists. The jury found Hughes not guilty.

"Upon four other charges growing out of Hughes' efforts to palm himself off to liberal groups as a former member of Senator McCarthy's staff with important dirt to sell, the jury disagreed. It was testified that among those who fell for Hughes' fabrications were some of the brass of the Washington Post and Mr. Rauh of the ADA.

"Rauh testified that he did not know that the Hughes material was phony although some of it was so preposterous that it ought not to have deceived even the most dedicated liberal. Hughes testified that Rauh knew that the material was fictitious. Despite the fact that it was Rauh's word against that of a confessed forger whom his own lawyer described as a louse, the jury could not reach a verdict.

"The thing which might reasonably be troubling the membership of ADA is its chairman's involvement in practices which ADA and its allies have consistently condemned and which they have accused Senator McCarthy of employing. The ADA has waxed eloquent against the use of informers by the Department of Justice, but it seemed willing to avail itself of the services of a man who represented himself as an informer and a purloiner of documents.

"Senator McCarthy has been a pain in the neck to many Americans, including so-called right-wingers, but the evidence in the Hughes trial seems to indicate that in ADA circles McCarthyism is not considered reprehensible when practiced by dedicated liberals against reationaries and their ilk.

"Anyway it would be enlightening to learn whether there are any back benchers in ADA who are even mildly disturbed by their chairman's carryings on. At the moment the betting is the other way. If Mr. Rauh does not get a grant from the Fund for the Republic, invitations to give the Thomas Jefferson lectures at four Ivy League universities, and the applase of all right-thinking liberals, he has a right to be a disappointed man."

Some other aspects of the same question were discussed by Senator Goldwater, Republican, of Arizona, in a speech in the Senate which was printed in the Congressional Record last April 16. Senator Goldwater mentioned "the role of the Democratic National Committee in this sordid conspiracy," and specifically the part played by Mr. Clayton Fritchey, deputy chairman of the committee and editor of the Democratic Digest. The Arizona Senator called on candidate Stevenson to take a good look at the Hughes case, and added:

"In all, Mr. Fritchey handed over $2,500 to Hughes, and his friend, Joseph L. Rauh, Jr., of ADA, left-wing fame, tossed an additional $8,500 in the till to keep Hughes' imagination well oiled so that the supply of scandalous memoranda would not dry up."

There are many unsolved puzzles in the Hughes case. Messrs. Fritchey and Rauh and the others who paid money to Hughes had a perfect right, of course, to look into the offerings of a man who claimed to have reliable information which, if true, would lead to the expulsion of Senator McCarthy. But just why it took so many months to discover that Hughes was not an employee of either the Senate or of Senator McCarthy, as Hughes claimed, and why the money was doled out to Hughes over so long a period of time has never been adequately explained.

Nor is it clear why the Senate itself doesn't take up the Hughes case. For it has a committee especially ordered to investigate improper attempts to influence United States Senators. There have been Senate hearings on attempts indirectly to contribute to a Senator's campaign fund in connection with legislation and lots of front-page stuff was developed last week about some telephone calls made by a couple of clerks at the White House as a courtesy to a lawyer who happens to have been campaign manager in past years for three prominent personalities in the Republican Party—Senator Knowland, Chief Justice Warren, and Vice President Nixon.

Yet the Hughes case involves something that touches far more intimately the integrity of the Senate than did the episode in connection with the pending gas bill. For the Hughes case reveals, in a court of law, evidence that efforts were made to use several thousands of dollars to intimidate into silence or to influence in some way the course of action of a United States Senator whose speeches in fighting the Communist menace in America happen to have been distasteful to political groups and organizations opposed to his views.

Facts on Our Economy Versus Eisenhower Peace and Prosperity Claims

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. PRICE. Mr. Speaker, the people are being subjected to an unprecedented wave of "peace and prsoperity" publicity, all involving the claim that everything is wonderful and that anyone who doubts it is a prophet of gloom and doom.

There are certain facts, however, that deserve attention. It is absurd, for example, to ignore the factor of Government spending for defense—more than $35 billion a year—in promoting employment. The spending is necessary—we must spend for security—but we should not pretend that the Federal budget is a peacetime budget.

We should also take honest cognizance of the soft spots, such as lower income for farmers and layoffs of scores of thousands of automotive and farm-machinery workers. In this connection, under permission to revise and extend my remarks, I offer the following editorial from the St. Louis Post-Dispatch:

SELECTIVE PROSPERITY

Talk about prosperity is one form of production which is likely to keep on rising, at least, until early November. Therefore, we return to J. A. Livingston's recent observations on the theme. They were nonpolitical, businesslike, and informative. Since the Nation is best served by information, we recapitulate a few of them:

"Despite his veto of the fixed-parity farm bill, President Eisenhower called for fixed price supports from 82.5 percent of parity up.

"Eastern steel mills are setting new production records, but some steel-products fabricators are laying off men. Automobile production in the Detroit area is 20 percent under last year.

"Business failures are rising and new incorporations are declining. There is renewed pressure for higher prices. Business loans of member banks of the Federal Reserve System are up $5 billion, or 20 percent greater than they were a year ago.

"The Federal Reserve System found it necessary to raise rediscount rates, bringing the bank interest rate to about 4 percent. The higher rediscount rate also depressed the bond market. Businessmen are thinking twice about new financing for expansion or to increase inventories.

"Overall production showed a slight decrease from February to March, and retail trade has turned sluggish."

Our economy displays many favorable aspects, and some of the weak features doubtless will prove transient. Yet Mr. Livingston's observations are supported by the substantial slump in farm equipment and automobile sales, as reported by the New York Times service. Now comes the news that here in St. Louis construction was off $9 million in the first 4 months of 1956. These are warning signals, and only the imprudent will ignore them.

The Rigid Decline

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the Record, I would like to present an editorial which I believe points up some salient features of our current agricultural situation.

This editorial appeared in the May 3 edition of the Lynden Tribune, an outstanding weekly newspaper published in the heart of one of the finest agricultural valleys in the Nation. The publishers of this paper are William and Julian Lewis, who have lived most of their lives in the Lynden Valley and know its farms and farmers. I believe this editorial represents the thinking of many people in my congressional district, both in and out of agriculture. The editorial reads as follows:

PULL TOGETHER

One of the reasons Uncle Sam's agricultural program for 1956 is again being booted around like a football may be because the major farm organizations are not pulling together for a single working solution.

In commenting on President Ike's veto of the farm bill, Roy Battles, assistant to National Grange Master Herschel Newsom said:

"The National Grange office expressed itself as 'shocked' by the veto." "It was not a perfect bill, but neither was it a bad bill. Congress and the administration * * * brought forth a mouse of an agricultural program for 1956 * * * President Eisenhower's veto assured that agriculture would draw a virtual goose egg out of this session" were some of the quotations from the Friday, April 27, edition of the Washington State Grange News.

On the other side of the fence, the American Farm Bureau Federation praised Ike's veto and said the bill was "utterly bad legislation." "Higher price supports, increased set-aside, two- and three-price schemes, dual parity standards, increased payments, every conceivable devise to confuse and conceal the inescapable truth that attempts to legislate prosperity into agriculture are a miserable failure."

These two opposite views of farm legislation leave the program as juicy bait for candidates for public office. It appears that rather than work together for a uniform farm program which would appeal to the majority of farmers, the three major farm organizations are themselves carrying on a

continuous drive for support and membership.

In every year but one since 1947, farm income has declined. And in all these years until mid-1955, high rigid price supports were in effect. It was under such price supports that our present farm problem developed. In other words, if high rigid price supports were the answer to our problem, we would have no problem. In view of this, the road for all farm organizations to travel, if they sincerely wish to serve the farmers, is no dusty, winding trail.

It is one of realizing that the farm population is going down because American agriculture has been steadily producing more and more with fewer hands. This is the dream of every underdeveloped country in the world. Why smash this mark of advanced technology and industry civilization with rigid farm supports?

The Alaska Mental Health Bill

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mrs. GREEN of Oregon. Mr. Speaker, the overwhelming support for the Alaska mental health bill from responsible lay and professional authorities has been splendid testimony to the merits of this proposal. It was an especial pleasure to me when the Oregon Journal, one of our fine Portland newspapers, in its issue of April 22 published an editorial in support of this bill.

I would like at this time under unanimous consent to include the Journal's eloquent statement in the RECORD:

HOSPITAL BILL ATTACK SENSELESS

Strange things happen in the giddy political whirl which surrounds Congress, but one of the strangest in many a day is the sudden appearance of a propaganda campaign against the Alaska mental hospital bill.

For many years the Alaskans have sought their own mental hospital. At present, cases from the Territory are cared for at the Morningside Hospital in Portland, a private institution operating under contract with the Government.

Alaska has no facilities and patients awaiting transfer here are kept in a Federal jail. Furthermore, Alaskans want their relatives in an institution which is within easy visiting distance.

The bill, introduced by Representative EDITH GREEN, Democrat, of Oregon, provides $6,500,000 for a hospital or hospitals in the Territory and $6 million to be used over 10 years for maintenance. After that the Territory would take over. The bill also provides a grant of 1 million acres of public land for support of the program and for a reciprocity program, similar to those between States, under which stateside patients in Alaska could be cared for there until transfer and vice versa.

It is the last two provisions which are causing all the furor. The opponents envision the 1 million-acre land grant as an American counterpart of a Siberian concentration camp for political exiles, with the reciprocity sections providing the machinery for such exile.

Jessen's Weekly, a newspaper published in Fairbanks, Alaska, editorially expresses complete bewilderment. Opposition, it says, might have been expected from Oregon, which stands to lose financially, but adds that Oregon's Representative GREEN has been the principal proponent.

One of the first to raise the concentration camp cry was the Santa Ana, Calif., Register, and it was picked up by such organizations as Merwin K. Hart's Economic Council and the Minute Women.

Oregon and other States have used grants of public lands for support of schools and no one, with the possible exception of the children themselves, thought they were in a concentration camp.

The hospital bill has passed the House and had a good chance of getting through the Senate until the whispering campaign was started.

If the bill is loosely drawn, then let changes be made, but the senseless charges as to the general intent of the bill and its sponsors should not be allowed to delay passage beyond this session of Congress.

New Deal Economic Reforms Commended by Eisenhower Adviser

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. PRICE. Mr. Speaker, I rise in a spirit of benevolent bipartisanship to acknowledge that a spokesman of this administration apparently has acknowledged that everything we Democrats ever did was not necessarily wicked, socialistic, confused, and destructive.

A gentleman on the staff of the White House itself, Mr. Gabriel Hauge, apparently made a speech in St. Louis in which he paid tribute to the contributions of the New Deal and the Fair Deal in building strength in America.

This is so unusual that I am glad to offer for the RECORD the editorial comment on Mr. Hauge's speech from the St. Louis Post-Dispatch. I commend Mr. Hauge's attitude to the attention of Republican campaigners, including that ferocious campaigner of 1952 and 1954, Vice President NIXON, as a model of candor and integrity they well might follow themselves in the months ahead.

I offer herewith the editorial from the St. Louis Post-Dispatch:

CREDIT TO GABRIEL HAUGE

Gabriel Hauge is President Eisenhower's administrative assistant for economic affairs. When he addressed the St. Louis Association of Credit Men last week he did something very, very few members of the Eisenhower administration have ever done—he gave credit to the immediately preceding Democratic administrations for their good works, many of which benefit the country directly today.

Mr. Hauge is an economist who believes strongly in free private enterprise, but this did not keep him from paying his respects to agricultural supports, deposit insurance, public housing, unemployment compensation, and social security. These New Deal reforms and others which might be listed have put, as Mr. Hauge so well phrased it, "a floor over the pit of personal disaster."

What Mr. Hauge said every other economist in the country knows and so do the politicians regardless of political affiliation. We commend Mr. Hague for a display of realism and fairness which in turn commends him.

Dangers for the United States in the Middle-East Crisis

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by the very able gentleman from Texas, the Honorable OMAR BURLESON, before the American Council of Judaism, Inc.:

DANGERS FOR THE UNITED STATES IN THE MIDDLE-EAST CRISIS

(By Representative OMAR BURLESON before the American Council for Judaism, Inc., 12th annual conference, Chicago, Ill., April 28, 1956)

Mr. Chairman, distinguished guests, ladies and gentlemen, my fellow Americans, I am pleased, as I am highly honored, at the invitation you have extended me to be with you on this occasion.

It gives me satisfaction to be identified with such men in your organization as your president, Clarence L. Coleman, Jr.; the chairman of your board, Lessing J. Rosenwald; your executive vice president, Dr. Elmer Berger; and others.

As a citizen of this great country, I am encouraged by the work, the attitude, and the dedication to principle of the American Council for Judaism. As a United States legislator and a member of the Foreign Affairs Committee, I am, if anything, even more keenly aware of the fact that you perform a great work, a much-needed service. I think every man and woman of your group displays great courage in taking the position you do on so many questions of concern to all Americans. I know your task is not an easy one, but I am deeply impressed by the fact that you have willingly shouldered the grave responsibility of attempting to inform not only Americans of the Jewish faith but all Americans that no international movement of a political nature represents all the people of Jewish faith; that the national identification of people of Jewish faith is with their country of citizenship; and that Americans of Jewish faith are by no means unified behind a proposition which, according to certain well-known propaganda media, suggests American Jews need and want a homeland other than these United States with its equality for all who are its citizens.

One could easily conclude that when 17 organizations, commonly referred to as Jewish groups, meet in Washington for a common purpose, they represent all the Jews of this country. In fact, it would appear that the motivation of such meetings is to give the impression they do represent everybody and that the political pressures they apply have virtually universal support.

Not long ago, I was walking through the corridors of the Capitol of the United States with your Dr. Berger. We encountered a fellow Congressman of mine. I performed introductions and explained that Dr. Berger was connected with, and devoting his time to, the American Council for Judaism. "Oh, yes," my colleague responded, "I have had a considerable amount of literature on the subject of Israel." He, of course, had no idea what organization it was that had sent him

literature on the subject of Israel, but Dr. Berger and I were reasonably sure it was not the American Council for Judaism.

This, however, is how it is with a great many people with whom I come in contact. Pressure groups are certainly not new in Washington. But pressure from so many different sources concentrated in one spot, in the manner of the Zionists, amounts to a tremendously powerful force.

That is one of the reasons why it is encouraging and inspiring to me to know of a group of Americans who will take a stand against this force in the face of tremendous opposition and unpopularity. It is something in Washington to see a pressure group pressurized. That, it seems to me, is just what your organization had the courage to do when it contacted the Secretary of State to advise him that the 17 so-called Jewish organizations united to press for arms to Israel did not represent the views of all Americans of Jewish faith.

I wonder how many of you realize the total impact of the work you are doing. Of course, you know your purpose is to inform the public generally that you do not subscribe to the idea of Jewish nationalism. But I can testify that you do far more than this. By the stand you have taken, you give courage to those of us in political life who are sensitive to the enormous pressures which are put upon us virtually every day in the year.

The sad and bitter truth of the matter is that objectivity—a desire to keep an open mind on certain problems—runs the grave risk of being denounced as anti-Semitism. There is always the possibility of this devastating accusation being made when any of us in public office dare raise our voice against the methods of the Zionists of this country, or when we happen to disagree with any expression of the views of those who are dedicated to putting the power and influence of the United States at the disposal of, and for the furtherance of, the national aspirations of the Zionist State of Israel.

My subject this evening is Dangers for the United States in the Middle East Crisis. Certainly I do not represent myself as being an expert on this subject. There are those present who could better lay claim to such a qualification.

The claim I make for myself is objectivity. I can further assure you that I feel free of emotion in discussing these issues which are obviously loaded with emotionalism.

It seems obvious to me that before we can begin to understand the nature of the crisis which the United States faces in this most strategic area of the world, we must go back a little to the history of the problem which lies at the root of the trouble.

The Middle East, for a long time the world's forgotten child, has come alive—almost too much alive. The nationalism of the long-dormant Arab world is engaged in a bitter conflict with the nationalism of the State of Israel.

Arab nationalism and the consciousness of the necessity for social reform are mingled with a deep suspicion of the West which has a long history of colonialism in the area. Not unrelated to this suspicion and no little part of the antagonism to Israel is the historical fact that the Zionist experiment in Palestine—under the Balfour Declaration—entered the area as part of the colonial controls imposed at the end of World War I.

The Middle East, as you know, is of vitally strategic importance—oil and millions of people now stirring in a variety of emergent national revolutions make it so. Admiral Radford, Chairman of the Joint Chiefs of Staff, recently told a congressional committee; and here I quote:

"The importance of the Middle East to the free world can hardly be overestimated militarily and economically. First, its huge oil reserves now supply most of the wants of Europe, and their loss would be disastrous. Second, its geographic location is astride the lines of communication between West and East; and, third, it is only in this area that the Soviets have no buffer states."

In the Middle East lie the largest oil resources in the world—75 percent of the known reserves available to the free world. From the strategic United States airbase at Dhahran in Saudi Arabia, which figured so prominently in recent headlines, the Baku oilfields and other important industrial centers in the Communist world are easy targets.

The peacetime economy of Western Europe and of our allies there is dependent upon oil. And suppose, despite all of our efforts to wage peace, we should fail and find ourselves involved in a war with the Soviet Union. The problem of tankerage for oil which would be needed by our allies would be greatly increased if Middle East supply centers are lost, even assuming without argument that the supplies could be produced from our own sources. Furthermore, should the Soviet Union obtain access to the oil concessions of the Middle East now controlled by our allies, such acquisition might eliminate from the inscrutable calculation of the Kremlin one possible deterrent to war. Such a deterrent may now exist in the form of insufficient petroleum supplies under the control of the Soviet Union.

This Middle East area is important not only in itself, but because of the intimate ties of the people to struggling Arab nationalists in north Africa, to the west, and to the newly created Asian nations to the east. What is of moment in Cairo soon reverberates from Marrakech, in Morocco, to Bandung, in Indonesia.

The significance of the whole bloc of nations was dramatically illustrated at Bandung only about a year ago. If any of us are concerned with the welfare of our country for the future—in our own lifetime or certainly that of our children—we must find the ways to help these vast numbers of people to understand their aspirations and assist in the realization of their legitimate hopes.

It solves none of these problems for us to know that the United States has perhaps inherited more than it has created, of these annoyances and suspicions. There is little room in statesmanship for such rationalizing. The task of statesmanship is to obtain the facts, to face them and to construct the road of peace upon them.

In 1917 a hard-pressed British Government issued the Balfour Declaration as a war measure in the struggle against the Central Powers. The Balfour Declaration was a grant to establish—not a political state—but a Jewish homeland in Palestine for religious-minded Jews and refugees. And this grant was conditional: for included in the 67 words of the ambiguous declaration was the safeguarding clause which specifically protected the rights of the existing Arab communities.

Also included in the declaration was a general prohibition against anything being done by the Zionists "which may prejudice * * * the rights and political status enjoyed by Jews in any other country."

As we look back on the cumulative results of the history of Palestine, from the days of the declaration until now, it seems accurate to say that while Zionism exploited to the full the affirmations relating to the ambiguous entity designated as a national home, no one did anything effective about implementing either of the qualifying conditions.

At that time the Arabs constituted approximately nine-tenths of Palestine's population with the Jewish population in the Holy Land less than 50,000 at the turn of the century. The British hastened to assure the Arabs, who were rebelling against their Ottoman overseers, that they had no intent to subjugate the Arabs to Zionist rule.

Here I think it is important, for an understanding of the present impasse, to understand that this question of immigration was always the principal bone of contention.

Zionists were more or less satisfied with the yardstick of economic absorptive capacity. With this as the motivation, they appealed to the Jews of the world to supply money to build a Zionist economy in Palestine which might support increasing numbers of Jewish immigrants. At the same time, they opposed as contrary to the Balfour Declaration and the later mandate, every effort to establish self-government in Palestine, while there was still an Arab majority in the country.

Clearly, therefore, what the Zionists wanted and what was the substance of their long-range strategy was always a state in Palestine which they would control. While they were a minority in the country they demanded the right of complete sovereignty in the all-important question of immigration which would eventually determine the political character of the country. For all practical purposes, they succeeded in exercising this right.

Furthermore, and this is important both as history and in terms of understanding the present conflict, although the Zionists of Palestine could not accomplish this purpose alone, they were able to do so by reason of the political mechanism they operated, first in Britain and later in the United States.

In this process, the rights of the Arab population of Palestine were slowly whittled away. And, if I may say so, the increasing dependence of the Zionists in Palestine upon Jews outside for both political and economic support certainly blurred the qualification of the Balfour Declaration, which was intended as a safeguard against the involvement of non-Palestinian Jews in the political destiny of the Palestinian-Zionist undertaking. I suspect that it was precisely this increasing involvement of American Jews in a Zionist quasi-government in Palestine which brought about the creation of the American Council for Judaism.

This long-range strategy of Zionism, of course, became apparent only with the passing of time. The years between 1919–20 and 1947 were characterized by a three-way conflict. This was among official Zionism, which never lost sight of the political strategy of immigration, however much less official followers looked upon immigration as humanitarian; Arab nationalists who saw the ultimate outcome of such a policy; and the British Government, charged under the mandate with assisting the people of the country to reach an eventual condition of self-government.

Something like halfway through this three-way struggle, Hitler's rise to power confronted the world with as revolting and atavistic a chapter of savagery and brutality as any historic period has ever seen. And when the Hitler madness grew to the proportions of a threat to the whole civilized world, the specter of another global war confronted mankind. So another impasse was added to the long-festering Palestine problem. For in the very face of the need of refuge for as many of Europe's Jews as could be saved, there arose a complicating factor—the necessity for the West to have a friendly—or at least a nonantagonistic—hinterland of people in the Middle East.

British efforts to find a way out of this dilemma produced the campaigns of illegal Zionist immigration and subsequent violence for Palestine.

By the spring of 1947, the British had decided to give up the ghost and place the Palestine controversy before the United Nations. A special session of the General As-

sembly was convened, an investigating committee was sent to the troubled area, and 7 months later the international organization recommended the partition of Palestine. The bitter struggle for votes at Lake Success was featured by unparalleled pressures.

During the following spring, the United States reconsidered the partition plan. Reports of the National Security Council and the Central Intelligence Agency warned that the Palestine turmoil resulting from the actions of the United Nations acutely endangered the security of the United States. A trusteesship for Palestine became the new policy. While the United Nations debate was in progress, on May 15, 1948, the Zionists succeeded in setting up an independent state in Palestine, in territory which had been occupied for over 1,300 years by Arabs and which had not been Jewish for 2,000 years. Since that day, the Middle East struggle between the Arab and the Israeli has continued unabated.

Partition would never have won had it not been for the human factor. With the end of World War II, the plight of the displaced persons was pitiable. It was simple for the outside world, for humanitarian-minded Christians and Jews alike, to embrace a solution which seemed to solve two pressing problems at the same time—that of the refugees and that of the form of government Palestine was to assume. This is why so many Americans espoused the Zionist cause and favored the establishment of Israel.

Sympathy for the plight of the displaced persons was an emotion which we shall certainly never have cause to regret. But the support we gave to the Zionist plan for solving this problem by creating a Zionist state in Palestine has cost us dearly. It seriously undermined for our country the priceless high prestige we had always enjoyed in the Middle East among the people there because, unlike the British, the French, and the Spanish, we had never been a colonizing power. Our educators and missionaries had given to these people an example of selfless devotion to their welfare; an example of democracy at its best.

Tragically, this inestimable heritage of good will built up over the years was transformed, in a few moments, relatively speaking, by our well-meaning but ill-advised attempt to make it up to the Jews of Europe through aid to the Zionists in the Middle East.

What we achieved instead, in the Middle East, was to antagonize and embitter some 40 million people—an important part of the vast numbers of underdeveloped peoples whose friendship and support are really the big stakes in the East-West struggle. For if we, together with our allies in Western Europe, cannot persuade these underdeveloped peoples of the sincerity and integrity of our way of life, we—and our Western European allies—will some day be surrounded by great, heavily populated, rich-in-natural-resources areas of the world filled with suspicion and antagonism.

And, as we have come to expect, this embitterment to which we contributed in the Arab world was not missed by the Kremlin.

Disillusioned with the United States and the West, the Arabs were ripe for Russian advances. The more partial we became to the Zionists and the Israelis, the more the Arabs found themselves turning to the Soviets.

We, as Americans, make a great mistake—or perhaps I should say we are in danger of compounding our past errors—if we look upon this Soviet advance as an occasion for us to choose between Israel or the Arab States. This would suggest we must abandon one or the other.

In my humble opinion, the only American way to look at the present situation is against the background of this historical development of the problem which I have recited here in an extremely abridged form. What has taken place is that, for the first time in about two decades, the Arab States think they have a great power on their side. We know this great power is only another—and more vicious—form of colonialism. But our knowledge of this fact is not enough to save the Arab world for us. We fear Soviet advances will not stop at simple, commercial deals as the Arabs believe they will. But our knowledge of this fact, too, is not enough to prevent the subversion of the area.

If, as even the President of the United States has said, the Middle East is of great strategic importance to us, our national responsibility calls for positive action and avoidance of further negative irritants. Only in this way do we stand a chance of seizing away from the Soviets what now appears to be the initiative they have captured in the area.

It should be obvious to even the most partisan supporters of Israel that if the entire Arab world should go Communist, one casualty of such a catastrophe would be Israel itself.

Paradoxically, had we been less partial to Israel in the past, Israel, as well as the rest of the free world, might today be much more secure.

I am appalled when I reflect upon the difficulty of the problems we must face if we are to avert the most tragic consequences in the Middle East. For this task we shall need every ounce of our insight, our finest diplomatic skill, and a kind of transcendental integrity. Above all, we shall need to present to the world a nation united behind a policy motivated by the most unselfish, the most humane, the most impartial of motives. Unless we can so present ourselves, especially to the protagonists in the conflict, our efforts are doomed from the start.

It is for this reason, I am sure, that the Secretary of State, John Foster Dulles, said what he did to the Senate Foreign Relations Committee last February. You will recall that he repeated an earlier statement expressing the hope that the Arab-Israeli dispute be kept out of the presidential election campaign this year. The position of the Secretary of State is one with which I find myself in the most heartfelt agreement.

It seems to me that so long as the question of United States policy for the Middle East continues to be a political football on the domestic scene we shall never arrive at any solution in the national interest. In this problem, as in all our problems of foreign policy, we must stick closely to the basic principle that differences among us cease at the water's edge. It is time for all candidates for public office in the United States—Republicans and Democrats alike—who have viewed this controversy as a convenient means of bartering for votes to realize that we have been callously playing politics with American national security.

When our first Secretary of Defense, James Forrestal, tried to get the Nation's two political parties to agree not to press the Middle East issue, he was met by rebuff and scorn. Mr. Forrestal was told that the Democratic Party would be bound to lose the advantage in certain States. His answer, as revealed in his diaries, was "It is about time that somebody should pay some consideration to whether we might not lose the United States." That retort of Mr. Forrestal's is more applicable today than ever.

Those of us who sincerely desire to demonstrate our friendship for the small State of Israel certainly will be yielding no ground if we ask that as the Middle East is debated, as it may be in election campaigns where our whole foreign policy is a legitimate subject for debate on a high level, the debate be on the issues of broad American interests in the whole area. It seems to me proper to ask any groups of Americans to assist in maintaining the debate on such a high level by avoiding the kind of partisan pressure tactics which led even so strong a friend of Zionism as Mr. Truman to complain. I think to suggest such standards for the debate is not to impugn the rights of any Americans. For our rights entail also responsibilities. And one responsibility of any American who petitions his Government is to be sure he is doing so as a free, sovereign, American citizen.

What I mean to say, above all, is that delicate negotiations which might lead to a just and equitable settlement of the complex problem in the Middle East can never be conducted against a background of bartering for a Jewish vote which I do not believe exists; the implied acceptance of which I believe to be a slander upon the integrity and the desire of Americans of Jewish faith to be part and parcel of the American people.

Among the many extremely useful things your organization has done, to my mind, have been your vigorous and repeated assertions that there is no such things as a Jewish vote presumably committed uncritically to the advancement of the foreign State of Israel. It seems to me to be self-evident that Americans who happen to profess the religion of Judaism, do not behave any differently in the voting booth than do Americans who happen to be Baptists or those who happen to be Methodists, Catholics, or Latter Day Saints.

I hope your organization continues to make it clear, particularly in this most important election campaign in which we are all about to become engaged, that anyone who says American Jews vote as a bloc to favor Israel slanders Jews, complicates an already highly complex problem for the United States Government and actually does Israel more harm than good.

Prof. William Ernest Hocking, of Harvard, in a letter to the New York Herald Tribune on March 4 wrote; and here I quote:

"We are again at a time when presidential issues are in the air, and when, as our political life has been running, it is prudent for any candidate or potential candidate to 'speak comfortably to Jerusalem.' I raise the question: What would happen if some presidential possibility were to speak uncomfortably to the present-day Jerusalem, in the interests of the honor and independence of the American voter?

"If it were suggested that votes might be lost, I ask, whose votes? They could be none but those prepared to put the interest of a foreign state prior to the interest of this country and of mankind. But can any candidate afford to lose them?

"I am looking for the man who will state this disgraceful situation clearly to the American people and publicly renounce any such vote."

I make no pretense to being the man for whom Professor Hocking is looking. But here and now I am prepared to say, as soberly as I know how, that I am one of what I fervently hope will be an increasing number who may seek to qualify.

My interest in this particular aspect of United States foreign policy is not new. About 2 years ago while witnesses from the Department of State were testifying on the foreign-aid program before the House Foreign Affairs Committee, they were questioned about the millions of dollars from the United States, contributed by American citizens in the form of bond sales and through the United Jewish Appeal to the Israeli Government.

Mr. Arthur Z. Gardiner, then politico-economic advisor to the State Department's Bureau of Near Eastern, South Asian, and African Affairs, said of these contributions, and I quote:

"Now these contributions, of course, are deductible for purposes of tax computation and they certainly have a bearing on our income-tax structure. How to evaluate or appraise that, I do not know."

A little later, Mr. Norman S. Paul, who was the State Department's Middle East regional director, made an extremely interesting statement. Here I quote him:

"The funds they have received through the United Jewish Appeal, just as the funds they received through these bond drives, have made up the pool from which they meet their defense as well as other requirements. * * * We can trace our funds definitely into projects and determine the commodities, but I don't think you could take the United Jewish Appeal contributions and do the same thing."

At this point, I said that if funds collected by the United Jewish Appeal were used for defense and for general economic development of Israel, they should definitely be taken into account in arriving at the question of what Israel needed from us. I said—and here I quote myself:

"When the dollars in the barrel are stirred you can't identify each, but nevertheless, those exempt contributions, as are the reparations payments, become available for any use. Why should this committee not take into consideration all these other contributions when we are considering grants-in-aid on that basis?"

I think of these questions our committee discussed 2 years ago when I notice that the increased armaments in the hands of Egypt are now being used as a sales-argument to raise a greatly increased quota this year for the United Jewish Appeal. I wonder about the logic, for the United States, in such a situation. One of the reasons Egypt turned to Czechoslovakia for arms was that the dollar cost of American arms to the Egyptians was too high. Egypt needed those arms to meet what, with concern for its own national security, it believed to be a rising threat from Israel following the Gaza attack of February 1955. Yet we in the United States help make it possible for Israel to purchase arms with dollars imported through the United Jewish Appeal but not segregated for strictly charitable purposes.

Soberly, earnestly, I ask those who direct and support such policies if they are of real, unqualified assistance to the United States at a time when our Nation's interests are gravely imperiled in the Middle East.

I am not making any accusations. I have little evidence of the extent—if any—to which the American taxpayer is without his knowledge or consent underwriting either the military power of the State of Israel or the pressure politics of the Zionist movement in the United States. I would hope, for the sake of our country and for all our citizens, that it is possible for someone to secure a detailed, fully audited breakdown, to the last dollar, of the ultimate disposition of the vast sums of money collected every year in this country in the name of philanthropy and which, to the extent that they are deductible from income tax, are subsidized by the American taxpayer.

It may be that such an accounting is available. If it is, I have not seen it. I raise the question only to point out that publication of such an accounting is perhaps long overdue. I raise it in the fervent wish that my suspicions may be proved to be unfounded. I raise it in all sincerity, hoping at the same time that I may be forced to apologize for giving rise to fears which may have no foundation.

I raise the question now, as I did in 1954, because of its very grave bearing upon our chances for reaching a settlement of the crisis in the Middle East. One of the factors which adds enormously to the difficulties we face in this area is the conviction, shared by many of the Arab States, that the United States Government is hopelessly subservient to Zionist pressures. One of the strongest indications, to the Arabs, that this is the case, is the fact that apparently no official of the United States Government dares to raise this kind of question in connection with what happens to the vast sums of money raised in this country and made available to the Israeli Government.

Once this, and perhaps certain other questions are clarified, it seems to me that American public opinion should certainly be willing to support a compromise settlement for the Middle East—a settlement which would be in the interests of American security; a settlement which would do justice to the Arabs, and a settlement which would not drive the Israelis into the sea—a widely held fear.

Such a settlement must accord justice to both sides. There are 900,000 Arab refugees who have become the innocent victims of the creation of the State of Israel. Both sides must be induced to make concessions which will help settle this problem. If Israel will offer to repatriate Arab refugees, that is, to let them have their land back or else compensate them for their losses, much of the Arab grievance would be dissipated. Many of the Arabs will not wish to return, but will prefer compensation. This refugee problem lies at the heart of the conflict.

Let us remember that just concessions at this time can avoid disaster. The alternative is that either the Israelis attack and conquer the Arabs or the Arabs attack and conquer them. In neither case is it likely that Israel can win. Should they initially conquer the Arabs, the task confronting 1,700,000 people of keeping under subjugation 40 million Arabs will prove an impossible one. Moslems of the surrounding countries will inevitably become involved. The floodgates to communism will be opened by the Arabs as they struggle to free themselves from any temporary rule under the Israelis. Can the West afford to permit this to happen? On the other hand, it becomes very difficult to see what the West can do if the Arabs become strong enough to attempt to throw Israel into the sea and if there is built into such strength increasing bitterness and hostility. For it is a certainty that the United States, either together with the West or alone, cannot engage the whole Moslem world in conflict in Israel's behalf. Nor can the United States alone, or with its allies, long avoid a decision to help the Moslem world in its emergent renaissance from North Africa to Indonesia.

In the vast expanse of territory and peoples, Israel must be seen in its proper perspective; and, in the long pull of history, if Israel is to endure it will be a service to it if American Jews do not encourage it, either directly or through pressure on their own Government, to hold an exaggerated opinion of its place in the context of world politics.

Unless one believes in some kind of pan-Israelism, or in some new version of the "white man's burden" in the form of an Israel destined to dominate the Middle East, I think nothing I have said can be construed as anti-Israel. Moreover, because I think I know something of the history of the problem, I am sympathetic to the reason why the Israelis hold an exaggerated opinion of their role in history. For too long the West—unmindful of consequences—yielded to almost every whim of Israel's Zionist progenitors.

But there comes a time, and nearly a decade in the life of a nation may not be too soon, when a sovereign nation demonstrates its maturity by seeing itself in its true proportions and in the perspective of the world's insistent desire for peace. One certain contribution Israel could make today to the peace of the world is to renounce its Zionist internationale; to bestow neither favors upon, nor require obligations of, people who are not its citizens; to turn its national face and energies, which are great, to the Middle East; to act the mature part which it claims for itself in its own comparisons of its sovereignty with the Arab world and, with a generosity commensurate with the favoritism it has enjoyed in the past, actively seek a peace with its Middle East neighbors. This, more than its propaganda, would demonstrate its dedication to western hopes for peace. In this way Israel might repay some of its debt to the West and, not the least, to Jewish citizens of the western nations, who for a complexity of reasons have showered on Israel and its Zionist antecedents innumerable blessings.

The role of impartiality for which the Department of State has pleaded is motivated by a desire to keep the Communists out of the area. In any arms race between the United States and Russia, the 40 million Arabs can more quickly absorb Russian weapons, incremented by the large obsolete quantities possessed by the Kremlin, than can the West supply Israel with arms. Israel's future then lies in making such concessions as will buy them what they most need to survive, namely, peace.

Will this problem ever be finally and completely solved? As Americans, we are accustomed to attacking problems head-on and fighting our way through to a complete and total solution. In my native State of Texas, for instance, the problems with which we deal seem to fall pretty largely in the area of combating the ravages of nature. We have to contend with drought, with excessive rains, with tornadoes, and floods. In all these cases, catastrophic though they may be, there is at least the satisfaction of knowing on which side we are.

In the political field, however, and most typically, it seems to me, in connection with the problems we have to face in the Middle East, we are dealing with issues which are not nearly as clear-cut and where, instead of there being a black-and-white contrast between good and evil, we have a situation in which there are shades of gray over virtually everything.

I have the feeling that the situation in the Middle East is in many ways comparable to that which prevailed there during the Middle Ages and earlier when the conflict, instead of taking place between Arab and Zionist nationalism was between two different groups, each of which referred to the other as infidels. Moslems and Christians for many generations in that area engaged in bloody battles with each other until somehow, with neither side ever being completely victorious, a kind of modus vivendi came to exist between them. The Christians and the Moslems never really made a formal peace with each other. I am sure that they still think of each other (privately) as infidels. Nevertheless, with the passing of time, they did learn to live with each other. The conflict between them, although never really resolved, did manage, by the very fact that it continued for so long, to ameliorate itself.

I am an optimist about the Middle East. However, I am not so much of an optimist as to believe that we are going to find a just, a permanent, and a peaceful solution which will satisfy everyone within the very near future.

Perhaps, in the present situation, we should lower our sights a bit. I believe if we accept the probability that the best we can hope to achieve for some time is a gradual amelioration of the intense emotionalism and bitterness which have characterized both sides to this controversy, we shall have come a long way.

In the long run, at any rate, it may be that this realistic view will help prevent the situation in the Middle East from deteriorating to the one irrevocable disaster of all-out war. Such a war could benefit no one except the power-hungry masters of the Soviet Union.

Perhaps our immediate objective, therefore, should simply be, not a final peace, but the continued absence of war. If both parties to the controversy continue to live as neighbors, if not at peace then at least not actually engaged in physical combat, the very passing of time itself may tend to dull the edge of the hatred which now divides them.

With the passing of time and the lessening of the hatred—and everything which we, as Americans of good will, can do to encourage the lessening of that hatred—the day of a final, lasting, and peaceful solution may not be as far off as it sometimes may seem.

I wish for the American Council for Judaism continued success in offsetting spurious claims to real authority over American Jews advanced by individuals or groups precommitted to linking American power and prestige in the area only to Israel.

We've Got To Attract and Keep the Men To Man Our Planes

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. DAGUE. Mr. Speaker, when Gen. Horace Wade spoke in behalf of his Strategic Air Command and emphasized the fact that we are spending "billions for equipment and peanuts for people," he put his finger on the glaring defect in the treatment we accord those who want to elect the armed services as a career but who, out of deference to the needs of their families and consideration for their own future, are forced to seek more lucrative employment in industry and the professions.

General Wade, in his appearance before the Senate subcommittee, was supporting his chief, General LeMay, and the substance of their joint recommendation was to the effect that an adequate program of incentives designed to encourage enlistments could actually save money while making possible a truly professional Air Force.

The average serviceman occupies in the minds of too many of us the role of "hero in war, zero in peace"; and while nothing is too great for the soldier or airman who mans our defenses when we are under attack, our treatment of him in peacetime is both illogical and senseless. We spend millions on a modern plane and then expect the man who pilots it to work for less than an ordinary mechanic's wages, even though he has to be a technician of the highest type. But the thing we sacrifice so readily that is above price is the esprit de corps without which no military service ever amounted to a hill of beans. I say, with all of the emphasis I can command, that the time is here when we must make military service so attractive economically that we will have no difficulty in recruiting and keeping on the job the cream of American manhood to protect us from those who would destroy us.

H. R. 6376: The Alaska Mental Health Bill

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mrs. GREEN of Oregon. Mr. Speaker, it is with great pride that I am able to state that the Portland Chamber of Commerce in my district has made a careful study through two of its committees of the Alaska mental health bill H. R. 6376. Following the favorable action of both committees, the bill has been endorsed by the board of directors of the chamber. Because of the thorough analysis of the bill which preceded the action of the chamber of commerce and because this action I believe represents the overwhelming support for this bill in my own area, under unanimous consent, I insert in the RECORD the conclusions of the two committees and the endorsement by the chamber of commerce.

PORTLAND CHAMBER OF COMMERCE,
Portland, Oreg., April 19, 1956.

DEAR MRS. GREEN: The hospital for Alaska insane bill has been put through the study procedure here—two committees have it. The Alaska committee has been able to sound out Alaska contacts and has brought here for consultation on the subject the Director of the Alaska Native Service. That committee is bringing out a report favoring the bill.

The chamber's health affairs committee investigates from a different approach, but their consideration of the bill appears to be leading to a favorable report.

Without such studies chamber action is unsound. Committee work, as you know, requires time. In this instance, however, it appears that favorable committee action will go to the chamber board late this week and at present it would seem likely that the board action would be to adopt the reports of the committees.

Sincerely yours,
DAVID C. DUNCAN, *President.*

APRIL 10, 1956.

To: The board of directors.
Subject: House bill 6376.

At a regular meeting of the Alaska committee, held on April 10, the committee considered House bill 6376, which provides for the hospitalization and care of the mentally ill of Alaska. This is an enabling act, cited as the Alaska Mental Health Act, the purposes of which is to transfer from the Federal Government to the Territory of Alaska basic responsibility and authority for the hospitalization, care, and treatment of the mentally ill of Alaska, and in connection with such transfer provides: (a) to modernize procedures for such hospitalization (including commitment), care, and treatment and to authorize the Territory to modify or supersede such procedures; (b) to assist in providing for the Territory necessary facilities for a comprehensive mental health program in Alaska, including inpatient and out-patient facilities; (c) to provide for a land grant to the Territory to assist in placing the program on a firm, long-term basis; (d) to provide for a 10-year program of grants-in-aid to the Territory to enable the Territory gradually to assume the full operating costs of the program.

The Alaska Committee recommends that the board of directors of the Portland Chamber of Commerce support passage of House bill 6376.

CARTER BRANDON,
Secretary, the Alaska Committee.

Approved by the board of directors, Portland Chamber of Commerce, April 20, 1956.

APRIL 19, 1956.

Memorandum to: Board of directors of the Portland Chamber of Commerce.
Re: Action of health affairs committee on House bill 6376, hospitalization and care the mentally ill of Alaska.

The health affairs committee of the Portland Chamber of Commerce at their regular meeting held in the chamber of commerce board of directors room an Wednesday noon, April 18, 1956, considered H. R. 6376 to provide for the hospitalization and care of mentally ill in Alaska, as well as the report of Mr. O'BRIEN of New York, from the Committee on Interior and Insular Affairs.

In consideration of this bill, it was brought out neither the Oregon State Medical Society or Multnomah County Medical Society had any opposition to the measure. It was developed there was a general feeling on the part of members of the health affairs committee the facilities for the hospitalization and care of the mentally ill in Alaska was a necessity for the territory.

It was regularly moved, seconded, and adopted that the health affairs committee concur with the recommendations of the Alaska committee and recommend the board of directors approve House bill 6376.

Respectfully submitted.

GUY E. LEONARD,
Secretary, Health Affairs Committee.

Approved by the board of directors, Portland Chamber of Commerce, April 20, 1956.

PORTLAND CHAMBER OF COMMERCE,
Portland, Oreg., April 24, 1956.

DEAR MRS. GREEN: The board of directors has adopted the two committee reports favoring passage of your bill respecting the Alaska insane.

Your sincerely,
DAVID C. DUNCAN,
President.

Spirit Lives On

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in commemoration of the 165th anniversary of Poland's Constitution Day, I included in the RECORD an editorial "Spirit Lives On," from the columns of the Shenandoah (Pa.) Evening Herald of May 3. It is a fine tribute to a great people:

In honor of Poland's early recognition and adherence to the principle of equality of man, freemen everywhere beyond the Iron Curtain today salute the Polish people on the 165th anniversary of their constitution.

In more happy years, the Poles joyously commemorated adoption of the constitution in 1791 annually on May 3; it was truly an eventful day in Poland.

But when the Kremlin's puppets forcibly gained control of the country, they were

quick to abolish constitution day. It was their evil intent to destroy this proud memory and obliterate everything it stood for.

Nevertheless, while the Reds did away with constitution day, they have never succeeded in stamping out the gallant spirit which lives on in the minds and hearts of all loyal Poles.

Here in Shenandoah, where so many good Americans are justly proud of their Polish ties, today occasions fervent hopes and prayers that the time will soon come when the yoke of tyranny may be overthrown in Poland and freedom and equality restored.

The Southern Position With Respect to the Biracial System

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks, I include one of the most able presentations of the southern position in regard to the racial problem I have seen, by Dr. C. K. Brown, of Davidson College, North Carolina.

The address follows:

THE SOUTHERN POSITION WITH RESPECT TO THE BIRACIAL SYSTEM

(Address delivered by C. K. Brown to the students of Davidson College, March 1, 1956)

In a time when much is being said about oppressed minorities, it is well to remember that the white people of the South are a minority in the Nation. They are not an aggressive minority. They do not seek to impose their pattern of life upon the people of other regions. They are willing to concede to other regions the degree of freedom that they would like to have to establish social arrangements, not inconsistent with the basic law to which they have assented, within their own bounds. For at least a century the South has struggled to retain the degree of local autonomy to which it feels entitled under the American system of government. This is not a purely selfish struggle; the principle at issue is important, the South thinks, to all the diverse regions of the American commonwealth.

For some years now the South has been subjected to heavy pressure to abandon its biracial social structure. This pressure has been applied by the Federal Government, which, in the words of the Charlotte News (editorial of November 26, 1955), has undertaken "a monumental project in the field of social engineering"; by the NAACP, which is determined to exploit the Federal power to the utmost in establishing relationships that are obnoxious to the overwhelming majority of the white people of the South; by the northern press, which is almost unanimous in its conviction that the South should be prodded into accepting the ideas of other sections, because, as the editor of Harper's magazine, for example, believes, the white people of the South don't do anything without being prodded (January 1956, p. 24); and by a small group of white persons in the South, who, chiefly on religious grounds, consider the biracial system to be a relic of a benighted past.

In the course of this campaign many intemperate things have been said and done; things that were calculated to infuriate the white South. The southern people have been called prejudiced, unenlightened, undemocratic, and unchristian. These intemperate attacks have evoked a number of intemperate responses from the less disciplined members of the southern community. The result is that a tremendous amount of ill-will and resentment has been generated, not only between blacks and whites but between members of the white race who hold different views on this troublesome subject. If this atmosphere continues, the issue that has been forced upon the South may find no acceptable solution in our time. I am convinced that there are, among the white people of the South, as many persons with a sense of decency, with a love for fair dealing, and with an understanding of the Christian teaching as are to be found in any group of comparable size elsewhere in the country. These are the people who in the end will have to solve this problem. Their task is being made much more difficult by their antagonists, who seem to regard them as deficient in all the great qualities of heart and mind.

The South recognizes the race problems as one of the greatest magnitude. It does not regard it as arising simply out of the prejudices of men of different color. It considers race to be a fact, just as sex is a fact. It is not moved by this off-hand assertion that science can discover no difference among races. It holds that there are differences among races, that those differences cannot be eliminated except by amalgamation of blood, that this is not desirable from the viewpoint of any race, and that if two races are to live happily together in the same region, each must know the bounds within which it can function without being offensive to the other. Rules establishing such bounds are to be found in every society containing discrete elements. Some of them are embodied only in custom; some are expressed in the formal requirements of law. The one can be just as compulsory as the other. Often customary boundaries are colder and less human than those that are established in law, for the reason that they appear to depend more upon personal decision. There is a grand impersonality about the law that softens the impact of its requirements.

Now, the Supreme Court has declared that the Southern States shall no longer embody in their law the boundaries that they have considered it desirable to maintain between the races. In the Brown case the Court interpreted the legal requirement of separate schools as a denial of the right of Negroes to attend white schools, although the law equally denies the right of white children to attend Negro schools. The South has bitterly protested this decision as an exercise of power that the Federal Government does not possess. It finds no language in the Constitution to justify such interference in the internal affairs of the States. "Equal protection of the law," upon which the Court relied, covers the protection of person and property against the depredations of others. The phrase cannot be stretched to include a right to be educated side by side with other persons who desire to be educated separately. It is no instrument for forcing the association of persons against their will. Under cover of the phrase, however, the Court has ruled in effect that people have a vested interest in associating with others whether the others like it or not. Now a vested interest is a right that the State will enforce against all and sundry and without regard to their likes or dislikes. Its purpose is to protect people in the enjoyment of rights already acquired; it cannot be employed as a means of bestowing rights.

Southern opposition to the Court's decision cannot be dismissed as disrespect for law. It is the expression of an important judgment concerning the sort of government under which all, black and white, North and South, are likely to find it tolerable in the end to live. In the South's view, the Court has shown disrespect for law by basing its decision on a sociological theory that is popular at the moment. The Court quotes with approval the finding of a lower court that "Segregation * * * has a tendency * * * to deprive (Negro children) of some of the benefits they would receive in a racial integrated school system." Then the Court says: "Whatever may have been the extent of psychological knowledge at the time of *Plessy* v. *Ferguson*, this finding is amply supported by modern authority" (p. 494). *Plessy* v. *Ferguson* was the 1896 case in which the Court held that equal but separable facilities met all the requirements of the law. There is no contention that the law has changed since that time; only that our psychological knowledge has changed. Among the authorities cited by the Court are: K. B. Clark, Effect of Prejudice and Discrimination on Personality Development, Midcentury White House Conference on Children and Youth, 1950; Witmer and Kotinsky, Personality in the Making, 1952; Deutscher and Chein, The Psychological Effects of Enforced Segregation; A Survey of Social Science Opinion, 1948.

Thus lightly does the Court turn over the making of law to social-science opinion and the writers of books on psychology. And if to one kind of opinion or to one group of writers, why not to another? Some have already insisted that the writers of political textbooks have been consulted. Certain it is that the prestige of the Court south of the Potomac is not enhanced when the Vice President of the United States publicly takes credit, on behalf of his party, for the Court's decision. "Speaking for a unanimous Court," Mr. NIXON is reported to have said, "a great Republican Chief Justice, Earl Warren, has ordered an end to racial segregation in the Nation's public schools." You may put the commas in that wherever you like, but they won't drive the politics out. The phrase "the Nation's public schools" has a sinister implication. Under the Court's decision the schools would no longer be North Carolina's or Georgia's or Mississippi's.

In its opinion the Court held that even though "buildings, curriculums, qualifications and salaries of teachers, and other tangible factors" are equal, the Negroes are denied equal opportunity unless they can go to the same schools with white children. In other words, there is no objective test of equality in schools. There is something that the white children bring to their schools that the Negroes cannot bring to theirs. It is nowhere asserted that white children cannot get a good education without attending Negro schools. This is a very clear compliment to the white man's culture. Referring to its own decision in the Sweatt case, the Court said: "In the finding that a segregated law school for Negroes could not provide them equal educational opportunities, this Court relied in large part on 'those qualities which are incapable of objective measurement but which make for greatness in a law school'" (p. 493). If one wishes to put the matter that way, one might go on and say that no power on earth can provide the Negroes with equal educational opportunities. What can these immeasurable qualities that make for greatness be but the sum total of all that the long history of the white man enables him to bring to the support of his endeavors?

The Court stressed the contention that the members of a minority who must attend separate schools develop a sense of inferiority. But the mere fact of being in a minority does not lead to a sense of inferiority. The Jews are a minority, and they have been subjected to a good deal of social differentiation, but they give no evidence of any feeling of inferiority. On the contrary, they are fully aware of their intellectual powers and their business acumen and are conscious of the proud spiritual heritage that they bear.

Here we come face to face with a fact that sets limits to anything that we can do in the premises. The Negro in America is in a sense a displaced person. He brought with him to this land only the most primitive type of culture and one that was bound to be obliterated in contact with the advanced civilization of the white man. In these circumstances the Negro could do nothing but appropriate and adapt the white man's culture to the best of his ability. In this process he has had the sympathetic help of a host of white southerners, and he will continue to have it. But no man can bestow upon him an inheritance that is not his. However willing we are to share it with him, there is a sense in which it must remain ours and not his. The Pilgrim fathers can never be his fathers; the signers of the Declaration can never be his ancestors. Whether he attends mixed schools or separate schools, it will be another's culture that he is striving to appropriate.

The confusion of our age is revealed in the fact that the advocates of mixed schools cite the immeasurable qualities that make for greatness as something that is being withheld from the Negroes, while at the same time they belittle the white man's culture as a thing not worthy of the loyalty of its custodians. On the one hand we are told that Negroes should be allowed a more intimate association in order that they may better acquire what the white man already has; on the other, we are told that the white man's civilization can no longer be seen through the prejudiced eyes of our fathers as having unique qualities that ought to be preserved. The second of these attitudes has been carried to the point where Prof. Richard M. Weaver, of the University of Chicago can assert that we are an impious people, having lost respect for all that went before us. And a recent reviewer, writing in the new National Weekly suggests that we are "systematically instilling into the adolescent mind contempt for the traditional culture of western man" (December 14, 1955, p. 25).

If there is such a contempt, it arises, I think, from the fact that we regard our vast production of economic goods as the most brilliant achievement of our culture. When I say "we," I mean the American people as a whole—the observation is less applicable, I believe, to the South than to any other section. The Bureau of Indian Affairs has recently begun the project of moving large numbers of Indians from their western lands into the industrial cities where they may enjoy what are called the fruits of 20th century civilization, up to and including television sets (Atlantic Monthly, March 1956, p. 54). These same fruits are clamored for by people all over the world, especially the people of color, and by the Negroes at home. For this false appraisal of our civilization they are less to blame than we. We have affronted the rest of the world by our vulgar displays, and we have affronted the best of our own traditions by our shameless materialism. Mixed with our materialism, however, is our generosity. We honestly want other people to share what we fatuously call the good things of life. We seem to consider it our destiny to invite the world to a feast, and the world is willing, of course, to come; but its coming does not indicate that it understands or respects or desires to appropriate anything that lies back of our economic productivity. From each table that we set they retire grumbling for more and liking us not one whit better.

Surely our culture is more than the goods that we can produce. The white man does have a history, and it is not contemptible. Indeed, almost all of recorded history belongs to him. The intellectual power of the Greeks, the organizational skill of the Romans, the spiritual insight of the Hebrews, the music of the Germans, the art of the Italians, the Anglo-Saxon genius for self-government—all of these are a part of his heritage. Modern science is almost wholly his creation; and the Christian religion has, in the providence of God, been committed to him for propagation. We ought to be ashamed of ourselves for encouraging other peoples to imitate and adopt the worst features of our civilization. The white people of the South are, I believe, as eager as any to share the best that we have, but they do not think that this sharing can best be done by submitting their culture to a process of erosion. They think it to the best interest of all to maintain the sort of social barriers that from time immemorial have been the means of preserving cultural and racial integrity. The South, in a word, conceives of human society as a thing having structure and not as something without form and void, in which persons are mere economic competitors, having no distinguishing features and bent solely upon increasing their incomes. Modern industrial man has largely lost this sense of structure. The South is on the defensive today because it still retains it.

Structure implies boundaries that cannot safely be crossed. Such boundaries have long existed between the sexes, although they have become much less formidable in recent years, with results that are not altogether good. There was sound wisdom, for example, in the designation of certain topics that men should not discuss with women. Rules covering such matters were not devised to prove that women are inferior to men, but to improve the quality of the association one with the other. A society with structure must be supported by mutual respect and a mutual spirit of helpfulness on the opposite sides of its boundary lines. It is more dependent upon good manners than it is upon the level of income. It need not be a society without mutual affection. Countless instances of such affection rush to the mind of any southerner. I cite but one. U. B. Phillips quotes an inscription found on the gravestone of a slave: "John, A Faithful Servant and True Friend; Kindly and Considerate; Loyal and Affectionate; The Family He Served Honors Him in Death; But in Life They Gave Him Love; For He Was One of Them." (Life and Labor in the Old South, p. 215.)

It is not necessary for me to say much about the Christian doctrine of brotherhood. All Christians are indeed brothers in Christ. "In Christ there is no east nor west." But Christian brotherhood implies no sort of equality beyond this, and it certainly sets up no preemptive right of intrusion. It is strange that the concept of brotherhood should be used to describe a condition of worldly equality. Brothers are not equal and cannot be; brotherhood, as Professor Weaver has observed, is status in a family. There are big brother and little brother, each with duties of his own and responsibility to the other. Nowhere in the New Testament can I find that it is the purpose of Christianity to wipe out the differences that exist among men. It deals not with the many points in which they differ, but with the one point in which they are all alike. Some men have black skins, but all have black hearts. In dealing with this common characteristic, Christianity does not destroy the differences of men. It does something grander than that: it makes those differences irrelevant. If Jesus had intended to endorse the struggles of men for worldly position and prerogative He could never have said that the meek shall inherit the earth. And if all the differences were to be wiped out, little room would be left for the charity enjoined by the rich 13th chapter of First Corinthians.

Eisenhower's Special Commission Came With General's Timing To Delay Consideration of Veterans' and Dependents' Legislation in Congress

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I include herewith material contained in the national legislative bulletin of the American Legion in regard to the General Bradley Commission report. The recommendations of the special commission set up by President Eisenhower should be most closely scrutinized by every Member of Congress.

The material follows:

THE BRADLEY COMMISSION REPORT

Whether by design or accident, the long awaited Bradley report came with a general's correct timing to strategically and tactically hurl an explosion into the midst of consideration of veterans' and dependents' legislation in Congress. The 415 pages of words, charts, and graphs recommended such an upset of accepted American philosophy on the treatment of war veterans, that it practically stopped everyone in his tracks. The House Veterans' Affairs Committee, in reducing it to briefest treatment, has prepared a blue sheet of 25 pages. Even the latter is so complex as to require a corps of expert service officers to ferret out the ultimately intended impact of the report and recommendations.

At best the report has caused the House Veterans' Affairs Committee to delay its decision as to whether or not to report out war veterans' security bill, H. R. 7886. In fairness to the committee, in spite of the fact that they have had H. R. 7886 under consideration for 2 months and should now be in position to render decision based upon complete knowledge of the situation surrounding the bill, the decision to withhold action on H. R. 7886 until after taking a further look at the Bradley report and hearing what veterans' organizations have to say about it, is a debatable issue. At least, when our bill gets on the floor of the House, it cannot be further stalled by those who would condemn the bill and attempt to force it back to committee because the latter had not held hearings on the Bradley recommendations. Such hearings may start on the 8th. The American Legion will present its views on the 9th.

As we go to press the national executive committee has just concluded its annual May meeting. The Bradley report was the principal item on the agenda. Details of its recommendations are not available to us now. However, the national executive committee discussion and its resolution will be the basis for our position before the House Veterans' Affairs Committee next Wednesday. You will be informed of the events.

WHAT TO DO NOW

We have not completely appraised the damage done by the report, but we know it has fed the boilers for steam for the opponents to the present system of veterans' and dependents' benefits. We urge upon all of you to get busier than ever before in insisting that the members of the House Veterans' Affairs Committee promptly vote

favorably on the American Legion's war veterans' security bill, H. R. 7886.

WHAT DOES GENERAL BRADLEY RECOMMEND?

Obviously, we cannot print the entire report—not even the brief of the House Veterans' Affairs Committee. Therefore, material below will have to be taken out of context. The Bradley Commission recommends:

"Military service in time of war or peace should be treated as discharging an obligation of citizenship and not of itself as a basis for future Government benefits.

"Special veterans' benefits should be provided only for the significant requirements of veterans that arise directly out of their military service.

"The ordinary or non-service-connected needs which veterans have in common with all citizens should be met wherever possible through the general welfare programs under which veterans are covered along with other people. Veterans' non-service-connected benefits should be minimized and gradually eliminated.

"The non-service-connected benefits are the lowest priority among veterans' programs. Their justification is weak and their basic philosophy is backward-looking rather than constructive. Our society has developed more equitable means of meeting most of the same needs and big strides are being made in closing remaining gaps. The non-service-connected benefits should be limited to a minimum level and retained only as a reserve line of honorable protection for veterans whose means are shown to be inadequate and who fail to qualify for basic protection under the general old-age and survivors' insurance system.

The Government in general, and the executive branch in particular, should adopt a positive policy toward meeting fully and promptly the legitimate needs of veterans. This policy should have the aim of alleviating war-incurred handicaps of servicemen as early as possible after separation and helping them become productive and useful members of their communities. The provision of constructive and adequate readjustment benefits, as a rule, should discharge the Government's obligation to war veterans who have no service-connected disability.

"As a nation we should keep the whole range of our needs in perspective. We ought to make sure that we meet the high priority service-connected needs of our veterans—and this is fully within our means and our volition as a nation. However, it would be dangerous to overemphasize veterans' non-service-connected benefit programs at the expense of essential national security and other general public programs."

COMPENSATION FOR SERVICE-CONNECTED DISABILITIES AND DEATH

"The Veterans' Administration Schedule for Rating Disabilities should be revised thoroughly so that it will reflect up-to-date medical, economic, and social thinking with respect to rating and compensation of disability. This revision should be based on thorough factual studies by a broadly representative group of experts, including physicians, economists, sociologists, psychologists, and lawyers.

"Shortened life expectancy due to disability or impairment of physical vitality may result in loss of earning capacity. It is appropriate, therefore, to reflect in the compensation scale some allowance for reduced longevity among disabled veterans providing it is held to modest weight and account is taken of the fact that liberal benefits for survivors are provided by the Government.

"Special consideration should be given to disabilities rated at 10 and 20 percent to determine whether significant economic impairment exists.

"Consideration should be given to discharge of the Government's obligation in static cases rated at 10 and 20 percent by an appropriate lump-sum or short-term settlement.

"The presumption of service connection for chronic diseases, tropical diseases, psychoses, tuberculosis, and multiple sclerosis as now listed should be withdrawn.

"There is otherwise in the law sufficient protection for the veteran to establish service connection of any and all diseases. Accepted medical principles can reasonably and accurately establish the onset of a disease and the disability process. Where there is reasonable doubt, the law provides for the doubt to be resolved in favor of the veteran.

"In view of the rapid and continuing growth of Federal disability benefits, a prompt effort should be made at an appropriate level in the executive branch to develop common standards for evaluation of disability and compensation under the several programs.

"A small lump-sum payment at the time of death, with monthly payments thereafter, is the best combination of benefits for survivors. In keeping with the idea that survivor payments represent a community sharing of the risk in a public enterprise, the monthly payments should be limited to those who were dependent upon the deceased, or who would have been dependent if he had lived.

"That the Veterans' Administration's death compensation be paid only to the survivors of members or former members of the Armed Forces who die from service-connected causes. The Commission feels that adequate benefits for civilian groups are necessary, but that such benefits should be provided through separate laws not administered by the Veterans' Administration.

"That the monthly amount of death compensation be related to the military pay of the deceased, within limits."

READJUSTMENT BENEFITS FOR WAR VETERANS

"Readjustment benefits should assist the individual veteran in meeting specific problems which result from his service in the Armed Forces or from conditions affecting his return to civilian life. A variety of benefits will be needed because individual problems will differ.

"Provision of a varied range of benefits does not mean, however, that there should be benefits for everyone. Except for mustering-out pay, at separation, no contribution to readjustment is made by providing benefits that do not actually contribute to readjustment, simply to assure that every veteran will receive something. Varied benefits should be available, not with the expectation that each will be used by all, but to assure that each major transitional problem that may affect a sizable number of individuals is provided for.

"Readjustment benefits should be used during the period in which the veteran is reestablishing himself in civilian life. Benefits that are used after this readjustment is completed are not, in any real sense, readjustment benefits; and benefits that are available over too long a period may actually discourage the veteran from taking steps, or making decisions, which are needed for his readjustment."

HOUSING

"The program for World War II veterans should be transferred to the Federal Housing Administration. In order to avoid a last-minute rush and allow an orderly termination of the program, the benefits should be extend and gradually decreased over a 2-year period."

VETERANS' PREFERENCE

"The reemployment-rights program fills a positive function in assisting exservicemen to return to employment. Inconsistencies in the statute should be clarified and resources augmented.

"The Commission believes that veterans' preference in entering civil service and the special appeals procedure for veterans should be provided for a limited period after discharge (say 5 years), but should not continue for nondisabled veterans after a reasonable period for readjustment has been provided. There is no justification for special retention rights for nondisabled veterans, beyond crediting toward length of service the time spent in the Armed Forces during wartime. For veterans with a significant compensable service-connected disability, a permanent preference both in hiring and retention seems justifiable, since their disability may put them at a disadvantage both in obtaining and retaining jobs. Such permanent preference should not be given, however, to those only with minor disabilities—certainly not to those with less than 30-percent ratings."

BENEFITS FOR PEACETIME EX-SERVICEMEN

"The Veterans' Administration should continue to provide disability and death compensation benefits for peacetime servicemen, and the rates payable should be the same as to those who served in wartime."

NON-SERVICE-CONNECTED PENSIONS

"Keeping in mind the basic role and the contributory character of the OASI program, veterans' pension benefits should not exceed average benefits which will be paid under OASI when it reaches reasonable maturity.

"At present, a monthly pension of $70 for a veteran pensioner alone and $105 for a veteran with a dependent wife would appear to fulfill these criteria. Benefit levels for veterans in need of regular care, and for survivors of veterans should be established in accordance with their comparative needs.

"All pension benefits should be reduced in full by the amount of family income from any source, except income from work or public assistance. Income from work which is not in excess of $100 per year should not reduce the pension. Additional work income should reduce benefits by some practical formula, such as by $50 for each $100 earned. With earnings large enough to reduce the amount of pension to less than $50 for any year, a pension should no longer be payable for that year.

"The test of impairment at ages 65 to 70 should be made more realistic by requiring at least a 30 percent disability. However, those found individually unemployed despite a lesser disability might be put on the roll in recognition of special circumstances, as is done now, with the changes in procedure recommended below.

"Applicants for pensions at ages below 55 and those aged 55 or over who claim to be unemployable due to a disability which is of lesser degree than that required for a pension at their age, should be referred to the Federal-State Vocational Rehabilitation Service. Only if the Rehabilitation Service declares the veteran is unable to overcome his impairment and the Employment Service certifies its inability to place him, should the veteran be put on the pension roll.

"Survivors' pensions should be available to the widow and/or children of any deceased eligible war veteran who are in presumptive need because their total family income falls below the amount fixed by the Government provided that:

"A widow, to be eligible, must (a) not have remarried, and (b) have a dependent child in her care, or have attained age 65, or be permanently and totally disabled or otherwise unemployable as certified by the State Employment Service; and

"A widow must have been married to the veteran at least 1 year prior to his death in order to qualify for benefits.

"The income standards for payment of pension benefits to survivors should be governed by the same type of formula recommended earlier for pensions to veterans."

MILES D. KENNEDY,
Director.

Speaker Blatt Honored by House

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. RICHARDS. Mr. Speaker, under permission to extend my remarks, I include an article which appeared in the Columbia Record on April 10, 1956.

Solomon Blatt has been honored by the South Carolina Legislature as few men have been honored by that body. He has served with distinction as speaker for 18 years. He is an old schoolmate of mine, and I am proud to call him a friend. He is 1 of only 2 or 3 members of the Jewish faith in the South Carolina General Assembly. He has forged ahead by sterling worth, ability, and integrity. His achievement is evidence of the evaluation that South Carolina places upon these characteristics.

The article follows:

SPEAKER BLATT HONORED BY HOUSE

Speaker of the House of Representatives Solomon Blatt was presented with a plaque today honoring his service in the lower legislative chamber both as a member as as its speaker. Blatt is shown receiving the plaque from Representative Charlie V. Verner, of Greenville, who presented it on behalf of the membership. The other photo is of the plaque, in silver on hardwood. The inscription reads: "With deep appreciation to Speaker Solomon Blatt for impartial, devoted, and progressive service to his county and State from the 91st South Carolina House of Representatives. Unanimously presented April 10, 1956."

Speaker Blatt in accepting the plaque said: "The people of South Carolina have been unjustly damned for racial intolerance." He declared the State "accepts a man for what he is."

Blatt, honored by his colleagues with a plaque denoting his years of service in the chair and also in the house, took the opportunity to make the observation. He said his own life, and the honor accorded him by the membership proves the lack of intolerance in this State. He is the son of Jewish immigrants.

The veteran speaker, who has served in the chair for 14 of his 22 years in the lower legislative chamber, told his associates that "I do not deserve this honor." His voice choked with emotion, he said, "If there is anything decent in me, it was given to me by my daddy, who has gone on, and my mother, who still lives. It was given to me while I was in my early youth, the son of immigrants to this country."

He lauded South Carolina for giving "strength and courage to all citizens, of whatever creed they may have."

Presentation of the plaque, a silver shield mounted on polished hardwood, came as a surprise to Blatt. It was made by Representative Charlie V. Verner, of Greenville, who had apparently risen to deliver a farewell speech to the house. Verner leaves the lower chamber today, soon to assume a position on the employment security commission.

Paying tribute to the speaker, he said, "I have seen him stand up under severe circumstances when the welfare of the State is at stake. * * * I have never known a fairer man." Verner described the 60-year-old Blackville native as a "man of integrity, with a high regard for those things he thinks are right. * * * I have never seen a member (of the house) more dedicated to the State and its institutions. No man has worked harder for good government in the past 25 or so years."

The presentation came on the closing day of the current general assembly. Statewide business was effectively adjourned March 24, but 2 weeks since have been devoted to local legislative matters. Members convene in a daylong session today to consider two gubernatorial vetoes which were routine matters requested by delegations and finally to wind up the 91st assembly.

Blatt thanked the members "for your expression of confidence and esteem. I am very humble and grateful," he said. He paid tribute to Verner, who had presented the plaque on behalf of the 123 other members of the house.

He praised the record of the assembly, citing its record of progress in improvement programs at the State (mental) hospital, in the public schools, at the State's penal institutions, and at the schools for the deaf and blind and the crippled children.

"I cannot fully express myself today," he said, "but I want to thank the people of my county (Barnwell) who made it possible for me to be here, and also the people of South Carolina who were constantly at my side to aid my journey."

The plaque contains the State seals, plus this inscription: "With deep appreciation to Speaker Solomon Blatt for impartial, devoted, and progressive service to his county and State from the 91st South Carolina House of Representatives. Unanimously presented April 10, 1956."

In Defense of the Automobile Worker

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. RABAUT. Mr. Speaker, we have heard a great deal about the automobile industry in the last few months. There have been extensive congressional hearings investigating numerous charges and countercharges. While there may possibly be room for improvement in contract relations between factory and dealer, I do feel that undue criticism has been leveled at the entire industry for isolated cases of dissatisfaction with a particular motor vehicle.

Recently, a Member of Congress inserted several letters in the CONGRESSIONAL RECORD that create the impression that automobiles generally are not being properly assembled or serviced. I challenge such an allegation. The case referred to in the RECORD involved 1 dealer; there are 45,704 automobile dealers in the United States. Further, the charge that inferior workmanship is widespread in the industry is a slap at the thousands of workers throughout America's greatest business enterprise.

I am quite familiar with the methods employed in the automobile factories and you may be assured that most careful consideration is always given to the safety element and proper construction of each individual car. I am also familiar with the pride that the employees take in their craftsmanship. These men and women deeply resent the inference that their work is not as thorough as it might be. I am not saying that there never has been a car with mechanical imperfections; in any human endeavor, mistakes will be made. However, proceeding from the specific to the general is definitely not in keeping with the American concept of fair play.

How a Bank Solved a Farm Problem

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. REUSS. Mr. Speaker, how to preserve the family-sized farm is one of today's biggest challenges to all Americans who believe in the community values of family-sized farming. Here is an interesting, human account of how a local institution—the Citizens National Bank of Marshfield, Wis., of which Mr. John L. Stauber is president—solved a local farm problem. I commend it to my colleagues' careful attention:

HOW A BANK SOLVED A FARM PROBLEM

The Citizens National Bank is located in Marshfield, Wis., a city of nearly 15,000 population situated in a vast agricultural region nearly in the exact geographic center of the State. This was not always an agricultural area but at one time the land of this area supported a dense and excellent growth of both hardwood and coniferous trees. The community of Marshfield and its surrounding area grew up with the harvesting of this timber crop and Marshfield became a center of the industry as well as the railroad shipping center. As the trees were removed and the timber became scarce in the area, the lumber activity moved north in Wisconsin. As the lumber camps moved north, the land which grew this great crop of timber was being cleared and farms began to dot the countryside. As the land was cleared and broke, it was found the soil was a heavy soil and had excellent water holding capacity. It was found that, when broke, the soil was a very productive one and agriculture moved in fast behind the moving timber and lumber camps. In just a short period of time, the area around Marshfield became one of the leading agricultural areas of the State. Because red clover grew so abundantly on this virgin silt loam soil, it became known as the "Cloverland" of Wisconsin. Due to the excellent hay and pasture provided by this red clover and the good grass growth, agriculture became highly specialized in dairying. It developed into one of the highest concentrated milk-producing areas in the Nation and soon became known as the cheese capital of the country.

However, as good as the soil seemed at the turn of the century when the farms were being hued out of the timberland, and as well as clover grew on this newly opened virgin soil, it did not take long to find that this abundant clover production was not a permanent thing. By the early twenties, farms

which had been cleared for some time were no longer supporting the excellent crop of clover and the area began to lose its name of Cloverland. With this came a problem of production. Dairy cattle numbered high and demanded large amounts of forage. The farmers had built their buildings and farming around the dairy cow and could not change very well. Besides the area was too far north for corn production and dairy farming seemed the only type suited. Farmers were turning to purchased roughages and mill feeds to substitute for the lack of the good homegrown clover. The purchase of feed was also necessary because the value of the timothy and other grasses which were replacing the clover had much lower feeding value. This problem continued to become more and more serious as farmers were forced to buy more and more shipped in feeding stuffs and as their net incomes began to drop to where more and more feed loans were necessary to carry them through the feeding period. The farmers of this once naturad dairy section were no longer in a good competitive position with other areas of the State where legumes still flourished.

Research workers at the college of agriculture, at the State university, became aware of this problem and set out to find out what had caused it and what could be done. The cause was soon determined to be the fact that the soil in this area was a silt loam soil of granitic origin and was naturally low in plant food and acid. They found that the soil produced abundantly when first opened due to the plowing under of a large amount of accumulated forest litter which was high in plant-food value. As this material had been derived from centuries of forest cover decomposed it gave up to the soil large amounts of lime and other plant foods which provided ample amounts for top crop growth. The soil had naturally good water-holding capacity so water was seldom a problem and given the good plant foods provided by this organic matter plowed under, the clover and other crops grew their best. However, as this litter decomposed and was used up in farming the land, the soil reverted to its natural acid and infertile condition. With this came the decline in ability of the soil to support good crop production and especially the clover. Research plots were started at the Experiment Station at Marshfield and at the Clark County Farm at Owen to find out what could be done. The research bore fruit in a short time as the effects of the acid soil was shown on clover production. By use of large amounts of lime and fertilizer, it was found that not only could red clover be grown on the soil in even higher yields than when the soil was first opened, but that the much more valuable legume alfalfa could also be raised where it had never been grown before by proper soil adjustment with lime and fertilizer. It was apparent to the research workers that planting and growing alfalfa on the dairy farms of the area would solve the problem of declining production and purchased feeds. It would mean that the dairy farmers of the area could again produce abundant crops of high-quality feed for their milking herds and again resume their place in the dairy farming of Wisconsin.

There was one big question in the program as worked out by the research workers. How was the farmer going to manage to treat his land in the recommended way to grow this alfalfa? The amount of lime and fertilizer required was large and the cost per acre high, amounting to about $50 per acre. How could the farmer afford that kind of program to improve his lot when he had to borrow money for feed and his dairy profit was not too good? He could not use a short-term 6-month loan as he knew he would not have the money in that time to pay back the loan.

What was needed was some kind of loan which would recognize the fact that this was a production investment in the soil. Its use would increase the productive capacity of the farm and the net income of the farmer thus allowing repayment out of the loan's increased income. The credit needed would have to recognize the long-term aspects of soil-building programs and that the loan would well repay itself, but that this could be done over several years and not all in one crop season. The research workers had found out how to do the job but could not solve the problem of how to get it on the farms.

Mr. John L. Stauber of the Citizens National Bank heard about this program. He immediately saw the good such a soil-fertility program could do for the areas, as he too was concerned about the large feed bills for purchased feeds on the farms in the area. Further, he realized that his bank was in a city surrounded by a large farm area and in a city which depended in a large measure upon the business of these farm people. Not only could this program help the farmers to help themselves to higher profits by growing their own feed but it would reflect in a better business for the entire city if farmers prospered and spent more in the area. Armed with this idea and backed by the university research workers and county extension personnel, Mr. Stauber set out to find out how he could help get this program started. Several meetings were organized by Mr. Stauber at which time bankers from neighboring cities were invited to discuss this problem with university personnel and farmers and to visit research plots and a few farms where the alfalfa program was going and where it could be proved it would work.

In order to get the program really going and to get a number of farmers started to prove its worth, Mr. Stauber convinced his board of directors to establish a new loan policy to farmers for his program. This program was called, the Alfalfa Loan Program by the Citizens National Bank.

Here is a typical example:

"Mr. FISCHER. Mr. Stauber I would like to speak to you about an alfalfa loan.

"Mr. STAUBER. How many acres are you interested in?

"Mr. FISCHER. Forty acres.

"Mr. STAUBER. Well, Mr. Fischer, our program calls for a 10-acre test and the average cost will run about $50 per acre.

"Mr. FISCHER. I have my soil tests and because I have put on quite a bit of lime and fertilizer, I only need about $1,000.

"Mr. STAUBER. I notice you are arranging for a chattel loan of $1,500 on a new tractor.

"Mr. FISCHER. Yes, those arrangements have been made.

"Mr. STAUBER. All right, Warren, if you will include the alfalfa loan with the chattel, we will go along. The $1,500 loan will be on a 6 percent note and the $1,000 loan will be at 2 percent with a 2-year maturity.

"Mr. FISCHER. How about repayment of the alfalfa loan?

"Mr. STAUBER. Looking over your soil tests, I note you will need about 160 tons of lime. Have you signed up under the soil-conservation practice?

"Mr. FISCHER. Yes, I have.

"Mr. STAUBER. Well, then you should receive one-half of your lime costs from the Government and that amounts to about $350. When you receive that check, you apply it on your loan and at the end of 1 year, you will have to pay your interest and renew the balance for another year. If there is a balance due at the final maturity, we will make you a regular loan at the going rate."

Most of the bank's loans, however, did not exceed $500 and these were all unsecured. In the past 6 years, the bank has loaned over $100,000 and its present exposure is $22,000.

By use of radio, farm meetings, newspaper ads, and billboards, the Citizens National Bank spread the news about their loans and also championed the story of soil building for alfalfa production. For a period of 3 years, this concentrated effort was continued by the bank to get the information to the farmers and to constantly remind them of the value of this program to their future. Through the loan program several plots of 10 acres and more begin to appear on farms scattered throughout the area. The bank arranged meetings on these farms so others could see how the alfalfa program actually worked. These farmers were asked to tell their story about alfalfa over the radio and in the papers so that other farmers might hear first-hand from people who had actually tried the program. The reports made by farmers who started on the program were almost unbelievable and even beyond the expectations of the bank. Farmers reported that they had been buying hay every year and now had hay to sell. Others reported they cut their feed purchase by as much as 80 percent and still others reported they could almost double their herd size. With these kinds of reports and actual factual data to give out from farms, the program began to spread rapidly. The original education part had been accomplished through the very active program of the bank. Not only were farmers convinced it could be done, but banks were becoming convinced of the value of such loans and many of them started to give long term land improvement loans. Today, alfalfa is a byword on most farmer's tongues in the area. If they have not already started growing it, they are in the process of getting ready to do so.

Through the efforts of the Citizens National Bank a farm problem of its area has been solved. A far-reaching program of soil fertility and forage production has been so well entrenched on the farms and in the minds of the farmers of the area that its effects are yet to be fully realized. A serious problem and one which could have well meant the decline of the prosperity of the community was solved. The program which was envisioned as the solution to this problem by the university was given a chance to prove itself. Without this support, it would not have been possible to get the program started. The university or the county extension personnel did not have the budget or means of using the broad means of communication which was used nor of getting money into the hands of the farmers to start the program.

The Citizens National Bank of Marshfield saw the problem and acted to help find the solution and then proceeded to put the solution of the problem to practice. Such action has made a permanent improvement in their community and has broadened the agricultural possibilities of the area. This is real progress towards a better living for all and a real American way of solving our problems in whatever field they may present themselves.

Polish Constitution Day

SPEECH

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. GREEN of Pennsylvania. Mr. Speaker, this is the 165th anniversary of the adoption by the people of Poland of their Constitution of May 3, 1791. That constitution, following so closely upon ours of the United States of America, was a triumph of democratic principles

which has remained as a guiding light through all the hard, harsh years of Poland's oppression.

Today, as for most of the time that followed the adoption of her constitution, Poland writhes in the grip of aggressive tyranny. The country is a prisoner, but the minds and hearts of the men and women of Poland remain free. The magnificent ideals of the constitution of May 3, 1791, are firmly held and proudly believed. The day will surely come when Poland shall again stand forth as the land of freedom, peace, and prosperity.

On this anniversary I proudly join in honoring and saluting a courageous people, a country magnificent even in oppression, and a document that ranks with the world's finest expositions of the principles of human liberty and dignity.

Million Dollar Armory With No Federal Funds

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. SCRIVNER. Mr. Speaker, on Saturday, May 5, a million dollar National Guard armory was dedicated in Kansas City, Kans. Dedication of National Guard armories are frequent occasions. This was an exception, because no Federal funds were used, the structure being financed by city and State funds.

The Kansas City Star and the Kansas City Kansan cooperated splendidly in publicity before, during, and after the ceremony.

Some excerpts from the Kansas City Kansan, which had a special Armory edition, devoting over half of the paper Friday, May 4, to the armory, will give some idea and this modern facility:

FINEST NATIONAL GUARD ARMORY LOOKS ITS PART—CRISPLY MILITARY IN SETTING AND DESIGN, NEW BUILDING HERE HAS MOST UP-TO-DATE FACILITIES ATTRACTIVELY INCORPORATED FOR EFFICIENT USE BY UNITS OF KANSAS CITY, KANS., STATION

(By Bob Newman)

Blocked securely into the side of what remains of a bill is the new Kansas City, Kans., National Guard Armory, as crisply military as a private's freshly polished boots.

Viewed from 18th Street, across the huge natural amphitheater which serves as combination drill field, parade ground, and athletic field, the facade of the $675,00 structure, faced with corrugated aluminum, flashes in the sun.

This is the business side of what is considered the finest National Guard Armory in the United States, and where Kansas City, Kans., guardsmen from now on will work, drill, and play in increasing numbers.

Immediately beneath the formal reviewing stand, which juts, boxlike, from the main part of the building, is a huge mouth of a door through which trucks can be driven into the bowels of the building.

FOR SPEEDY MOVEMENTS

Inside, supplies and equipment can be loaded or unloaded, quickly, with room for as many as five trucks at once, thus enabling units to load and move out quickly in time of emergency.

To the right of this entrance, which is flanked on both sides by enclosed concrete stairways leading to the reviewing platform, are the offices of the ranking National Guard commanders, including the office of Col. Mahlon S. Weed, station commander.

* * * * *

Above these offices face the windows of the administrative offices of the 137th Infantry Regiment, largest administrative unit housed in the building, and commanded by Colonel Weed.

SPACIOUS DINING HALL

To the left on the ground level is found the 200-man capacity dining hall, also viewing the drill field which eventually will be seeded to one vast expanse of greenness.

Above the dining hall is the spacious enlisted men's lounge, also fronting the drill field.

The personality of the building, however, centers at the reviewing platform enclosure which appears as an extension of the walls and roof. Dimensions are 98 feet width, 28 feet height, and 10-foot horizontal depth.

The vertical interior of the enclosure is faced with corrugated aluminum, upon which black 28-inch letters spell "Kansas National Guard." Beneath this, centered squarely, is a 6-foot diameter, porcelain-on-steel, yellow sunflower against a blue background.

BRILLIANTLY ILLUMINATED

A continuous row of floodlights angled from the base of the reviewing platform train toward this facade, which afford a brilliant night display.

As the visitor goes around either side of the 4-story building, up one of the steeply sloped and grass-terraced hillsides, the main entrance is found facing the west. It actually is on the second level.

Parking space is available here.

Entering the lobby, a visitor is first attracted to the inside athletic court and drill hall, which also can be used as an auditorium and has a stage at one end.

Seating capacity for basketball games is estimated at 1,500 to 1,800 persons and for stage events at over 3,000. The playing court is full regulation size, being 50 by 94 feet.

SEATING IN BALCONY

The upper balcony, where most of the seating is, is broken at the west end by a concrete-block film-projection booth.

The basketball goals, of the latest type, can be raised and lowered electrically.

The second floor is composed of offices, classrooms, and the spacious, well-furnished enlisted men's or general lounge. A typical classroom, where the guardsmen will hear lectures during their weekly drills, is about 18 by 23 feet in size, well lighted by fluorescent tubes, and contains the necessary classroom aids.

Dropping to the first, or basement level (actually only the rear portion of this level is underground), the huge insulated firing range can be inspected.

ACOUSTICAL INSULATION

Walled with concrete, and padded in the forward portion with thick slabs of sound absorbent acoustical material, the range has eight firing slots. The length to the target area is 135 feet from wall to wall.

Targets are attached to frames which can be rolled into firing position by means of overhead pulleys, enabling targets to be changed without a halt in operations.

The slugs are reflected downward into a dirt pit and safety sandbags by a 45-degree slanted facing of ⅜-inch steel boiler plate.

A highly engineered fluorescent lighting combination—all tubes protected from slugs—lights the target area to a degree which is reminiscent of natural sunlight.

The remainder of the range is lighted by over 80 fluorescent tubes in banks hidden underneath overhead reinforced concrete beams.

STORAGE FOR WEAPONS

On this level are kept in eight separate bank-type vaults, the rifles, machineguns, mortars, and light artillery pieces of the various units. There also is a supply unit for each component, all of which face the vaulted interior drive for loading and unloading supply trucks inside.

On this level are found two shower and locker rooms, the kitchen adjoining the mess hall (which can be converted into two classrooms by a folding door arrangement), the furnace room, a huge locker room with over 400 lockers, affording 1 for each guardsman, and the dispensary.

The latter, which includes a medical supply room and treatment room, is intended to serve both for minor first aid and as an emergency civilian medical center in time of disaster.

Third floor spaces (found only in the main or center section of the building) are restricted to a communications room and two overnight sleeping rooms for the accommodation of visiting inspecting officers.

OFFICERS' ASSEMBLY ROOM

Only spaces found on the fourth level are occupied by the officers' assembly room and lounge, which has continuous banks of windows facing both the outside drill field and the gymnasium.

The building is of reinforced concrete substructure, topped by a steel frame and concrete block walls faced with buff brick.

Interior decoration is plain, but tasteful, the concrete block wall faces painted in pastel shades. Both the officers' and enlisted men's lounges contain comfortable and attractive furniture.

Lighting of the entire facility is considered to be the best engineered of any new building in the Kansas City area. Of particular note is the overhead lighting arrangement in the gymnasium, composed of 24 equally spaced clusters of 1 1,000-watt incandescent lamp and 2 400-watt mercury vapor lamps.

The gymnasium roof is acoustically insulated with the same slabs of material (precast concrete mixed with wood shavings) that face a portion of the firing range walls.

The Decline of Invention

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wall Street Journal, Tuesday, April 10, 1956, which calls attention to our weakened patent system which slows down the flow of new discoveries:

THE DECLINE OF INVENTION: OUR WEAKENED PATENT SYSTEM SLOWS THE FLOW OF NEW DISCOVERIES

(By Richard Spencer)

Almost every day someone in Washington warns that Russia may be overtaking the United States in the fields of atomic weapons, aircraft, and guided missiles. At the same time some industrialists and economists are concerned about the relative lack of really new consumer products.

Whether or not one considers these fears exaggerated, the demonstrable fact is that invention—the key both to national security and industrial strength—is on the decline in this country. To the extent this is recognized, it is usually attributed to the shortage of scientists or some similar deficiency. Yet there is another and perhaps more basic reason which is hardly ever mentioned.

This is the steady emaciation, over the last 30 years or so, of the American patent system. The United States Constitution itself stipulates the granting of patents to encourage the progress of science, and the kind of patent system a nation adopts will indeed either foster or impede invention. Today the Soviet Union has one of the strongest systems in the world to encourage inventions; the United States has one of the weakest.

From 1790 to 1930 the American patent system provided sufficient incentive to our inventors to carry this country to the pinnacle of military power and industrial might. It did this by granting limited, exclusive rights in exchange for new inventions and discoveries. Beginning in 1930, however, a series of blows has been rained on this system.

POLITICAL DEVICES

The patent right itself has been largely nullified by placing the standard of invention beyond the reach of the average American inventor. The remedy for infringement has been weakened by the development of new legal defenses. Instead of being treated as ordinary legal instruments, patents have come to be regarded as economic devices.

Lately still another—and weirder—concept is coming to the fore. Patents are being used as quasi-political regulative instruments in antitrust decrees. Proceeding against leading firms with strong patent positions, the Government brings suit to break up the defendant's alleged concentrtaion of economic power. In the settlement, however, the Government agrees to the alternative of stripping the defendant of its patent rights.

Thus, in the recent American Telephone & Telegraph case all existing and all future patents of the company were thrown open. In the International Business Machines case, reported a day or two later, the company consented to license all existing and future patents for a period of 5 years only. "To encourage the growth of other manufacturers," the Government said, "the inventions of the defendant are made available to competitors."

This new view of patents as a regulative device was well expressed in the United Shoe Machinery case 3 years ago. "Defendant is not being punished for abusive practices respecting patents for it engaged in none," explained the court; "it is being required to reduce the monopoly power it has * * * compulsory licensing is in effect a partial dissolution on a nonconfiscatory basis."

In these cases the policy of encouraging new inventions is weighed against the policy of limiting the growth of monopoly, and the recent decrees indicate that the Government considers it more important to encourage competition than to encourage invention. This is indeed a delicate balance and an interesting hypothesis.

A. T. & T. and I. B. M. are the great pioneers in research and invention in their industries, which accounts for their leadership and their strong patent positions, as well as for the fact that they were selected as defendants. Under the decrees, not only have their long-established methods of doing business been disrupted, which will interfere with efficient operations for years to come, but management will no longer be in a position to authorize the expenditure of millions of dollars in the development of new commercial products and processes, since competitors will be free to copy them.

These same companies are also leading contributors to the national defense effort. Disruptive influences in their businesses will be reflected in that effort. More important will be the further retardation of invention in two such vital fields as electronics and computers, both of which are of critical importance to atomic energy, aircraft, and guided missiles.

The United States aircraft industry itself suffers from the effects of an open patent pool of the kind now taking shape in electronics under the A. T. & T. settlement. In 1935 Gen. William Mitchell, a man of unusual vision, told a congressional committee the aircraft pool was a threat to our national safety.

As for atomic energy, with its unlimited potential, it has been locked away from private industry for so long that today it also stands in dire need of invention and development, both civilian and military. Yet the law which liberalized some aspects of atomic energy in 1954 also encased it in compulsory patent licensing of the type ordained in the I. B. M. decree.

ACQUISITIVE GOVERNMENT

This atomic law states that all nonmilitary inventions "made or conceived under any contract, subcontract arrangement, or other relationship with the (Atomic Energy) Commission" belong to the Commission. This by itself is reason enough for a company to give the Government a wide berth if it expects to own patents of its own. If, by avoiding Government contracts, a firm should acquire atomic energy patents, the Commission can, until September 1, 1959, declare them "affected with the public interest" and grant compulsory licenses under them.

Still another provision requires everyone, including the reader of this article, to report nuclear inventions or discoveries to the AEC within 90 days or, alternatively, to file an application for a patent within the same period. To avoid the penalties and the criminal implications of the act, discretion suggests a policy of accepting the door as being locked, and not even thinking about the subject for fear of conceiving an invention that should be reported.

The main reason given in support of these patent provisions is that they are necessary to prevent some "inside" or "ground floor" company, engaged in the atomic-energy program from the beginning, from obtaining a monopoly position through patents that would "create roadblocks in the path of progress." If ever this was a valid argument, it is tenable no longer. The patent provisions are the real roadblocks.

At one point or another during the course of history, England, Germany, Switzerland, and Holland were caught with their patent systems down and each learned the same identical lesson. They saw science, invention, and technology slipping away from their own economies only to appear in and add to the economies of other countries. Each promptly adopted and still maintains a strong patent system.

PRODIGIOUS OUTPOURING

So long as or own patent system was strong, the flow of invention was prodigious. By 1890, the centenary of the system, it had already brought forth the cotton gin, sewing machine, steamboat, locomotive, sleeping car, air brake, telegraph, electric light, telephone, reaper, binder, match, and many other products. For national defense inventors had produced the magazine rifle, the revolver, the machine gun, the Springfield rifle, the breech-loading gun, and the torpedo.

A comparable stream of inventions—the motion picture, the automobile, the camera, gasoline, radio, etc.—continued thereafter. But in 1930 the flow started to diminish. Although our population has increased enormously since 1930 and, although billions of dollars are being spent on research and invention today where hundreds of thousands were spent then, the Patent Office received more applications and granted more patents in 1930 than it has in any year since.

Already we seem to be developing a replacement economy in which new consumer products are lacking. Invention, in the form of putting on sale something the purchasing public has never been offered before, is sadly missing. Digital computors and automation, after all, are of little interest to the consumer. Without inventive incentive, whence will come the new products to spur the economy?

The need, therefore, is to restore the patent system. Just as patents were made an exception to the Statute on Monopolies in 1623, so today, to quicken the pace of our lagging technology and provide an adequate incentive for invention, patents must be made wholly exempt from the Federal antimonopoly laws. Defenses in suits must be limited to the traditional questions of validity and infringement.

Until the patent system is restored to full strength, the necessary research and development in atomic energy, aircraft and guided missiles—and in new consumer goods—will not take place. Patents are that important.

Address of Hon. Robert P. Weatherford, Jr., Mayor of the City of Independence, Mo., Before the Missouri Federation of Democratic Women's Clubs, Clinton, Mo., April 28, 1956

EXTENSION OF REMARKS
OF

HON. GEORGE H. CHRISTOPHER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. CHRISTOPHER. Mr. Speaker, the Honorable Robert P. Weatherford, Jr., mayor of the city of Independence, Mo., delivered a speech before the Missouri Federation of Democratic Women's Clubs at Clinton, Mo., on April 28, 1956.

This speech sets out in a masterful manner what has happened to the American farmer over the past 3½ years. We still do not have farm legislation because the President saw fit to veto H. R. 12. Had the President signed this bill, it would have added $3.1 billion to the 1956 farm income, and would have restored this year's take-home pay to the American farmer almost to the level of 1952, the last year in which farmer's prices averaged 100 percent of parity.

The so-called soil-bank bill recently passed by the House, will do little to raise the income of the family sized farmer. The chief reason given by the President for his veto of H. R. 12 was that this bill contained price-support provisions for the five basic farm commodities at 90 percent of parity. It seems strange, but it is no less true, that this administration recommended and sought to enact legislation which would have guaranteed Dixon-Yates 125 percent of parity for 25 years, and only a Democratically controlled House and Senate prevented that measure from becoming law. It seems even stranger that an administration should deny to the American farmer 90

percent of parity while seeking to guarantee a corporation 125 percent of parity. One is forced to the conclusion that whether the Republican Party favors parity or not depends entirely upon who gets it.

The address follows:

Madam Chairman, distinguished guests, ladies and gentlemen, this is a season of ardent, amorous endeavors by the Republican Party. They love everyone. Even the Vice President has laid aside his little hatchet. He is the complete embodiment of sweetness, meekness, and love. He even loves us Democrats. He is going so far overboard with his sparkling personality that I predict, come November, the jury will bring in a verdict for the plaintiff in the breach of promise suit known as America versus republicanism

They certainly love the farmers. They are so concerned about your welfare—your income—your future. They want you to plant no more, eat it yourselves, and go bankrupt on a full stomach. On October 10, 1952, the Republican general said "The Republican Party is pledged to the sustaining of the 90 percent of parity price support, and it is pledging even more than that to help the farmer obtain his full parity, 100 percent, with the guaranty to price supports of 90 percent." Then, down in Columbia, S. C., he said, "I believe wholeheartedly and without any 'ifs' or 'buts' in Federal programs to stabilize farm prices, including the present program insuring 90 percent of parity on all basic commodities."

Farmers, have they kept their word with you? Have your farm products brought 90 to 100 percent of parity? Has the cost of your farm operations, your replacement of machinery and tools—your purchasing power—your interest rates—stayed parallel to your income? Every farmer in America not only in the Fourth Congressional District of Missouri, should look at his checkbook every morning and every night—then ask himself repeatedly—have the Republicans kept their word and their promises?

If 4 years of Republican bungling, fumbling, and juggling have done anything for you, Mr. Farmer, then vote Republican by all means. It is apparent to all Americans that the concern for the farmer, the interest in this basic industry of America, the social and economic future of the farmer, so far as the Republican Party is concerned, is strictly on a 4-year basis and their record conclusively proves this fact.

The Democratic Party is concerned with the welfare of humanity regardless of a man's station in life or the vocation he may follow. Since the inauguration of Franklin D. Roosevelt and Harry S. Truman the American farmer has progressed, improved himself economically, has prospered steadily, has educated his family excellently, and experienced economic security, but the day that big business moved in to 1600 Pennsylvania Avenue and buckled the leash into the collar ring, the farmers have been on a narrow unchartered path of betrayal. Where were you betrayed? Why it was at about the ninth hole at Augusta, I think. Ezra flew down from Washington, determined to scuttle the only piece of legislation containing the farmers' last hopes. The "five-star playboy" nodded agreement, picked up his putter, throttled up his putt-putt and went over to take another swing. Just where does this leave the American farmer?

Four years of republicanism. Four years of declining prices. Four years of increasing interest rates. And—nothing ahead under this repugnant republicanism but—Vote for us and we will give you another 4 years of flexibility and vetoes.

They were stuck with Ezra, and from first-hand information I can impart to you why they were stuck with him. I was introduced to this great Secretary of Agriculture in 1950 in a western State. I was introduced to "the man who would have been Secretary of Agriculture had not my fellow townsman defeated Mr. Dewey in 1948." Now, the Republican Party had some rather long-standing debts to be paid, so while they are paying their old debts out, the American farmer is getting deeper and deeper in debt.

The only program that the Secretary of Agriculture has is a complex of surplus and flexible price supports. The result has been confusion, bickering, and not one constructive aid for the farm family in 4 years. He is against any program for the benefit of the American farmer that does not originate in his own little selfish mind, and as the late James A. Reed diagnosed the ability of Arthur Hyde, so I submit the same applies to flexible Ezra. The Senator said: "I doubt if he can tell a bull calf from a heifer."

Let's take a look at big business. Let us observe if it is following along the parallel course that agriculture is following. The Associated Press reported on April 24 that United States Steel set an all-time record for the first quarter of the year for income, sales, and production. Sales totaled $1,100,453,-080 for the first quarter. The net income for the first quarter was $104,160,945. The Associated Press also, on April 24 stated that the General Motors Corp. made a 31 percent return in 1955, which was considered extremely high profits by the Senate's Big Business Committee and a judiciary Subcommittee on Antitrust and Monopoly suggested that it might be helpful for competition if General Motors cut its connection with its financing subsidiary, namely General Motors Acceptance Corp. The Senate report noted that General Motors made a 1955 profit of 31 percent on capital investment after taxes and stated that this compared with 12 percent for the average American manufacturing firm. Did you farmers make this kind of profit on your capital investment?

The 83d Congress repealed all excess profits tax. Are you enjoying this kind of Republican tax cut? Take a look at the excess profits taxes paid by some corporations in 1953, before the tax was repealed by the Republican Congress. Their profits are much higher now than they were then. Therefore, the excess profits taxes would be much greater today than in 1953, but this money is now retained in the pockets of these big business corporations. General Motors was relieved of $192 million, which was the amount they paid in 1953; General Electric, $72 million paid in 1953; United States Steel, $53 million paid in 1953, and in that same year nine corporations paid excess profits taxes of $429 million.

Has the Republican Party from Eisenhower down done anything for you taxwise? Hogs sold in 1952 for 100 percent of parity. In 1955 hogs were selling for 50 percent of parity. Grade A milk delivered in Kansas City in 1951 sold for $6 per hundredweight. The average price to consumers the same year was 20 cents a quart. Grade A milk delivered in Kansas City in 1955 brought the farmer $4 per hundredweight, and the average price to consumers the same year was 21 cents a quart. Yet the cost of living to the farmer is four-tenths of 1 percent under an all-time high.

Under the Benson program of hesitation, fluctuation, and exasperation, farm families forced from the land over the last 3-year period in the United States total 600,000 and in Missouri, 28,431. In this congressional district 2,136 were forced from the land in the last 3 years. The source of this information is from the Bureau of the Census. How does this compare with General Motors and United States Steel?

In 1953 and 1954 farm mortgage debts increased $1.1 billion. Farm bank borrowing increased $1 billion. Farm real-estate inventory dropped $4.5 billion. The livestock inventory dropped $7.5 billion. The source of this information is from the agricultural statistics of the United States Department of Agriculture of which Mr. Benson is the boss.

All this happened under the administration of Eisenhower and flexible Ezra, and the impact of it is right here in these 8 counties of the Fourth Congressional District. Just check your neighborhood for facts. By comparison, from 1952 to 1955, industrial stocks increased 62 percent. Corporate profits, after taxes, increased 32 percent. Stockholders' dividends increased 19 percent. Nonfarm income increased 14 percent. Farm net income decreased 23 percent. The source of this information—the Department of Labor, statistical report. The net income lost by farmers for the 3-year period 1953 through 1955 was $12 billion. The source of this information—Agricultural Statistics, page 483, table 666. This under the administration that loves the farmer.

Flexible Ezra is confused about surpluses which is nothing more than a smoke screen to hoodwink the American farmer. If this Nation used entirely from Government surplus, food and fiber as an overall average, it would last 4 months and 5 days; and this information, for the benefit of the Republicans, comes from the financial report of the Commodity Credit Corporation, dated December 31, 1955.

No, this isn't a big-businees administration. They love the farmer. They love the average American citizen. He is better off than he ever was. What is good for General Motors is good for the Nation. Then why in the name of all that is high and holy isn't the Nation getting the same treatment that General Motors is receiving? How is your bank balance, Mr. Farmer? You are an orphan and the Republicans won't even set up a welfare department to help you.

They talk about reduced spending, but no tax cuts. What happened to their balanced budget? The Federal budget from 1950 to 1953 under Harry S. Truman totaled $223.3 billion. From 1954 through 1957 the big-business budget, instead of having been reduced, will total $262.6 billion. Eisenhower's big-business economy 4-year budget exceeds the Truman 4-year budget by $39.3 billion. The source of this information—Budget, page 1165.

Farmers and every person associated directly or indirectly with agriculture—look at the smiling faces and listen to the soothing words from the Republican National Committee. Take a look at your bank book before breakfast and after supper in the evening and see if you get the same stimulating response from your bank book as radiated upon the grinning face on the TV screen. It other words, in grim reality, ask yourself this question: Have they kept their word with me?

The impact of this Republican philosophy should be discussed at your firesides and, farmers, if you are better off financially, if you are happy with your idle lands, if your bankbook has been enhanced and if your future is secure, then by all means vote the Republican ticket. What about national security?' The United Press, on April 24, quotes the following statement from Mr. Allen Dulles, Central Intelligence Director, who stated that the Communist chieftain was exaggerating in claiming Russia "quickly" will have an intercontinental missile with an H-bomb warhead. He says—"I think what he had to say is a little bit on the high side." Dulles then laughingly added "it is a change to have a man in the Soviet Union who blurps out things. Maybe someday we will get a little more intelligence." This statement, mind you, from the head of the American Central Intelligence Office. Mr. Allen Dulles makes such a statement while that unguided missile, John Foster Dulles, is launched on another world-circling orbit. Truthfully,

guided missiles will be a welcome change from the rudderless type.

They have lost or alienated most of our former allies and friends throughout the world, hoping for foreign intelligence by a slip of the tongue from the Soviet party chief. The looseleaf portfolio of National Security and Foreign Affairs seems to also be on a flexible support basis. Brink of War Johnnie with portfolio, suitcase and all is now caught in a revolving door with an outboard motor attached to the seat of his pants. In the face of evident facts—that Soviet armies, industries, research and real estate agents are plotting our destruction, they say so and have no hestancy about it. The United States defense budget is mutilated upon White House insistence. Bulganin smiles at Khrushchev and Khrushchev smiles at Zukov and he, in turn, smiles at his old friend Eisenhower; then we see that face-splitting personality grin at a TV camera.

Now, the Secretary of Defense, better known as Bird Dog Charlie is worried. He has built more long-range bombers, more jet fighters, more guided missiles, stepped up research and built ironclad defenses with his famous mouth-filling phrases during the last 30 days than American war potential could build in a generation. The reason for this is that he is scared to death of STUART SYMINGTON'S investigation into the Air Force and in the entire defense picture. This is all under Republican administration. With the exception of George Washington, this country has invariably come into a state of highly organized confusion every time it has entrusted its affairs to political generals or military statesmen.

You will hear much from these smiling faces on TV of peace—yes—all about prosperity and plenty, but just sit down around your family table and figure it out for yourselves.

The attempted betrayal of the South in an effort to scuttle the TVA and the overt attempt at the planned wreckage of Rural Electrification by big business inside the White House is an issue which demands an exacting penalty from the Republican Party. The American people will hold the Republicans responsible for giving away the natural resources of this Nation such as water power, electric power, timber lands and oil rights to the favored few of the palace guard.

I am a Southerner. Missouri is a southern State. There is a very clear and craftily conceived political scheme devised by the Republican Party to divide the Democratic Party in the south in an attempt to secure another 4-year lease on the White House. The leaders of both races in the southern States must also see through this as it is a very simple tactic of divide and conquer then abandon for another quardrennium. Southern people are too intelligent and too cultured to fall for such an obvious political trick. The South can and will settle its own problems far more efficiently and justly than can Mr. Brownell and Company. The Democratic Party will carry every southern State.

General Eisenhower is a Republican. They have recently raised him to sainthood. He is strong enough to run, but not strong enough to be criticized. The Republican Party is the party of big business beyond the shadow of a doubt, and the General, as the head of the party, is responsible for his conduct, for all the assistant presidents and for the administration of the affairs of the American people.

In the newspapers throughout the land yesterday the Democratic Party acquired a long sought and most familiar asset in the person of one Mr. NIXON. Let us reason this out. In the light of known facts and in the face of an unpredictable future, the pre-convention announcement of the Republican Party of its candidates deserves the careful scrutiny of every American. Every voter in this Nation must examine the Republican vice presidential candidate as nature and fate have eclipsed the focal point upon which the campaigns of American history have centered. The Republicans and Democrats of this Nation are now confronted by the Nixon-Eisenhower ticket respectively. This is the most unique problem that has ever confronted political decisions of the intelligent electorate of this Nation. Instead of voting for the captain of the team with the toughest game of the season scheduled for November 6 the studious and intelligent student body of America is asked to focus their entire attention and vote on a third string substitute. This is the dilemma that the Republican high command and the Madison Avenue advertising boys have to overcome, and we Democrats doubt if they can.

Your speaker was in Washington some 6 weeks ago. I visited in the House of Representatives' Office Building and in the Senate Office Building. I concluded, beyond the shadow of a doubt that we have the most vigorous, the most tenacious and the most deermined friend of agriculture in GEORGE H. CHRSTOPHER. He impartially represents all people alike whether they be rural or urban people.

Farmers, you are represented by a fighting member of your number. Your fireside is defended by a man of the soil. Your welfare and your progress dominate his thinking. Nowhere in this Fourth Congressional District in either party can voters lay their hand upon the shoulder of a native son more devoted, better informed, nor a more skilled fighter in your behalf than the Congressman of the Fourth District of Missouri, the Honorable GEORGE H. CHRISTOPHER. You can't afford to be without him in the years which lie ahead.

I, therefore, predict that the Democratic Party will restore the Government to the people come next November and, making no political predictions, but only expressing my own personal wish and fervent prayer the ticket will read: "Democratic Party: Stuart Symington, Frank C. Clement, George H. Christopher."

Message to Constituents

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article prepared by me for insertion in Town and Village, a newspaper circulated in the Stuyvesant Town area of New York City which is in my district:

In one of my recent columns for Town and Village in which I tried to give my constituents a picture of the working day of a Congressman, I told of how he must take time off to ask himself questions about national problems and policies.

It must not be supposed though that questions are enough. They have to be pursued until the right answers are found.

By this time, of course, I have arrived at a number of conclusions and I want to deal with one in particular which seems to be particularly important; and that is the administration's foreign policy.

I judge from the letters that I get from my district that nobody is fooled by the bluster and braggadocio that substitute so very often for genuine diplomacy. Nor I think, is there any failure to recognize that in the basic goals, the present administration has added nothing to the fundamentals laid down by the prior administrations. We seek peace and in order to help achieve that goal, we want to be strong, we want to have friends, and exert an influence on world opinion. Along those broad lines the administration has the support of the Democratic legislators far more than it has the support of its own party members. Across my desk there come many leaflets, pamphlets and documents of all sorts. Quite a number of them are from "die-hard" Republicans and isolationists and they make it pretty clear that they are outraged by the administration's foreign policy.

My criticism of it is of another character. It stems from the fact that they inherited a good idea from the past administration and have fouled it up in its application. As a result we are now losing friends and alienating people because the methods vary from dull to Dulles, and often with sheer incompetence.

A particular defect of the administration's foreign policy efforts is in its inflexibility. Another is that it substitutes advertising slogans which, though they may tickle partisan supporters in this country, give offense to thoughtful national leaders the world over. Still another is that the administration is halfhearted about its policy, doing things too late and floundering in a spate of words rather than action. Still another is in its ambiguity.

Look, for example, at the bluster and big talk as to China and the unleasing of Chiang Kai-shek or at the gaffe of Goa that so deeply and unnecessarily came out with its tremendous offense to hundreds of millions of the people of India. Consider the gap between the solid support of United States policies 5 and 6 years ago and the wavering, the neutralism, and the open opposition today. Consider how little and late the administration is when it now tries to revive the essence of a point 4 program, 1 of the greatest concepts developed in America's foreign policy, which was shamefully left to wither on the vine. And consider what passes for smartness in the ambiguities about our support of the anticolonial movement and our unbelievable confusion in regard to Israel.

One does not have to have any particular sympathies for the state of Israel and the heroic struggle which it is undergoing, to recognize one simple truth, that Israel wants peace and that in this basic drive, Israel completely synchronizes with the stated United States policy as to maintenance of peace. You may have difference of opinions on this or that aspect of the Near East problem, but you cannot blind yourself to the fact that the United States wants peace and that alone of all the nations in that area, Israel wants peace and that its neighbors do not, as is clear from the fact that they will not even sit down to discuss peace with Israel.

Yet this basic and, one would suppose, elementary truth is obscured by all kinds of double talk that evades this central common interest of the United States and the state of Israel.

Recently I had occasion to say a few words in Congress about the eighth year of independence of Israel as follows:

"This occasion, however, must not be noted without regard for the threats of and actual aggression that hover like a calamitous cloud over the State of Israel. The cry of the victims reaches out to us and calls upon us to reassert vigorously our national policy to prevent aggression and to warn and, if need be, punish aggressors.

"The security of the State of Israel is vital to the stability of the entire area of the Middle East and this in turn is basic to America's own defense and the defense of the free world. This calls for an administrative policy of action rather than of inaction; and of direct, friendly, and timely intervention rather than by a nod to our allies.

It calls for prompt and sympathetic action as to the defense needs of the State of Israel, out of the same considerations that justify our provision for our own defense needs and for those of the Western World.

"It calls for an ample and timely counterweight to the armaments furnished by the Communist and satellite governments.

"Above all, it calls for a clear unambiguous assertion on the highest level that the United States is committed to the proposition that peace is indivisible and that peace and the safeguards of peace for the State of Israel are basic in our national policy."

Can anything be more unrealistic than to drift along in our present policy of lack of policy?

Perhaps there is no more flaming example of the folly of this course than the recent announcement that while the United States will not itself supply the defensive arms asked for by Israel, it will not object if its allies, largely armed by the United States, will supply such weapons. This, in Mr. Dulles' book, may seem smart; and may appeal to the men in the gray flannel suits on Madison Avenue on which the administration leans so heavily. Yet it is still a diplomatic blunder of the first magnitude. For here is action, or rather inaction, that is certainly calculated to alienate everybody. The Israelis must certainly continue with their sense of injustice when they cannot get defensive arms from the United States. The Arabs are annoyed because of this "go-ahead" signal to allies of the United States.

This is perhaps the most glaring example of the Eisenhower-Dulles foreign policy. In reviewing the world situation, however, it seems to be only typical.

How To Improve the Income Tax

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. REED of New York. Mr. Speaker, some individuals today are advocating repeal of the Federal income tax on the ground that it has become too complicated and too erratic in its application. In my opinion, this proposal is like trying to cure the patient by killing him. It is totally unrealistic to talk about abolishing the income tax.

The individual income tax is today producing about $31 billion annually, close to one-half of the general revenues of the Federal Government. The corporation income tax produces another $20 billion. Thus, the income tax as a whole raises about $51 billion annually. We have to face the plain fact that without this source of revenue our Nation would have been crippled during critical years of its history.

Those who suggest abolition of the income tax have not offered any alternative source of revenue. I can only suppose that such an alternative would take the form of a general sales tax or some similar proposal. Primary reliance on such a method of taxation would impose unfair burdens on millions of Americans. Those least able to pay would be those hardest hit. Therefore, to be realistic, we must recognize that, so long as our Government requires billions for our security and other essential operations, the income tax is the only practical and fair method of raising most of this revenue.

This is not to say that there is not room for improvement in our income tax structure. Far from it. In 1954, the Republican 83d Congress enacted the new Internal Revenue Code of 1954 which I sponsored. That mammoth legislation, covering thousands of changes in the tax laws, corrected countless inequities which had accumulated over the years. Many loopholes which had been permitted to exist in the past were closed. Fairer treatment for millions of taxpayers was provided, including more generous medical deductions, more liberal treatment of dependents, the exemption of sickness and accident benefits, tax advantages for retirement income, and the deduction of child care expenses of working mothers, to mention only a few.

It has been estimated that about 700,000 man-hours of work went into the development of that legislation. Experts from all over the country lent their assistance. There is no question but that the present strength and vitality of our economy is due in no small part to the sounder tax rules which the new law contains. We were successful in developing greater simplicity and clarity in many areas which had confused taxpayers in the past.

The fact remains, and I would be the last to deny it, that the income tax is still complicated and still poses difficult problems for the average taxpayer. We must recognize that every time a new relief provision is enacted, whether for business or for the average individual, and no matter how meritorious, new complexities are created in the tax structure. This is inevitable. Each new amendment designed to promote greater equity in the system as a whole must take the form of an exception to the general rules. Thus, no matter how sound, no matter how fair, each new exception almost invariably creates a new complication.

Moreover, it must not be thought that these special relief provisions are simply for the benefit of the well-to-do. They are not. The most costly of them are primarily for the benefit of low-income taxpayers. The retirement income tax credit, the extra $600 exemption for those aged 65 and over, and many others are examples of special relief provisions which mainly benefit those with small incomes.

Today, Congress is besieged with demands for further changes in the tax law, each designed to lessen the impact of the income tax in some particular area. I have received hundreds of such suggestions in my own office. They include increased deductions for child care, increased deductions for charitable contributions, larger deductions for dependents, bigger medical expense deductions, the allowance of deductions for tuition and other educational expenses, the deduction of the transportation expenses of handicapped persons; the deduction of life insurance premiums, a deduction for the cost of repairing and maintaining a home, the exemption of pensions generally, the complete exemption of active duty pay of members of the armed services, an additional exemption for the totally disabled, and so forth. These are only a few of the many examples which could be cited. There are countless more. Some involve a negligible loss of revenue. Some involve a potential revenue loss of hundreds of millions of dollars. With many of them I am entirely sympathetic. However, each one, if enacted, would whittle down a little more the total income tax base, and would, thus, to that extent, increase the burden of less fortunate taxpayers. Each one would add a new exception to the tax law. Each one would add a new complication to our already complex income tax forms.

We would seem, therefore, to be faced with this dilemma: Shall we ignore these reasonable and just demands for fair treatment or shall we adopt many of them and by so doing add further complexities to our already complicated tax law? I submit that there is another alternative which would go a long way toward solving this problem.

I believe that the underlying cause of most demands for special relief is the excessive nature of our tax rates. Our lowest tax bracket rate today is 20 percent. Our highest is 91 percent. Think of it. The Government takes over 90 cents out of every dollar earned in the top bracket. No wonder serious hardships arise and special relief becomes necessary.

I realize that some claim that the rates at the very top of the scale are largely fictitious because certain of these taxpayers can avoid the full impact of the rates by taking advantage of relief provisions. There is an element of truth in this argument. Some can avoid the full impact of the tax rates. However, the fact is that many others cannot. It seems to me that this very lack of uniformity in the incidence of the top rates is a compelling argument for their reduction to more reasonable levels.

I do not believe that the average American has any conception of how high our tax rates are. On March 18 of this year, George Gallup released the results of a nationwide poll taken to determine what the public itself believes the proper tax rates should be. The results were startling. The public set the proper tax level of a family of four with an income of $5,000 at $235. Actually, a family with that income today pays $420 under our present tax rates, almost twice what the public thinks is fair. The public set the tax level of a similar family with an income of $10,000 at $690, when in actuality that family pays $1,372 under our present law, again about twice as much. Finally, when the public was asked to fix the tax for a family of four with a $50,000 income, it set the tax at $7,125 instead of the $18,294 which it actually is, almost three times as much.

It is these excessive rates which are the villain of the income-tax problem. They stifle initiative. They encourage evasion. They breed disrespect for the tax system. They create severe individual hardships which in turn create the demand for special relief provisions. This, then, is the real cause of our income-tax difficulties. When the rates become too high, as they obviously have,

special exceptions necessarily have to be adopted in order to soften their impact. At the same time, special restrictions have to be enacted in order to prevent the evasion and avoidance which excessive rates openly invite. In my opinion, the present complexity of our income-tax system is due almost exclusively to this cause. Those who seek to cure the problem by abolishing the income tax would provide a more worthwhile and constructive public service if they would recognize the true nature of the problem and develop appropriate remedies within the framework of the existing income-tax system.

I propose this program as a first step toward a fairer and simpler income-tax system, to be undertaken as soon as the budget permits:

First. The top bracket rate should be reduced to at least 75 percent.

Second. All other bracket rates, including the bottom, should be graduated downward to conform to the new top rate; and

Third. The law should be simplified by the elimination of as many of the special exceptions as possible.

Certainly it seems reasonable enough that any individual be permitted to keep at least one-quarter of any income he receives. Moreover, this would not need to be a costly program. Substantial reduction in the progressive rates would have relatively little revenue effect, because only a very minor portion of our total revenue today is derived from these high bracket rates. However, I feel strongly that any such rate revision should be accompanied by a tax reduction benefiting those in the first bracket. Any tax reduction program must help all of our taxpayers. Naturally, across-the-board relief of this kind is much more costly.

For example, of the approximately $31 billion produced by the individual income tax, about $25 billion comes from the first bracket rate of 20 percent applicable to all taxpayers. This fact brings out two important points. First, it shows that the entire progressive element of our income tax—the portion of the rates above 20 percent—produces only $6 billion or 19 percent of the total individual income-tax revenue. Secondly, it shows that any reduction in the first bracket results inevitably in a substantial reduction in revenues.

I point these facts out simply to indicate the revenue implications of the tax program I have proposed. I have no information at this time which would suggest that the budget will permit substantial tax reduction in the immediate future. However, I believe that preparatory work should be begun immediately to develop a constructive program of this type. Excellent studies have been made recently of the economic impact of the income tax. It is time now that the tax committees of the Congress assume the obligation of developing a sound tax program. For this reason, I propose that the Joint Committee on Internal Revenue Taxation begin immediately to prepare studies and recommendations along the lines of my proposals.

In conclusion, I believe that the advantages of my program are tremendous. It would encourage individual initiative. It would lessen the demands for special treatment. It would simplify the tax laws. It would reduce evasion and avoidance. It would ease the compliance problems of the taxpayer. It would simplify the administrative problems of the Government. It would strengthen public confidence in the income tax.

It is a program that should recommend itself to every Member of Congress, irrespective of party.

NATO Parliamentary Conferences

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. ANFUSO. Mr. Speaker, I am very happy to support the resolution (H. J. Res. 501) which authorizes participation by the United States in the NATO parliamentary conferences. It was by distinct honor to serve as one of the six House delegates to the NATO conference in Paris last July when we met for 5 days with the representatives of the 15 countries associated in the North Atlantic Treaty Organization. We exchanged views and opinions pertaining to the maintenance of peace and security of the nations concerned, and we discussed ways to obtain closer social, economic and cultural relations between the peoples of the Atlantic community. We were also briefed by the top military leaders of NATO regarding the military position of the NATO countries.

All in all, it was a most interesting and inspiring gathering from which we came away with the feeling that we have many friends in the world who are just as determined as we are to carry on the struggle against communism. I also came away with a better understanding of the urgent need for maintaining the military power and strength of the free world to assure its continued freedom. In this respect, there is not the least doubt that NATO has shown itself to be a strong force and a deterrent against communism in Europe.

Fundamentally, NATO is a defense organization which was founded 7 years ago to check Communist aggression. The agreement signed by the NATO nations states that "they are resolved to unite their efforts for collective defense and for the preservation of peace and security." But in addition to defense, the 15 NATO nations can also serve as a springboard from which to attack Soviet Russia in the event of war. The Soviet leaders know this and for that reason they have made the dissolution of NATO their No. 1 objective. Continued Russian attacks on NATO through threats, cajolery, deception and charmed smiles, all of which are aimed to destroy NATO, only prove NATO's strength and the need for maintaining this Organization as an instrument for free world security.

NATO has shown itself to be a bulwark of freedom and democracy. We must do everything possible to keep it strong because through NATO our allies are strengthened, militarily and economically. The only thing which Communist Russia understands, fears, and respects above all else is strength. As long as we have the power to resist and restrain the Russians, as long as we have the means and the strength to destroy them—they will never attack us. Only a strong military posture by the United States and its allies will convince the Russian leaders that they have nothing to gain by force or war.

Today 15 nations are united in a defense pact under the auspices of NATO. Each of these nations is contributing manpower, equipment, and resources. American generals lead the military forces of these 15 nations. There is perfect harmony and understanding in this amalgamation of military power which is bent on preventing a third world war. I believe that this spirit of unity and cooperation on both sides of the Atlantic constitutes one of the strongest influences for peace in the world today.

As a defense organization, NATO pursues a practical course in that it is geared for immediate and collective action in the military field. Of late, NATO is also developing its political and economic aspects, so that in time it is hoped that NATO can also become a powerful organ for greater economic and political cooperation in advancing peace and improving standards of living among the nations associated with it. I should like to see, however, a strengthening of the nonmilitary aspects of NATO to a greater extent than in the past, though military defense should still remain its primary purpose.

May I also assure my colleagues that both the Allied Command and NATO are prepared to use all their resources not only for the defense of Europe, but also for the defense of North and South America, if need be. Our allies readily understand the importance of protecting American production plants at all costs and to maintain the arsenal of democracy in the United States.

Last summer, during the period of the great smile, Russia was busily engaged in consolidating her positions in Europe, beginning with Finland in the north, through Germany, Austria, and Yugoslavia to the Mediterranean area. She has succeeded to some extent in neutralizing these countries, in alienating them from the West, and even in crippling the NATO organization. Russia has not stopped there. Its current friendly demeanor is aimed primarily to weaken and finally split NATO and the Atlantic defense system. A notable example is the recent action of the Parliament in Iceland which called for the removal of American troops from that strategic island in the North Atlantic.

Mr. Speaker, I believe we should do everything within our power to strengthen NATO and to keep it strong in accordance with the recently declared policy of our Secretary of State, who understands and appreciates the importance of NATO for the free world. Mr.

Dulles said that NATO must either "grow" or "tend to dry up." I believe also that the interchange of ideas among the representatives of the parliamentary bodies of the 15 NATO countries is beneficial and constructive and should be continued in the future as well. Our country and this legislative body should participate in future NATO meetings to discuss problems of mutual interest and to seek greater understanding among the nations concerned.

Pension Plan for the Self-Employed

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. MULTER. Mr. Speaker, in the first session of this Congress bills were again introduced to provide an annuity program for self-employed persons, such as physicians, lawyers, dentists, ministers of a church, and so forth. Representatives KEOGH and JENKINS proposed such legislation on January 5, 1955, by the introduction of H. R. 9 and H. R. 10.

Mr. Leslie Gould in an editorial appearing in the April 23, 1956, issue of the New York Journal-American discloses the desirability of such pension-plan proposals. I commend the editorial, which follows, to the attention of our colleagues:

UNITED STATES SHOULD FOLLOW BRITAIN ON AIDING SELF-EMPLOYED

The British have just taken a significant step toward ending the discrimination against the self-employed for their old age.

The move, included in the new British budget, is important for its possible effect on similar efforts in this country to end this discrimination.

There are more than 10 million self-employed in the United States. These include farmers, doctors, lawyers, accountants, brokers, engineers, salesmen, and funeral directors.

Under present tax laws they are denied a tax credit or deduction for contributions to specified private pension funds.

There is a bill before the House—it passed the Ways and Means Committee by a 16-to-8 vote last year—to accord the self-employed the same treatment as now granted employees. Employees include officers of a corporation. Also employees of a partnership—such as a law or accounting firm or of any professional person. But the partners in such a firm or individual professional people and the farmers and salesmen are now denied this treatment.

PRESENT LAW UNFAIR

This is unfair. It is discrimination never intended under the Constitution. But to date, the matter has been kicked around in Congress, getting nowhere until this present House bill.

One of the troubles is that no administration has sponsored this needed change. That includes the present Eisenhower one. The British development may help change that "hands off" stand. Also, it looks like the Treasury will wind up the current year with a surplus, maybe as much as $2 billion—so the Treasury no longer has its pat argument of being against it for its effect on the budget. Regardless of its effect on the budget, the present tax law is discriminatory and it should be changed.

The British Government's proposals go far beyond the relief provided in the present House bill. The same tax break as granted corporation workers is to be accorded the British self-employed. Cost of annuities would be deductible, thus reducing the taxable net income.

RELIEF EXTENDED

This relief is to be extended by Britain to employees not now covered by their employer, whether the employer is a corporation or not.

This is part of the just announced British anti-inflation program. It is designed to encourage saving, which is what contributions to a pension plan are.

Under present American tax laws, the self-employed can only provide for his old age out of net income—that is after the high income taxes. And the taxes are high no matter what the bracket.

The proposal is so fair and equitable, that it is amazing that there should be any delays in providing this relief. It is in keeping with the basic American philosophy of proviate endeavor.

Washington Turns Out To Honor Clifford Hope

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. REES of Kansas. Mr. Speaker, under consent granted by the House, I am including a fine article from the Wichita Eagle, Wichita, Kans., that pays tribute to our colleague from Kansas, the Honorable CLIFFORD R. HOPE. The article is by Mr. William P. Helm, of the Washington bureau of the Wichita Eagle. It concerns a dinner given in honor of Mr. HOPE by the Organization of Professional Employees of the Department of Agriculture. Mr. HOPE was presented with a plaque of praise for services rendered to agriculture and to the Nation.

The article follows:

WASHINGTON TURNS OUT TO HONOR CLIFFORD HOPE

(By William P. Helm)

WASHINGTON, May 3.—Men of the Government who've known and worked with CLIFFORD HOPE long years turned out tonight to hail him as one grand guy at a testimonial dinner. HOPE, retiring Congressman from the Kansas Fifth District, who lives at Garden City, was overwhelmed.

For nearly 30 years, or since March 4, 1927, HOPE has served in Congress. Some of those whose memories went back to his early days on the House Agricultural Committee were here tonight to wish him well and honor him for what they termed his outstanding service. Among his intimates he is known as "CLIFF," among his colleagues as "Mr. AGRICULTURE." Both affectionate names were given him tonight.

HOUSE, SENATE REPRESENTED

House and Senate were represented among the speakers. Senator FRANK CARLSON, Republican, of Kansas, spoke for the latter, Congressman HAROLD D. COOLEY, Democrat, of North Carolina, for the former. The one is the Democratic chairman of the House committee that HOPE himself headed when Republicans controlled the House, the other chaired the Senate Agriculture Committee at the same time.

Sponsor of the dinner was the Department's group known as the Organization of Professional Employees of the Department of Agriculture. Its chairman, Dr. Stanley B. Fracker, presented HOPE a plaque of praise for his many services to agriculture and the Nation.

For the Department, Under Secretary True D. Morse was the speaker. For conservationists within the Department, Richard McArdle, Chief of the Forest Service, was selected to make the address. Hundreds of Department workers, high and low, and others of Washington officialdom were present.

The dinner was held in the Department's cafeteria and those promoting the affair lamented that space restricted attendance to only 300. There could have been other hundreds, they said, had there been places to seat them.

CARLSON PRAISES

Typical of the many kind and laudatory expressions was that of Senator CARLSON, HOPE's long-time close friend. In his address, CARLSON said:

"When my close and trustworthy friend, CLIFF HOPE, told me several months ago he was retiring from public service, my reaction was one later shared by the people of his home district and farm families everywhere, one of dismay and deep regret. I still feel the hard-pressed farmers of the Nation are losing a great champion, but in all fairness I must say retirement was never more richly deserved.

"Congressman HOPE has served the Fifth Congressional District of our home State through 30 of this country's most turbulent, trying, and revolutionary years. He has served it in a way to win the respect and affection of his constituents and colleagues alike. He has won his place and held it because he has kept mental pace with the fast-changing times.

HIGHLIGHTS

"There are many high points in his enviable 30-year career, but the ones to which CLIFF HOPE himself points with quiet pride are those concerning soil- and water-conservation legislation, and laws to promote agricultural research—particularly in the area of marketing research. His first major effort in this field came in 1935, when he was responsible in large measure for the original Soil Conservation and Domestic Allotment Act, the forerunner of much of the Nation's farm program today.

Another milestone came just a little more than 2 years ago with the passage of the Hope-Aiken Act to establish the small watershed program.

As chairman of the House Agriculture Committee in the 83d Congress, he also established the insured loan program for soil and water conservation.

He is still working on better means for marketing farm products, a job which had its first major impetus with passage of the Research and Marketing Act of 1946, which he co-authored.

Congressman HOPE entered the political arena as a representative in the Kansas Legislature in 1920. He was reelected to that post in 1922 and 1924, serving as speaker pro tempore in the 1923 session and speaker of the house in 1925–26. He has been a member of the House Committee on Agriculture continuously since entering Congress in 1927, and was chairman of that committee during the 80th and 83d sessions.

Although agriculture has been his principal field, Congressman HOPE has had numerous other chores here in Washington. He has served as a member of the Labor Com-

mittee and was appointed to several special committees, including the vital Committee on Postwar Economic Policy and Planning of the 78th Congress. He visited and made economic surveys of Russia, Iran, Egypt, Greece, Italy, and most of Western Europe in 1945 in connection with this latter work.

And now the CLIFF HOPE public-service story is drawing to a close. The last political chapter reveals CLIFF at the height of his popularity and respect. Even now, when he could easily taper off his heavy schedule of congressional activities in view of his announced retirement, CLIFF HOPE remains one of the most conscientious, responsible, and hard-working men on Capitol Hill. He is still keeping trust with the remarkable faith his constituents and the American farmer have shown him.

I, for one, will sorely miss his wise counsel and personal friendship here on Capitol Hill. And I am convinced that in the years ahead we all will realize more fully what major contributions he has made to the economic welfare of the Nation.

Hearst, Smith, and Conniff Win Pulitzer Prize

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. HILLINGS. Mr. Speaker, the 1956 Pulitzer prize for distinguished reporting on international affairs has been awarded to Mr. William Randolph Hearst, Jr., Kingsbury Smith, and Frank Conniff. The award is based on interviews in January and February 1955 with the 4 top Soviet leaders. I congratulate Mr. Hearst and his colleagues for this journalistic achievement, which did much to open the door to a better understanding of conditions behind the Iron Curtain.

During my recent visit to the Soviet Union and five satellite countries I carried with me the articles written by Mr. Hearst, Mr. Smith, and Mr. Conniff, and I found that they were invaluable in providing me with advance information. I wish to include at this point in the RECORD a newspaper article which appeared in the Los Angeles Examiner for May 8, 1956, describing this award.

The article follows:

(By Joseph R. Marshall)

NEW YORK, May 7.—The 1956 Pulitzer prize for distinguished reporting on international affairs was awarded today to William Randolph Hearst, Jr., Kingsbury Smith, and Frank Conniff.

The top American journalism award was given the reportorial team by the trustees of Columbia University for a "series of exclusive interviews with leaders of the Soviet Union" in January and February 1955.

Hearst, editor in chief of the Hearst newspapers, Smith, now vice president and general manager of International News Service, and Conniff, editorial assistant to Hearst, obtained historic and unprecedented interviews with the four top leaders of the Soviet Union at the time when Georgi Malenkov was being ousted from the premiership.

JOURNALISTIC ACHIEVEMENT

Commenting on the international reporting award, the university pointed out:

"No other American or foreign journalist or journalists have ever achieved such a succession of interviews with leading members of the Soviet regime. No other journalistic achievement in foreign affairs in 1955 carried such a worldwide impact as did these interviews and the subsequent articles.

"They provided the first definite indication of what the policy of the new rulers of Russia would be on the great issues of war and peace, as well as an extraordinary insight into the thinking and personalities of these leaders of the Soviet regime. For days, the interviews were headline news throughout the world.

"Actually, the February 1955, interviews were with the four men who were to have the key roles for the Russians at the July summit meeting at Geneva—Soviet Deputy Premier and Foreign Minister V. M. Molotov; Nikita Khrushchev, first secretary of the Russian Community Party; Soviet Marshal Georgi Zhukov, first deputy defense minister, and Soviet Premier Nikolai Bulganin."

CIVIL WAR NOVEL HONORED

Mackinlay Kantor's Civil War novel, "Andersonville," the story of a notorious Southern prisoner-of-war camp, won the fiction award. The dramatized "Diary of Anne Frank," by Frances Goodrich and Albert Hackett, won the prize for the best American play.

The journalism awards, for work done in 1955, were headed by a meritorious public service prize to the Watsonville, Calif., Register-Pajaronian for its courageous exposure of corruption in public office, which led to the resignation of a district attorney and a conviction of one of his associates.

Except for the public service award, a gold medal, the eight journalism prizes all carry a stipend of $1,000. The letters and music awards are $500 each.

The award for local news stories written "under the pressure of edition time" went to Executive Editor Lee Hills, of the Detroit Free Press. The award was given for his "aggressive, resourceful, and comprehensive front-page report of the United Automobile Workers' negotiations with Ford and General Motors for a guaranteed annual wage."

The award for local reporting with edition time not a factor went to Arthur Daley of the New York Times for his "outstanding coverage and commentary on the world of sports in his daily column, Sports of the Times."

The prize for reporting on national affairs was given Charles L. Bartlett, Washington correspondent of the Chattanooga (Tenn.) Times, "for the original disclosures that led to the resignation of Harold E. Talbott as Secretary of the Air Force."

The 1956 prizes were the 39th annual awards established under the will of Joseph Pulitzer, publisher of the New York World. The awards are made each year by trustees of the university on recommendation of the Advisory Board on the Pulitzer Prizes.

Other journalism awards were:

FARM VISIT

For editorial writing, Lauren K. Soth of the Des Moines (Iowa) Register-Tribune for his February 10, 1955, editorial inviting a Russian farm delegation to the United States.

For cartoons, Robert York of the Louisville (Ky.) Times for his cartoon, "Achilles," showing a figure of American prosperity tapering to a weak Achilles heel labeled "Farm prices."

For news photography, the New York Daily News for its consistently excellent news-picture coverage exemplified by its photograph Bomber Crashes in Street.

The other awards went to:

For history, Richard Hofstadter for his book, The Age of Freedom.

For biography, Talbot Hamlin for Benjamin Henry Latrobe.

For poetry, Elizabeth Bishop for Poems: North and South—a Cold Spring.

For music, Ernst Koch for Symphony Number Three.

A New York City School Won the Battle Against Segregation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article describing the excellent efforts of Morris High School, of the Bronx, N. Y., in its fight against segregation. The article by Madeline Ryttenberg and Nick D'Incecco appeared in the May 4, 1956, issue of the New York Journal-American:

CRISIS IN THE CLASSROOMS—HOW SCHOOL WON INTEGRATION BATTLE—PRINCIPAL CALLED FOR REZONING AND URGED PARENTS NOT TO SHIFT PUPILS

(By Madeline Ryttenberg and Nick D'Incecco)

In 1947, Morris High School was a school in trouble.

Its enrollment was dropping; its teacher morale was ebbing; its discipline problems were rising; its student achievement was falling.

Why?

It was becoming a segregated school.

The story of Morris High School is a case history of city schools faced with the subtle segregation imposed in New York—and other large northern cities—by community prejudices; a segregation more elusive but no less rigid than the legal variety found below the Mason-Dixon line.

The Public Education Association in a report made last year, revealed 71 percent of the city's elementary schools and an unknown—but probably lesser—number of our junior and senior high schools are segregated in fact if not in law. The reason: They draw an overwhelming number of their students either from "continental white" children or from Puerto Rican and Negroes.

This deplorable condition, the PEA said, comes about mainly because schools in New York are neighborhood schools. Their enrollments will reflect the characteristics of the areas they serve—and New York, like most urban areas, shunts its minority groups into restricted residential sections.

That is precisely what happened to Morris High School.

During and right after World War II, the character of the South Bronx area from which Morris draws most of its students changed rapidly.

Large numbers of Negroes and Puerto Ricans moved in. And, as they appeared, the oldtime residents of the area did 1 of 3 things:

1. They moved away.

2. They sent their children to private schools.

3. They used subterfuge to send their children to other public schools not so hard hit by the impact of minority groups.

As a result, the oldest high school in the Bronx saw its enrollment dwindle to 1,400 students—80 percent of whom were Negro and Puerto Rican. Much the same thing was happening to Julia Wadleigh High School nearby—and Julia Wadleigh finally closed its doors as a high school.

COMMUNITY BACKS FIGHT FOR SURVIVAL

But Morris decided to fight.

Under the leadership, first of Dr. Jacob L. Bernstein and then of Dr. William Friedman who succeeded him as principal, the school went to the community and said, in effect:

"Unless you help, Morris is doomed to become a wholly segregated school—something no person of good will wants to see in our city. Unless you help, Morris may have to close its doors completely. We can do much of the job, but we cannot do it all. This is your school and it will become what you want it to be."

The approach worked. Church and civic groups held meetings to urge the oldtime residents to keep their children in school. Special efforts went into enlivening the PTA and getting newcomers and oldtimers in the organization acquainted with each other.

Meanwhile, the school went to work in other ways. School district lines were changed to draw in areas which Negroes and Puerto Ricans had not settled so heavily.

In addition, some junior high schools in the district with heavy Negro and Puerto Rican enrollments were allowed to send their students to other high schools if parents wished.

This matter of zoning was also taken up in the PEA report. Talking of elementary and junior high schools, it said the school system apparently has not deliberately zoned school districts to funnel minority groups into particular schools.

But the school system generally has also failed to rezone the schools, where this can be done, to bring about a better balance in school enrollments.

And, by failing to use integration as a principle in its zoning, the report says, the school system has allowed many schools to assume the patterns of segregation.

High schools, which draw their students from wider areas, were not included in the report; the high school division at the board of education says boundaries have been adjusted for 20 years to recognize shifts in the city's population.

Nevertheless, Morris and Julia Wadleigh show that high schools can be hit by the problem, too.

The board of education repeated last December its determination to integrate the school system "as quickly as practicable." On February 3, the Brooklyn chapter of the National Association for the Advancement of Colored People felt it necessary to bring the case of *PS 258* v. *PS 61* to the board's attention.

The NAACP charged that PS 258 opened last October with an enrollment of 98 percent Negro. It said plans for PS 61, scheduled for completion this year "strongly suggest an all-white student body."

And the 20-block area between the schools is an interracial section; the NAACP wants rezoning which is now under consideration by the zoning subcommission of the board's commission on integration.

Morris High School used zoning to good effect in its fight against segregation. It also had other weapons.

It was proud of its top rating as a college preparatory high school; but school officials recognized that most of the new students didn't have the resources for higher education.

To fill their needs, a multiple track curriculum was installed to allow youngsters to choose the path of education best suited to them.

Teenagers who wanted college could still prepare for it. Those who didn't could learn the basic tools of earning a living—and get a commercial or general diploma as well:

Says Friedman:

"You can't handle a situation like this simply by rezoning and modernizing the building.

"You have to make sure that the tensions between the students don't rise again; that means, in the long run, making sure that each child gets what he needs from the school because a child who is achieving something for himself won't make trouble for others."

OTHER KEY WEAPONS AGAINST SEGREGATION

Morris did other things, too.

It made students responsible for monitoring the halls and entrances of what Friedman calls their school home. Leadership classes gave students school problems to solve—such as overcrowding in the halls and arranging assembly programs.

It developed a strong guidance program to work with youngsters who showed signs of getting into trouble or falling behind in their work. (Morris, as a difficult school, gets more special staff for such activities.)

It worked with the faculty to make them aware of tensions in the student body and how to deal with them.

"Our faculty," says Friedman, "is younger than average, partly because younger people are more adaptable to the problems we face, partly because the old-timers have been transferring out* * * not because of prejudice but because they are less adjustable to the new curriculum and methods."

The result of all this?

Registration at Morris has gone up to 2,500—and the student body is now 35 percent Negro, 35 percent Puerto Rican, and 30 percent continental white.

The youngsters have desegregated their own activities. Negroes, Puerto Ricans, Chinese, and continental whites have been elected by the entire student body as officers in their general organization.

Every school is an individual educational community with its own individual problems. Perhaps the answers Morris found successful won't work everywhere. But its battle shows that a determined effort can defeat even the insidious effects of the unofficial segregation which grips so many of our schools.

Woodrow Wilson Centennial Year

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include a proclamation of the President of the United States concerning the Woodrow Wilson centennial year:

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION

WOODROW WILSON CENTENNIAL YEAR

Whereas Woodrow Wilson, the 28th President of the United States, gave to this Nation and to the world a concept of peace based on justice and freedom and supported by the brotherhood of man; and

Whereas this scholar, educator, and statesman led the United States successfully through the ordeal of a devastating war, which was fought to preserve those high principles which this Nation cherishes; and

Whereas Woodrow Wilson's outstanding character, his devotion to his country's service, his efforts to strengthen the Government and to promote the public welfare, his dependence upon divine guidance, and his unfailing confidence in our system of free government and the ultimate wisdom of the American people, are a lasting inspiration to the Nation; and

Whereas the year 1956 marks the 100th anniversary of the birth of Woodrow Wilson, and the Congress, by a joint resolution approved August 30, 1954 (68 Stat. 964), established the Woodrow Wilson Centennial Celebration Commission to develop plans for commemorating that event; and by a joint resolution approved April 27, 1956, has authorized and requested the President to issue a proclamation inviting the people of the United States to observe the anniversary with appropriate ceremonies.

Now, therefore, I, Dwight D. Eisenhower, President of the United States of America, do hereby call upon the people of the United States to observe the centennial of the birth of Woodrow Wilson; and I urge interested individuals and organizations, both private and governmental, to participate in appropriate ceremonies during 1956 designed to honor and commemorate his life, his ideals, and his concern for the freedom of peoples throughout the world.

In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 27th day of April in the year of our Lord 1956, and of the independence of the United States of America the 180th.

[SEAL] DWIGHT D. EISENHOWER.

By the President:

JOHN FOSTER DULLES,
Secretary of State.

United Mine Workers of America Express Opposition to the Passage of H. R. 5550

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mr. SAYLOR. Mr. Speaker, on April 26, 1956, the gentleman from Pennsylvania [Mr. EBERHARTER], placed a statement in the CONGRESSIONAL RECORD entitled "The Coal Industry and H. R. 5550." Among other things, this article included the following paragraph, and I quote:

Although representatives of the coal industry were opposed last year to the enactment of H. R. 1, the 3-year extension of the Reciprocal Trade Agreements Act, no spokesman either from the management of labor side of the coal industry came before the Ways and Means Committee to oppose enactment of this bill. This shows that even though the representatives of the coal industry were opposed to further reduction of tariffs, that they recognized that H. R. 5550 will not lower tariffs by one iota, but would on the contrary, help to get the greatest benefits for American export trade from foreign countries.

Mr. Speaker, I do not know about our colleague's mail, but I am thoroughly familiar with mine. On March 6, 1956, I received a letter from the United Mine Workers of America reiterating their opposition to the Reciprocal Trade Agree-

ments Act and their vigorous opposition to the passage of H. R. 5550. Included with that letter was an attachment which further explained their opposition to this bill. As part of my remarks, I include both communications:

MARCH 5, 1956.

The Honorable JOHN P. SAYLOR,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: For many years the United Mine Workers of America has opposed the Reciprocal Trade Agreements Act. We have opposed it because there is nothing reciprocal about it. It is used by the State Department without regard for the best interests of American business and labor, which must meet low-wage foreign competition.

H. R. 5550, a bill now in the Ways and Means Committee, sets up a rulemaking body which would legalize the rules and laws which up to now have been made illegally by the so-called General Agreement on Tariffs and Trade.

Each year the opposition to the Reciprocal Trade Agreements Act grows stronger. We are confident the day will come when the plight of American industry will force Congress to rewrite this legislation. As long as the Congress maintains full power to regulate commerce and to levy and collect duties on imports, we must accept its decisions. But we bitterly oppose the usurpation of these powers by GATT and the legal recognition of its stepchild, the Organization for Trade Cooperation.

We respectfully ask each Member of Congress from the coal-mining States to oppose the passage of H. R. 5550.

Sincerely yours,

ROBERT E. HOWE,
Director, Labor's Non-Partisan League.

ORGANIZATION FOR TRADE COOPERATION, H. R. 5550

The OTC, or Organization for Trade Cooperation, would be a specialized agency of the United Nations dedicated to the administration of the General Agreement on Tariffs and Trade, or GATT. This is the new international trade organization that Congress is now being asked to approve. The bill is H. R. 5550 and is now before the Ways and Means Committee of the House. The new OTC represents an effort to unload GATT on the United States in a form that will make it permanent.

The so-called Reciprocal Trade Agreement, of which OTC is a part, is now 21 years old. The United Mine Workers of America has opposed the Reciprocal Trades Act since its inception.

OTC has been advertised as calling for no supranational power, yet that is exactly what it would have in practice and in fact—and that is also exactly what the State Department wants it to have. Otherwise the Department would not be interested in it. Since the OTC would have an assembly, which means a law or rule-making body, passage of H. R. 5550 would make legal the rules and laws which up to now have been made illegally by the so-called General Agreement on Tariffs and Trade.

Our Constitution conferred upon Congress in unmistakable black and white the power to regulate foreign commerce and to lay and collect duties on imports. Congress has legislated repeatedly since 1951, when the escape-clause amendment to the Trade Agreements Extension Act of that year was adopted. Congress has made its will known repeatedly in legislation, in many amendments to that escape clause, to make sure that all American producers faced with hurtful import competition have a reasonable remedy.

This legislation has been rendered impotent by the stubborn opposition of the State Department—a Department that seems to find it hard to believe that American producers are entitled to the most elementary considerations of fair treatment.

For years the United Mine Workers of America has advocated and supported legislation to provide quota limitations on foreign imports. Now we are told that Congress cannot legislate quotas or provide the mechanism for their imposition by an administrative agency without violating the letter and spirit of the General Agreement on Tariffs and Trade.

By just what pattern of reasoning the State Department could arrive at the notion that they could properly bind Congress against any particular type of legislation on quotas, or anything else, has not yet been explained. These powers have been, in effect, usurped by GATT and because of ignorance and indifference on the part of the Congress, they have succeeded in getting away with murder. Now they are attempting to make the past actions of GATT legitimate by having Congress pass H. R. 5550 which sets up the Organization for Trade Cooperation.

By defeating H. R. 5550 Congress would recapture its constitutional authority and responsibility and once more labor and business, the producers of this country, would regain their lost voices in the determination and direction of trade policies that are of the greatest importance.

Mr. Speaker, I know that the above letter and attachment were mailed to every Representative from districts where coal is mined and that a copy of same was read into the record of the hearings on H. R. 5550 by Representative CLEVELAND BAILEY.

I am also informed that coal-industry representatives support the same position as taken by the United Mine Workers of America.

The Polish Constitution of 1791

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. MULTER. Mr. Speaker, May 3, 1956, commemorated the 165th anniversary of the Polish Constitution. The freedoms voiced in that promulgation have been denied Poland time and time again; however, its people have never ceased in their efforts to regain their independence.

We may compare the struggle of humankind in the achievement of democracy to the erection of a multicolumned, solem temple or to the building of a majestic road, audaciously projected into the unknown and into the future. These splendid structures are adorned and brightened by lofty burning tripods or marked by milestones—each representing a symbolic step or a glorious conquest of humanity over nature's adversities, or the triumph against a tyrannical will imposed through history by dictators or avaricious men. Representative of such indelible marks of history is, indeed, the Polish Constitution of 1791.

By its enactment humanity achieved another step in the recognition of man's individual rights and freedom. Many progressive social and political reforms were inaugurated by this document. Participation by the peasants and the local towns in the right of representation in the national government was firmly recognized. The Polish Constitution, based upon two other great documents of that period—the American Declaration of Independence and the French Declaration of the Rights of Man—proclaimed the concept of liberty for all men and recognized that man is endowed with certain inalienable rights and that for the protection of these rights "governments are instituted among men, deriving their just powers from the consent of the governed."

Unfortunately, the country which gained life with such a stupendous monument of freedom was chosen to remain through history as an example to other men—an example of the fact that an author ofttimes endures suffering instead of recompense for such a splendid donation to humanity. "Martyrized Poland," they have properly called it, and, in truth, few people have suffered so much from foreign oppression and aggression.

Although Poland has, perhaps, been through the centuries the bloodiest battleground of Europe, its spirit of independence, its wholehearted dedication to God have never faltered. What a glorious proof of good faith the Communists could now give if they would free Poland. What coherence and logic would appear in their behavior if, after renouncing Stalin and denouncing his crimes, they would redress and repair the tortious acts inflicted upon the Polish people. In other words, if they free now a few persons who were put in dungeons by their bloody leader, there is far more reason that they should free an entire people from the oppressive status that same leader has thrust upon them.

It is only natural that the American people look with every sympathy to this anguishing country. We cannot forget the land of Kosciusko and Pulaski. In our hearts there is engraved forever the memory that during World War I 300,000 Polish-Americans served in defense of their adopted country, and almost 1 million fought in World War II.

We in the United States proclaim our admiration for the Polish people, and fervently pray that the day may not be far off when the freedom and happiness of man will be the object of the Government of Poland and of other enslaved nations.

Alger Hiss' Big Victory

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. RIVERS. Mr. Speaker, I am enclosing, under my permission to extend my remarks in the Appendix of the REC-

ORD, an article from the News and Courier, Charleston, S. C., under date of May 1, 1956.

The editorial has to do with the appearance of Hiss at Princeton University. It will be recalled that some time ago the distinguished member from New Jersey, Mr. TUMULTY, made a magnificent speech on the floor of the House in which he lamented the action on the part of the school permitting this convicted perjurer to speak to the students. It will be recalled that Mr. TUMULTY observed that Hiss had chosen the wrong subject—that Hiss was an authority, not on Geneva, but on how to fabricate falsehoods. This editorial further expounds on the theme which was so ably advocated by our fine colleague from New Jersey.

Mr. Speaker, I agree with the gentleman from New Jersey [Mr. TUMULTY] in his opposition to Hiss' appearance at Princeton. I think the school made a mistake in permitting him to appear. I do not believe even Voltaire, if he were living, would favor such a thing. I agree with the stand taken by the most outspoken newspaper in the South—the Charleston (S. C.) News and Courier:

ALGER HISS' BIG VICTORY

Some liberals are now trying to say that Alger Hiss' appearance before a student debating society at Princeton University represents a victory for academic freedom.

Actually, the invitation extended to Hiss represented a victory for the convicted perjurer and a victory for sophomoric stupidity, but a defeat for decency and a defeat for academic freedom.

We do not blame college officials—or at least we do not blame them very much—for what happened. The blame belongs to the students. Once the invitation had been extended by the students, Hiss' victory was won. If Princeton officials had stepped in and canceled the invitation, they would not have erased his triumph. For it was the invitation—rather than the speech—that represented victory. And cancellation would only have had the effect of making Hiss pose as a martyr to whom freedom of speech had been denied.

Today, the liberals are saying, "How can it hurt a group of students of reasonable intelligence and with open minds, to hear a speech by anyone?"

And the liberals add, "The students knew of Hiss' record. Certainly they can be trusted to form their own judgment of whatever he told them in a speech."

But the point is that while the speech may not, and probably did not, hurt the students, it certainly helped Hiss. And Hiss is a person outside the pale of decent men. He is a convicted and unrepentant perjurer. The only reason he has never been tried on other counts is that the statute of limitations saved him.

Ever since he got out of jail, Hiss has been angling for invitations just such as the one at Princeton. Why? Because after 2 or 3 of such invitations a seed of doubt about his guilt is planted in the mind of the public. The general reaction, after a number of such speeches, is that if Princeton and similar institutions endorse him, there must be some doubt about the justice of his criminal conviction.

Of course this is exactly what Hiss wants. More important, it is exactly what his Red and pink and "liberal" associates want. True enough, Priceton did not endorse Hiss. But the general public often reads merely the headlines—not the fine print.

No, it didn't hurt the Princeton debaters to hear Hiss. But certainly they had him talk on the wrong subject. Hiss now is a recognized authority on only one matter—how to tell all-important, whopping lies about betrayers of the United States. If he were going to talk on anything, that was the matter he should have discussed.

We can well understand how, for instance, the FBI college might invite a veteran burglar to talk on safecracking; or how the War College might invite a traitor to talk on breaking secret codes; or how a Princeton debating society might invite a Communist to talk on the blessings of communism, as seen through Red eyes.

But for the FBI to invite a burglar to discuss ethics or jurisprudence would be the height of effrontery both to our moral code and our system of justice. The same can be said about the other comparisons offered above.

If the Princeton students had thought through all of those various matters, we don't believe they would have embarrassed their university or the country by their asinine, sophomoric invitation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Engineering Research and Development

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. WILEY. Mr. President, not long ago it was my pleasure to deliver an address in Madison, Wis., before a section of the American Society of Tool Engineers. My subject was the competitive race between the United States and the Soviet Union, in the field of guided missiles, research, and development. Subsequent developments have underlined the significance of this subject.

I ask unanimous consent that the text of my remarks on that evening be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR WILEY

I am indeed honored to address your society. It is one which contributes indispensably to the future of America.

In our industrial society, trained and skilled manpower and tools are the keys to production and to success.

And you highly trained engineers, and your companies, have the responsibility and satisfaction of creating the tools which make America great.

We of the United States, as you know, lead the world in production. We have accomplished the greatest feats of engineering. We are looked to, and increasingly visited, for our advanced industrial know-how.

OUR RACE WITH SOVIETS FOR SUPREMACY

And we are now, of course, engaged in a tremendous struggle to determine whether free men can remain supreme in their production achievements and thereby remain free, or whether they might become the slaves of a Communist industrial state, because of the latter's possible gaining of supremacy in time to come.

I am convinced, as I know you are, that just as we have won in shooting wars against dictators, so in peacetime we can prevail in competition against a dictatorship.

I do not believe in either overestimating or underestimating Soviet engineering capabilities. But I, for one, after years of warning about the Kremlin's determination, was not surprised when Khrushchev announced in Burma last December that "we shall see who has more engineers, the United States or the Soviet Union."

WE MUST BE NO. 1 ON GUIDED MISSILES

I want to talk to you tonight about the implications of this matter of the number of engineers and the quality of engineers.

It is particularly appropriate that you and I weigh the problem on this occasion, because just during this past week, a subcommittee of the United States Senate Armed Services Committee began, as you know, an investigation of the program of our guided missile and long-range and medium-range bomber programs.

I am not on that particular committee. I don't purport to know what its findings will be.

A great deal of its testimony must necessarily be in executive session, because matters of the highest security will be taken up, just as they are taken up in many of our Senate Foreign Relations Committee meetings.

SOME REPORTS ASSERT REDS ARE AHEAD OF US

But I do know this: There has been report after report, apparently based upon information available to United States and allied intelligence, that the Soviets have been making spectacular progress in guided missiles research.

Some reports assert that the Reds are actually ahead of us in the development of a 1,500-mile medium-range guided missile. Some reports assert that we are still ahead in the race for a 5,000-mile intercontinental guided missile, or a ballistic missile (the latter being, as you know, an unguided missile, fired like a bullet or an artillery shell).

It is next to impossible to know how reliable these various reports are. I have confidence in our military authorities, and I know that they have been trying to do their best. I have confidence in the President of the United States, who certainly has the finest military judgment available to this Nation in this hours of stress.

The President's recent request to the Congress for a half-billion doHars more in funds for long-range bombers—B-52's—showed, however, that all is not as well as we would want it to be. It shows that we have got to step up our activity.

The guided missile program, the bomber program, the development of antiguided missiles and antibomber systems—these will determine, in time to come, the very life of this Republic.

We dare not be second best in guided missiles; we cannot be second best in our bomber program.

DANGER OF SOVIET OVERCONFIDENCE IN A BLITZ

If ever the Soviet Union gets the idea that it could blitz us in an all-out attack, that it could rain down a shower of missiles with hydrogen bomb warheads on defenseless cities and defenseless airdromes, that it could smash our strategic air force before it could retaliate—if ever the Soviet Union gets that false idea—then it will be a bad day indeed, and the chance of war will be that much increased.

The recent appointment of a Chief of Guided Missiles in the Pentagon, shows that we recognize that we have got to proceed all-out on the development of that particular weapon.

We cannot, of course, put all our eggs in one basket. We cannot simply rely upon any one weapons system.

But neither can we be second best in the most crucial weapons and the most crucial weapons systems.

The day of mass armies is long since completely over. This is as you and I so well know, an age of science and technology.

But we are losing technicians from the Armed Forces at an alarming rate, and the strongest steps must be taken to replenish that supply.

We cannot have engineers and technicians available to the Armed Forces, unless in the first place, we graduate sufficient numbers of youngsters from the high schools and the institutions of higher learning in America.

OUR BASIC CHALLENGE—MATCHING SOVIET GRADUATES

And that brings me back to the principal point of my comments tonight. It brings me to the one point on which I know you, of this society, will agree with me completely. This Nation must take steps, in a comprehensive program, to expand the number of engineers and technicians available to United States society.

In the dictatorial state of the Soviets, they have power to order as many students as they wish to study engineering. Their government can order that enough money and facilities are made available for training engineers. They don't need to pay too much attention to the standard of living of the Russian people, and they pay no attention at all to their liberty.

Knowing that they need more engineers for defense and for their industrial machine, they merely arrange and order the number of engineers to be turned out.

It is something like our planning a production line to turn out machines. The single mindedness of their program makes it easier. But the concept of dictating to human beings is utterly objectionable to us.

We need more engineers, too, but we will leave the decisions basically to the people.

We do not coerce our people, nor require them to serve what some men may regard as the present fleeting interest of the state. One of our cherished liberties is the freedom of the individual to choose his own vocation.

LOW TECHNICAL STATE FROM WHICH SOVIETS STARTED

Meanwhile, there is no doubt whatsoever that Russia has come a long way in technical achievement since its 1917 revolution.

Czarist Russia was not an industrial state and was very backward in technological matters as compared to the United States.

Consequently, almost any Russian advances in engineering and science appear as great strides compared to the lack of such technical activity before the industrial revolution entered Russia.

About 40 years ago 50 percent of the Soviet population could not read. Since then they have built an elementary school system with a 7-year course and are planning, by 1960, 10 years of basic schooling will be compulsory throughout Russia.

Those schools are open 6 days a week, and more hours per day and more weeks per year than ours are. The students are treated with semimilitary discipline.

We might expect these students to be too machine-like to have the independent initiative and imagination of Americans when they grow up. But we must not discount the fact that they do turn out highly qualified technical engineers.

If we have as many engineers, I am sure that our results will be better than theirs. But there is a limit beyond which imagination and initiative cannot make up for numbers.

We must not let that limit be reached.

RUSSIAN ENGINEERS INCREASE RAPIDLY

In 1954 Russia had more than 540,000 engineers.

This increase to 540,000 engineers may be compared with the figures for 1929 when Russia had only 41,000 engineers.

They may also be compared with the American total of between 500,000 and 535,000 engineers.

In addition, their other scientists numbered about 160,000. We have between 210,000 and 225,000 such scientists.

Their combined total of engineers and scientists is 890,000, according to 1954 figures. Our total is between 700,000 and 740,000.

SOVIET EDUCATION'S VAST ENROLLMENT

Student enrollment in the Russian institutions of higher education rose to 2½ million students in the fall of 1954. And the growth of Soviet college population is continuing.

In 1954 universities and other institutions in the Soviet Union graduated 53,000 engineers.

The Soviet Union is stepping up its rate of graduating engineers. It graduated 63,000 in 1955.

While the Russians have been making this enormous effort in training engineers and scientists, we in the United States of America, speaking generally, have not been concentrating our national efforts upon the problem. We have not focused our attention on the production of engineers and scientists adequate to meet our needs in the modern world.

It is, of course, good that we leave the selection of the individual's career to the individual concerned. I would not have that changed one iota nor would you.

But let us look for a moment at how our achievement in the production of engineers and scientists stacks up against that of the Soviet Union.

AMERICA'S TECHNICAL POPULATION

In the United States, the creation of professional workers (including engineering and scientific people) has increased nearly two times as fast as the Nation's population.

In 1890 the census showed about 30,000 engineers in a total population of 63 million in the United States. In manufacturing, construction, utilities, and transportation, there was only one engineer for every 290 workers.

When the American population had risen to 151 million people in 1950, we had 535,000 engineers. That gave us one engineer for every 65 workers in those same fields of manufacturing, construction, utilities, and transportation.

This was a remarkable increase and is, to a great extent, responsible for the rise in our industrial efficiency and in our standard of living.

The United States now has between 700,000 and 740,000 engineers and scientists.

Most of these engineers and scientists are employed by private industry. More than 400,000 engineers and more than 100,000 scientists were working in private industry in January 1954.

ENGINEERS IN THE FEDERAL GOVERNMENT

Not only industry but also Government requires engineers. More than 30 Federal agencies employ about 47,000 professional engineers. And many agencies have numerous high positions to fill. They cover the fields of mechanical, electrical, electronics, chemical and civil engineering, as well as others.

LOW RATE OF GRADUATION IN UNITED STATES

But the graduation of engineers and scientists in America (which moved up between World War II and Korea) has since slumped badly.

This fall not only reflects the decline in births about 20 years before but also the lack of enough discipline requiring study of mathematics and science in high school and college.

To put the sad story to you bluntly, the Soviet institutions of higher education are graduating engineers about 2½ times faster than we are—2½ times.

Now, this is a sorry state of affairs to face a country like ours which has developed a continent through hard work and technical know-how. Our country has always led the world in technical performance and engineering. We are a Nation accustomed to producing surpluses, not shortages.

NO NEED FOR FEAR OR DESPAIR

We must solve our shortage with courage and hard work. I do not believe in an attitude of fear or despair.

"For God hath not given us the spirit of fear; but of power, and of love, and of a sound mind" (II Timothy 1: 7). This is what Paul wrote to Timothy, and it is directly applicable to us as we face world problems today. We must banish fear. We must take courage. We will go forward to solve the difficult problems and to overcome the foes we face.

It was not through inattention or through lack of technical skill that we increased our national income from about 70 billions of dollars (which it was in 1939 when Wisconsin first sent me to Washington) to the current figure of about 327 billions of dollars. That is an increase of more than four times, and it was done in the comparatively small period of 17 years.

Now I am not saying that we have plenty of time in which to step up our production of technically skilled people. We don't have. We must work hard and fast.

We had, as you recall, 2 years in which to get ready even after we were attacked at Pearl Harbor, but we would not now have as much as 2 hours if we were attacked by atomic and hydrogen bombs showering our principal cities.

And in this connection may I remind you that, with the speed of modern airplanes, we, here in Wisconsin, are less than 5 hours from Soviet Siberia.

UNITED STATES CHIEFS WARNED AGAINST OVERCONFIDENCE

Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, said in a speech last January that:

"Perhaps the most insidious weakness a nation can have is complacency. This is the belief that we can do everything better than anyone else."

I continue to quote Admiral Radford:

"It is something like the popular song called 'Anything You Can Do I Can Do Better.'"

He said that the Soviet achievements in developing "modern long-range bombers, submarines, jet engines, and nuclear weapons" rebutted the thought that we can afford to be complacent about Soviet technology. He concluded:

"There are no rational grounds to presuppose that American defense technology is invincible."

A recent statement by the Chairman of the Atomic Energy Commission, after the atoms for peace conference, said that, "What we learned was enough to shatter any complacency we may have enjoyed in regard to our own imagination and ability."

Therefore, we must redirect and reemphasize our engineering program so as to step up the number of highly trained engineers available to support our expanding economy. Meanwhile, we must maintain our defense posture, our readiness to repel attacks, with the most advanced scientific weapons conceivable.

And this must be done within the freedom of our American competitive system of individual enterprise.

We have already made a start. We have already reversed the downward trend of engineering graduations, and we are aiming upward.

Fortunately, the enrollment in the engineering classes of our higher educational institutions in America has been increasing during the last 3 years.

The increase last fall was about 10 percent. And, if this trend continues, the Office of Education in Washington believes that there will be over 40,000 engineering graduates in 1964. This is a substantial increase, but we must remember that in 1950 we graduated over 52,000 engineers. With sound planning and energetic drive, we can again focus the attention of our professional people upon producing engineers who will help protect us from the Communist danger.

And this can be done through the incentive of our system of individual initiative.

THERE ARE ATTRACTIVE FINANCIAL INDUCEMENTS

Salaries and demand for engineering experience have been high. As you know, in city after city, the newspapers carry advertisements seeking engineering personnel for employment at high salaries with glowing futures.

The continuing demand for engineers and qualified scientists will probably serve to maintain the salary incentive. Consequently, boys and girls, who learn of the glowing opportunities in the engineering and scientific fields, will more and more wish to follow those careers.

INCREASE NUMBER OF MATH STUDENTS

But, one of the greatest problems in training engineers and scientists quickly is the lack of mathematicians in high school. Since 1910 there has been a consistent decline in the proportion of high school students who take college preparatory mathematics. This conclusion is the result of a survey by the Educational Testing Service under a grant from the Carnegie Corporation. The youngsters just don't realize how important their math is, to themselves and to the country.

One of the survey's conclusions, after looking at 60 mathematics classes, was stated as follows:

"That genuine and efficient mathematical learning was going on in only eight of them."

And that:

"What we are facing is not a shortage of talent, but of trained talent."

And that:

"It is a problem which merits the attention of all men and women accustomed to concerning themselves about the future of America."

Almost half of the schooltime of high-school children in Russia is spent on science and mathematics.

There has been a distressing tendency in our country to let study of mathematics slide. Under the elective system, most students avoid it. True, it is hard; but it sharpens the mind and it helps toward success in later life.

SIX-POINT PROGRAM TO SPUR ENGINEERING

Now, I earnestly urge that we give serious consideration to an engineering and scientific educational program under which we will do the following things:

1. Emphasize science and mechanics in counseling those boys and girls who show aptitude for that sort of thing.

2. Stimulate them to study hard and to keep up their studies.

3. Direct them to the sources of scholarships, to competitions for tuition grants, and to sources of loan funds which have been made available to foster scientific education.

4. As Government officials and as college or corporation executives, appropriate and allocate adequate funds for scientific study and research and for scholarships.

5. Help our great private and public university system in its wonderful work.

6. Counsel graduates as to scientific and engineering employment and so make the Nation's opportunities available to them.

UNCLE SAM IS FINANCING VAST RESEARCH

Uncle Sam is of course already busy. The Federal Government lets tremendous contracts for research and development. These are awarded on a competitive basis to universities, colleges, research institutions, and industrial corporations which have the skilled manpower and the facilities for their performance.

As a result, many of our colleges are being partially financed by doing Federal Government work in scientific and engineering fields.

And many of our companies are able to finance their engineering research and development by doing defense work for the Pentagon.

This is going on in our truly American way without subjecting the thinking of any of these universities, colleges, institutions, or corporations to the influence of what the Government wants them to think. And that is as it should be. For there must be no censorship of thought in our country.

So I leave with you the message that, although the future may look somber and although we may face a strong enemy, we need not despair. We can be of good cheer because we have the capacity, we have the energy, and we have the incentive to win.

But it will not be easy.

THE VITAL IMPORTANCE OF MACHINE TOOLS

I have been speaking principally about the shortage of United States engineers in relation to the Soviet's mammoth concentration on increasing the number of engineers for weapons development.

I want to emphasize now, however, that I am thinking of the shortage of engineers in terms of our peacetime economy, as well. I am thinking of engineers not simply for the development of guided missiles and B–52 bombers, but for the development of that vast array of tools, which you know, even better than I, is the backbone of America's industrial strength and its military might.

In modern war, toolmakers are as essential as soldiers. But the machine tool industry is an industry of feast or famine. There is either a great demand for its production, or there is little demand at all.

MACHINE TOOL RESERVE POOL

Our unfortunate experience in World War II, when we did not have nearly enough machine tools to turn out quickly the military equipment we needed, has led the Federal Government, as you know, to establish, very wisely, a machine tool reserve pool.

This is administered by the Department of Defense under policies defined by the Office of Defense Mobilization. Several years ago, an American industrialist, Harold S. Vance (formerly chairman of the executive committee of the Studebaker-Packard Corp. and now a member of the Atomic Energy Commission) headed a committee which described the policy to govern that reserve.

The Vance Committee concluded, after careful study, that a stockpile of end items was not enough. It recommended that machine tools be bought and stored against the time when war would suddenly require American industry to step up military production and go on an all-out basis. This Committee recommended annual appropriations of more than $500 million to establish this pool. Consequently, separate appropriations were made for the establishment of this reserve stockpile of machine tools.

It has been decided by the Pentagon to procure machine tools, both for stockpile and for current use, out of their general appropriations. The effect of this decision is to place the responsibility for stockpiling machine tools on each military service. This places the burden for justifying appropriations for this reserve where the burden lies for all military appropriations.

TRIGGER PROGRAM FOR M-DAY

One of your past presidents, Joe Crosby, is giving his time until July to the Department of Commerce to help solve the machine-tool problem. As you no doubt know, the Department of Commerce and the General Services Administration have cooperated to develop a trigger program to be shot into action, if and when we have an M-Day again.

The Government is now offering to enter into contracts with your companies effective immediately to produce specified machine tools which will be needed for wartime production. Manufacture of the tools would begin upon notice from the Government on or about M-Day. Later, these contracts may be made effective automatically on M-Day without further notice. The requirements of the contracts would be reviewed twice a year, and proper adjustment made. Just the other day, the Commerce Department and the General Services Administration completed their cooperative preparations for this machine tool trigger program.

THE CHALLENGE OF AUTOMATION

One cannot, I believe, discuss our machine tool industry without bringing up the challenging issue of automation.

There has been, as you know, concern expressed in some quarters, particularly labor circles, about the trend toward automation. There has been a fear that it would result in displacement of jobs.

There is no question but that in specific instances, some unemployment may result as manual jobs are replaced by machine-run machines. But the whole inspiring history of the expansion of the American free enterprise system has shown this fact—industrial progress in America, while invariably making obsolete some particular type of job, tremendously increases the number of new jobs in totally new fields.

The horseshoemaker, the harnessmaker, and the other jobs, which were dependent upon horses in the America of the 19th century, have been replaced. But there were literally millions of new jobs created, thanks to the "horseless carriage," the great American automobile industry.

The development of nuclear science, the continued progress in electronics, the miracles of American chemistry, particularly in developing new plastics—the miracles in physics research—these are symbols of the new frontiers of American industry.

So, contrary to the fear talk, we should welcome the trend to automation, because it means a higher, not a lower standard of living, more jobs, not fewer.

AUTOMATION NOT REALLY NEW

I should like to point out that automation is really only a further development of an old concept in America. It involves the increasing use of laborsaving machinery. This machinery is almost continuous in its operation and sometimes is self-regulated. It is, as you know, increasingly used in offices, as well as in factories.

MANY KINDS OF AUTOMATION

Some automatic machinery performs a cycle of operations according to an established pattern without further human intervention.

Other machines same human labor in the automatic movement and handling of materials.

Still other machines automatically control the work of machinery, substituting machine calculation in place of graders and inspectors.

And in offices, electric computers and data-processing machines perform miraculous calculations in split seconds.

PURPOSE OF AUTOMATION IS GOOD

All these are the brain-children of mankind. And they are calculated to lift toil from the backs of mankind, men and women.

As we exercise statesmanship, in government, in business and in labor, we can foresee a shining future when there will be more leisure, more happiness and less physical and mental exhaustion in the lives of all our people.

But we must exercise patience and forebearance, and labor long to foresee the problems which this transition to more automatic processes will entail.

If greater automation increases production, we must be sure that the engineers and the small entrepreneurs receive an adequate return for their imagination, foresight, and risk-taking.

On the tax phase, let me mention this: Whether or not the rapid tax amortization program is continued in connection with defense expenditures, the Government now permits a more realistic write down of investments in plant and facilities. This should stimulate the business of the machine-tool industry.

And of course, we must protect the rights of labor in this changing world. If workers have been faithfully doing one job for years, have acquired seniority rights and limited skills, we must try to help them to secure fair compensation for these rights or transfer them to the other jobs for which their study and increasing skill will fit them.

And here I must reemphasize that hard work and study throughout our lives will fit us for increasing responsibility.

FURTHER TRAINING OF WORKERS NECESSARY

If any workers are displaced by automation, they should be able, with proper help, to improve their skills to the point where they will earn more in more responsible jobs.

In this connection, I commend to your attention a pamphlet issued under the name of our Secretary of Labor. It is called, "The Skilled Work Force of the United States," and it deals, among other things with the relation of skill to unemployment. It points out that automation will increase the proportion of skilled workers in American life, and stresses the importance of continued self-education.

There are many ways in which our people can improve their skills. They can do it at home, in school, or while serving with the Armed Forces. Through initial apprenticeship, through technical institutions or junior colleges, by participating in training programs within industry and by accumulative job experience at their daily work. But no one becomes skilled by chance. You didn't, and no one else can. Special effort is necessary.

And so, while the Federal Government foresees the great gains coming from automation, it is not overlooking the considerations necessary to help gradual adjustments to the new jobs which automation will bring about.

WISCONSIN WILL PROSPER IN AUTOMATION ERA

It seems to me that a great State like Wisconsin, with a marvelous university system, a State which has rightly prided itself upon the skills and crafts of its laboring people and its managerial people, a State where quality of product has always been a matter of deepest pride, stands to benefit far more so than the average State—in the scientific, industrial, and atomic era of our times.

I look, therefore, for greater prosperity of our State, than we have ever known before. But I emphasize that it must be a well-rounded prosperity in which the progress of industry and labor is accompanied by prosperity in agriculture. Unfortunately, the latter situation—prosperity in farming—has not sufficiently prevailed, but it must prevail if our whole society is to remain healthy.

And I want to mention still another essential unit for well-rounded prosperity—our great teaching profession.

INCREASES TEACHING FACILITIES

In the process of greater automation, and the training of the greater number of scientists and engineers which automation will require, the Federal Government, as well as

private industry, should make increasing use of our great universities.

They should make increasing use of our splendid laboratories and our fine private inventive and engineering talent in the laboratories of our many corporations.

In this way, America can move ahead by improving our civilian economy while maintaining superiority in weapon systems for our own national survival.

In order to continue our technological progress, we need, as I have said, more engineers and scientists; and to train these, we need more teachers. Teachers are woefully underpaid. We must bring every effort to increase their compensation, so that they will regain the position of real leadership and the place of respected importance in our lives which we all remember our own teachers had 30 or 40 years ago.

CONCLUSION—THE BRIGHT HOPE OF OUR PIONEERING AGE

If we think ahead, if we continue to act with pioneering spirit, if we follow in the footsteps of the settlers of America, we will have nothing to fear from increasing automation.

We can rely on it, as Daniel Boone relied on his long rifle, for defense, for food, and for a better life.

If we avoid fear and if we follow hope, if we buckle down with hard work, we will succeed beyond the imagination of any of us here present.

Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. NEUBERGER. Mr. President, benefits for veterans who have fought in the great wars in defense of our country have been under continual attack by this administration. The Hoover Commission recommends the whittling away of veterans' hospitalization rights and other benefits. More recently the President's Commission on Veterans' Benefits, headed by Gen. Omar Bradley, proposes the ending of all veterans' benefits for non-service-connected disabilities.

I have long felt that some aid for the disabled, the aged, and the unemployable should extend to all our citizens, veterans and nonveterans alike; but I can see no valid reason for ending arbitrarily these benefits for our veterans.

One of the ablest arguments against the reasoning of the President's commission is that advanced by Mr. W. W. Campbell, of Portland, Oreg. Bill Campbell, as he is known to his fellow veterans, is a Marine Corps veteran of World War I, and has played an active and outstanding role in the Veterans of Foreign Wars.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the editor by W. W. Campbell, which appeared in the Oregonian of April 27.

There being no objection, the letter to the editor was ordered to be printed in the RECORD, as follows:

VETS' SPECIAL RIGHTS

TO THE EDITOR: The report of President Eisenhower's Bradley committee appears to be the most iniquitous proposal ever aimed against America's war veterans.

It would entirely disregard the Nation's historic and traditional policy of recognition of the right of war veterans to special consideration by reason of the sacrifices required of them in wartime far above and beyond any sacrifices required of the civilian population.

It would destroy this policy completely and swallow the entire veterans' program into the vast social security and public relief systems and the veterans would lose their identity.

While most veterans will agree that in our Nation of great wealth no citizen should be permitted to become an object of charity through physical disability, unemployability or old age, they can be expected to vigorously insist that the veterans' historic right of prior and special consideration be maintained—and on a separate basis.

There can be no doubt but that the Bradley report, no less than the Hoover report, was inspired by pressures from the "economy leaguers," the hard core of which is composed of what may well be dubbed the "econo-misers"—these being gentlemen who traditionally place dollar values above human values and are known to veterans as those flag-wavers who love the American serviceman while he is out fighting and dying to save the skin and treasure of the "econo-miser," but who hates the serviceman who manages to survive and return in need of assistance.

Among these may usually be found those who profit most from the Nation's wars.

W. W. CAMPBELL.

Address by Hon. William Langer, of North Dakota

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I made in New York City on September 29, 1955.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR LANGER AT CARNEGIE HALL, NEW YORK, SEPTEMBER 29, 1955

Mr. Chairman, Mrs. Sobell, and my friends, I am delighted that Mrs. Sobell told you that I was the Senator from North Dakota. North Dakota, believe it or not, is the greatest State in the Union. Every once in a while this evening when one of these distinguished guests came to me and said they were glad I was here and commenced to pay compliments to me for being here, I said to them that we have scores of folks out there in North Dakota who would do it if they were in my place.

I believe one of the greatest jobs in the United States is that of being United States Senator. That is especially true if you represent a great State, if you don't owe any obligations to anybody but to the people, where you can say anything you want to and do anything you want to and be entirely happy while you are doing it. I want the press to know that, and they are here, I understand, tonight, to report my speech. I want them to tell the press in North Dakota that WILLIAM LANGER spoke here tonight and he is very, very happy to be here.

Upon these other occasions on which I have appeared here in Carnegie Hall, I promised to put certain articles and legal instruments into the CONGRESSIONAL RECORD. I placed, and maybe Mrs. Sobell will feel better, I think, when I tell her, I placed the William Peters case into the CONGRESSIONAL RECORD, and he won. And I put the Schneider case into the RECORD, and he won. Of course, you all know that great champion of human rights here in New York City, Corliss Lamont. I can't tell you the great pleasure it gave me to rise on the Senate floor at the time when he was cited for contempt by the McCarthy committee, to appear there and help Senator LEHMAN, of your State, in that great fight we made to keep Corliss Lamont from being cited. And what particularly pleased me was that a few weeks later, we, Senator LEHMAN and I, had the great pleasure of reading the decision of the court upon the floor of the Senate, saying that Corliss Lamont was not guilty of contempt.

When I became attorney general of my State, as Mrs. Sobell told you, I was only a young fellow. I found 441 men (they weren't all men; there were 7 women) 441 altogether, confined in the penitentiary. It gave me a great deal of pleasure to have a thorough investigation made of every case. You would be interested to know that in there we found 2 Negroes, and you know in North Dakota we only have a population of 208 Negroes altogether, and so when I found 2 of them in the penitentiary sentenced to life, Mr. Williams and Mr. McGee, we spent $400 and got out the record and got it before the pardon board. Then we found out that both those men were absolutely innocent and both of them were discharged. It is our belief out there in North Dakota it is better to have 99 guilty go free than have 1 innocent man sent to the penitentiary.

When I came to the Senate, I had had varied experiences. One was as county attorney of a county, and as attorney general of the State, and as governor. When I became a United States Senator, I promptly proceeded to organize a committee on national penitentiaries. Nobody else wanted the job so they gave it to me. I was the chairman of that committee for a great number of years, and when the Democrats got in—due to WAYNE MORSE—I lost my chairmanship and the result was I am only 1 of 3.

In these penitentiaries we have 21,500 inmates and most of these people haven't got a friend on earth. A lot of them aren't as lucky as Morton Sobell to have a beautiful, fine wife who is loyal to him and anxious to help him. You find quite the opposite in some of these cases. As chairman of that committee and as a member of that committee, I have investigated many penitentiaries in the United States of America, every Federal prison, all 18 of them, and also the work farms. It is a very simple procedure. You get up about 3 o'clock in the morning and you go over to the penitentiary and investigate the food. You have a card of admittance and they can't keep you out, because you are either the chairman or a member of this committee. We investigate to see whether there's been any discrimination—any racial discrimination. We investigate to find out whether there has been an excess of solitary confinement. We make a thorough investigation to ascertain just exactly how that penitentiary is run. And you know, my friends, upon my tombstone, if I have nothing else, I hope there will be something on there that will say that since the organization of that committee there has not been a single riot in all the 11 years in any Federal penitentiary, not one. Certainly we people here in America can run those prisons in a humane manner and not run them the way Atlanta prison was run shortly before this committee was created. All the riots that they have had in various States

(men have been killed, guards have been killed, guards have been held as hostages, and millions of dollars worth of property has been burned), have been due to the fact that the prisoners were not treated in a humane manner, with sufficient food and with all that goes with being confined in a penitentiary.

Yet I can tell you this—of all the prisons in the United States, the worst hellhole of all is Alcatraz. I have been there time and again. I have made report after report asking that that prison be closed up. It was established by Spain during the period of the Spanish Inquisition over 400 years ago. There it is today, 12 acres, not enough land out there to give exercise to the prisoners. Former Attorney General Frank Murphy made an investigation of Alcatraz and he recommended that it be closed. I've taken this matter up as a United States Senator time and time again, and I'm happy to inform you tonight that at last Jim Bennett, Director of Prisons of the United States Government, is also recommending that Alcatraz be closed, closed forever in the United States of America.

Being attorney general of a State is a replica of being Attorney General of the United States. The United States Attorney General only operates on a larger scale than does the attorney general of the State. I have always maintained that it's the duty of the attorney general of the State to be just as much interested in seeing that no innocent man is sent to a penitentiary, as it is to see a guilty man sent there. As chairman of the Judiciary Committee of the United States Senate that was my object. It's hard to describe to you here tonight the terrific power, the almost unbelievable power, that is in the hands of the Attorney General of the United States of America. The entire Department of Justice is in his hands, the FBI, J. Edgar Hoover's department, 10,000 young men and some women who are working for them. You can readily understand that when a prosecutor goes in convinced that a man is guilty, what small chance that man has. I think it is just as much the duty of the FBI and the Attorney General to dig up the other side of the question.

So it was when Mrs. Sobell came to me in Washington in 1954 I said to Mrs. Sobell, "I am satisfied that the Attorney General of the United States, when the Judiciary Committee asks him to intercede, will see that you get a fair deal." Now the Sobell case is going to be up in the Court of Appeals. I want you to know that just as soon as that is disposed of, and also in the meantime, we will do what we can down there in that Senate. Believe me, that body of Senators is an honest group of men who want to do what's right. When you know those men, when you know them as I know them, you're proud of them. Now some of the men may not agree with some of your views on some matters. A Senator may be in favor of the railroads, but he's elected by the people and if the people weren't interested enough to elect somebody who had opposite views, certainly that Senator has a right to make his views known to the country. We have down there the conservatives, and the so-called liberals, and I want to tell you tonight there's no distinction either side of the aisle between Democrats and Republicans, because we have liberals and conservatives on the Democratic side and liberals and conservatives on the Republican side. Happy to say that down there some of my most liberal friends and some of the best men on that Judiciary Committee, some of the men who are just as much interested in Morton Sobell as I am myself, would gladly put their hands to the plow, to help out to see that he gets the justice to which he is entitled.

May I say, however, that there's one thing that I've discovered down there in Washington that I don't like—and it isn't only down there but I found that in State after State after State. You find a prosecutor who wants to make a record, a prosecutor who will get hold of the press and get them to write up stories, just like they did in the Sobell case, month after month after month after month, and poison the feelings of the people in that community before the man ever comes to trial at all, stories that aren't true, stories that mention people who never are called to testify when the trial itself takes place. They create a prejudiced atmosphere—my friend Waldo Frank referred to the atmosphere in the courtroom. In spite of the fact that a juror may be honest and say that he isn't prejudiced in that particular lawsuit, nevertheless, subconsciously, there in the back of his head he's read these stories and he's heard this stuff over the radio. You can't tell me that it hasn't made an impression. I believe if we're going to have the kind of justice we're so proud of in the United States of America, the kind of justice we should have, and the kind of justice that I believe every member of the Senate Judiciary Committee wants, somehow or other we've got to do something when a poor man, or a rich man either for that matter, when any man is charged with a crime, so that the newspapers don't blazen a lot of stuff that isn't true about that man or about that woman, and prejudice the community.

I want you folks to know that the Judiciary Committee has this very much at heart—this matter of convicting an innocent person before he's proven guilty, in the minds of the public, so that when you finally get a jury, they're unconsciously prejudiced, with the result that instead of having a fair trial like our Constitution says every man or woman should have, that man or woman doesn't get it. And I think that down there in Washington too we need legislation—I don't mean a new law, but I mean an interpretation which will say to the Attorney General of the United States: We believe it is just as much your duty to see to it that an innocent man is not sent to the penitentiary as it is to send a guilty man there—just as much your duty to use all the services of the F. B. I., all the services of all these other men that you've got, to see that all the evidence is brought out, to see that no evidence is suppressed and that the jury may have all the facts. And so tonight, ladies and gentlemen, I can't tell you how delighted I've been to have been invited here. I want you to come forward, Mrs. Sobell. [Motions to Mrs. Sobell to stand at his side.]

My friends, I want you to know that I've got four daughters just about the same age as this young lady standing here beside me tonight, and I pledge you that everything I can do as a member of the Judiciary Committee of the United States Senate will be done to see that her husband gets justice.

One Hundredth Anniversary of the Order of the Sisters of Providence in the Pacific Northwest

---

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 9, 1956

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared relative to the 100th anniversary of the Order of the Sisters of Providence in the Pacific Northwest.

Not only has this order of sisters pioneered in religious and charitable work, but it has been outstanding in the field of hospital work in the Pacific Northwest.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MAGNUSON

I should like to call to the attention of the Senate a centennial observance in the State of Washington which has more than sectional interest. I refer to the 100th anniversary of the Sisters of Providence Order in the Pacific Northwest and the work carried on, first by a handful, and then by an ever-growing militant army of dedicated Christians intent upon alleviating ignorance and suffering in the northwest corner of our Nation.

Eighteen hundred and fifty-six was the year when five Sisters of Charity of Providence arrived at Fort Vancouver. They have traveled by riverboats, overland wagons, and packtrains before arriving at Fort Vancouver, Wash. At that time, Vancouver was a fur trading post of the Hudson's Bay Co. The northwest will never forget the leader of that group, Mother Mary Joseph. The daughter of a Montreal carriage maker, she was familiar with woodworking tools, a gifted wood carver, and an architectural designer, in addition to being a practical builder. Upon arrival at Fort Vancouver, she transformed a shack into a residence and schoolrooms.

We still point to that school as being the first permanent school to be established in the State of Washington. Today we know it as Providence Academy.

Mother Mary Joseph then converted a log cabin into St. Joseph's Hospital. This was the first permanent hospital in the Pacific Northwest. It is still in operation and last year had 3,368 patients.

Both the school and the hospital had been established by 1858.

Early in the 1860's the Sisters of Providence had set up schools at Walla Walla, Steilacoom, Cowlitz, and Colville. These schools educated the territories' youngsters before public schools were established.

Seattle began to feel that beneficent hand of the Providence nuns in 1877. Pioneer doctors and city fathers of that day had called for establishment of a farm to care for the poor and aged. This was set up at Georgetown. Only a year elapsed before the first Providence hospital was built and placed in operation at Fifth and Madison Streets in downtown Seattle. Now, Providence Hospital is located at 17th and East Jefferson Streets and cares for more than 16,000 patients per year.

In addition, the Northwest now boasts the 600 bed Sacred Heart Hospital in Spokane which annually cares for more than 22,000 patients and St. Elizabeth's in Yakima which cares for more than 8,000 patients.

The motivation of the order and the motto probably accounts greatly for the success with which the order accomplished from its very beginning. Its motto is: "The Charity of Christ impels us."

The founding of the order took place in Montreal when a wealthy widow established an Institute of Servants of the Poor.

The Order of the Sisters of Charity of Providence has left a permanent mark upon the entire North American continent by establishing hospitals, schools, and homes for the aged along the Pacific coast from Anchorage and Fairbanks, Alaska, to Burbank, Calif., and from Seattle to Montreal.

The hospitals of the order are internationally known for representing the highest standards of medical science.

Never in the order's life has the original intent been forgotten. In addition to caring adequately for the sick and needy, they

have maintained clinical and outpatient services for the needy and have kept their hospital kitchen doors open to the hungry.

It is fitting that there will be a series of observances starting April 8, and concluding June 15, throughout the Pacific Northwest. One of the highlights of the celebration will be a solemn pontifical mass on May 8, at St. James Church, Vancouver, with His Excellency the Most Reverend Thomas A. Connolly, archbishop of Seattle, as the celebrant. His Excellency the Most Reverend Edward D. Howard, archbishop of Portland, will preach the sermon.

Then, a solemn pontifical mass of thanksgiving will mark the formal ceremonies June 14 in Mount St. Vincent Chapel, Seattle.

Archbishop Connolly will be the celebrant, and the Most Reverend Joseph P. Dougherty, bishop of Yakima, will preach the sermon.

The applied Christianity of this order has known no racial, religious, or monetary bounds.

Widespread public gratitude knows no bounds in this centennial observance.

Library Services Act

SPEECH
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2840) to promote the further development of public-library service in rural areas.

Mr. SMITH of Wisconsin. Mr. Chairman, I do not oppose the library extension service, in fact, I believe it is highly desirable, but it is a local matter. In my own district we have rural service, paid for by the taxpayers. I want to raise the point, however, that no Federal function is involved under the provisions of the bill now under consideration. For that reason it should be rejected.

It has been stressed in this debate that only a small amount of money is involved and for a limited period of time. Just as sure as I stand here when the 5-year period has expired it will be extended and the money requested will be doubled or tripled. That is the nature of Federal bureaucracy.

Is there any interstate question involved here? Absolutely no. Are not the local communities in a position to finance this kind of program? Of course they are.

The gentleman from Alabama recited an experience. I have had similar experiences. The women in that community provided the service. Have we reached a point in this country where we take the position that Uncle Sam has got to take care of local activities in communities all over this country?

It is said that this is only $7½ million. Over a 5-year period it is over $37 million. It is, of course, very little money in comparison with some of our spending programs. But do not forget this bill only gets the camel's nose under the tent; this is operation "foot in the door."

What is wrong? Why cannot the local communities sponsor this highly desirable program? I will tell you why. Because local officials refuse to tax for that purpose. It is a whole lot easier to come to the Federal Government to make this soft touch, and that is what this is. It is much easier to present a case to the Congress of the United States for these funds than it is to appear before the local county board or before the local State legislature. It seems to me that those who advocate that we take Federal money when we are hopelessly in debt, $282 billion—oh, $37 million is chicken feed. That is true. But I say to you that the issue here is not whether this is a good idea. It is a good idea, but let the local officials tax their people for it. You are asking now that my people be taxed twice for a library service they are already supporting on the local level.

Mr. Chairman, with all due respect, I ask the question: Is this the first move to put over Federal aid to education? I hope not.

Speech of Harvey V. Higley, Administrator of Veterans' Affairs, at River Falls, Wis., April 29, 1956

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. WILEY. Mr. President, on April 29, at River Falls, Wis., the veterans of the State of Wisconsin celebrated "May Day—U. S. A. Way." It was my privilege to attend that celebration and to witness a parade several miles in length. But one of the things which stood out above everything else was a speech delivered by Harvey V. Higley, of my State, who is Administrator of Veterans' Affairs. It was a challenging speech. It spoke of our heritage and our obligations under the facts of life as they exist today.

I am happy, Mr. President, to ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TEXT OF REMARKS BY HARVEY V. HIGLEY, ADMINISTRATOR OF VETERANS' AFFAIRS, AT "MAY DAY—U. S. A. WAY" OBSERVANCE, RIVER FALLS, WIS., APRIL 29, 1956

I am honored to be here. It gives me deep pleasure to be part of this truly American observance of May Day.

This kind of May Day should be among the most important holidays of our year. It gives us pause to consider our way of life—to renew our faith in it—to remind ourselves that we live in freedom—that we are grateful for our freedom—that it is our American freedom that has made this the greatest Nation on earth.

Too often we forget our heritage. We become complacent. We tend to accept our American way of life with barely a passing thought. But on this May Day I hope that you and I, and all of our fellow Americans everywhere, will remember that our freedoms had to be won, that they had to be achieved and made strong and secure with the blood and sacrifices of the millions of Americans who participated in the struggles for freedom through the proud history of our land.

You and I must remember that our four basic freedoms are built into the solid foundations of our free land. Those freedoms developed in America. Because of them our country has developed and grown and prospered.

The four basic freedoms became part of our Constitution as one of the first orders of business of the very first Congress of the United States. On December 15, 1791, they went into effect. We can truly call them our birthright, for they are as old and as strong as America itself. If ever we let them be taken from us, there is little doubt that the entire structure of our way of life would crash into ruins.

Just to hear their names is like listening to noble music. Freedom of religion. Freedom of speech. Freedom of the press. Freedom of the right to petition.

But as freedom does not come of itself, but must be won, so too, freedom must be cherished and defended, or it cannot be kept.

You know, and I know, there is abroad in this atomic world a vicious philosophy of life. A philosophy that fears freedom. That hates freedom. That would like to destroy freedom. A philosophy that would like to rip freedom away from its basic place in the life of our Western World.

The Communists have been devilishly ingenious in their attempts to foist their way of life on the rest of the world. They have tried "little wars." They have tried infiltration. They have tried terrorism.

Now, we read in the newspapers that two "happy salesmen" from Moscow are touring the world. They have with them a sample case—about which they talk constantly—but which they never open. They tell us that inside their happy sample case they carry friendship and peace—an easing of international tension—an end to atomic war—an East-West handclasp that will somehow blend freedom with communism, and—who knows—perhaps they hope, will blend communism with freedom.

All this, they tell us, is in their sample case. But while we listen and look, it will pay Americans to remember this slogan:

Beward of shoddy merchandise.

Now, please do not misunderstand me. I want to make it perfectly clear that nobody but a fool would want to close the door to lasting peace. We in America have made it plain that peace is our business. But a wise man insists on business that is conducted in good faith.

What do we see over the shoulders of the two "happy salesmen" from Moscow? We see Stalin, 3 years dead, suddenly transformed by his one-time friends and associates from hero and saint to a deep-dyed villain.

Do any of you remember what the central committee of the Communist Party of Russia said at the time Stalin died? I took the trouble to look this up so that I can quote it exactly: "The heart of the comrade and inspired continuer of Lenin's will—the wise leader and teacher of the Communist Party and the Soviet people, Joseph Vissarionovitch Stalin—has stopped beating. Stalin's name is boundlessly dear to our party, to the Soviet people, to the workers of the whole world."

That's what they said about their man Stalin in 1953. That was the year when they made their people stand for hours in sub-zero weather in Red Square to get a view of the "sainted" Stalin's body. Khrushchev was there. So was Bulganin. So was Molotov and all the other leaders.

But what of today, 1956?

Listen to the words of Khrushchev, senior member of the two "happy salesmen": "The Russian Communist Party," he says, "vigorously condemns the cult of the individual," and of making "a particular leader the hero and miracle worker."

Listen to Malenkov, who was Stalin's chosen successor, and is now the kisser of babies in England: "One-man rule," says Malenkov, "led to arbitrary, irrevocable decisions, highhandedness, serious abnormalities." Truly, the understatement of the year.

Quite a switch. Quite a change of pace. Did they mean what they said in 1953? Do they mean what they say now? These are sane, sensible questions you and I must ask, and demand truthful answers, if we are to remember our purpose: Beware of shoddy merchandise.

America wants peace. We do not want betrayal. We intend to be sure of what we're being offered.

Today's top-ranking Soviet specialist on international trade is an Armenian named Mikoyan. Mikoyan has been shrewd enough to stay alive through all the devious twists and turns of Soviet policy since the early days of Stalin. For years he was one of Stalin's close associates.

But this is 1956. So what is Mikoyan now doing? He has called for a revision of all textbooks on Soviet history—to "correct mistakes." Mistakes about what? "About allegedly subversive activity," says Mikoyan, "of former party leaders who, many years after the events described, were wrongly declared enemies of the people."

In other words, many Russians who were liquidated as criminals and traitors under Stalin, are now to be rehabilitated.

What a solace this rehabilitation must be to the late accused, and to their grieving widows and orphans, if any are still alive.

They've made Stalin, literally, the goat, the scapegoat. They're driven him away with rocks and curses to bear all the sins of communism. Now we are asked to believe that Khrushchev and Bulganin, the "happy salesmen," are purged of all guilt * * * the same Khrushchev and Bulganin who you and I know have been at least accessories in these crimes of communism against humanity. We are asked to believe their present words are honorable, and that their current deeds are to be accepted at face value.

Ladies and gentlemen, veterans, fellow Americans, can we believe them?

At the very least, we must be extremely careful to examine meticulously their words and their deeds, and we must beware of shoddy merchandise.

Bear in mind that Communists have proved ever since they took over Russia that they are good at timing. Now listen to another statement from Khrushchev. He said this, appropriately enough, on St. Valentine's Day: "Soviet leaders want to be friends with the United States, and cooperate * * * in peace and international security. We propose this with good intentions, without holding a knife behind our backs."

Does he mean it? We hope so. Our leaders are going to try and find out but I can't escape a personal feeling of doubt.

This past December, Mrs. Higley and I were visiting in India. On the day we arrived in Calcutta, this same Mr. Khrushchev had just completed another speech to thousands of Indians just a few blocks from our hotel.

He said then that the Western Powers had plotted to make the Nazis attack Russia in World War II. Right now, he charged, we Western Powers were up to the same old tricks, trying to push Western Germany into a war against the Soviet. He denounced our stand on Formosa. He discussed Formosa, which he described as the "lawful possession" of Red China, and berated us for keeping this island from being overrun by the Reds.

Did that speech represent what he really means? Or does he mean what he says now?

Is there any way on earth of knowing when past apostles of fraud and deceit begin telling the truth?

I think we have the right to pin these "salesmen" down. As long as they think it advisable to make such sudden turnabouts to gain our friendship and goodwill, they might very well make a few more reversals. We in the free world would like to see more changes from falsehoods to truth. For example?

The Communists said we and the South Koreans started the Korean conflict. They never have withdrawn that false charge.

They accused us of using germ warfare in Korea. They never have admitted to that fabrication.

They declared war upon Japan just 2 days after the atomic bomb on Hiroshima had virtually forced the Japanese to capitulate. Yet, ever since that war ended—just 6 days after Russia got in it—they have taken complete credit for victory. This myth, too, has never been set straight.

They promised free elections in East Germany, Poland, and Austria. Yet, have you ever heard of such elections taking place? Still more fantasies and broken promises.

When you examine merchandise to try to decide whether it is good or shoddy, you have to take a long look also at the reliability of the company in back of the product, and of the manner in which it has been doing business.

We cannot easily forget about the blockade of Berlin, the disheartening succession of Russian vetoes and walkouts at the United Nations, the fomenting of war in Indochina, the imprisonment of American citizens on false spy charges, Khrushchev's boast—just a few days ago—of a projectile with a hydrogen bomb warhead that can be dropped at any point on the surface of the earth, and many such portrayals of their international behavior.

All this, of course, poses a serious problem for Americans.

We cannot and must not turn our backs on anything that promises a just and honorable peace for the world.

However, we cannot afford to be gullible when examining something offered to us that may seriously affect our way of life.

And what is it—this way of life we Americans hold so sacred—a way of life that has been forged for the past two centuries into something strong and beautiful and everlasting.

What of the merchandise we have on our counter? We proudly stand behind its unimpeachable quality. The merchandise and the quality have been the same since our country was founded. We proudly display it for all the world to see, without maneuvering the package first one way and then the other—for we don't have to fool the customer.

It is a way of life based on the rights of man, not just some men some of the time, but all men all of the time.

It is a way of life that is a living testament of the teachings of the great religions of the world that man has been created in the image of God, that therefore man must be free, that he has the right to live in liberty and equality.

It is a way of life that has been firmly rooted in the four freedoms of America: in freedom of religion, freedom of speech, freedom of the press, and in the right to petition.

The War of Revolution, the Civil War, the Spanish-American War, two World Wars, the Korean conflict, through them all the concepts of freedoms we hold so dear have been temptered in steel and in blood.

I say to you, thank God for our heritage and for our way of life.

Thank God for our wonderful free nation.

Let us never take our freedoms and our way of life for granted. Let us cherish them with all our hearts and with all our might.

There is no such thing as talking or thinking too much about our American way of life. I think that every day—and especially here and now, on this May Day, U. S. A. way—it's good to be able to say: "God bless our land. God bless our life. God bless, and help us preserve, our freedom."

In that spirit, may God Almighty bring true peace to ourselves and to all mankind.

In that spirit, may our heritage continue to flourish, and may it serve as a beacon of light and of hope for all the world.

Remarks by Hon. W. Kerr Scott, of North Carolina, Before the Senators' Breakfast Group, on May 9, 1956

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. STENNIS. Mr. President, this morning it was my privilege to hear a short talk made by the distinguished Senator from North Carolina [Mr. SCOTT]. The Senator from North Carolina has a fine appreciation for the enduring values, including things of the spirit. He has a great understanding of human nature, as well as things of nature. His remarks are always helpful to others. I ask unanimous consent that his remarks be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

TALK BY SENATOR W. KERR SCOTT BEFORE THE SENATORS' BREAKFAST GROUP, UNITED STATES CAPITOL, MAY 9, 1956

Friends:

"One is nearer God's heart in a garden
Than anywhere else on earth."

So wrote the poet enthralled by the newfound discovery that flowers, even if not possessing a soul, are a part of the spiritual values with which the Creator has surrounded us and our lives.

Edward William Bok, a great American editor and public benefactor, recognized the spiritual value of flowers and man's need for their comfort and relaxing power when he built and endowed that famous beauty spot known as Mountain Lake Sanctuary, or Bok Tower, near Lake Wales, Fla.

He turned a barren, sandy wasteland into a garden of 53 acres of flowers and trees—and trees are only massive flowers—that has relieved the tensions and refreshed the souls of the hundreds of thousands of visitors who have passed through it.

And Luther Burbank, the great naturalist who spent his life skillfully blending the colors and other characteristics of flowers into even more splendid beauty, also found inspiration in the words of the poet, words inscribed on a plaque at Bok Tower:

"The kiss of the sun for a pardon,
The song of a bird for mirth,
One is nearer God's heart in a garden
Than anywhere else on earth."

Flowers, and the love and devotion they symbolize, are an integral part of the joys and sorrows of the most moving moments of life—of courtship, marriage, birthdays, illness, and even death.

They walk with us, and we among them, finding in them pleasure and solace all the days of our lives.

A wedding without a bridal bouquet would be like food without salt.

Death of a loved one calls for banks of flowers, a tribute to the goodness of his life and to ease the sorrow we feel at his or her passing.

Flowers even have a language of their own. Lovers and sweethearts know it and speak it to each other throughout courtship and marriage.

On Mother's Day we wear a red rose if the one who gave us life is still living, a white rose if she has passed on into the great beyond prepared for us by the Creator and from which no traveler returns.

In ancient days the warrior going forth to battle carried close to his heart a pressed flower, a talisman of love and devotion from his beloved designed to bring him home safely. And when the hero returned from the wars, a garland of flowers was placed around his neck by an acclaiming populace.

After a loved one dies we return, time and time again, to lay an offering of flowers on his grave—a silent tribute that speaks its own message.

And who, I ask, can look upon the splendors of a rose or the delicate face of a pansy and say with certainty that flowers themselves do not possess a soul.

Joyce Kilmer, after a solitary walk in the forest—surrounded on every hand by wild flowers shyly peeping toward the sun while protected from the raging winds by their big brothers, the trees—became pensive and wrote:

"I think that I shall never see
A poem as lovely as a tree.
A tree that may in summer wear
A nest of robins in her hair.
Poems are made by fools like me
But only God can make a tree."

"Consider the lilies of the field," we are told by the Master in Luke 12: 27, "how they grow; they toil not, neither do they spin: And, yet I say unto you, that even Solomon in all his glory was not arrayed like one of these."

Yes; it is true, flowers neither toil nor spin, but Solomon in all his glory was not arrayed like one tiny flower created by God to sustain man in his deeper emotional and spiritual moments.

The conclusion is inescapable that Divine approval, if not guidance, has been given for our entwining the beauty, innocence, and purity as symbolized by flowers—and the inspiration, comfort, and pleasure they give us—into the fabric of our daily lives and our acceptance of the darkness of the grave.

In the song of Solomon, which depicts the love of Christ for the church, we read:

"I am the rose of Sharon, and the lily of the valleys," and, "For, lo, the winter is past, the rain is over and gone; the flowers appear on the earth; the time of the singing of birds is come."

As I reflect upon the words, "the flowers appear on the earth," I am aware of the fact that the flowers appear in this worship garden spot each time we meet here through the devotion and thoughtfulness of Mr. Bellamy, the only non-Senator member of our group who regularly attends. He has captured and faithfully nurtures the consciousness that flowers symbolize the love of man for man, the love of man for God, and the love of God for man.

Flowers truly are the currency of love, honor, and adoration. What boy raised in the country has not sought out in the early spring on sunny hillsides delicate, pale, dancing forget-me-nots to shyly lay a tight little bouquet in his mother's lap? What boy raised in the country has not searched the shady forest nooks for violets—those "purple teardrops that live betwist Heaven and earth, but closest to earth"—to honor that selfsame mother?

Our Father in Heaven, in casting the important scenes of His Divine Plan, has chosen flower bedecked gardens as the stage for most of them.

"And the Lord God planted a garden eastward in Eden," we read in the second chapter of Genesis.

Centuries later it was in the Garden of Gethsemane that our Saviour fell upon His face, and the man-side of His nature cried out in anguish, "Oh, My Father, if it be possible, let this cup pass from me."

But, even then, winding along the garden paths, came the traitor Judas to betray Him to the multitude armed with swords and staves who demanded His crucifixion.

And when the shameful trial had ended, and He had died on the Cross, it was to a nearby garden that His sword-pierced body was taken for entombment.

It was from that spot, a garden where tiny early spring flowers were bravely lifting their heads toward the warmth of the sun, that the Saviour who died for the sins of all men arose on that first Easter Morn to take the place prepared for Him on the throne of the Lord God of Creation.

Yes, one is nearer God's Heart in a garden than anywhere else on earth.

It is only after the shouting and tumult has died, and our friends and loved ones left behind have bedecked our grave with flowers of remembrance, that we can get closer to the Heart of God than we can in a garden where flowers grow.

In closing I would leave you with the song of the Roadside Flowers:

"We are the roadside flowers,
Straying from garden grounds;—
Lovers of idle hours,
Breakers of ordered bounds.

"If only the earth will feed us,
If only the wind will be kind,
We blossom for those who need us,
The stragglers left behind.

"And, lo, the Lord of the Garden,
He makes His sun to rise,
And His rain to fall like pardon
On our dusty paradise.

"On us He has laid the duty—
The task of the wandering breed—
To better the world with beauty,
Wherever the way may lead.

"Who shall inquire of the season,
Or question the wind where it blows?
We blossom and ask no reason,
The Lord of the Garden knows."

International Bank for Reconstruction and Development

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Eugene R. Black, President of the World Bank, at the annual dinner of the Connecticut Chamber of Commerce, held in Hartford, Conn., on May 8, 1956. The subject of the address was "The International Bank for Reconstruction and Development."

I am advised by the Public Printer that it is estimated the article will make 2½ pages of the RECORD, at a cost of $200.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

(Address by Eugene R. Black, President of the World Bank, at the annual dinner of the Connecticut Chamber of Commerce, Hartford, Conn., May 8, 1956)

I want to talk with you this evening about the underdeveloped areas of the world. I chose this subject not only because of the work of the World Bank in these areas, but because I think America's attitude toward the problems of the underdeveloped world is going to be an increasingly important factor in the fight of freemen to withstand and throw back the incursions of Soviet communism.

The fears and hopes of the refugees living in squalor on the outskirts of Karachi and New Delhi, the yearnings of farmers scratching out a poor existence in Guatemala and Nicaragua, the dreams of the slumdwellers in Baghdad and Beirut—the aspirations of all these people are no longer of just local or regional importance. They have a relation—a very direct relation—to the realization of our own American dream.

As we look at the free world today, we must be struck by the fact that underdeveloped countries constitute at least two-thirds of it. Only Western Europe and North America can be described as developed areas, where adequate use is being made of natural resources and human talents and where, as a result, life can be lived in some dignity and reasonable material comfort.

In these respects, our Atlantic community is an island, less than half a billion people surrounded by more than a billion whose life has scarcely been touched by the material benefits of 20th century civilization. On this side of the Iron Curtain, a thousand million people are living with half the diet, a 10th of the doctors, a 10th of the schools, a 10th of the income that are standard in the United States. For hundreds of millions of them, life expectancy is less than 35 years—or about the same as it was in our Thirteen American Colonies two centuries ago.

This is certainly not the faultof the United States, and this country certainly has no obligation to do anything about it. For my own part, I am not one of those people who believes that we owe the world a living. But I do think it is very much to our own interest to do what we can, on an intelligent basis, to promote economic development in the rest of the world. Let me state why I think this is so.

Development abroad will enable foreign nations to produce the goods and services that can make them active trading partners, rather than supplicants for goods and services which the United States, in one way or another, has been giving away free. Development abroad will create and strengthen markets for goods produced in the United States and the rest of the Atlantic community. It will develop resources of primary materials which are vital to our industrial economies. Finally, I think economic development is one of the keys to stability and peace in the world.

Let me return to 1 or 2 of these points. In recent decades, export markets, by and large, have not been important to the American economy. They absorb only a small amount of our national product, and account for only a fraction of our national income. But this picture is changing.

Since 1940, there has been an enormous growth of physical plant in the United States. The physical volume of industrial production has nearly doubled, and the basic trend is still running upward.

America's capacity to save, to invest, and to produce is so great that in many industries we have already reached the point where capacity is more than enough to meet the demands of our own market. That capacity, if it is to be used, will have to be used for customers abroad. I am sure that you are keenly aware of this problem here in New England, where 1 job out of every 9, I am told, already depends on exports.

Developed countries, as you surely appreciate, are better markets than backward ones. Let's take an undeveloped country like Ethiopia. Here is a country rich in natural resources. It has just about the same population as New England, and about five times the territory. But on a percapita basis, its purchases of American goods amount only to about 50 cents a year.

Contrast this with Belgium and Luxembourg. These two countries also have about the same population as New England, crowded into one-sixth as much land. But they are highly developed countries, and they import American products at a rate of nearly $30 per capita per year.

In terms of export prospects, it surely is obvious that the United States would be better off in a world in which there were more $30 countries than there are today.

There is a second aspect of our relations with the underdeveloped countries that is of increasing importance to us. Over half the things we import come from those countries. They include such indispensable items as tin, copper, lead, maganese, bauxite, cobalt, and zinc. Although we are the world's greatest industrial producer, we mine within our own borders only about one-third of the number of basic materials we need. And as our industrial production mounts, our factories will grow more and more hungry for some of the things they must have from abroad to keep going.

So, whether we like it or not, we must take an increasing interest in the development of raw materials production abroad. Here again, I know that a keen awareness of this problem must exist in New England, where a substantial part of your requirements for fuel, and for raw materials needed by such industries as your metals industry here in Connecticut, must come from abroad.

But, if Americans are seriously interested in increasing trade and in making the most use of productive capacity, they must actively help to increase production abroad. Most of your production in Connecticut is for a high-income market. You are not going to sell your metal products, your machine tools, and your other finished goods more extensively in the underdeveloped areas unless the people of thes areas have the money to buy them. And they are not going to have the money to buy them without more production, more earnings, and more savings of their own.

An important avenue—and potentially a wide one—to increasing world commerce is to put more investment into productive facilities overseas. This kind of investment, of course, is the World Bank's principal business. The bank has now been in operation for nearly 10 years, and has invested about $2½ billion in public and private projects in 40 different countries. Our first loans were made in advance of the Marshall plan to help maintain a flow of imports from the United States that were essential to reconstruction in Western Europe.

Although we have continued to lend in Europe, most of our operations since 1947 have been carried out in underdeveloped countries. These countries are not poor because they lack natural resources; they are poor because they have not yet done enough to develop the resources they have. To give you two extreme examples: Despite a hydroelectric power potential of some millions of kilowatts, west Pakistan today has less than 50,000 kilowatts of electric generating capacity based on water power. Honduras, a farm country which is one of the largest in Central America, has only 20 miles of paved road.

The fundamental task which the loans of the bank are helping to carry out is to construct or enlarge the basic facilities essential to modern economies. Since reconstruction, we have lent $660 million for the expansion of electric power services. We have lent another $600 million for transportation facilities—to buy equipment for the construction or operation of motor roads, railroads, ports and inland waterways.

We have lent a quarter of a billion dollars for industry, and a little less than that for the improvement or expansion of agriculture through land reclamation, irrigation and farm mechanization. Finally, we have lent about $140 million for programs of development embracing projects in several or all of these basic fields.

Connecticut products, I may say, have been sent all over the world to play their part in projects financed by the bank. Our borrowers have needed them, for instance, for electric power installations in Chile, Finland, India and Mexico; for farm development in Paraguay and Pakistan; for railway improvements in Brazil and Columbia; and for air transport in Australia.

A few minutes ago, I referred to the Bank's "business," and I used that term advisedly. We do not pay our bills from your taxes; we support our activities out of our own earnings. Our loans are being repaid on schedule—indeed, we have received more than $110 million of repayments ahead of time. Our net income is running at a rate of nearly $30 million a year, and our reserves out of earnings and commissions amount to more than $200 million.

So far from competing with private capital, the Bank has worked actively—and successfully—to encourage the participation of private capital in international investment. While we began our lending operations 9 years ago out of payments which our member governments made for shares of our stock, our most important source of new capital has been private funds.

We have tapped that source most often by the sale of our bonds, of which $650 million worth are now outstanding. We have also sold some $225 million worth of our loans to other investors, who either buy them out of our portfolio or participate in the loans when they are made.

Up to now, I have spoken in terms of dollars, but only as a convenient way of describing sums that include other money as well. The Bank is an international organization, and its sources of finance are by no means confined to the United States. We have lent 18 different currencies in all; and in recent years, half of our new loan funds—from foreign government subscriptions to our capital, from our sales of bonds to foreign investors, and from earnings—have come from outside the United States.

The fact that the Bank is an international organization is of advantage to the governments of developed countries, including the United States, because it enables them to share out development costs with private investors and with each other.

The Bank's international character also gives rise to another advantage of greatest importance—and that is the opportunity to work effectively and closely with borrowers and borrowing countries in ways, that for the most part, are not equally open to individual governments in their dealings with other nations. Precisely because we are international, we cannot in truth be charged by our borrowers with operating from selfish motives of profit or economic exploitation, nor can we be charged with discriminating between different countries for reasons of politics, strategy or diplomacy.

We can, and do, apply business-like standards to our lendfng. The Bank lends, in the normal course, for specific projects. We do not finance the whole cost of those projects; the borrower himself must make a substantial investment, and is usually required to find all those funds needed for local expenditures on labor and materials. We estimate that our $2.5 billion of lending is being matched by well over $3 billion of other investment.

We pick and test our projects with a great deal of care. I am not going to describe the process in any detail; I would rather tell you what the loans are helping to do.

In Iraq a couple of weeks ago, young King Faisal dedicated the Wadi Tharthar project for turning the floods of the Tigris River away from the city of Baghdad and the surrounding farm area. In 1950, we had lent the Iraq Government $12.8 million for the equipment and engineering services that were needed to construct the scheme. The project will save Iraq some $4 million a year that the government and individuals have spent, on the average, for levee construction and disaster relief; and it will prevent damage which as recently as 1954 amounted to an estimated $80 million from a single flood. And the Bank has its money back already; after the project had been well advanced, government oil revenues had increased so much that half the loan was canceled and the other half was repaid in advance.

Or take the case of Gwelo. This is a town sitting on a mile-high prairie in the center of Southern Rhodesia, and it is a symbol of what the Bank is helping to accomplish in a young and growing country. The town is at the center of the Southern Rhodesian railway system, to which new equipment is being added with the help of Bank financing; and it is near the start of an entirely new rail line, built under a Bank loan, that connects to a new seaport on the Indian Ocean. More than that, Gwelo is close to a new power plant of some 120,000 kilowatts generating capacity—one of several plants that has been built with Bank help.

The town is a bustling place of some 30,000 people. It is the headquarters of engineering and construction companies; is fatctories make chemicals, shoes, leather goods, razor blades, steel castings, concrete and many other products. All this is happening where only a few years ago there was a settlement of only a few hundred people—and Gwelo may be said, almost literally, to be the creation of electric power and transportation.

When the Bank lends for electric power development, it usually lends for sizeable projects. But in Mexico, we have lent for over 50 power installations, many of them quite small, and some of the most vivid examples of what electricity can do for progress are to be found among these small projects.

One of these installations was a generating plant of some 2,700 kilowatts capacity in the town of Ciudad del Carmen, a shrimp-fishing port on the Gulf of Mexico. This was Carmen's first dependable, 24-hour-a-day electric supply, and presented the first opportunity to make enough ice to fully protect the shrimp catch from spoiling. Nine deep freezing and ice manufacturing plants have now gone up in Carmen. A large shrimp canning factory has been built and is operating at a profit. Seven small yards have come into operation to build more fishing boats. Two years ago, only an occasional tramp steamer called at Carmen to pick up shrimp—today, modern refrigerator ships provide regular service from Carmen to Texas ports. Furniture plants and other small industries have begun to spring up. This town, which 3 years ago was almost literally in danger of drying up and blowing away, is now a busy and growing community. That is what a little electric power and a lot of private initiative have been able to do in Carmen.

An event smaller project, in this Mexican group, was the installation of some 600 kilowatts of generating capacity in the town of Tecuala, on Mexico's west coast. The plant began operating in 1951. At the same time, a paved road arrived to give Tecuala a better

connection with the surrounding farm country. The sequel to these two events was little short of explosive.

In the next 3 years, the population of the town grew from 5,000 to 13,000. The number of children in school increased sevenfold; and for the first time the adults of Tecuala, many of them illiterate, were able to have a night school. There is power now for the hospital and its first fluoroscope. The new electricity is powering two movie theaters, the town's first radio station, and the presses of its first newspaper. The number of small factories and processing plants has grown from 3 to more than 30. Among other things, Tecuala now makes ice, cornmeal, shoes, and furniture. The community is making more, earning more, and is much better able to satisfy its hunger for products from the outside world. To cite only one instance, there are today more than a dozen stores selling electrical appliances, as compared to none 5 years ago; and Tecuala is now a market for electric fans, electric irons, radios, and refrigerators. The mayor of the town sums up the whole story well when he says, "We have come out of the dark ages into the light."

Now let me switch from these small projects to a very big one—the biggest ever to be considered in the bank, and the biggest of its kind, in fact, ever to be planned anywhere. I am referring to the High Dam which the Egyptians intend to build at Aswan, near the first cataract of the Nile. The dam would be nearly 400 feet high, 3 miles thick and 5 miles wide, and would be 17 times greater in volume than the great Pyramid of Cheops. The dam would store enough water to inundate the entire State of Rhode Island, in a snake-like reservoir long enough to stretch from here to Richmond, Va.

As some of you are aware, the project actually consists of three elements. One is the construction of the high dam itself. Another is the use of water stored by the dam to extend perennial irrigation to some 2 million acres of land, or about a third more than are perennially irrigated at present, and including 1.3 million acres not now irrigated at all. The third element is the installation of a large hydroelectric powerplant, along with the necessary distribution facilities, which will more than double the present supply of electricity and help the continuing growth of industry in Egypt.

The Bank was informed late in 1952 that the Egyptians intended, if possible, to carry out this project. I myself discussed it with the Egyptian authorities on a visit I made to Cairo as part of a general trip to the Middle East early in 1953. The bank has been in close touch with the planning and preparation of the project since that time, and our own experts spent 5 months in Egypt in 1954 and 1955, making a detailed study.

We believe—as do private experts of international repute—that the project is entirely feasible. Further, we estimate that when the project is in full operation—which will not be for another 15 years or more—the value of new agricultural and industrial production and of other benefits will within a short span of years be more than equal to the investment required for the project.

But in the meantime, the problem of financing is a large one. We began close discussions of this with the Egyptian Finance Minister in the bank during November; and at the invitation of Colonel Nasser, the Prime Minister of Egypt, I went to Cairo earlier this year to discuss it further.

The estimated cost of the project and ancillary works is $1,350,000,000, of which some $400 million represents private investment. Our discussions centered on the balance—$950 million—which will take the form of Government expenditures. In line with the bank's usual practice, the Egyptian Government will take the responsibility for $550 million needed in Egyptian currency for local labor, services, and materials. That leaves $400 million needed in other currencies for equipment and services that will have to come from abroad.

I felt that of this amount the bank could lend half, or $200 million, but that it would be necessary for the Egyptian Government to find elsewhere the remainder of the foreign exchange needed. Before I went to Cairo, the American and British Governments had offered grant funds of $70 million—enough, it is estimated, to cover the foreign-exchange costs of diverting the Nile from its bed and completing the foundation of the dam. The two Governments also indicated that they would be prepared at a later date, in the light of the then existing circumstances, to give sympathetic consideration to financing the later stages of the project, as a supplement to bank lending.

The position of the two Governments, however, was contingent on lending by the bank. At the invitation of Colonel Nasser, I therefore went to Egypt to discuss with the Prime Minister himself the circumstances under which the bank would be willing to participate in the financing of the project. Most important, it was necessary to know whether the Egyptian Government was determined not only to give the necessary financial support to the project, but also to budget other public investment prudently and with foresight, so as to avoid bringing the project—and, indeed, the economy of Egypt itself—into jeopardy. During my visit to Cairo, the Prime Minister and I reached an understanding which was satisfactory to me.

The World Bank is not interested in projects only. It is even more interested in whether the underdeveloped countries are themselves making the most of their own opportunities. The effects of even the best project may be lost in an economy that is going adrift; and the whole process of development requires intelligent use of a country's resources as a whole. It calls for the wise budgeting and direction of public investment toward realistic goals, and it requires public economic and fiscal policies that will support private initiative and private investment.

The bank hammers very hard at this matter of encouraging private enterprise and private investment within the underdeveloped countries themselves. We have worked for proper Government policies, and we have declined to support Government ventures in fields of industry which should be competitive and for which, under the right circumstances, private capital could be found.

We discuss these considerations with prospective borrowers before we lend; we offer advice on these matters when we feel that it is useful to do so; and not infrequently our decision to lend or not to lend depends upon the outcome of these discussions. In more than one case, we have decided that our most effective contribution to development can be made by shelving loans until the prospective borrower has begun to straighten out his own affairs; and to do what lies within his power to do with resources already at his disposal.

In other words, the bank has not tried to be popular. We have tried to be effective and to win respect. And it is generally recognized, I think, that in these things, we have succeeded.

The bank, as I said, is an international institution. But I believe that it is serving your interests and the interests of the United States. It is helping to create production and earnings in the underdeveloped world, and it is helping to create paying customers abroad for communities like yours.

In Washington, Congress is now considering the administration's proposals for the continuation of economic aid to countries abroad. Without commenting specifically on those proposals, I want, from the vantage point of our exeperience in the bank, to offer some remarks about reasons that are put forward both for and against economic aid. Some of them, I think, confuse rather than clarify the issue. We hear it said, for example, that such massive amounts of aid are needed that to satisfy them would work serious damage on the American economy. I just do not believe that. It assumes that everything can be, and must be, done at once. But the fact is that the rate at which the underdeveloped countries can absorb new capital is limited; and that the number of useful projects on which public funds can be properly and effectively spent is far from infinite. The danger, in my opinion, is not that we shall try to do too much, but rather that we will find it possible to do too little.

On the other side, the most popular argument in favor of foreign aid is that it can win friends for the United States and the democracies of the West. This, too, seems doubtful to me. This kind of thinking in the past has already kept aid from being as effective as it might have been, because it has emphasized the act of giving—or in some cases, of lending—at the expense of careful attention to the study and selection of projects for economic merit.

On the recipient side, too, the friendship theory has not infrequently had unfortunate results which were quite the opposite of those intended. It has encouraged a supplicant attitude on the part of some underdeveloped countries, and has made it quite logical for them to feel resentment when one of them does not receive as much aid as some other. And in a few cases, the notion that American aid was intended to buy their favor has caused underdeveloped countries to decline that aid altogether.

To believe that economic aid can win friends is to take altogether too simple a view of international relations; and I think we must always remember the warnings of experienced diplomats that friendships cannot exist between nations in the same sense as it exists between one person and another. Indeed, if aid could win us friends in the sense that some people believe, the United States, after the expenditure of scores of billions of dollars since the war, already would be far and away the most befriended nation on earth.

What can exist between nations is mutual interest, based on geography, history and hany other factors—a complex in which aid can only be one part. I think that the United States, both acting on its own part and making the fullest possible use of international organizations like the Bank, can wisely and realistically support aid for economic development, and I think so because the United States itself will benefit from the growth in world production, markets and trade that economic development can help bring about. The right kind of program can mitigate the problem of scarcity overseas, and it can at the same time build markets for industrial nations like the United States and industrial communities like Connecticut. I think one important conclusion that follows from this is that the United States should give support to economic aid continuously, and not according to the rising or falling barometer of pressures in world politics.

There is, to my mind, just one other compelling reason to support economic development. It is that the course of development will become a more and more important factor in determining the kind of world we ourselves live in. The political and economic revolution that we ourselves helped begin in the 18th century is now beginning to march through many parts of the underdeveloped world. Wherever the revolution marches, we see political, economic and social institutions in the process of change.

The form in which these institutions begin to crystallize is of the utmost importance to us. In a better economic environ-

ment, there is a better chance for men to appreciate those values of freedom and democracy which mean so much in the West and so little in Moscow. If aid to economic development can help men prize and assert their independence, then it is something greatly worth doing. And if along with our aid we can demonstrate the validity of our own principles of freedom of individuals and of enterprise, then I think we are making some progress toward shaping the kind of world which we ourselves want. I think this is worth doing—not reluctantly and hesitantly, but on a scale and with a constancy of purpose equal to the importance of the task.

Address by the Prime Minister of Ireland Before the Friendly Sons of St. Patrick

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. MURRAY. Mr. President, recently we were favored by an official visit by the distinguished Prime Minister of Ireland, the Honorable J. A. Costello. After a most impressive appearance before the United States Senate, the Prime Minister delivered a stirring address at the annual banquet of the Friendly Sons of St. Patrick, in Philadelphia. The speech is replete with factual data concerning the relationship between our citizens and the Irish people over past decades. His is an extraordinarily good presentation; and, because of its great merit, I ask unanimous consent that excerpts from it be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

It is not as a mere formality or by way of introductory platitude that I say, at the outset of my remarks, how deeply gratified I am to be the guest, on this Saint Patrick's night, of the Society of the Friendly Sons of Saint Patrick of the City of Philadelphia.

On Saint Patrick's Day in particular it is natural that the Irish and the descendants of the Irish who glory in their ancient lineage, while giving testimony of the faith which Saint Patrick brought them, take pride and strength in the realization of the facts that no nation, other than the Irish nation, has borne so many children who were destined to contribute to the development and greatness of other nations and that no nation, other than the Irish nation, has for so long retained the affection of its exiles.

The land of the free (United States), which has since become the greatest Nation on the earth, gave bountifully to our exiles. Were it not for the welcome generosity of that great Nation who gave to our exiled ancestors that empty space of land that they sought, and shelter and freedom to labor, the Irish nation would be poor indeed and we would not be here tonight. But we are here, grateful in the recollection of what was done for them and deeply gratified by the knowledge that they have repaid the debt for the succor and the sustenance given to them in the contribution that they gave to the development of the material and spiritual resources of that great Nation and in defense of its unity and strength.

It is small wonder, therefore, that our people have found nowhere a home more closely linked in sympathy with their country of origin than here in the United States of America. It is hardly necessary for me to speak of the feelings of warm friendship and affection which we in Ireland have always entertained toward the American people. We are proud to remember that men and women of our race have contributed in a not insignificant measure to the founding and to the building of this mighty Nation. We are happy to recall the never-failing support which we received from this Nation, since its birth, throughout the course of our own long, and sometimes all but despairing, struggle for independence.

We of today can scarcely imagine what the blessed words of toleration must have meant to people who had experienced a very different attitude from the rulers of their native land. These sentiments were shared by your own Charles Carroll of Carrollton, the only Catholic who signed the Declaration of Independence, the last of the signers who stated that "when I signed the Declaration of Independence I had in view not only our independence from England but the toleration of all sects professing the Christian religion and communicating to them all equal rights." Your own Society of Friendly Sons of St. Patrick of Philadelphia has in its membership and its activities given proof of your fidelity to those high principles.

The religious toleration which was granted to those early Irish emigrants is in the closest harmony with the traditions and practice of the Irish people themselves. In the 26 counties that now form the area of jurisdiction of the sovereign, independent, democratic Sttae of Ireland, no man need fear disability or discrimination on the ground of his religious belief. The fundamental law under which we are governed, the constitution of Ireland, contains explicit guaranties of freedom of conscience and of the free profession and practice of religion and prohibits the state from imposing any disabilities or making any discrimination on the ground of religious profession, belief, or status. When the ardently awaited reunion of the 32 counties of Ireland is secured, those guaranties will remain as an ample safeguard of religious freedom for all our people.

The men of Irish birth and descent who found here the freedom and security denied in the Ireland of those days made, in return, no small contribution to the development of this great city and of the Nation of which it became the birthplace and the first capital. They were active and successful in the commercial and political life of Philadelphia, and when the time came, they played a worthy part in the struggle which resulted in the creation of the United States of America. When, after small, informal beginnings, the Society of the Friendly Sons of St. Patrick was founded in 1771, nearly all of the 24 original regular members were prosperous merchants whose names were well and favorably known in Philadelphia. From that early time members of your society have been significantly associated with the story of your country. Indeed, the history of your society is closely woven into the fabric of the greatness and glory of America. They stood sponsors at the birth of the Republic; they financed the War of Independence; they sat among the Founding Fathers; they marched with Washington from Philadelphia down to victory at Yorktown. They signed the Declaration of Independence. They were the first to proclaim the sacred documents of the new predestined Nation.

Turning from the Ireland of the past I would like to say a few brief words on the Ireland of the present and the future.

The Ireland of 1956 is a country that has left behind the growing pains of a young state. She has settled down to putting her house in order and has gradually but steadily improved the conditions of her people. She is no longer the land of the leprachaun, the shillelagh of the jaunting car. She has to face the difficulties of building up and managing the affairs of a young state beset by the problems of the atomic age. Even so, and even in the short period of her existence as a modern independent state, considerable progress has been made in the social, economic, political, cultural, and educational sectors of our national life.

The returned emigrant would note a significant change in the composition of the working population; the numbers engaged in agriculture have fallen substantially and the numbers engaged in industry have more than doubled. He would see the rapid strides made in industrialization, would note the many new factories which have been built since the 1920's and would observe how output has increased in a host of varied industries. Special mention must be made of the vast expansion in the electricity industry. The vision and daring of the men who conceived the Shannon scheme in the 1920's is coming to its fruition. The electrification of the whole countryside is well on its way and soon it is hoped that every farmhouse whether in Connemara, in Wexford, Donegal, or Kerry will feel the benefit. The scheme has already reached Connemara and you could now hear a seanchai speaking the native language and telling his tales in a house lit by an Irish electric lamp.

The face of the Irish countryside is being transformed. A variety of schemes are improving agricultural productivity and making rural life more attractive. Our returned emigrant would see the benefits which have been derived from such projects as rural electrification, land reclamation, the elimination of bovine tuberculosis, the farm buildings scheme, the widespread use of improved veterinary practices, the extension of agricultural advisory services and a host of other schemes. He would be struck by the evident prosperity of the countryside—a prosperity which, unlike the bad old days, has not enriched the pockets of the landlord. Irish farmers are now owners, not tenants, of the land they till.

Progress has been made in arterial drainage and utilizing the bogs, in planting trees on the hillsides, in founding both a mercantile fleet and an Irish airline. In the social field also, the progress has been equally remarkable. A vast program of housebuilding has gone far to eliminate the city slum and the rural hovel. We have built many new hospitals and have extended and renovated others. An energetic school-building and reconstruction policy has gone far to overcome the many years of neglect prior to the foundation of the state. Social welfare legislation has been recast and widely extended and general and specialist medical services are now available to a wide section of the community.

Beverage Alcohol and Its Attendant Evils—Award to Benny T. Rosell in Oratorical Contest

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. KERR. Mr. President, I ask unanimous consent that there be printed

in the Appendix of the RECORD the prize-winning address delivered by Benny T. Rosell, of Phillips University, Enid, Okla., on the subject Beverage Alcohol and Its Attendant Evils. Mr. Rosell was awarded the second place in the contest sponsored by the Woman's Christian Temperance Union.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BEVERAGE ALCOHOL AND ITS ATTENDANT EVILS

(By Benny T. Rosell)

For many years the Star-Spangled Banner has gloriously flown over the lands and seas of my country—the Philippine Islands. Since my childhod, I have honored your flag; I have loved the great people, the vast continent, the noble ideals which the Stars and Stripes represent. Having this privilege to visit your country, I find that the sweetest flower that blooms in my heart is gratitude.

Like America, and because of American influence, the Philippines today is a democratic country. We know that the well being of a democratic society necessitates a well-informed citizenry. A government of the people, by the people, and for the people remains effective only when the people are imbued with a patriotic zeal to tackle the problems that threaten it. Public indifference is the cancer of democracy. But when conscientious citizens are well aware of the social problems and are ready to join hands to solve them—then, and only then, can democracy remain effective.

We are assembled here to sound the alarm against America's public enemy No. 1—named alcohol. It is a wanton killer at large. But many are misinformed and misled about alcohol and its attendant evils. Liquor has been effered to the American public in the guise of an angel. Liquor has been advertised in glowing colors with picturesque backgrounds. Every day, American homes are bombarded by the misleading claims of alcohol.

We find such claims as these: "It belongs there," "America pays highest tribute to its quality," "It is known by the company it keeps." My friends, those statements are true—but very misleading.

Surely, alcohol belongs there—in drunken brawls, in joints of immorality, in broken homes—but not in peaceful American homes, not in wholesome fellowship. Certainly, America pays highest tribute to its quality—67 million Americans drink; of them 7 million are heavy drinkers, addictive drinkers, and chronic alcoholics. Americans spend $10 billion annually for beverage alcohol. Consider the billions of dollars spent for liquor-bred crimes, the tremendous loss in American industries, the thousands of lives lost because of alcohol. What a tribute to its quality. Certainly, alcohol is known by the company it keeps. Having visited the skidrows of many cities, I know full well the company alcohol keeps. They are haggard, emaciated bodies in rags and dirt; they are deteriorated minds, weaklings, immoral persons, criminals.

The neat, handsome-looking man with a glass of liquor in his hand, we commonly see in liquor ads, is the picture of a man before drinking. The after-picture—the finished product of alcohol—is quite different. We see a staggering brute, an untidy, vomiting fool. If he drives his car after drinking, we may read about a drunken driver not resting in peace but resting in pieces. That, my friends, is the company alcohol keeps.

There are certain established facts about alcohol. Scientific facts reveal that alcohol is neither a food nor a stimulant, but a depressant narcotic drug. It is a poison. As such, alcohol produces toxic damage to the central nervous system; so much so, that lifesaving body reflexes are slowed down from 5 to 10 percent even by amounts of alcohol too small to be socially appreciable. Thus, alcohol reduces the efficiency of human activity; and never at any age does a human being improve his health as a result of the use of alcohol. Truly, "Wine is a mocker; strong drink is raging, and whosoever is deceived thereby is not wise."

Dr. Kelly, of Johns Hopkins University, said, "Alcohol is a habit-forming drug. Its high potency as a dangerous drug is a million times more hurtful than any conceivable accruing advantage. It has no place in medical practice."

When alcohol is imbibed, it is readily absorbed into the bloodstream, without being changed. Then it quickly acts on the brain; then it numbs the senses.

Because of its anesthetic effect, alcohol makes the drinker feel less—less stupid, so he thinks he is a gentleman of distinction—less tired, so he thinks he is refreshed—less troubled, so he thinks his problems are solved—less cautious, so he foolishly plunges himself into danger, killing himself and others—less obligated, so he neglects his responsibilities.

Friends, that is the nature of alcohol. That is the stuff that is highly advertised today. Why, even children sing the soothing advertisement melodies of liquor. Could it be that liquor advertisers have finally succeeded in making our homes the spawning bed for future criminals and alcoholics? "When lies are told often enough and loud enough, people will believe them." So, the liquor industry spends $250 million annually to advertise their product—to deceive the American people—to make it respectable and smart to drink. And you know, the ads of that worst poison killer today are allowed to circulate freely. It is a legalized killer.

Why is alcohol public enemy No. 1? The facts will show us. First, alcoholism is a serious disease. Only heart disease, cancer, and tuberculosis rank higher than alcoholism as great killers today. Alcoholism, however, is self-induced, caused by utter folly.

Second, alcohol is a major cause in traffic casualties. The best scientific evidence available shows that 40 percent of traffic deaths and injuries, a total of 800,000 in 1951, is due to drinking before or while driving.

Third, alcohol causes numerous moral problems and crimes. Homes have been deprived of the necessities and privileges of life because of the alcohol habit. Because alcohol releases inhibitions, it is a great factor in divorce, broken homes, prostitution, illicit sexual relations, rape, vandalism, murders, juvenile delinquency.

Fourth, alcohol expenditure is a tremendous waste of the Nation's resources. Ten billion dollars is spent annually by the American people for liquor. That means that the American public spend billions more for alcohol than for education and religion. Dr. Andrew C. Ivy declared: "There is something wrong with the quality of the sense of values of a population which spends more to put the brain to sleep than it does to awaken it and to create noble aspirations." In 1952 about $800 million was the cost of traffic accidents which involved liquor. About $3 billion is the expenditure for liquor-bred crimes every year. Dr. Pollock, the director of mental hygiene statistics for the State of New York, estimated that "the annual loss of productive human capacity due to drunkenness, alcoholism, and alcoholic mental disease in the United States is more than $5 billion." To add to that wanton waste who can estimate for me the cost of human lives lost because of alcohol? Friends, what the Government gets in liquor revenue, which is blood money, is unjustifiably small compared to that tremendous waste. Alcohol is, indeed, public enemy No. 1.

Now, we know the facts about alcohol—its effects, its attendant evils. When you realize that the Nation's Capital is one of the wettest spots in the Union you have great reason to be alarmed. Your country possesses tremendous power that could destroy the world—power under the disposal of men whom the people trust to represent them in high places.

During this critical age of history, this country, which is a leader of nations, needs a clear-thinking citizenry and sober leaders. Clear thinking and alcohol do not go together. When our leaders make plans and decisions under the dulling and befogging influence of alcohol, alcohol has struck a deadly blow at the very heart of American security.

Is it nothing to you that America is debased and plagued by the effects of alcohol? Is it nothing to you that in the drunken state of this Nation, peoples of the world will cry, "Lord, help my country to be unlike America?" Is it nothing to you that you are always in danger from those who drink? Is it nothing to you that society pays a tremendous price because of the evil effects of alcohol? Is it nothing to you that precious lives are lost every day because of alcohol? You cannot deny your personal involvement in this problem, even if you are a total abstainer. Liquor will not let you alone. So, face it; fight it.

But are hearts so calloused that they are not touched by the miseries caused by alcohol? Are attitudes so indifferent that they shirk from their responsibilities to themselves, to fellow men, and to God?

I believe that still ingrained in the hearts of the American people is that rugged pioneering spirit to fight for the right. I trust your valor to combat that enemy. You can do it through three lines of action.

First, practice and promote total abstinence. That is the safest way to escape the disasters of alcoholic indulgence. One who has courage enough to say "No, thank you" to the first drink will never be in danger from alcohol. The first drink is the beginning of the journey down a long, expensive, and dangerous road of alcoholic indulgence. With this habit-forming drug, moderation is hard to define and very difficult to practice. Different people vary in their susceptibility to this narcotic drug, but we know that 1 out of 9 becomes a heavy drinker. "First a man takes a drink; then the drink takes a drink; then the drink takes the man." Moderation is just the beginning—not the end—of alcoholism.

The moderate drinkers are the main factor in crimes and traffic fatalities. The moderate drinkers keep the brewers in good business. The moderate drinkers, not the alcoholics, are the tempters of drinkers-to-be. The wretched alcoholics are specimens that make liquor ads so ridiculous and sarcastic. Remember that, in any amount, alcohol has similar effects. So, practice and promote total abstinence.

Second, educate and motivate. Help expose the truth about alcohol. Most people do not know the facts. They are misled and misinformed. Support the organizations that are educating the citizenry about alcohol—stirring public opinion against it. The profit this effort promises is human welfare and happiness.

Education concerning alcohol and its attendant evils has a right place in our schools and in our homes. Since the problem affects morality, spirituality, and the welfare of society—since it corrupts the high ideals of religion, alcoholic indulgence must be vigorously fought from the pulpit of churches—from the very altars of God. We must educate and motivate.

Third, legislate. When public opinion rises to combat this social menace, laws suppressing it will be easier to enact and enforce. When conscientious citizens join hands and rally behind political leaders who are fighting against alcohol, then we shall be on the road to victroy. Experience since repeal of the eighteenth amendment shows that legalizing alcohol has only made its destructiveness much worse. Repeal was expected to solve bootlegging; but now bootleggers have

increased. But listen friends, it is not the bootlegger who turns cars upside down—kills people—and destroys the morality of society; it is the stuff he makes. Let us keep our eyes on the ball. Legalizing that stuff only brings it out from the dark caves to the open joints of the side streets—to be sold in abundance. Legalizing a menace to social welfare and legalizing the free circulation of its misleading claims is stooping down too low. Stop liquor adds on radio, television, movie, newspapers and magazines—and in the silence that would follow, let man listen to the dictates of his conscience. Down deep in the heart of man, I believe, he knows the fallacies of the claims of alcohol.

Thank God, you are living in a democratic society. The power of your Government emanates from you. Exercise your power. Use your precious vote wisely. Prohibition was repealed because of the apparent indifference of the citizens who thought their battle was over.

The fate of your posterity and the destiny of your country depend upon you. The battle against this enemy may not be won overnight, but oh the sweetness of victory dearly bought; only cowards glory in bloodless strife. As long as conscientious citizens continue to fight for the right, to root out the causes of many crimes, to produce and preserve a sober and clear-thinking citizenry, your land will long be a glorious home of the free and the land of the brave.

The Medical Library Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the April 13, 1956, issue of the New York, N. Y., Herald Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MEDICAL LIBRARY BILL

A bill now before the Senate would put the excellent medical library of the Armed Forces on a worthy footing. Called in a Hoover Commission report "the largest and most important medical library in the world," it is now housed in quite inadequate quarters in Washington. Its invaluable collections are in danger of ruin from crowding, fire, and rain; thousands of its volumes, for want of space, are stored elsewhere than in Washington; its services to the public have been seriously impaired.

The bill, introduced by Senators LISTER HILL and JOHN F. KENNEDY, would repair these faults by creating a National Library of Medicine, where the collections could be properly housed and cared for. As an independent agency, the library would be separate from the Department of Defense, which has other pressing matters on its hands.

At present the armed services' library has more than 650,000 bound volumes and adds over 25,000 a year. Its interlibrary loan service makes 133,000 volumes available to medical research workers annually. Now over 130 years old and with a record of serving civilian agencies and health workers since 1892, it has every right to be regarded as an invaluable national institution. The Senate should approve the Hill-Kennedy bill to create a National Library of Medicine.

The Administration's Farm Policy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter concerning the administration's farm policy, written by Mr. Carl J. Newhouse, of Alexandria, Minn., which was published in the Park Region Echo, Alexandria, Minn., for April 26, 1956.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

IN OUR MAILBAG

DEAR EDITOR: Ike's veto of the United States Senate-House compromise new guaranteed parity-price farm bill will go down in history as Black Monday for the farmers of our Nation and for the small-business man on Main Street depending on the farmers take-home pay and buying power. It shows definitely Ike's utter disrespect for the welfare of our family-sized farmers, in view of the glaring evidence in various States of the crisis on the farms. A radio commentator recently announced there were more bankruptcies filed by farmers and small-business men in the State of Ohio during 1955 than there ever has been before in history.

Besides Ike's totally ignoring the actual facts in the grassroot investigations last summer by the Senate Agricultural Committee, consisting of both Republicans and Democratic Senators, whose findings and report overwhelmingly showed the distress in general, the family-sized farmers are experiencing under the Republican sliding scale farm-price program, is a shame to our high office of Presidency.

Ike went back on his golden promise to agriculture on 90 percent, or even full parity in 1952. Thus, by what principle (when he lied then to gain votes) can we be assured of his and the Republican Party's 1956 campaign promises of being fulfilled? Ike's attitude of keeping the farmers on the sliding-scale price program, and from giving them a fair chance of sharing in on the Nation's prosperity now enjoyed by special-privileged monopolies and big interests in the upper-income brackets—is a sad episode by a President, supposed to be for all the people in our Nation.

One farmer expressed in a humorous way, in spite of his resentful feeling, that "Ike must be in love with Ezra." "They should get married and have the president of the Farm Bureau as their best man, and all other Farm Bureau leaders as sponsors of this big wedding affair."

Ike's weak alibi in his radio-TV veto message, proves what I, together with others observing the three presidential candidates' TV appearances the night before the primaries recently, that Ike is definitely not the same Ike now as he was in 1952. He has gotten to be bitter in his attitude and expressions. Not once during his whole pre-primary speech in that TV appearance did he crack a smile, even when interrupted and cheered by his audience. In 1952 and at other public occasions, his amiable expressions and attitude was always apparent—which now has vanished to a resentful attitude and bitterness.

It is quite understandable why this bitter, arrogant attiude has taken place the past 3 years. For 35 to 40 years of his life Ike was devoted to military life and his several years as military officer, and especially as a high-ranking general, he never was or could be criticized by his subrodinates. His opinion and orders were law. Now, as an honored, high-ranking public official as President, he has not been able to take constructive criticisms, and is plainly irritated when he and his Cabinet appointed members are being checked on and criticized. The big $64,000 question now is, Should a public official with such an assumed bitter attitude be continued as our President? I think it would be for the best of Ike's personal health and future peaceful living (and for the best of our country in general) that he be retired from the excessive strain and responsibilities as a President, who should and must assume himself instead of leaving a large share of his Presidential duties to subordinates, even while he so often goes golfing.

I do not mean but that a President needs to relax at times, but when like golfing gets to be a hobby, it becomes quite a different thing in respect to his official constitutional duties as President. The general comments by people of both party affiliations since Ike's veto, is "Why couldn't he sign the bill, when it was only for a 1-year trial?" (being it incorporated his favorite soil-bank features) and would have automatically reverted back to his and Benson's favored sliding-scale farm program again. Was it because Ike was afraid it would prove to be the doom of his and the Republican Party's sliding-scale farm price program philosophy?

CARL J. NEWHOUSE.

ALEXANDRIA, MINN.

The Business Recession of 1954

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent that an article entitled "Eisenhower in the White House," written by Robert J. Donovan and published in the New York Herald Tribune for May 3 be printed in the Appendix of the RECORD. This is a chapter in what seems to be a semiofficial history of the Eisenhower administration and the writer has obviously had access to inside and confidential information inasmuch as he describes what allegedly occurred at Cabinet meetings. His play by play account shows that while spokesmen for the administration were denouncing me as a "prophet of doom and gloom" and as one of the Four Horsemen of the Apocalypse for stating at the beginning of 1954, that we were in a recession, the administration nevertheless knew that this was precisely what we were experiencing. Now after 2 years they evidently believe that the truth can now be told. I happen to believe that the truth about such matters should be told at the time, and not 2 years later. This is one further proof, if any more were needed, that I was right at the time and that Mr. Leonard Hall, the chairman of the Republican National Committee, tried to cover up the truth by resorting to personal abuse.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EISENHOWER IN THE WHITE HOUSE—WHITE HOUSE MOVES TO OVERCOME 1953–54 RECESSION; FINDS REAL DANGER IS DEFLATION AND NOT INFLATION

(By Robert J. Donovan)

The Nation's brush with the 1953–54 recession, viewed from a vantage point inside the Eisenhower administration, conjures up comparisons with a sickbed vigil and a medical consultation room.

The Republican administration was just beginning to live down the depression of a quarter of a century before when the patient began to show worrisome symptoms. Nobody in the White House needed to be reminded that a worse domestic calamity could scarcely befall the United States than a great dislocation of business, finance, and farming.

This was true not alone because of the personal hardships and political upheaval it would bring but because economic disaster in America would be a torpedo rammed under the free world's defenses against communism.

So when pallor appeared in the national economy toward the autumn of 1953, the White House meetings swiftly became preoccupied with diagnostic findings and remedial measures for what was recognized as a development of possibly grave import. For months thereafter an anxious temperature-taking went on in Cabinet sessions as the patient got sicker, then held his own, and finally, by July 1954, successfully passed the crisis.

When the administration took office, inflation caused by the economic boom of the Korean war was the bugaboo. First, Secretary of the Treasury Humphrey moved to tighten credit with a so-called hard-money policy. Then the administration discovered that the danger that loomed was deflation rather than inflation.

CASE HISTORY OF THE RECESSION

Here are highlights from the case history of the recession as the administration experts diagnosed and prescribed for the ailing economy:

September 25, 1953, Cabinet meeting: Dr. Arthur F. Burns, Chairman of the President's Council of Economic Advisers, noted these warning symptoms: 1. A decline in the stock market. 2. An increase in business failures. 3. A dropping off in the volume of orders for durable goods. 4. A decline in residential building. 5. A drop in the average length of the work week. 6. Sagging farm prices. 7. Evidences of excessive inventories.

Burns said the situation was not critical. Strength was reflected in such things as the economy's ability to withstand the recent "hard money" credit squeeze, the favorable distribution of income among the people and the basic soundness of the inventory situation. Legislation was under study, he reported, for helping private business, tax reduction, and Government programs emphasizing loans rather than Government construction itself.

January 13, 1954: Walter Reuther, then president of the CIO, wrote to the President urging him to call a national conference on unemployment, saying that in the Detroit area 107,000 workers had been laid off.

REUTHER CALLS OWN CONFERENCE ON JOBLESS

(Reuther failed to persuade the President, but the labor leader himself called the conference in the spring. Meanwhile, week after week Republican legislators reported to Eisenhower that Congress and the country were worried. A congressional election was only a few months away.)

January 15, 1954, Cabinet meeting: Humphrey said it was his opinion that prosperity depended more upon the confidence of all the people than upon any particular Government measures other than removal of impediments to individual initiative. The President replied that he wished to avoid false expressions of confidence such as were proclamed in 1929, and he wanted to refrain from any suggestian that the Government was unable to act positively to strengthen the economy.

February 5, 1954, Cabinet meeting: The President informed the Cabinet that he had asked Burns to coordinate reports from the various departments and agencies on their plans for public works projects, saying that it was essential to have planning advanced enough to insure that men would be put to work quickly. He set July 1 as a tentative date for the Government to be prepared to act.

UNEMPLOYMENT TAKES TURN FOR THE WORSE

Humphrey said that a broad public-works program would be desirable if operations then in progress should fail to turn the tide. But he felt that these operations might very well succeed.

February 11, 1954, confidential White House briefing: On the basis of facts available, Burns said, the Government was now justified in taking action to strengthen the economy but not to launch a program to fight a real depression.

March 12, 1954, Cabinet meeting: The President was in deadly serious mood. The unemployment situation had worsened. The figure in March was 3,725,000 unemployed, or 5.8 percent of the entire civilian labor force. (The fact that unemployment was then at the crest was not known on this date. Eisenhower complained that plans were ready but when one came to look for recommendations at to when to put the plans into effect, one looked in vain.

Humphrey reminded the President that Senator DOUGLAS had warned that drastic action should not be taken before unemployment reached the level of 6 or 8 percent of the labor force. Eisenhower replied that timely action would forestall the need for drasic action; he insisted at least on preparedness to act at any moment.

BURNS REPORTS FAVORABLE TRENDS

March 19, 1954, Cabinet meeting: Burns reported that some favorable trends were appearing but urged that judgment be suspended for a while. The Council of Economic Advisers was moving ahead rapidly with projects if need should arise for them, he said.

March 26, 1954, Cabinet meeting: The sense of mounting urgency cntinued. Burns offered a list of actions that could be taken—modifying Federal Reserve requirements, liberalizing mortgage requirements, altering tax-depreciation policy, hastening domestic procurement. Eisenhower asked him to prepare an outline of useful legislation.

April 2, 1954, Cabinet meeting: Burns said that continuing economic troubles called for action he had suggested. The President said said they should be done without delay, but not in a way to jolt public confidence. Secretary of Defense Wilson noted an upturn in the automobile industry. Burns said he had discovered that plant expansion and building contracts had surprisingly continued at a very high rate through the whole 9 months of the general decline.

April 9, 1954, Cabinet meeting: Burns reported a sharp and significant division between the industrial situation, which was poor, and the financial situation, which was strong. He said the two trends must be reconciled either in a general decline or in a general advance. He predicted the latter.

April 30, 1954, Cabinet meeting: Burns optimistically noted that contrary to expectations, the economies of foreign countries had remained strong during the sag in American economy.

TRUMAN CALLS FOR PUBLIC WORKS RISE

(On May 11, 1954, the National Full Employment Conference of CIO leaders met in Washington and heard Reuther assail the administration for doing nothing to relieve unemployment. Two days later, Truman told the CIO Amalgamated Clothing Workers that the economy was suffering from "creeping McKinleyism" and proposed a $3 billion increase for public works and welfare).

May 14, 1954, Cabinet meeting: Burns said that even without new legislation, funds were probably available for military purchases, repair, and modernization of Federal buildings, construction of atomic energy installations, small bridges, and forest roads. Eisenhower answered that departments having money available for worthwhile projects should start them now.

May 21, 1954, Cabinet meeting: Burns reported that for the third consecutive month increases in orders and production surpassed decreases; that the economy might be swinging into an upturn.

June 11, 1954, Cabinet meeting: Burns presented definite evidence that recovery was under way but said the possibility remained that it would fizzle out. The President said, "Arthur, you'd have been a fine chief of staff during the war."

July 23, 1954: Burns announced that the midyear economic indicators showed definitely the decline had come to an end. To have passed from the Korean war economy to a peacetime economy without a far more serious drop, he said, was a tremendous accomplishment. With congressional elections approaching, the Cabinet cheerfully turned to a discussion of ways of making all this clear to the public; especially the now favorable comparison between 1954 and 1952, the last year of Democratic rule.

The Medical Library Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Wednesday, May 9, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the April 1, 1956, issue of the Chicago, Ill., Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MEDICAL TREASURE THREATENED

The people of the United States own what is probably the largest and certainly the finest medical library in the world. Its services to physicians and all of the other health professions are immeasurable.

Yet this magnificent collection is housed today in various unsuitable spots. Part of it is in warehouses in Cleveland, part in an ancient building in Washington that was declared unsuitable for library use 30 years ago. It is accumulating scientific publications at a rate that requires a half mile of new shelf space annually, and its overflow is about to be consigned to some old frame barracks where a carelessly tossed cigaret butt could destroy the accumulation of 120 years, much of it irreplaceable.

This great medical library is neglected because, in the eyes of the Defense Department, 2 or 3 transcontinental bombers are worth more than proper housing for a national medical library. A task force of the Hoover Commission, headed by the late Chauncey McCormick of Chicago, recommended last year that the library be separated from the Defense Department and established as a truly national institution with an appropriate administrative organization, a proper building, and an adequate budget.

Senators HILL, Democrat, of Alabama, and KENNEDY, Democrat, of Massachusetts, have

introduced a bill to carry out this recommendation. It would establish a national library of medicine under a board of civilian regents appointed by the President. The Surgeons General of the Army, Navy, Air Force, and Public Health Service and the Librarian of Congress would be ex officio members. The bill authorizes but does not provide appropriations for operation and housing. A proper library building would cost from five to ten million dollars.

The library is operated by the Defense Department because the Army started it. Joseph Lovell, the first Surgeon General of the Army, began collecting a library for his office before his death in 1836. The real father of the library, however, was Col. John Shaw Billings, one of the great pioneers of American medicine, who was Surgeon General of the Army from 1865 to 1895.

Colonel Billings remained active almost until his death in 1920, and found time to guide the merger of the institutions that formed the New York Public Library. He also planned the campus and hospitals and helped assemble the brilliant faculty of Johns Hopkins Medical School.

Under Colonel Billings the Surgeon General's library not only bought all the books and periodicals it could find funds for, it indexed them, too. Its index is today the most comprehensive in the world. In 1887 it also started a periodical index of medical and allied literature, which has been maintained.

In time the institution became known as the Armed Services Library. For the last 55 years its facilities have been available as well to civilian physicians, dentists, and other professionals. Last year it circulated 133,000 volumes, mostly to research workers, through its interlibrary exchange. Its staff answers a thousand reference questions a month. Many of the answers consist of exhaustive bibliographies in the field in which the inquirer is working.

Chicago, Cleveland, Washington, and the Public Health Center at Bethesda, Md., have all been suggested as sites for the National Library. It has also been suggested that it be placed under the Federal Public Health Service instead of an independent board of regents.

The collections of Crerar Library, the University of Chicago, Northwestern University, and other institutions already give this city vast sources of medical literature. If the library were located here in the communications center of the Nation, the circulation of its books throughout the country would be aided. The important thing at present, however, is to rescue the library from its status of stepchild in the Defense Department and confer on it the independent guidance that will preserve and enhance its usefulness.

Redistribution of Seats in the House of Representatives

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. COLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and memorandum:

ITHACA N. Y., *April 24, 1956.*

Hon. W. STERLING COLE,
House of Representatives,
Washington, D. C.

DEAR MR. COLE: Fifty-seven years ago the Director of the Census instructed the Division of Methods and Results, which I then headed, to prepare tables based on the forthcoming figures of population to be used by Congress in redistributing seats in the House of Representatives.

Since then I have worked on the problem at intervals and now ask the help you have given me several times before in getting my results before Congress and the public.

Yours sincerely,

W. F. WILLCOX.

MEMORANDUM ON METHODS OF REDISTRIBUTING SEATS IN THE HOUSE OF REPRESENTATIVES AFTER A DECENNIAL CENSUS

(By Walter F. Willcox)

Two processes are involved in any redistribution of seats among the States.

1. Assigning (not apportioning) 1 seat to each State as required by the mandate: "Each State shall have at least 1 Representative." Congressional or statutory reapportionment, therefore, must start with a body like the Senate except that it is only half as large.

2. Apportioning whatever number of Representatives Congress decides upon, one after another, in the effort to transform the original body of 48, all of them having equal claims to their seats, into a body "apportioned among the several States according to their respective numbers."

These apportioned Representatives, now numbering 387, cannot be apportioned by 1 procedure, as the 48 are and as all used to be before 1910, but one after another in answer to the question, "What State is entitled to the next seat?" That question is answered differently by different methods.

The proper way to judge these different methods is by asking how well the results of each carry out the provisions of the Constitution. The seven States listed below are all that need to be considered. They have the following population:

[In thousands]

State	Seat No.	District population
New York	1	14,830
California	2	10,586
Pennsylvania	3	10,498
Illinois	4	8,712
Ohio	5	7,947
Texas	6	7,711
Michigan	7	6,372

The methods still deserving attention are: (1) The method adopted after 1910, (2) the method adopted after 1940, (3) a novel method.

These 3 agree in giving the first 3 seats to the largest 3 States. The 7 would then stand as below:

[In thousands]

State	Seat No.	District population
Illinois	4	8,712
Ohio	5	7,947
Texas	6	7,711
New York	49	7,415
Michigan	7	6,372
California	50	5,293
Pennsylvania	51	5,249

The present method and the proposed one agree in apportioning the next seat, No. 52, to Illinois, while the 1910 method would give that seat to New York although 3 States then had a larger district population. The 1910 method should be ruled out and the choice limited to one between the present method and the proposed one.

The next question is, to what State should seat No. 53 be apportioned? The situation after 4 seats had been apportioned is shown below:

[In thousands]

State	Seat No.	District population
Ohio	5	7,947
Texas	6	7,711
New York	49	7,415
Michigan	7	6,372
California	50	5,293
Pennsylvania	51	5,249
Illinois	52	4,356

The present method gave the next seat, No. 53, to New York, although Ohio and Texas had larger district populations and had a better claim to the next two seats.

If that is admitted, the present method also should be abandoned and the novel one accepted. It adopts what seems to me a rule, both simple and correct, namely, apportion seat after seat to whatever State then has the largest district population.

Because this method reduces the difference between the largest and the smallest of the 48 district populations at each of the 387 steps it might well be called the method of minimum range. It would result in a House of Representatives wherein the average of the 48 district populations would be as small as possible and wherein also all Representatives would have as nearly the same number of constituents as the mathematical conditions permit. It would have the following advantages:

1. It would get rid of all difficult mathematics growing out of assuming a standard district population for the country and debating what weight should be given to the 48 fractional remainders after the population of each State has been divided by that number, a difficulty over which Congress and executive officers have worried from the time of Jefferson and Washington to the present day.

2. It is based on the two relevant passages of the Constitution.

3. Its results come as near as possible mathematically to equalizing the district populations of the 48 States.

April 26, 1956.

The Medical Library Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Wednesday, May 9, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the April 10, 1956, issue of the Cambridge, Md., Banner.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIBRARY OF MEDICINE

The Senate today is scheduled to begin hearings on a bill to create a new National Library of Medicine. The measure has been introduced by Senators LISTER HILL, of Alabama, and JOHN F. KENNEDY, of Massachusetts. Rather than bring such a library into existence, it would provide the funds to decently house and maintain an existing collection of books.

This country actually has had such a medical library for more than 125 years. It was known originally as the Surgeon General's Library. Since 1952 it has been the Armed Forces Medical Library. Operated by the Federal Government as a research library, it has more than 650,000 bound vol-

umes which grows by 25,000 more each year. It also receives about 5,000 medical periodicals annually.

In a recent report, the Hoover Commission called this "the largest and most important medical library in the world. * * * No other medical agency of the Federal Government serves the future of medical research so intimately and so widely as does this unequaled collection of books, journals, and bibliographic services."

The library now is housed in a 69-year-old building. Every year it adds another mile of shelf space to carry new acquisitions. More than 130,000 books a year are loaned to research workers. Yet, one commentator observes that "Its priceless collections of medical literature are constantly threatened by loss from fire and have undergone actual damage through exposure to weather and improper storage."

A year ago, the Hoover Commission recognized that this collection in fact has become a national medical library and should be designated and supported as such. The Hill-Kennedy bill would set up a National Library of Medicine and provide the money to finance it. An independent agency, it would be administered by the Surgeons General of the Army, Navy, Air Force and Public Health Service, the Librarian of Congress and 12 leaders in various health fields named by the President.

Although it has been serving civilian agencies for around 60 years, the library costs are now borne by the Department of Defense. It is pointed out that "as it has no legal authorization to operate as a national institution primarily for civilian purposes, its expenses are hidden in 18 categories of the Department of Defense." Defense Department plans to build a structure to house the library have been shunted aside by overriding defense considerations.

Medical men say that the bill to create a national library lacks the dramatic impact of a new discovery in solving the riddles of disease but "It is fundamental * * * to the eventual achievement of these goals."

The Fund for the Republic

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. BOLLING. Mr. Speaker, the article which follows appeared in the March 5, 1956 issue of the Presbyterian Outlook, published in Richmond, Va. The author, Mr. Albert Fowler, a resident of Rosemont, Pa., was editor of the Arnold J. Toynbee volume, War and Civilization, and has served on the faculty of Haverford College. Since the Fund for the Republic has been much criticized, on occasion, it seems to me that fairminded people will welcome the opportunity to read this sympathetic treatment of its activities:

THE FUND FOR THE REPUBLIC

(By Albert Fowler)

When the American Veterans' Committee presented Robert Hutchins with the Bill of Rights Award last October, he said: "I am surprised that there should be any difference of opinion about the Fund for the Republic." As president he was well aware that the fund had been criticized for supposed left-wing tendencies by Fulton Lewis, Jr., and the New York Journal American, and as an American devoted to the preservation of his country's heritage of freedom he replied to that criticism with courage and confidence.

The Fund for the Republic was authorized in 1951 by the Ford Foundation and incorporated in 1952 as an independent organization under a separate board of directors chosen for their interest in civil liberties and their ability to increase public knowledge of these basic rights. The chairman is Paul G. Hoffman, chairman of the board of Studebaker-Packard Corp., and other directors include Erwin N. Griswold, dean of Harvard Law School, Meyer Kestnbaum, president of Hart, Schaffner & Marx, and Jubal R. Parten, president of Woodley Petroleum Co.

Provided with $15 million by the Ford Foundation, the Fund for the Republic has devoted itself to the support of those liberties of thought, speech, and assembly without which this Nation would be unrecognizable.

POLICY OF PRIVATE GIFTS

Organizations like the Fund for the Republic and the Ford Foundation have been regarded as the finest flower of free enterprise, and it has been the policy of the country to encourage people to finance religious and educational endeavor through private contributions rather than through taxes. If powerful pressures had not been exerted against our traditional freedoms, the Ford Foundation would not have seen a need for the Fund for the Republic which Dr. Hutchins calls a fund for the American dream. If the fund takes the reason for its existence seriously and supports civil rights where they are threatened, it must inevitably expect a certain amount of criticism.

Early in 1953 the directors of the fund declared in a public statement: "The major factor affecting civil liberties today, in our opinion, is the menace of communism and Communist influence in this country. Coupled with this threat is the grave danger to civil liberties in methods that may be used to meet the threat."

A its first meeting the board of directors made a grant to a special committee of the American Bar Association dealing with individual rights as affected by national security. This committee studied the methods of congressional investigations, and the bar association adopted its recommendations for rules of procedure by an overwhelming vote in August 1954. Since then the administration of congressional investigations has improved, and one reason for the improvement has been the influence of the American Bar Association. This change was not achieved without criticism from those who wanted a free hand to deal with the Communist menace in whatever way suited them best.

STUDIED THE COMMUNIST RECORD

To get the facts straight and make them available for ready reference the Fund for the Republic then financed a study of official records of Communist activity. Under the able leadership of Arthur Sutherland, of Harvard Law School, a digest was prepared of the principal judicial and administrative hearings in which the Communist Party has been involved, and the completed volumes were distributed to university, research, and public libraries. Microfilm records of the leading court cases on Communist activities have been put in a few large libraries throughout the country. The fund has also made a grant to the Methodist Church for a study of the challenge of communism.

In response to calls from many quarters for a private committee to make a dispassionate appraisal of the loyalty-security program of the Federal Government, the fund for the Republic financed such a committee under the auspices of the New York City Bar Association. In appointing the members of this committee the bar association included lawyers from many parts of the country. The fund believed that one good way to show how the loyalty-security program operated was to compile the facts of individual cases, and Adma Yarmolinsky of the District of Columbia Bar Association was asked to secure what records he could from the defending lawyers. His report contains abstracts of over 300 cases, and 50 of these have been published. The facts of this report throw much light on whether individual rights have been sacrificed to the demands of national security and whether those demands have been excessive.

FREEDOM OF DISCUSSION

One of the foundation stones of Americanism is the freedom of discussion. The Illinois Department of the American Legion and its past commander, Irving Breakstone, have cooperated with the American Heritage Council of Chicago on a plan of popular education centering around discussion of basic documents in United States history. The fund for the Republic has made a grant to the council to assist this enterprise. It has also helped the Carrie Chapman Catt Memerial Fund with its Freedom Agenda project in which 500 communities are cooperating, and similar educational programs of the Council for Social Action of the Congregational Christian Churches, the Universalist Service Committee, the YMCA and YWCA. The more people know about their individual liberties, the safer their freedom will be.

The Fund for the Republic has honored with substantial awards organizations and communities that have distinguished themselves by their defense of civil liberties. One award went to the YMCA at the University of California at Berkeley for its outstanding program in race relations and its open platform policy, and another to the town of Waverly, Iowa, for its efforts on behalf of a Negro Air Force captain and his family. In this way the fund called the attention of the country to courageous and selfless devotion to the cause of freedom.

IN RACE RELATIONS

Individual rights have also been under pressure in the field of race relations, and it was natural for the Fund for the Republic to concern itself with racial discrimination. One of its largest grants went to the Southern Regional Council to strengthen the Atlanta headquarters and increase the professional staff of the council's affiliates in 12 Southern States. With this assistance the council is expanding community education in intergroup relations under the leadership of George S. Mitchell, who received the 1953 award of the Catholic Committee of the South for an outstanding contribution to the improvement of race relations. A recent grant to the Southern Presbyterian Church provides for local institutes for discussion of interracial problems and for the distribution of literature and visual aids. Similar assistance has been made available in this field to the Board of Social and Economic Relations of the Methodist Church, to the Presbyterian Church, United States of America, and to the National Council of Churches in connection with problems growing out of the Supreme Court's decision holding segregated schools unconstitutional.

The Fund for the Republic has also established a commission on race and housing to examine the obstacles encountered by minority groups, particularly Negroes, in finding places to live and in building new homes. No comprehensive survey of housing for minorities has ever been made, but it is thought that they pay more and get less than other sections of the population. This commission is headed by Earl B. Schwulst, chairman of the board of the Bowery Savings Bank, and among its members are Henry R. Luce, editor of Time and Life; Elliott V. Bell, editor of Business Week; and John J. Cavanaugh, director of the University of Notre Dame Foundation.

A CHANGING CLIMATE

Fortunately the climate of opinion is now more favorable to the cause of civil liberties than it was when the Fund for the Republic began its work in 1953. The eclipse of Senator McCARTHY, the apologies by Government agencies to people wronged by mistake or prejudice, the changes in passport regulations, the improved procedure in congressional investigations, are putting new heart in the belief that America does not have to suppress its liberties in order to protect them. But as long as the fund continues to carry out the purpose for which it was created, as long as it supports the freedoms guaranteed to all Americans by the Constitution and the Bill of Rights where they are under threat or pressure, it will come in for its share of criticism and will face the attack with courage and confidence.

The Medical Library Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Wednesday, May 9, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Howard A. Rusk, M. D., entitled "Books Can Help To Cure," which appeared in the New York Times on April 8, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOOKS CAN HELP TO CURE—AN ANALYSIS OF THE FACTORS BEHIND BILL TO ESTABLISH NATIONAL MEDICAL LIBRARY

(By Howard A. Rusk, M. D.)

WASHINGTON, D. C.—Next Tuesday Senate hearings will begin here on a little-publicized and undramatic bill which has tremendous significance for medical research in this country. It has been discussed very little in the congressional cloakrooms, but is a leading topic of discussion among medical researchers, physicians, and health teachers.

The bill, introduced by Senators LISTER HILL, Alabama, and JOHN F. KENNEDY, Massachusetts, is to create a decently housed, efficiently staffed, properly located and adequately financed National Library of Medicine.

For the past 130 years, our Nation has actually had such a national medical library. Known originally in 1836 as the Surgeon General's Library, it has been the Armed Forces Medical Library since 1952. One of three large research libraries operated by the Federal Government, it has over 650,000 bound volumes with more than a million titles, receives over 5,000 medical periodicals, and adds to its collection over 25,000 volumes a year.

The Hoover Commission Task Force on Federal Medical Services declared in its report, "today the largest and most important medical library in the world is the Armed Forces Medical Library. No other medical agency of the Federal Government serves the future of medical research so intimately and so widely as does this unequaled collection of books, journals, and bibliographic services."

NEED IS UNQUESTIONED

That new physical facilities for this library are needed stands without question. Its present quarters, built 69 years ago, have been outgrow and outmoded for 30 years. The library requires an additional mile of shelf space each year. Its interlibrary loan service places 133,000 volumes in the hands of thousands of medical research workers yearly. Over 1,000 reference questions are answered by its staff each year. Its priceless collections of medical literature are constantly threatened by loss from fire and have undergone actual damage through exposure to weather and improper storage.

Pointing out that the Armed Forces Medical Library has, in fact, become a national Library of Medicine, the Hoover Commission task force a year ago urged it be thus officially designated and be given clear statutory authority for the functions it now serves.

The bill introduced by Senators HILL and KENNEDY provides for such authority with adequate financing. As an independent agency, it would be administered by the Surgeons General of the Army, Navy, Air Force, and Public Health Service, the Librarian of Congress, and 12 leaders in the various health fields to be appointed by the President.

With the ever-increasing amounts of both public and private funds being spent for medical and related health research, the significance of a national library of medicine has increased. All professional organizations concerned with health, such as the American Medical Association, American Dental Association, and American Hospital Association, have strongly endorsed such a proposal.

RESEARCH INVOLVED

Dr. Alan Gregg, vice president of the Rockefeller Foundation and one of the world's authorities in medical research, has said, "No defense for the amounts being spent on medical research by all the Government agencies can be made if we continue to neglect the need for one adequate library, such as this library could be made."

The paramount importance of the Armed Forces Medical Library to our military services is without question. Since, however, it has been serving civilian agencies and health workers since 1892, it is not logical that its costs should be totally borne by the Department of Defense. Currently, as it has no legal authorization to operate as a national institution primarily for civilian purposes, its expenses are hidden within 18 different categories of the Department of Defense. In the past, each time the Department of Defense planned a building program for the library, it was squeezed out by other more strictly defense items.

As in the case of the National Gallery of Art, there are reasons to expect that substantial contributions from private foundations and other voluntary, civilian groups would be made to a National Library of Medicine. Such groups have been loath to support a library that by its title implied it was a military library.

The bill to create an adequate National Library of Medicine does not have the drama and glamour of increased funds for direct research activities which may solve the riddles of cancer, heart disease, arthritis and the other great killers and cripplers. It is fundamental, however, to the eventual achievement of those goals.

Wisconsin Soil Conservation Report, 1955

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. DAVIS of Wisconsin. Mr. Speaker, it is again my pleasure to insert in the Appendix of the CONGRESSIONAL RECORD the annual report of M. F. Schweers, Wisconsin State conservationist, to district supervisors of the Soil Conservation Service in Wisconsin.

Mr. Schweers was thoughtful enough to furnish me with a copy of his annual, cumulative report, based on the annual reports submitted to him by the various soil conservation districts in Wisconsin.

Mr. Schweers has high hopes that the four remaining counties of Wisconsin which have not yet formed soil conservation districts may do so in 1956. The remaining 67 counties of the State are so organized.

Since last year, seven new locally organized watershed associations have come into being, making a total of 46 in the State. Other significant developments during the past year have included completion and dedication of the Coon Creek project, and approval of the Mill Creek project in Richland County.

I believe the accomplishments of the Soil Conservation Service in Wisconsin represent a laudable example of fine cooperation, dedication to service apart from dictation, and commendable leadership at the State level.

Mr. Schweers' report for 1955 follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Madison, Wis., April 23, 1956.

To: Soil Conservation District Supervisors.
From: M. F. Schweers, State conservationist.
Subject: Acknowledgement of your 1955 SCD Reports.

"Success of the Coon Creek project rang the bells around the world, not the bells tolling hunger or the doom of progress, but rather those that tolled for better things from the land for the people."

These words were spoken by the first Chief of the Soil Conservation Service about the Nation's first large scale coordinated soil, water, forest, and wildlife conservation demonstration.

Dr. Hugh H. Bennett, now retired, made the above statement when he came back to Coon Valley last July 19 to help dedicate an official historical marker commemorating the watershed project. Governing bodies of the La-Crosse, Monroe, and Vernon County Soil Conservation Districts were among the sponsors of this recognition ceremony.

Inscribed upon the Coon Creek marker are these words:

"The success of the project is a tribute to farm families who had the courage, wisdom, foresight, and confidence to adopt the modern methods of soil conservation farming illustrated here."

Yes; the people of the Coon Creek Watershed played a major role in the conservation movement of Wisconsin and the Midwest. And, certainly the early farmer conservationists in each of your districts also deserve a tribute for their pioneering activities. After all, we know that the success or failure of our joint efforts lies in the hands of the farm families who till the land.

1955 REPORTS

As always, your reports were both interesting and informative. We were again pleased to note that a large number were mimeographed. Many had attractive covers. We sincerely hope that everyone who received a copy enjoyed and got as much out of it as we did.

In a special communication, SCS Administrator D. A. Williams asked that this acknowledgement also be made in his behalf. So, please consider this as a joint letter from him and us.

ACCOMPLISHMENTS

"The best year we ever had." That, in effect, is what many of your reports say about

1955 and the statement is applicable to total accomplishments in the State.

When we acknowledged your annual reports 3 years ago we indicated that 1952 was the banner year. Up to that time it was the most productive year in the history of SCD-SCS operations in Wisconsin. Now we come to 1955 which surpasses the fine record made back in 1952. Of course, there are a few decreases among the many increases. But let's see what actually was done in these 2 years and how they compared.

Item	Unit	Accomplishments		1955/1952 (percent)
		1952	1955	
New cooperators	Number	6,866	2,996	44
Basic conservation plans	do	605	1,216	201
SCD cooperators serviced	do	13,222	13,022	98
Soil surveys	Acre	623,488	550,395	88
Soil descriptions	Number	30	102	340
Conservation crop rotations	Acre	(1)	314,472	
Contour strip cropping	do	65,698	59,174	90
Waterways	Mile	343	345	100
Terraces	do	301	335	111
Diversions	do	151	198	131
Closed drains	do	196	232	118
Open drains	do	649	977	151
Pasture improvement	Acre	8,266	20,773	251
Prevention of grazing damage	do	13,302	20,969	158
Woodland management	do	8,351	5,599	67
Tree planting	do	2,020	3,185	158
Field windbreaks	Mile	44	33	75
Wildlife area improvement	Acre	1,688	903	53
Fence row management	Mile	64	294	459
Major structures	Number	6	25	417
Farm ponds	do	23	79	343
Land smoothing	Acre		731	
ACP referrals	Number	20,030	14,670	73
ACP farms serviced	do	16,900	15,112	89
Direct SCS assistance to SCD's (includes part-time aids)	Man-year	153	155	101

[1] No record.

A few comments concerning the table are in order. You will note a material reduction in the number of new cooperators for last year as compared to 1952. On the other hand, the number of basic conservation plans increased materially. In planning for 1955, most governing bodies decided to devote more time to assisting farm families in the development of basic conservation plans rather than trying to secure an increase in the number of new cooperators. Frankly, we thoroughly agree with your thinking and the corresponding trend is very gratifying.

Although the acreage of soil surveys decreased, there was a considerable increase in the number of soil descriptions written. Added efforts are being devoted to characterizing soils in greater detail than formerly was thought necessary. Naturally, this work took time away from field mapping.

There was a slight reduction in contour strip cropping. This is to be expected as there has been a gradual downward trend for this practice. Yet, Wisconsin, as of last June 30, had over 40 percent of the total strip cropping in the nine Corn Belt States. Strip cropping is the most picturesque and spectacular of all practices. Having such a large percentage, one need not wonder why many people tell us that there is more obvious conservation work in Wisconsin than in any other State of the Midwest.

The reduction in wildlife area improvement may be attributed to the fact that the Service no longer provides wildlife packets.

We should like to call your attention to the nice increases in construction practices. We have one comment to offer. It concerns drainage. We want to point out that most of the open drains are surface ditches on land upon which there was very little if any change in land use.

The reduction in the number of ACP referrals was due to the fact that in 1955 the Service did not have the responsibility for determining need and practicability for some of the vegetative practices as we did in 1952.

While the Service does not maintain detailed records on such items as desirable land use conversions; influence on increasing farmer purchases of needed liming and fertilizing materials, and so forth, these basic factors are considered while assisting farm families in developing and carrying out their conservation plans. To do this job in 1955 Service personnel made over 13,000 personal calls on soil-conservation district cooperators.

The Service also assisted district governing bodies and collaborated with the Agricultural Extension Service and the State soil conservation committee in planning for and carrying out educational and information programs. We do not have data on the extent of these activities.

AGRICULTURAL CONSERVATION PROGRAM

Your reports indicate that the ACP contributed to improved interest in and the establishment of increased amounts of soil and water conservation practices.

County agricultural stabilization and conservation committees transferred more than $122,000 to the Soil Conservation Service under the SCS–ACP 5-percent program. Of this amount the Service "earned" just under $114,000. These funds were used in supplementing district staffs to handle or compensate for the additional workload resulting from the agricultural conservation program.

Layout accomplishments made under this joint program are included in the table appearing in the preceding section of this letter. Almost 9,000 of the referrals involved farms of soil conservation district cooperators. According to what you say, many of the farmers assisted solely on ACP have since indicated an interest in farm conservation plans and should ultimately become district cooperators.

PROGRAM BALANCE

The forestry, wildlife, pasture renovation, and gully and streambank erosion control phases of your programs are lagging somewhat behind cropland practices. Such a statement appears in a number of your reports. We know that everyone has done his utmost to bring these measures into balance as integral parts of the overall soil, water, forest, and wildlife conservation program. It has been a difficult task and new ideas on promotion and establishment are needed. Many district governing body plans for 1956 call for special emphasis on these practices.

WATERSHED ACTIVITIES

Many of your reports made reference to watershed associations. Records show that there are now 46 such groups in the State, varying in age from 0 to 10 years.

Lack of space prohibits quoting many of the favorable comments made about these organizations. More conservation on the land", "better balanced program", "local planning," "local leadership," "whole family participation," "social and economic advantages," etc., are among the remarks included in your reports or conveyed to us in contacts with enthusiastic association members.

The Sauk County SCD still leads the State in the number of associations with eight. There are seven in the Green County SCD.

One of the two contracted detention dams on the Kickapoo Pilot Watershed was completed in 1955. The other will be finished this year. There is a possibility for another and much larger structure provided the Vernon County SCD governing body is able to acquire necessary rights-of-way and land easements. Should this materialize the watershed above it will be about twice as large as the other two combined.

In order to facilitate activities under Public Law 566 the 1955 State legislature enacted several new laws. Copies of these have been transmitted to you. Among the provisions of the new laws are the following: (1) The State Soil Conservation Commitee has been designated to review applications for planning assistance; (2) villages and counties are permitted to appropriate funds for works of improvement as defined in the Federal statute; and (3) SCD governing bodies have been given additional responsibilities and authorities on watershed protection and flood prevention work.

The Mill Creek application for planning assistance under Public Law 566, co-sponsored by the Richland County SCD governing body, was approved by the State Soil Conservation Committee and D. A. Williams, Administrator of the Soil onservation Service. At the present time a staff of technicians is working in the District collecting technical data and information for consideration by the local sponsors and cooperating agencies in completing their work plan.

Six other watershed associations are in the process of completing applications at the present time.

COOPERATION

We were pleased to note that every annual report made complimentary references to the friendly and effective relationships existing among all people interested in the conservation programs of your respective soil conservation districts.

In these narratives you commend personnel of the Agricultural Extension Service, Agricultural Stabilization and Conservation Service, the State soil conservation committee, Farmers' Home Administration, Vocational Agriculture, Vet Trainers, Soil Conservation Service, Wisconsin Conservation Department, county highway commissioners, sportsmen's clubs, bankers' associations, machinery dealers, business organizations, and several other groups for the fine cooperation and contributions made to the programs of Wisconsin's 67 soil conservation districts.

Newspapers, radio, and TV have evidently given you all the space and time you can effectively use in your program.

And we do not ever want to overlook the people on the land. As previously mentioned, they hold the key to a successful program.

Insofar as the Soil Conservation Service is concerned, we sincerely thank you for the very fine tributes you paid our personnel. Were they individually acknowledging their respective soil conservation district reports, they would say about what we feel, which is: "We thoroughly enjoy having the opportunity of working with you supervisors and serving the fine farm families in the district. We will continually strive to do a better job."

YOUTH EDUCATION

Youth education in soil, water, forest, and wildlife conservation rates high in most district work plans. We still believe Wisconsin

ranks second to none in the field of youth training. In most soil conservation districts, county superintendents of schools have done an outstanding job in having courses on conservation included in the rural school curriculum. We too commend these important members of soil conservation district governing bodies on the fine program they are carrying out.

Advances continue to be made in emphasizing and improving conservation courses for teachers both in secondary schools and on the job. This program is under the capable leadership of I. O. Hembre, executive secretary for the State soil conservation committee.

Your reports point to increased 4–H Club enrollments in conservation projects. The FFA has participated in various activities.

GOVERNING BODY ACTIVITIES

We were interested in your remarks concerning activities being carried out by you supervisors. Most governing bodies meet monthly and plan their programs in advance. Evidently your field trips have proven profitable in guiding your activities. Your sponsorship of plowing matches, land judging contests, demonstrations and meetings has been very fruitful. Quite a number of governing bodies held highly successful recognition banquets for SCD cooperators. Several district governing bodies conducted tours for their county boards. From all indications these too were very worthwhile events.

A number of county boards appropriated funds to district governing bodies in amounts varying from one to several hundred dollars. This permitted you and your associates to do some of the things requiring financing that you would have been unable to do otherwise.

The Marathon County Soil Conservation District governing body won first place in the 1954–55 Goodyear Soil Conservation Awards Program. The Waupaca County SCD was runner-up.

Many district governing bodies took an active part in sponsoring Stewardship Sunday. Several reports indicated that you secured and personally presented packets of information to clergymen.

References were made to effective area conferences of supervisors and representatives of cooperating agencies. We agree with you that these are very worthwhile. Many of you also mentioned the successful State meeting held in Madison last year.

Evidently quite a number of you attended the annual meeting of the Soil Conservation Society of America held in Green Lake last September. A new national attendance record was set with over 800 people registering. The Green Lake County SCD governing body provided free cheese, crackers, and milk during the entire 3-day conference. Supervisors, their wives and others did a rushing business.

THE FUTURE

In retrospect, 1955 was the best year we ever had in our joint undertaking. Looking forward, we have every reason to believe that 1956 will surpass it.

Substantiating the above statement, we present the following data. Interpreting your total workload analyses in light of program balance, availability of equipment, size of permanent staff, etc., we estimate it would take about 195 man-years of permanent and part-time help to perform all the work you believe farmers will be ready to undertake during 1956. We figure that we will have about 160 man-years available. That leaves quite a difference. However, we believe it's better to have too much work than not enough. Then, too, we prefer being under rather than over staffed. Such conditions tax everyone's ingenuity to get the job done.

One statement common to most reports indicates that you believe all layout will be pretty well taken care of in 1956 with present staffs, provided the weather is right and adequate equipment is available. However, planning will suffer, so you say.

During 1955 we increased the number of permanent personnel assigned to districts by several new employees. We are now considering requests for additional help from a number of SCD governing bodies. We are analyzing workloads, and we do plan to fill a number of positions in 1956.

The future looks good, and through a united effort we are confident that in 1956 the bells will continue to toll for more conservation on the land for the good of its people.

THANK YOU

Extending personal regards and thanking you for the many courtesies and fine cooperation you have extended to all of us in the Soil Conservation Service, I am,

Sincerely yours,

M. F. SCHWEERS,
State Conservationist.

The Medical Library Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the New York Times on April 8, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILL WOULD BUILD MEDICAL LIBRARY—SENATE GROUP SETS HEARING ON PROPOSAL TO CREATE NATIONAL INSTITUTION

WASHINGTON, April 7.—The Senate Labor and Public Welfare Committee will open hearings next week on a little-noticed bill that, it is believed, could have a big impact on the Nation's medical research.

The measure would create a National Library of Medicine to take over "the greatest collection of medical literature in the entire world." The library is now operated by the Defense Department as the Armed Forces Medical Library. The proposed legislation would transfer it to a new and independent board.

Senator LISTER HILL, Democrat, of Alabama, committee chairman and coauthor of the bill, said the library was "lost and hidden in the Defense Department. He predicted it would grow if turned into a national library.

One of the main purposes of the bill is to get a new building and adequate financing for the library. It is now housed in a 69-year-old structure that was termed inadequate 30 years ago.

Col. Frank B. Rogers, library director, said the library was "desperate" for space. It "cannot go on much longer unless the problem is solved," he added. Congress four times since 1919 has authorized the military establishment to draft plans for a new building, with no results.

The library, a clearing house for the world's medical literature, contains some 961,000 books, periodicals, pamphlets and films. It serves both the Armed Forces and civilians in every field of health. Colonel Rogers said it received 100,000 requests a year for copies of material on medical developments and research.

The library was established 120 years ago by the Army Surgeon General for military use. It has grown into "the largest and most important medical library in the world," according to a medical task force of the Commission on Organization of the Executive Branch of the Government.

No other Government medical agency "serves the future of medical research so intimately and so widely," the task force said in a 1955 report. The report recommended that the library be transferred from the Defense Department.

Senate committee aides have said the bill has widespread support in the medical profession. Representatives of many medical groups will testify Tuesday and Wednesday.

The Defense Department originally opposed the bill. It will withdraw its objections according to committee sources.

Statement in Support of Proposed Appropriations for the Soil Conservation Service

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me in support of proposed appropriations for the Soil Conservation Service before the Senate Appropriations Committee:

The duties and responsibilities of the Soil Conservation Service are among the most essential of all Federal Government activities. In developing and carrying out a national soil and water conservation program through soil conservation districts, it is contributing immeasurably to the welfare of our great farm population and to the Nation.

A mere listing of its activities is sufficient to bring home this fact. Its watershed protection and flood-prevention projects and river-basin investigations are of inestimable benefit to all of the Nation. Reduction of flood damage in 11 major watersheds is one activity which is difficult to measure in monetary value but almost beyond calculation in actual value to those who will thus be protected from loss of property and even loss of life.

Soil, water, and range resources of our country are the foundation blocks of the structure of the national economy. It is the Soil Conservation Service which coordinates, develops, broadcasts information, and carries out many of the most effective measures for the protection of the sources of our food and much of our clothing. How well the resources of soil and water are protected and conserved and even improved will have a direct effect on our standard of living throughout the Nation far into the future.

In the short span of its history the Soil Conservation Service has rendered services of great value to us all. It would be difficult to envisage a farm economy without the vital services which it performs. In the past year, throughout the 2,700 soil conservation districts, over 1,200,000 individual farmers and ranchers were assisted in some measure. Over 4½ million farms totaling over 1½ billion acres are now organized into soil conservation districts. These districts serve as centers for sharing information with all of their members.

Ask almost any farmer and he will tell you that he has benefited mightily from the services offered by the Soil Conservation Serv-

ice. He may have had his entire farm surveyed and a plan for its most efficient utilization prepared. Such a survey would make use of the most effective conservation measures as well as means of improving the quality of the land and crops. The farmer may have been aided in application of such complex measures as drainage and water-disposal systems, farm ponds (a sight now familiar to even the city dweller), diversions, waterways, contouring, stripping, and many others. He is also constantly advised in maintaining such measures of soil and water conservation after it has been applied to the land.

A broader activity of the Service is the upstream watershed protection and flood-prevention program carried out as an integral part of the total soil and water conservation job. The Service works with local organizations that sponsor watershed projects as well as individual landowners and operators in watershed project areas. It aids in preparation of a plan for the entire watershed and helps the local interests to carry out measures found to be most effective.

We have only to remember reading in the daily press, hearing on radio and TV the constantly recurring accounts of floods throughout our Nation to realize the vital need for flood-prevention measures.

The needs of our radiply increasing population for food and raiment must be met. All we have whereby they can be met are our soil and water resources. The must be protected in every way possible. The Soil Conservation Service is rendering a vital and valuable service in so doing. It is essential that the work be continued and even expanded in the future.

Economically the farmer is now going through a period of straightened circumstances. He must be helped a little now, and he certainly deserves it. We, as a nation, owe much to our farmers in the past, now, and increasingly will in the future. So I beg of you do not stint in providing funds for one of the most valuable and essential needs of the farmer, the Soil Conservation Service.

Mr. Chairman, I especially urge you to follow the recommendations of Nolan Fuqua, of Duncan, Okla.; L. L. Males, Cheyenne, Okla.; Harral Allen, Ada, Okla., and president of the Oklahoma Association of Soil Conservation Districts, for $5 million for upstream measures on the Washita and other similar projects.

The project on the Sand Stone Creek typifies the great value of such projects and is a monument to such men as Mr. Frank Dunaway, of Jones, Okla., Dick Longmire of Pauls Valley, and Dave Vandever of Chickasha, who work without compensation, and many other civic minded citizens who realize that there is an average of only 3 inches of top soil remaining in this world and if it is not conserved, 200 years hence there will be no top soil left.

I wish to commend and compliment the especially good work done by men like Mr. Ray Walker, in charge of Soil Conservation Service in Oklahoma, his assistant, Harry Chambers, Earl Wade, and Ed McVicker of Chicksasha, and many others who are serving beyond duty.

This $5 million is for the Washita Valley Flood Control project which is 1 of 11 pilot watersheds established in 1946 by an act of Congress. I had the privilege of assisting in writing this legislation.

There are 64 substation sheds in the Washita Valley. Six or eight are completed, or nearly so. Forty percent of the Washita project is planned and 15 percent is completed.

Another $5 million is needed now, and $5 million per year for 7 years, making a total of $35 million.

There are many other projects needed in the soil conservation district—one near Waurika where we have had devastating floods recently.

A Program for Children

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 9, 1956

Mr. LEHMAN. Mr. President, in the May issue of the fine publication called Parents magazine, there appeared an article by Gov. Adlai E. Stevenson entitled "A Program for Children." This article, like most of Adlai Stevenson's pronouncements, is constructive and thought-provoking. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECERD, as follows:

A PROGRAM FOR CHILDREN

(By Adlai E. Stevenson)

Joy, wonder, and pride attend the birth of our children—but so does a solemn feeling of responsibility. Most Americans would agree that our society should be so ordered that every child may realize the full promise of his natural endowment. Indeed, this concept is imbedded in the very structure of our democracy, which relies finally upon the capacity of the individual.

Our obligation, then, is to guarantee all our children a good start in life and a clear field. How are we measuring up to it?

We can find much encouragement in the medical statistics. Infant mortality is steadily declining and the total life span is steadily widening. Many of the diseases that once ravaged childhood have been checked by immunization, miracle drugs and improving standards of public and private sanitation. But as we take due pride in such milestones as the conquest of polio, we must note, too, that other killers are still abroad in the land and are not yet subject to such concentrated attack as that launched against infantile paralysis by public and private agencies. Heart disease and cancer are no respecters of childhood; paralysis and crippling accidents, multiple sclerosis, muscular dystrophy, rheumatic fever, blindness and deafness take a frightening toll.

The magnitude of the health problem is variously measured, but the charts and tables tell us nothing of the human tragedy each recorded case and his family must bear. Even so, the figures are terrible enough: 8 million eye defects, a third of a million hearing defects, 1 million plastic and orthopedic handicaps, cases of heart disease and even tuberculosis still running into the thousands.

These might be called the visible parts of the record. But we have also had in recent years alarming evidence of the cumulative effect of physical deficiencies of childhood that do not always find their way into the statistics—the determination under Selective Service that barely half of our young men are physically and mentally fit for duty with our armed services. Here is clear evidence that there is much to be done despite our inoculations, vitamin pills, school lunches, and bathtubs.

The responsibility for reducing the health hazards of childhood is partly private, partly public, and there has been much controversy over the division of labor. But certainly there can be no quarrel with the proposition that our children deserve a concerted and carefully coordinated effort to make full use of the scientific tools now available to us and to find new and more effective means of controlling and combating disease.

We need, first of all, a stepped-up public education and public health program that will carry to every community and to every family health-giving and life-saving messages and services. Here we are on well-tested and firm ground. Local and State departments of health, working with the support of the National Government, can take much credit for the decline in child mortality and children's diseases.

But we also need stepped-up research programs that will take the offensive against the great killers and the great cripplers. Again responsibility must be shared. The private foundations and medical institutions will continue to contribute their generous share, but the public agencies, the agencies that must serve all the people, cannot escape their residual responsibility. And it might be noted parenthetically that a first condition of success is the maintenance of adequate safeguards around the right of free inquiry. Men and institutions must be free to push honest search to its ultimate limits; there is no other way of unleashing our Nation's productive intelligence.

EMOTIONAL HEALTH

Physically handicapped children are heartbreaking to see, but those with clouded minds and disturbed emotions are even more pitiful, for they are denied the human right to think and to be. And each retarded child represents a social problem as well as a human tragedy; his hesitant growth grievously burdens his family and his community. We must redouble our efforts to rehabilitate where possible, to ameliorate where practical, and to push forward with maximum speed those heartening discoveries which hold promise of loosening some of the cruel bonds which bind these children.

Retardation is entangled with another critical problem, that of emotionally disturbed children. There are those who would comfort us by asserting that emotional diseases are not new, that they are simply more accurately diagnosed and recorded these days. But serious students in this field see the 50,000 children (between the ages of 2 and 8) who need around-the-clock psychiatric care as a problem whose dimensions at least are new.

Indeed, the whole question of emotional health, and especially the emotional health of our children, is one of the most insistent and elusive problems of our pressured and anxious times. The field is still wide open and requires yet uncharted programs of medical, social, and psychiatric services. We are only nibbling around the edges of a field of inquiry and of treatment which perhaps more than any other is most closely related to human happiness and the full realization of the individual potential.

JUVENILE DELINQUENCY

This matter of emotional health ties in closely with the distressing phenomenon of juvenile delinquency. I do not for one moment believe that a whole generation of our young people is suddenly lacking in idealism, in character, or in concern for decent standards. In fact, we appear to be faced with the strange paradox that children sometimes become delinquent because they are concerned and anxious. But we cannot overlook the fact that delinquency, as measured by skirmishes with the police, is growing at an alarming rate. It has been estimated that there are over a million delinquent children, and if the current trend keeps up this number may well be doubled by 1960. Again, it would be comforting to believe that the mounting total simply reflects better police reporting or rising community standards. But no one really puts much faith in this sort of complacent reasoning, for there is little doubt that the incidence of flaunted community standards and actual breaches of the law are alarmingly in the ascendant.

But if we are uncertain as to why this is so, of what goes on in the distorted depths of wayward young minds, we are still less clear as to what to do about it. Most of us have long since discarded the outmoded notion that punishment which fits the crime can settle the matter. What we need is not retribution for past guilt but deterrents to future sins, and here we are on uncharted seas.

If we do not have all the answers, at least we know that we must explore every avenue of program and policy that offers any hope of preventing young offenders from becoming bitter, disillusioned, and antisocial adults. We know that the attack must be many-pronged and carefully coordinated. And we have more than a suspicion that much responsibility rests on careless, ignorant, or inadequate parents, on preoccupied and oblivious communities.

All of us are quick to point the accusing finger at the other fellow, but this is a short-sighted and self-deceiving approach which commits valued resources to a time-consuming, energy-dissipating merry-go-round. The deep-seated, cancerous core of this problem of juvenile delinquency has roots in every sector of our national life. It appears to grow from some inward inability to come to constructive terms with everyday problems. It is fed, no doubt, by adolescent self-doubt and yearning for the security of gang approval; but it is also nurtured by parental apathy and neglect. It derives sustenance from every evidence of adult tendencies to talk in one way about what is right and good but to act in another. And it is nourished by the materialism of a civilization that seldom pauses to ask where it is going, by a prosperity which still finds one-third of the Nation ill housed, and by civic indolence which permits millions of families to become contaminated by slum living.

In the end juvenile delinquency statistics prove only one thing: that we have all failed. The wolfpacks of the city streets are symptoms of a corrosion of public and private morals beyond the reach of police measures. Schools, churches, recreational and other child-serving community institutions, as well as corrective and disciplinary agencies, must move forward massively and together.

The juvenile delinquent, like the physically crippled child, is the extreme symbol of conditions that less visibly affect all our children. Obviously an educational system which permits a perceptible number of our young people to become active rebels against society has failed in important respects. It is, therefore, pertinent to inquire whether that same system is adequately serving the great majority who are not identified with overt revolt and therefore do not find their way into the statistics of the juvenile courts. Are these normal children being adequately prepared for the increasing complexities of our age?

MORE AND BETTER SCHOOLS

Americans have always been proud of our educational system—proud of the broad concept of democracy that underlies it, proud of the high literacy rate it has produced, proud of the scientists and technicians, professional wrokers and business leaders who are its end products. Yet anyone who has taken the time to inspect the school facilities available to his children in almost any community in America is aware that in many important respects education has not kept pace with the burgeoning growth of the postwar years.

We see now, when we go to examine it, a school system that needs 300,000 classrooms to serve its preenrollment; that needs 180,000 teachers; that confines 6 million children to buildings that actually are unsafe; that subjects a million and a half impressionable young minds to the stopgap teaching which alone is possible in double or split shifts. It is a school system that only rarely provides for the special needs of unusually handicapped, and unusually gifted children. It is a school system that usually does not pay its teachers enough and therefore witnesses an annual exodus of trained personnel to more rewarding fields—and with it a qualitative loss in the level of instruction at a rate that defies measurement by the statisticians.

Perhaps the only encouraging aspect of this picture is that, because the deficiencies of our schools are virtually universal, most Americans are aware of them and concerned about them. The worst of our schools are intolerable, and even the best are not good enough. So there is a stirring throughout the country, a demand for action at the Federal, State, and local levels that even the most complacent politicians can no longer ignore. Popular support for an educational program that will meet today's needs, and take due account of tomorrow's, is a force in being. All that is needed now is wise and effective leadership to channel that support to productive ends.

THE RESPONSIBILITY OF GOVERNMENT

I have dealt here primarily with the responsibility of Government. Reduced to its ultimate simplicity, it is the responsibility for the needs of our children which will otherwise be unmet. Obviously the field is broad. Expanded public programs in health and education, as I have suggested, are in order. Moreover, the Government, through its aid to dependent children and old-age and survivors insurance programs, has assumed direct responsibility for the support of indigent children. Yet there remains a large and essential area of private responsibility which the Government, by its nature, cannot and should not invade.

Which brings us full circle to our individual obligation, not only to our own children, but to all children.

Public and private welfare programs, however forward looking, are poor substitutes for comfortable and loving homes. The support of sustained affection, experiences in giving as well as receiving, these are beyond price and beyond full substitution.

The attitudes, the values, which germinate inside the close circle of family cast lifelong shadows, and are the ultimate source of private morals and public purposes. Here concern for individual growth and individual responsibility can develop to its fullest, and here also is born the will to participate in self-government. Recent studies indicate that children who come from families that have demonstrated sustained civic concern are most likely to be willing to shoulder public responsibility. Schools, churches, other community institutions, even politics and politicians, contribute their share to shaping civic virtue—and its opposite—but the prime moving force is the family.

Every program, public or private, that reinforces individual families feeds strength into democratic processes. Much of our social legislation has this purpose as a by-product, if not as a major objective. Housing programs, unemployment and other types of social insurance, maximum hours and minimum wages, nursery schools and other aids to working mothers have all helped to stabilize families.

What the children of America need in 1956 is not bright election-year promises, lightly given and soon forgotten. They are not well served when either Government or private agencies move reluctantly, erratically, and only under the goad of crisis. For their sake we must face all the facts in all their total dimensions—including their costs—and never falter in our conviction that the welfare of children is worth whatever it costs.

The Medical Library Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Boston, Mass., Herald on March 27, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MEDICINE'S WEAKENED LINK

One 3-by-5 card mailed for 10 cents can keep a team of medical researchists from needlessly duplicating a previous experiment. More, such a card can enable researchists to jump years ahead in their experiments. This is the bibliographical service of the Armed Forces Medical Library in Washington which, among other things, supplies the indispensable link in research, civilian and military, that keeps medicine moving ahead efficiently.

Yet that service and others as valuable are jeopardized by a peculiar, almost unbelievable situation.

The Armed Forces Medical Library is, by historical accident, a responsibility of the Department of Defense, although it serves civilian needs far more than military. According to a Hoover task force, it is the largest and most important medical library in the world. It holds over 650,000 bound volumes, receives over 5,000 medical periodicals and needs a mile of additional shelf space a year. Without its help, much of the research and clinical work now being carried on by the medical profession would be impossible.

Yet this irreplaceable collection is largely housed in a 69-year-old building, totally unsuitable, condemned 30 years ago as inadequate, so antiquated that its iron columns have buckled. Some of its books, charts, and manuscripts of incalculable value are stored in a warehouse in Cleveland, in danger from fire, and large numbers of volumes will soon have to be removed to highly flammable barracks.

Why has Congress let this happen? Because the Defense Department, compelled to cut its cloth to a closely circumscribed budget, has refused, and understandably, to tailor its military requirements to this mainly civilian function.

Now Congress has before it a more drastic move. A bill sponsored by Senators HILL and KENNEDY would take the library from the Defense Department and put it under an independent National Library of Medicine headed by a Board of Regents. The Board would prepare plans for a suitable new building.

This proposal is similar to the Hoover task force recommendation, except that the latter would make the library an almost autonomous division of the Smithsonian Institution, like the National Gallery of Art.

Either is a reasonable solution to this strange and little known problem. But the bill can easily be forgotten in this slow-moving, election year Congress. It needs the alert attention of the public, particularly of the American Medical Association, and the active concern of Senator HILL'S Committee on Labor and Public Welfare, which now has the measure.

Strengthening the Bridge

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. RIVERS. Mr. Speaker, recently Gen. Nathan F. Twining, Chief of Staff, United States Air Force, dedicated a new terminal building for the Military Air Transport Service at Charleston Air Force Base in my home city. For centuries Charleston has been an important seaport and Navy base. During World War II it was an important port of embarkation for military personnel being sent to overseas theaters. Now it is a great airport, and one of the main ports of aerial embarkation. Henceforth, passengers and freight will leave for or arrive from Puerto Rico, the Panama Canal Zone and South America with regularity.

Charleston Air Force Base has been approved as a permanent base and, thanks to action taken by the public spirited citizens of Charleston, is certain to be designated a permanent Air Force installation. A good many people deserve the credit for this, especially the members of the Charleston Chamber of Commerce who have been consistently interested in the defense of this Nation, and leaders in recognizing the importance of air power.

Air power is not merely bomber and fighter power; it is also, and more especially since World War II, airlift—or air transportation. It was airlift—Operation Vittles—that forced the Russians to abandon their blockade of Berlin in 1949. During the first year of the Korean conflict, our airlift of personnel, ammunition and supplies far surpassed the Berlin record. Our combat Air Forces fought and won the air war in Korea, but the air bridge over the Pacific created by our air transportation system made the victory possible.

Henceforth our air transportation system must serve as the bridge over which forces and supplies will move with utmost speed to the scene of combat in a future war. Victory may indeed depend upon the rapidity of that movement or, to continue the figure, the strength of the air bridge.

The MATS terminal at Charleston Air Force Base is one end of this great air bridge. It is important in peace. It may prove crucial in war. The dedication of the terminal and the use to which it will be put strengthens the bridge and strengthens the Air Force that guarantees our security.

Mr. Speaker, I take pride in the consent of my colleagues to extend my remarks to insert in the RECORD the address by Gen. Nathan F. Twining, which follows:

ADDRESS BY GEN. NATHAN F. TWINING, CHIEF OF STAFF, UNITED STATES AIR FORCE, AT THE DEDICATION OF MILITARY AIR TRANSPORT SERVICE TERMINAL, CHARLESTON AIR FORCE BASE, S. C., MARCH 16, 1956

It is a pleasure to be here with you to participate in your celebration that marks a real step forward in air transportation. This terminal is not only a valuable addition to the Air Force; it is a tribute to Charleston and Charleston's good relations with the Air Force.

For centuries Charleston has been an important seaport and naval base. Now your city takes its place as a link in modern air transportation.

The people of Charleston can be particularly proud that this airport is much more than a center of domestic air travel. As of the first of this month, Charleston Air Force Base became one of our main ports of aerial embarkation. Here passengers and freight will leave for or arrive from Puerto Rico, the Panama Canal Zone, and South America.

As you know, Charleston Air Force Base has been approved as a permanent base and the city officials of Charleston have prepared to offer a deed to the Federal Government for the necessary property. The deed is currently being reviewed by the United States Attorney General. If the deed is approved, and we expect that it will be, the way will be open for the base to be designated as a permanent Air Force installation. The fact that Charleston Air Force Base will become a permanent base, that it has become a port of aerial embarkation, and that we are here dedicating this terminal, are not the results of Air Force decision alone. One of the main reasons behind all of these actions is the fact that the people of Charleston have taken a very deep interest in their base and in the work that the Air Force is doing here. The Charleston Chamber of Commerce has been most cooperative in making this base what it is, and I want to endorse what Colonel Wassam said in thanks to the people of Charleston.

I also want to acknowledge the fine help the Air Force has received from Congressman MENDEL RIVERS. He has been extremely interested in the defense of this Nation and has been a leader in recognizing the importance of airpower and in working for a stronger Air Force. Much of the credit for the excellent relations that we enjoy down here and for the importance of this base must go to Congressman RIVERS.

It is essential that all of us realize the importance of airpower during the days of international unrest. When we think of airpower the picture of jet bombers and supersonic fighters comes to mind. But I want to emphasize how important a part of airpower our air transportation system is in the airpower picture.

Since World War II air transportation itself has grown tremendously. While growing, it has greatly increased the interchange of people, of goods and ideas.

Air transportation has contributed to peace and our security. It was the means of winning the first battle of the cold war: The Berlin Airlift. Thousands of people were kept alive by food, fuel, and medicine. Freedom was maintained by air transport alone.

Air transport won this cold war battle just as decisively as the atom bombers ended World War II. Our victory in Berlin had a profound effect on the Soviets.

Air transport became even more important in the next scene of battle against Communist aggression: Korea. The airlift of forces, ammunition, and supplies in the first year far surpassed the Berlin record.

By early 1952 military transports combined with commercial airlines to set a new airlift record—more than 3½ million ton-miles were flown.

Commercial airlines carried more than half the burden. This is an outstanding example of the operational efficiency of our airlines.

This accomplishment was capped only by their readiness to meet the emergency. Within 3 days after the Communists attacked, our private airlines had planes in the air on the way to the Korean theater.

Our combat air forces fought and won the air war in Korea—not only over South Korea, but over North Korea as well. Important in this victory was the air bridge over the vast Pacific created by our air transportation system.

This gives you an idea of the great contribution to our airpower made by the airlines pilots and the planes they fly.

Another big part of our national airpower that we should be proud of is our system of air bases and airfields. If war should ever strike this Nation again, our airfields, military and civilian, could very well be one of our most priceless assets. In an atomic war, the more airfields we have the better our chances of successful retaliation against an aggressor. More airfields mean more dispersal. More dispersal means more of our retaliatory force could survive an atomic onslaught. More airfields mean more division of an enemy's effort. More airfields would make this job tougher and our job easier.

More airfields also give us another important advantage. In case this country were attacked by an enemy atomic striking force, our airlines could very well be the only surviving transportation system. Airfields could give us the ability to sustain our Nation and to support and rehabilitate any devastated area.

You all have a share in this great airfield we see here—you also have a share in many other airfields that you do not see—the many bases of your United States Air Force. These extend three-quarters of the way around the world. From the far off Middle East through Africa and Europe, across the Atlantic to Greenland, and stretches westward to Alaska. From Alaska they reach down through the Far East to Japan, Okinawa, and the Philippines.

This airfield here will be important to our security in war just as it now is important to commerce and welfare in peace.

I am honored to be present to dedicate this terminal. I feel honored also to be among those who have helped to give us strength in the air so that we can remain safe and free.

With your help and your support we will maintain our position of leadership in the air, so that this great Nation can continue to grow and prosper.

National School-Lunch Program

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me in support of the national school-lunch program before the Senate Appropriations Committee:

STATEMENT OF VICTOR WICKERSHAM IN SUPPORT OF THE NATIONAL SCHOOL-LUNCH PROGRAM BEFORE SENATE APPROPRIATIONS COMMITTEE

From a small beginning, the school-lunch program has expanded rapidly until today approximately 10.5 million school children in the United States are participating in the program. In Oklahoma about 170,870 children were participating as of December 1955.

The National School Lunch Act, which became effective June 4, 1946, placed the school-lunch program on a permanent basis. It states that the purpose of the program is to safeguard the health and well-being of the Nation's children by encouraging them to eat more nutritious food. In signing the bill, on June 4, 1946, President Truman commented: "In the long view, no nation is any healthier than its children or more prosperous than its farmers; and in the National School Lunch Act, the Congress has contributed immeasurably both to the welfare of our farmers and the health of our children."

Congressional discussions of the school-lunch program have generally credited it with a two-fold purpose—the use of surplus agricultural commodities, and the improvement of the health and nutrition of school children. In its early stages, the program seems to have been chiefly inspired by the surplus of agricultural commodities. School lunches were one method adopted for distributing these surpluses. But as the program has developed, the two purposes have received equal emphasis; and, particularly in educational and health circles, the greater emphasis has tended to be upon the health and nutritional benefits.

To assist the States in carrying on a school-lunch program, Federal funds are allocated on the basis of an equalization formula which takes into account the per capita income of each State and the school population. For the years 1947 to 1950, inclusive, the States were required to match each dollar of Federal funds by $1 from sources within the State. For the years 1951 to 1955, payments were based upon the condition that for each dollar of Federal funds, the State's matching requirement would be $1.50. For any fiscal year after 1955, each Federal dollar must be matched by $3 from sources within the States. However, in the case of any State whose per capita income is less than the per capita income of the United States, the matching required for any fiscal year shall be decreased by the percentage which the State per capita income is below the per capita income of the United States.

The Federal Government appropriation for the national school-lunch program for fiscal year 1955 was $83,236,197. In addition to the cash appropriation, the Federal Government donated about $70 million worth of surplus commodities to the States to be used in the program. Of the cash appropriation for fiscal year 1955 Oklahoma received about $1,228,129, and in addition to that amount received about $3.7 million worth of surplus commodities.

The cooperation of States and the local communities in the administration of this program and financial contributions in making the national school-lunch program a success is most commendable. It proves to us again that the Federal Government assistance in this program, which provides some incentive for carrying on the program, is highly justifiable. We must, however, keep the program up to date. As participation increases contributions must be increased to maintain comparable nutritional standards from year to year.

The necessity for better nutrition was demonstrated to us during World War II. The national school-lunch program is an important means of spreading knowledge of better nutrition among all people throughout the country. While results of this aspect of the program cannot be measured in quantitative terms, it may well be that future generations will look upon this basic step toward better nutrition for our children as the most important single achievement of the program.

U. S. Department of Agriculture—Agricultural Marketing Service

SELECTED STATISTICS ON NATIONAL SCHOOL-LUNCH PROGRAM IN OKLAHOMA, FISCAL YEARS 1947–55 AND PRELIMINARY 1956

	Fiscal years									
	1947	1948	1949	1950	1951	1952	1953	1954	1955	1956 (preliminary)
Number of schools participating	1,561	1,447	1,393	1,546	1,590	1,669	1,653	1,696	1,771	1,763
Number of children participating	117,634	107,240	115,561	129,763	139,515	145,578	145,873	154,975	163,382	168,865
Federal cash apportionment	[1] $1,400,252	$1,216,167	$1,452,971	$1,524,239	$1,508,514	$1,313,928	$1,329,151	$1,318,090	$1,228,129	$1,181,309
Value of sec. 6 commodities [2]	$123,354	$315,442	$360,736	$364,210	$419,775	$342,654	$343,459	$275,499	$240,633	[3] $149,308
Value of surplus commodities [4]	$61,714	$397,682	$632,295	$839,972	$775,815	$475,394	$1,106,714	$1,818,138	$3,700,471	[3] $843,000
Number of meals served in program	16,249,000	16,706,000	18,538,000	21,183,000	22,868,000	23,177,000	23,690,000	25,482,000	26,864,000	[3] 12,439,000
Value of foods purchased locally by schools	$2,228,350	$2,578,494	$2,691,054	$3,023,175	$3,449,072	$3,793,063	$3,812,323	$3,854,572	$4,287,895	[3] $2,230,283

[1] Does not include $210,443 apportioned for equipment.
[2] Acquired under sec. 6 of the National School Lunch Act.
[3] July–December 1955.
[4] Acquired under price support and surplus removal programs.

The Medical Library Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Wednesday, May 9, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the New York Times on April 1, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATIONAL MEDICAL LIBRARY

The finest medical library in the world is that of the Armed Forces. It contains almost a million books, receives more than 10,000 serial publications currently and annually about 100,000 journals and monographs, and supplies medical information to every institution that wants it. For years it has been inadequately housed and supported. Yet it is an indispensable aid in medical research.

If he were denied access to its rich resources, the research clinician or biologist and public health officer might well spend weeks, months, possibly years in exploring a region that may have been penetrated by some Japanese, Russian, or other forgotten or unknown scientist. Realizing this, Senators LISTER HILL and JOHN F. KENNEDY have introduced a bill which would separate the library from the Department of Defense, convert it into a National Medical Library, provide the necessary funds for its proper accommodation and maintenance and then place it on the same footing as the Library of Congress or the National Gallery. As it is, the library is housed in quarters that were condemned over a generation ago.

The Library of Congress is a national institution which meets needs far wider than those of Congress. Similarly, the library of the Armed Forces meets far more than military needs. Besides, the time passed long ago when the library was merely an adjunct of the Army's medical service. It is time that we had a National Library of Medicine with a board of trustees and a budget of its own. Neither its present name nor its anomalous place in the administration of the Department of Defense suggests the function that the library serves in meeting the needs of medical men all over the country.

The Hoover Commission is in favor of calling the library by its right name, expanding it and giving it the status that it should have had long ago. There is no sign of objection from the Department of Defense, which would probably be glad to rid itself of an administrative burden that has no direct connection with strictly military matters. The Hill-Kennedy bill deserves the approval of Congress.

Hiss' Appearance at Princeton

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter I received from a Princeton alumnus which should make interesting reading. The letter is as follows:

HARRISBURG, PA., *May 7, 1956.*

Hon. T. JAMES TUMULTY,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN TUMULTY: As an Orangeman with a Princeton tradition in his family background (third generation), let me congratulate a son of old Erin for lancing the boil which finally came to a head at Princeton in the Hiss invitation. Truly you Irishmen will convert an old Scotsman like me by your example yet.

The Hiss invitation is of course not an episode in Princeton's history, but the result of a trend among its administration and faculty of long standing. Numerous alumni like myself have been protesting the growth of left-wing and un-American influences at Princeton University for years, only to earn

the hatred and contempt of the administration of the university and many alumni. We have made our protest without effect, and it appears that a reform, if any, must come from outside influences like yourself.

The reaction of the majority of the Princeton alumni proves that most of them are good Americans who loathed the idea of lending Princeton's good name to a traitor.

It is to be hoped that the Hiss affair will finally arouse Princetonians to throw out a faculty and an administration which—(1) Teaches the students such things that they think it is smart to invite a traitor to Princeton; (2) teaches the students such things that they give a standing applause to a traitor; (3) lets the president of the student society who invited Hiss to Princeton off with a light reprimand, instead of a resounding and disgracing rebuke; (4) refuses to take advantage of the university rule requiring advance clearance of speakers with the administration in order to cancel Hiss' appearance, and thus connives at Hiss' appearance at Princeton.

But are the students to be blamed if they follow the example of their elders who granted an honorary degree to such Red fronters as Bishop Oxnam, Ralph Bunche, Linus Pauling, and Harlow Shapley, and whose president wrote a rave review of Elmer Davis' book, "And We Were Born Free"?

Congressman, I say give 'em hell again and bravo!

ANDREW W. GREEN,
Princeton 44.

Preservation of Remnants of an Ancient Culture on the Site of the Dalles Dam

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 9, 1956

Mr. NEUBERGER. Mr. President, my colleague, the senior Senator from Oregon [Mr. MORSE] and I requested an appropriation for fiscal 1957 which would enable the National Park Service to save for future generations, the remnants of an ancient culture found in the vicinity of Celilo Falls on the Columbia River—a site soon to be covered by the waters impounded by the Dalles Dam.

I mention the subject today, Mr. President, because the hours and days are few, indeed, in which the work of saving these precious remnants of an old culture may be expedited. For future generations there will be a deeper appreciation of the past if the program of preservation is supported by an adequate appropriation.

To the end that a wider understanding of the purpose of this request may generally be had, I ask unanimous consent to have printed in the Appendix of the RECORD of an article by Fred W. Vincent, entitled "Pictograph to Petroglyph," which appeared in the Portland Journal's Northwest Living magazine of April 22, 1956. This article was called to my attention by W. S. Nelson, the dean of Oregon Chamber Managers, who serves the chamber of commerce at The Dalles, Oreg..

I also ask unanimous consent to have printed a statement by Emory M. Strong, of the Oregon Archeological Society. He speaks as a scientist keenly aware of the infinite loss which is sure to occur if there is not an immediate and sufficient effort made to save those evidences of earlier inhabitants deposited century after century at this site.

Also, Mr. President, I ask unanimous consent to include in the RECORD excerpt's from a letter I received from Jimmie James, dedicated and devoted pleader for the rights of his fellow Indians. Jimmie speaks in his letter, not with anguish at what is happening at Celilo, but with a profound sorrow—sorrow for the desecration of Indian graves, sorrow for his people who must lose this intimate association with the past, and sorrow for a people who in their rush to possess the earth, rudely trespass on the chambers of the dead. And from the Fort Vancouver Restoration and Historical Society, Inc., at Vancouver, Wash., Mr. President, I submit a letter from Carl Landerholm, secretary of the society.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

PICTOGRAPH TO PETROGLYPH

(By Fred W. Vincent)

"Hee-hee!" was the Columbia and Snake River Indian expression during the early days when the old Chinook jargon was the universal trade language of the Oregon country.

It meant "have fun."

And there is plenty of fun and lots of frustration too, for anyone currently attempting to discover the actual meanings of the so-called Indian "rock writings" found on Columbia River cliffs from The Dalles eastward, and also in various parts of eastern Oregon and other Western States.

High honors await anyone who can determine the when and why of these crude "writings" that were hand chipped or painted on the hard basalt rocks which line the river and its tributaries.

The writings appear in three distinct forms: The first is the petroglyph. Here the picture is carved into the rock's surface. Generally speaking the incised lines are shallow, ranging from a scratch to a quarter of an inch in depth.

The second "writing" is the pictograph. This was made with paint consisting of ocher, hematite, or charcoal mixed with animal oil and resin. Red is the dominant color with yellow, black and white occupying secondary positions.

The third "writing" employs the petroglyph with superimposed pictographs.

For more than a century, curious amateurs and expert archeologists alike have pondered them with disappointing results. Now, for the last time, men of science are bending every effort to garner first hand records of the "writings" in The Dalles district, since these specific writings along the river's shores are doomed.

Late next year the last gap in the huge Dalles Dam will be closed. The river level will be elevated 90 feet. Under the deep waters of the resulting 24-mile-long lake two of the Columbia's most spectacular sights will be submerged—Five Mile Rapids just above The Dalles, and Celilo Falls, which during ages past has been the salmon fishing grounds of Pacific Northwest tribes.

The flooding will mark the end of the tribal gathering of coastal and interior Indians for trade and intertribal festivals. Beneath the water will go still unexplored ancient village sites, the mystifying rock writings, and other rich archeological remains that might be important keys yet needed to unlock the long ago past to disclose the "who" of our prehistoric peoples; how they lived, and how they scattered to found new homes throughout our two Americas.

Bit by bit patient archeologists have located the main routes that ancient migrants followed for thousands of years as they settled a vast new world.

From excavations of primordial village sites and caves; from the recovery of stone artifacts, human bones, and from the charred wood of ancient campfire remains researchers have gained clear ideas as to how the American Indians' primitive ancestors once lived, died, roamed, hunted, spun, wove, and with tools of stone, wood, and bone tilled the soil and developed intertribal commerce.

Modern man has, likewise gained a goodly knowledge of the various cultures achieved by America's ancient settlers, including the more recent and advanced civilizations of Peru, Mexico, and Central America at a time when Europe was only just emerging from savagery.

But our scientists know there is far more to be learned; to many, important archeological questions such as, "In what part of Asia did these peoples originate?" "When did they first reach the Western Hemisphere?" "How long did the main stream of migration last?" "Did all of them migrate across the 'Alaskan bridge' afoot or did some of them take to the ocean and find their ways to warmer climates by raft and boat?"

Some of the answers, it is believed, may be found if and when the rock writings, common to both North and South America, are, accurately deciphered and accurately dated. For example, the Mayan ornate writings are fairly well dated, because Mayans of Yucatan built of stone, and developed a written language. But the crude rock writings that appear here in Oregon and in 40 of our 48 States, are dateless and lack adequate translations.

There are reasons for this. No nomadic culture can be accurately dated until it can be definitely tied to some chronology that is already known. Oregon's early inhabitants were fundamentally hunters, and as such they were nomadic in their habits. For the most part they were constantly on the move in search of game, fish, berries and roots. As a result they left behind them only legends and artifacts, such as arrows and stone spearheads and those puzzling "writings" on the rocks.

Present day Indians here in the West with very few exceptions, disclaim any knowledge of the petroglyphs and pictographs despite the fact that a number of their symbols are widely used in tribal ceremonies and rites. They are also employed as patterns for ornamentation of baskets, textiles and products.

The fact that the rock hewn or painted characters contain so many identical or similar forms, makes it clear that the peoples who lived in the rock-writing era knew what the "writings" meant. Differing techniques also indicate that the "writings" were the products of several Indian cultures, according to geographic areas.

The most common of our regional "writings" revolved around figures of human beings, game animals, reptiles, anthropomorphic characters, birds, sun rays, arrows, circles, zig-zag lines, rain signs, and a number of intricate designs which bear no apparent resemblance to any specific thing.

Elk, deer, mountain sheep and antelope are the most frequently pictured among the game animals. Lizards, rattlesnakes, and horned toads lead the reptilian category. The fact that such forms of life thrive here today would argue that climatic conditions then were not too different from those of today. Reptiles, for instance do not take kindly to cold and ice. In the Dalles region pictures of humans are extremely rare. Many however are found east of the Cascades, armed with bow, arrow and spear. In Oregon, Washington and Idaho, most of

the petroglyphs and pictographs are found close to streams, lakes and points where old Indian trails crossed each other. Aside from the Columbia and its tributaries, the greatest concentration of the writings are found in central and southeastern Oregon. They also extend into Idaho, California, Nevada and the Southwest. One of the richest finds yet is located near Long Lake, close to the California border.

The presence of the writings along the shorelines of former lakes indicate that it was well populated and was first class hunting country. Carbon 14 tests on an old pair of sandals recovered by University of Oregon's excavators, indicate that the aborigines lived there at least 9,000 years ago. Yet, says Dr. L. S. Cressman, University of Oregon anthropologist, there is no evidence, so far unearthed, that shows any relationship between that ancient stone age culture and the petroglyphs and pictographs found on the rocks.

The same holds true for the petroglyphs and pictographs in the Dalles district according to Portland Archeologist David Cole. Cole, Dr. Cressman's former assistant, directed excavation work on several ancient Indian village sites above the rapids from 1951 until 1954 when he went to Japan to serve as a United States Army consultant in anthropology.

The excavations were completed last year by other archeologists under Dr. Cressman's direction. They yielded stone artifacts which indicate that aborigines lived in the district probably 11,000 years ago.

Many geologists estimate that the last ice age that gripped North America occurred between 16,000 and 20,000 years ago. Archeologists believe that man arrived after the ice was in full retreat. There is plenty of evidence to show that man had already made his way as far south as New Mexico 12,000 years ago. If he was in Oregon at such a time, he might, conceivably, have pecked out petroglyphs with his stone chisel. However, the presence of modern animals in the writings points too strongly to post-ice age authorship to be ignored. The writings themselves indicate man's aptitude with his chisel may have developed thousands of years later. He may not even have abandoned the art until sometime after the arrival of the white man on the scene.

Support for this latter theory is given by the appearance of the modern horse in the petroglyphs. The ancient nomads were horseless. They had no horses until the early 1500s when Spanish invaders brought them to Mexico. Up to that time the Indians depended on their own two feet and on canoes or dugouts for transportation.

Here in the Northwest, the horse did not arrive until the late 1700s when Dakota and Shoshone Indians brought them into the intermountain country. When Lewis and Clark passed through our lands in 1805 the coastal Indians, from the Cascades west, had no horses and depended on their canoes to get around.

Nevertheless, "Mr. Hose" with men riding him, is found pictured at 5 Oregon sites. One site is just west of the Cascades summit. The remaining 4 are in eastern Oregon and include Long Lake, where the adventurers from Asia lived 9,000 years ago. All of which proves only one thing. A couple of centuries ago Indian artists were still chiseling out petroglyphs. But this fact does not answer the question as to when they started to make them.

Pictures of the horse are brighter, and may have been added to the original subjects, even as a pictograph depicting a buffalo has been found at the head of Five Mile Rapids. Buffalo never ranged in Wasco County.

There you have it. Pictures of things we know, and some symbols whose meanings the experts know, are included there on the rocks. But no one knows exactly what thoughts or information the pictures were intended to convey by the Indian artists who produced them.

Modern researchers do agree on some points. They know that rock writing had a real purpose. Some undoubtedly were related closely to fundamental religious beliefs in the magical powers of gods to make nature work for good or ill. Others may have been records of personal or tribal achievements. Still others may have been signs pointing to good hunting, berry patches, or water. Others may have indicated boundaries between neighboring tribes, while still others may have been related to various tribal ceremonies, such as initiatory rites of boys and girls into full tribal membership.

All of them within the reaches of a rising lake are doomed to pass from modern man's sight. With them must go two of the ageless river's greatest grandeurs, its rapids and its falls.

All that will be left will be stone artifacts, photographs and typed memories displayed in a museum which W. S. Nelson, manager of the Dalles Chamber of Commerce, is hoping the National Park Service will build nearby.

If you want "Hee-hee" so far as concerns this segment of the Indian's history make haste, next year it will be too late!

MARCH 26, 1956.

To the UNITED STATES SENATE:

There is probably no place in the United States so rich in historical and archaeological lore as the area soon to be inundated by the waters of The Dalles dam. Here is the start of the great Columbia River gorge, the only pass for hundreds of miles north and south through the Cascade Mountains. Here also are Celilo Falls and the Long and Short Narrows of the Columbia where the river, usually nearly a mile wide, is compressed into a few hundred feet and in the words of Lewis and Clark "in these narrows the water was agitated in a most shocking manner, boils, swells, and whirlpools."

The falls and narrows made ideal places for the taking of the salmon which formerly ascended the river in incredible numbers. From hundreds of miles in all directions the natives gathered here to fish, and being in the only pass it became a great trade market also as the Indians from the rain swept coast met those of the barren plains. At the head of the Narrows was the village of Wishram described at length by Washington Irving in his book "Astoria", and many others both historic and prehistoric. Early journals indicate that as many as 5,000 Indians were encamped at one time on the narrow ledges beside the falls and rapids.

This concentration of natives from many tribes greatly enriched the area in archaeological data. Buried in the depths of the occupational strata is a wealth of scientific information and a treasure of museum specimens. On the basalt cliffs surrounding the region are hundreds of the finest examples of aboriginal art in the United States. All of these things are a great cultural heritage, they should not be permitted to be lost to the public, and to the students of ethnology.

Through this pass may have come some of the first inhabitants of this continent. Preliminary excavations by Dr. Cressman of the University of Oregon and Dr. Osborne of the University of Washington uncovered occupational strata at depths of 27 and 22 feet, respectively, of an unknown culture that may have preceded the invention of the bow and arrow. The famous Wakemap Mound, a midden over 20 feet deep and indicating a succession of cultures, may hold the key to the history of early man. On both the Oregon and Washington shores are ancient sites that have never been exploited.

The petroglyphs and pictographs, or rock carvings and paintings, are a great tourist attraction as well as a valuable cultural media. Of the hundreds in the area, about 25 are of such an outstanding nature that it is unthinkable to let them be lost for all time. These are not the random markings usually associated with Indian picture writing, but true expressions of an artistic urge. Being in an inaccessible portion of the river, they are as yet little known except to the amateur and professional archaeologist.

The loss of similar but not so important historical and archaeological data behind other dams on the Columbia and elsewhere led to the formation of the Oregon Archaeological Society to assist in the preservation of these American heritages. As amateurs we are spending hundreds of days of volunteer labor in The Dalles basin but much of the scientific digging and the removal of the petroglyphs is beyond our capabilities. We ask only that sufficient money be appropriated to cut away the art specimens from the cliffs for removal by barge when the pool is full, and for the employment of skilled archaeologists for the tracing of the history of the region through excavations.

We feel that the Government, by whose hand these things are being inundated, cannot shirk its duty to preserve these valuable historical, scientific, and cultural materials.

EMORY M. STRONG
(For the Oregon Archaeological Society).

INDIAN CEMETERIES ARE JUST AS SACRED AND HAVE THE SAME RIGHT OF PROTECTION AS THOSE OF THE WHITE PEOPLE

JIMMIE JAMES,
PRESS AGENT FOR THE
YAKIMA INDIAN NATION,
April 26, 1956.

Senator RICHARD L. NEUBERGER,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR: Today, I believe I saw one of the most depressing things that ever came to my attention, and I have seen some pathetic ones. I have believed in the past that man's cemeteries were sacred, and deserved all consideration that we could give our consolation to those who still lived, no matter if it were today or yesterday—because cemeteries are memory chests where we lay away our loved ones and our heroes alike—we know they do not remain there—but we like to be able to feel they are near and cherish their memory by strolling by or leaving some token we know they most loved, and, according to our laws and customs, these places are guarded by every God-fearing person within our Nation. We have been taught this in churches and at mother's knee, and know beyond a doubt this principle is right, right for every race, no matter from where they come, nor how small their group may be. We have seen long, straight highways reaching for miles on end, with a bend in the road turning out around a small cemetery rather than disturb it, although it may be tumbled down and ill kept and stood for over a hundred years—but my belief in this principle suffered a shock and all but fell apart.

I have the word of the people who are losing cemeteries, their Arlingtons, holding their Washingtons, Lincolns, and Jeffersons, as well as great leaders and warriors who outsmarted this Nation's best, these people are again feeling the double standard they have known so long. Some say, "Their cemeteries are not marked," as the white man's are. This is, because to mark an Indian's grave is to mark a place to dig for relics.

The fiction writers, through the years, have done their job and done it well, and have made museum pieces of our dead. They term skulls and beads or anything that stands the ravages of time relics, but now our graveyards, if they stand in the way, are being considered just yardage, dug and used

for fill just like any other earth soil, or roadbeds or waste, regardless that the soil holds hundreds of bodies that have become a part of mother earth.

The churches throughout the Nation and kindred organizations must not know of this cemetery destruction that is going on so heartlessly, without consideration. When they do, pleace offer a prayer that this may stop and we may be considered people like other races and enjoy the same privileges because we have given much to mankind—although we fought like any other race to keep some of our homeland, our security, and treaty privileges.

Your attention is respectfully drawn to these facts: When the Dalles Dam is completed and the huge gates are closed against the stream—water will rise, flooding land never intended to be flooded. The water will cover many burial places, used by the Indian people, some since the beginning of time.

I have done as you suggested, gone to Celilo Falls and talked to people who are losing their cemeteries, and this is the picture I got.

The cemetery at Big Eddy on the Washington side and the burial island just above the dam as well as very ancient ones along the Columbia will be flooded. My attention was also called to the burial grounds that lie within the village of Celilo, which will not be flooded. But this is what happened as the facts were told and shown to me at the grave yard, several Indian residents varified these facts, so they are true beyond a doubt. When they moved the railroad tracks to higher ground, and built a new road to the lock house and lower administration buildings near the river, bulldozers and carriers cut their right of way through this cemetery. The railroad right of way seems to be at least 60 feet wide and 6 or 7 feet deep and the roadway is about 30 feet wide and about 5 feet deep, these cuts are through the burial ground, also there was considerable dirt removed from this cemetery all over the top, for just what reason I could not tell, unless it was for fill somewhere else. But from what I could learn, and I spent considerable time there, no one either asked or listened about this grave yard they just simply started work as on any other section, although the Indian people went to them and protested, and told them it was their cemetery. First they told the oiler, and I believe he brought it to the attention of the head engineer of that part of the project. This man came and told them the bones were animal, and just laughed and walked away. But these (animals) bodies were shrouded in buckskin and had black hair and beads, so I am quite sure I am not mistaken, all you have to do is interview the people at Celilo Falls and they will tell you more than I have.

We stop traffic for a funeral to pass, no matter if the President of the United States has to wait, so would it be asking too much to stop the construction of the dam, if need be, until the Indian people can be contacted and treated like the white skinned people, in caring for their dead, because you must remember the Great Spirit is the same as the white man's God.

Very sincerely yours,

JIMMIE JAMES.

PORTLAND, OREG.

FORT VANCOUVER RESTORATION AND HISTORICAL SOCIETY, INC.,
Vancouver, Wash., April 6, 1956.

Hon. CARL HAYDEN,
Chairman, United States Senate Appropriations Committee,
Washington, D. C.

DEAR SENATOR HAYDEN: The Fort Vancouver Restoration and Historical Society of Vancouver, Wash., respectfully urge the approval of the appropriation of funds to make possible the preservation of valuable archeological and other historical data which are threatened with annihilation above the dam near the Dalles, Oregon-Washington, now under construction.

Upon the flooding of the area, much of this material of great social value will, as said, be lost, unless prompt action is taken to insure its preservation.

Thanking you for whatever aid you will give to this pressing matter, I am

Sincerely yours,

CARL LANDERHOLM,
Secretary of the Society.

Improved Weather Bureau Program

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Charles F. Brooks, Milton, Mass., to the editor of the New York Times, April 8, 1956.

There being no objection, the letter to the editor was ordered to be printed in the RECORD, as follows:

TO IMPROVE FORECASTING—NEED FOR FUNDS TO EXPAND WEATHER BUREAU PROGRAM EXPLAINED

(EDITOR'S NOTE.—The writer of the following letter is professor of meteorology and director of the Blue Hill Meteorological Observatory of Harvard University.)

To the EDITOR OF THE NEW YORK TIMES:

I am pleased that your editorial of March 21 places blame for the insufficient warning of the heavy snow of the 18th and 19th not on the forecaster but on the lack of constant upper air reports and on inadequate knowledge as to how to interpret them.

As the low pressure area which developed this snowstorm approached the coast from the West there were no upper air reports at all from the Atlantic west of a line from Nova Scotia to Bermuda. The forecaster, therefore, had no knowledge of upper air currents offshore which were to change the easterly movement of the low into a northeasterly one. Upper air data every 6 hours from a weather ship at Station Hotel, about half way between New York and Bermuda (abandoned, after 12 years, for reasons of economy in June 1954) might well have given the cue.

As for surface observations, from this oceanic area of some 250,000 square miles, an area about equal to that of the Middle and North Atlantic States, there were only 2 ship reports at 5:30 a. m. March 17, 5 at 9:30 p. m., and 4 each at 5:30 and 11:30 a. m. March 18. None of these was from the same place twice.

ADDITIONAL MARINE REPORTS

The Weather Bureau recognizes the deficiency of marine reports and is using some of this year's considerably increased appropriation (made in part for the purpose) to produce more. In the western Atlantic 2 radiosonde and surface observation stations have been established on merchant vessels plying between Baltimore and San Juan, P. R., also 2 in the Gulf of Mexico and 1 in the Pacific. More are planned, including wind-aloft stations. Weather reconnaissance flights have been doubled.

As I see it, station "Hotel" should also be reoccupied. No less-expensive substitute has yet been found for providing the frequent and complete surface and upper-air data that this station used to present from this stormy area. These reports were very helpful in the forecasting for the adjacent region, which has the greatest concentration of population, property, industry, and commerce in the United States.

While the more reports over an area the better, there is additional value in reports from the same spot. The trends can be observed—trends that may mean changes in storm tracks, speeds, and intensities. The station is always there (unless a hurricane is right on top of it), which is not true of merchant vessel stations. Such ships give hurricanes a wide berth.

We should make sure that Congress votes at least the budget asked for 1956–57. This provides $30,804,600 for general weather services, $2,952,000 for research, $1,745,400 for administration, and a special $2,500,000 for meteorological facilities.

The regular budget is virtually the same as this year's, except for an increase of $1,350,000 for research. This is much needed for gaining a better knowledge of meteorology, and thereby improved forecasts. The special budget is to augment the $7,500,000 voted last year ($10 million had been requested), mainly for refurbishing and extending the network of upper-air and radar stations, to be spent over a 4-year period.

AUGMENTED BUDGET

Nevertheless, what may be possible under the present appropriations and the budget for the coming year is quite inadequate, in my opinion. There was a considerable discussion about this at a "town meeting" of meteorologists held by the Chief of the Weather Bureau in New York 2 months ago. All present seemed to agree on the desirability of greatly increased marine reports, but some considered the cost, especially of restoring station "Hotel" ($2 million or $3 million a year), prohibitive.

But is it really prohibitive to spend a few million dollars more for a probably significant improvement in storm forecasting? Is 1 cent per inhabitant of the United States ($1,650,000) prohibitive, or 2 cents ($3,300,000), or 5 cents ($8,250,000)? The total regular Weather Bureau budget is only 20 cents per person.

CHARLES F. BROOKS.

MILTON, MASS., *March 31, 1956.*

H. R. 10

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Leslie Gould which appeared in the New York Journal-American of Monday, April 23, 1956:

UNITED STATES SHOULD FOLLOW BRITAIN ON AIDING SELF-EMPLOYED

(By Leslie Gould)

The British have just taken a significant step toward ending the discrimination against the self-employed for their old age.

The move, included in the new British budget, is important for its possible effect on similar efforts in this country to end this discrimination.

There are more than 10 million self-employed in the United States. These include farmers, doctors, lawyers, accountants,

brokers, engineers, salesmen and funeral directors.

Under present tax laws they are denied a tax credit or deduction for contributions to specified private pension funds.

There is a bill before the House—it passed the Ways and Means Committee by a 16 to 8 vote last year—to accord the self-employed the same treatment as now granted employees. Employees include officers of a corporation. Also employees of a partnership—such as a law or accounting firm or of any professional person. But the partners in such a firm or individual professional people and the farmers and salesmen are now denied this treatment.

PRESENT LAW UNFAIR

This is unfair. It is discrimination never intended under the Constitution. But to date, the matter has been kicked around in Congress, getting nowhere until this present House bill.

One of the troubles is that no administration has sponsored this needed change. That includes the present Eisenhower one. The British development may help change that hands-off stand. Also, it looks like the Treasury will wind up the current year with a surplus, maybe as much as $2 billion—so the Treasury no longer has its pat argument of being against it for its effect on the budget. Regardless of its effect on the budget, the present tax law is discriminatory and it should be changed.

The British Government's proposals go far beyond the relief provided in the present House bill. The same tax break as granted corporation workers is to be accorded the British self-employed. Cost of annuities would be deductible, thus reducing the taxable net income.

RELIEF EXTENDED

This relief is to be extended by Britain to employees not now covered by their employer, whether the employer is a corporation or not.

This is part of the just announced British anti-inflation program. It is designed to encourage saving, which is what contributions to a pension plan are.

Under present American tax laws, the self-employed can only provide for his old age out of net income—that is after the high income taxes. And the taxes are high no matter what the bracket.

The proposal is so fair and equitable, that it is amazing that there should be any delays in providing this relief. It is in keeping with the basic American philosophy of private endeavor.

Miss Jane Todd

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. KEATING. Mr. Speaker, President Eisenhower recently announced the creation of a council on the aging, entrusted with the task of inquiring into problems pecular to our older people. This organization is particularly charged with the responsibility of seeing that the Federal Government keeps its programs and policies attuned to the marked rise in the number of older people in the United States.

Partially as a result of the establishment of this council, long overdue recognition has been accorded Miss Jane Todd. Miss Todd has for years been an advocate of greater attention to the needs of women and older people. She has led a busy and fruitful life, highlighted by numerous contributions to the Republican Party, serving as deputy commissioner of the New York State Department of Commerce, and in her present role as consultant to the Women's Bureau of the United States Department of Labor and member of the Department's Committee for Older Women. The nature of her work and the way she goes about it are typical of Jane Todd's kindliness and selflessness.

Under leave to extend my remarks, I include an article from the Christian Science Monitor of April 30, which describes Miss Todd and her work:

OLDER WORKERS HAVE MUCH TO CONTRIBUTE—JANE TODD, LABOR DEPARTMENT CONSULTANT, TELLS THEM HOW

(By Jessie Ash Arndt)

Assets outweigh drawbacks in the employment of the older woman worker, says Miss Jane Todd, consultant to the Women's Bureau of the United States Department of Labor and a member of the Labor Department's Committee for the Older Woman. The reason for such a committee is that 12 million of the 20 million women workers in the country are at least 35 years of age and of these 4 million in the 1955 labor force were from 35 to 54.

Miss Todd, who initiated New York State's small business program for women as deputy commissioner of the department of commerce under Governor Dewey following World War II, is now translating the successful business clinics she held in New York State into a Federal project for the Department of Labor.

THINGS TO LEARN

Older women who are seeking jobs often have things to learn, Miss Todd pointed out. Sometimes they need a refresher course in the field in which they have worked in previous years or a training course in some other field before they apply for a job. But one important requirement is that they delay their application until they have equipped themselves to fill a given job whether part or full time.

Too often, the older woman may want work of some kind but fails to get it. First, because she is in need of some brushing up of skills; second, because she asks for work without a clear idea of what she is fitted to do; and third—or should this have been first?—because she does not give attention to her appearance when she makes application.

These details will be discussed at an all-day earning opportunities forum in Boston May 10 at the Community Service Center, to which women job seekers listed with the State employment service will be invited. Miss Todd has been in Boston 3 times within the past few weeks for meetings with a planning committee composed of civic leaders, representatives of labor groups, and industrial leaders. Miss Pauline Mandigo, also a consultant to the Women's Bureau, has assisted her.

BOSTON FORUM

There will be discussion of job opportunities and job requirements at the May 10 forum from 10 to 12 a. m., and 1:30 to 3:30 p. m., with a period for personal interviews following each session.

"It is only fair that those who are familiar with the technique of employment and training share their knowledge with those who are preparing to secure gainful employment for the first time, and with those who need job training," said Mrs. Alice K. Leopold, Assistant to the Secrtary of Labor for Women's Affairs, in a message of appreciation to the citizens of Massachusetts planning the Earning Opportunities Forum.

The whole purpose of the program is to bring jobs and much-needed workers together, and to open doors which have been closed to the older women in the labor market.

Miss Todd has been consultant with the Women's Bureau—which Mrs. Leopold heads—for the past year and has already conducted a pilot project in Baltimore. There a public forum for job seekers was held the end of January with almost 300 registered, many of whom wanted part-time work.

Dean M. Marie Mount of the University of Maryland, who served as chairman of the Maryland committee which sponsored the sessions in Baltimore, has kept her committee together as a clearinghouse for applications and information. Often older women do not know where to get job information, Miss Todd stated.

The Baltimore YWCA is so much interested in the project that it is conducting a survey as to women wanting jobs and the job opportunities available in that area.

Dr. Francis M. Froelicher, assistant superintendent of schools in Baltimore, in charge of adult education, has set up evening training courses which will be given in the public schools as part of the program. Twenty-three enrolled in the initial one offering training for office skills.

This program, Miss Todd explained in an interview when she was in Boston preparing for the meeting planned here, has the twofold purpose of opening greater opportunities for older women and helping to meet the shortage of teachers, nurses, stenographers, and other office workers. The Boston forum will serve as a pilot project for the New England States. The next program will be instituted in New Jersey.

It is in line with President Eisenhower's recently announced plan calling for designation of a representative from each of a dozen Government agencies to form a council on the aging, charged with seeing that Government programs and policies keep pace with the needs presented by the marked rise in the number of older people in the population of the United States.

NO MORE ABSENCES

Statistics show that the older woman is not slow nor is she more frequently absent than the younger worker, said Miss Todd. On the contrary, she has proved to be steadier, more reliable, and to have a better attendance record than her younger colleague.

The older employed woman is neither concerned with dates and parties after work, nor young children at home. She is settled, and stable, and usually devotes herself to her job with genuine interest.

Often she prefers part-time to full-time work and one of the problems is to help employers see the advantage of making use of her for the number of hours she can give to a job. On the other hand, Miss Todd remarked, the woman who wants part-time employment must make adjustments in home duties to fit the employer's needs and not expect him to turn his shop or office upside down so she can run her home or her usual schedule.

IN SMALL BUSINESSES

Miss Todd plans to devote some time at the Boston forum to discussion of small-business enterprises which women can set up in their homes, marketing products which they make themselves. Women who have made a success of such endeavors will be on the program.

There is a warm kindliness about Jane Todd which finds practical expression in the program she is now carrying on. Her own hair is a little gray, her cheeks are ruddy—perhaps from gardening at her home in Tarrytown-on-the-Hudson—and she is full of encouragement for those who need ideas and direction in earning extra dollars.

She got into public life by working in the Republican Party as a volunteer after women won suffrage in 1920. Her first political office was as vice chairman of the Republican Committee for the town of Greenburgh the first time any woman living in Tarrytown had held such an office.

Then, in 1937, she became New York State's first woman vice chairman of the Republican Party. She has served ever since and has also served 10 years as a member of the State legislature.

When she got out of the State assembly in 1944, she decided to retire from public life. But at the end of World War II, Governor Dewey was concerned about the women coming out of the service and their being able to get civilian jobs. Miss Todd was called to the State department of commerce to help them in the readjustment. However, the women veterans were so well trained they had no trouble getting jobs, she said, so attention was turned to older women and the small-business program.

ON NATIONAL SCALE

Now, under Secretary of Labor James P. Mitchell and Mrs. Leopold—who is the first woman to serve as assistant to the Secretary of Labor—recognition is being given to the need on a national scale, and Miss Todd is in the midst of the new program.

When she is not busy in this or in work for the party, she is glad to be at home in the four-room colonial house she built after she and her brother sold the family home which her grandfather had established in Tarrytown. There she cooks delicious meals for weekend guests and delights in digging in her garden.

Someday she may retire to her home, her garden, her cookstove, and view of the Hudson, but that time is not yet. There are still too many people who need the kind of help she can give, so her job is cut out for her and she's one of those steady, reliable workers who like to stick to it till it's done.

Fifty Years of Forestry

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 9, 1956

Mr. NEUBERGER. Mr. President, Oregon is blessed with the greatest forests in the United States. The State's greatest industry, Mr. President, is the billion-dollar lumber industry. This industry, begun in Oregon 120 years ago, nearly 20 years before Oregon became a State.

It was very natural under such circumstances that Oregon State College would become famed for the teaching of forestry. In the April 1956 issue of the Oregon Stater, the official organ of the Oregon State College Alumni Association, there appears a splendid account of the development of the School of Forestry under the title of "Fifty Years of Forestry." Dean W. F. McCulloch, Donald W. Pitts, and Henry Clepper, the executive secretary of the American Society of Foresters, contributed to this able account.

I ask unanimous consent, Mr. President, to have this article printed in the Appendix of the RECORD.

There being no objection, the article were ordered to be printed in the RECORD, as follows:

FIFTY YEARS OF FORESTRY

(It has been 50 years since the first 4-year course in forestry was established at Oregon State. Prior to 1906 the forestry courses were taught along with botany and horticulture. In this half-century of OSC forestry, bachelor's degrees were granted to 1,367 and 93 foresters have been awarded advanced degrees. The college's forestry alumni are working in nearly every State in the Nation and in many foreign countries. The School of Forestry has tradition, excellent faculty and students, and a world-wide reputation. The following articles will show you how the School of Forestry got that way).

AIMS OF FORESTRY SCHOOL

(By Dean W. F. McCulloch)

The first forestry at Oregon State was taught as part of a botany course by Moses Craig in 1892. A forestry course as such was given in 1896, and in 1904 the department of botany and forestry was established. In 1906, forestry became a degree-granting department on its own. This was a little optimistic since the entire staff consisted of one man, Edward Lake. In January 1910, the first professional forester joined the Oregon State staff in the person of George W. Peavy, later to be dean of forestry and president of the college. At this time, the professional flavor of the school was so soundly established that it still persists.

George Peavy was a dynamic individual, full of fire, with a great zeal for forestry and a great interest in foresters. In the days of small enrollments, he knew each student thoroughly, regarded him as a personal friend. "My boys" he called them. The friendship with "his boys" endured throughout George Peavy's life.

This fine relationship between school administrator and students naturally spread to other staff men as new instructors were engaged. Through the years a high degree of understanding developed. School affairs, instructional as well as extracurricular, became cooperative ventures between students and staff.

This program worked well for forestry, for the graduates, and for the college. Leaders in forestry today look back on their formative years and ascribe much of their success to George Peavy's emphasis on the development of men and to the friendly way in which he did it. The worth of graduates determines the worth of a school program. Since the Peavy formula has worked so well, there seems no need to change it. The aim of the school today is the development of men, citizens, and foresters, in that order. In keeping with the best traditions of the school, the friendly relationships of the early years are maintained. Students and staff are on a first-name basis; students participate in school programs such as orientation of new men; staff members participate in forest club activities; and a fernhopper forum comprised of student leaders and staff advisers coordinates the interest of both.

To achieve the aims of the school an intensive personal program is carried on including a yearly followup of graduates for 5 years after graduation. Staff members are active professionally not only for their own development, but to maintain contacts which will aid in the career development of students. The school's standard of performance is clearly stated to each new man: "The school expects every man in every class every day with every lesson prepared—and with the right attitude toward the profession and his fellow man." Those who cannot or will not meet this standard are advised to leave promptly, because anything less than this will not enable them to become foresters. The basic purpose of the combined academic and personnel program is to better forestry by developing better foresters.

THE M'DONALD FOREST STORY

(By Donald W. Pitts)

North of Corvallis about 6 miles and just west of Highway 99–W lies the McDonald Forest. It is an essential part of the school of forestry. Generations of fernhoppers have studied and played here.

The McDonald Forest contains 6,761 acres. All types of wildland cover are found on the forest but the area is largely second growth Douglar fir. Experimental plots, the dean's cabin, the forestry club cabin, and recreational areas are found within its borders.

The forest is not used by foresters alone. The Sulphur Springs area has fireplaces and tables. It is used by the public and campus-living groups for picnics.

The first steps toward acquiring the forest were taken in 1923 when Dean George W. Peavy sponsored an arboretum committee to raise funds for purchase of land for a school of forestry arboretum. In 1925, the first land was purchased. Through the years, land has been added by purchase and donations to bring the forest to its present size.

The forest is named in honor of Mrs. Mary J. L. McDonald, the principal donor. She was born in 1850 in Illinois. She came to California in 1855. Her husband was a wealthy mining engineer and lumberman from San Francisco. Mrs. McDonald died in 1936. She felt the moneyed people of Oregon had neglected the State college. She wanted to help a school that taught the practical courses of everyday living, rather than the fine arts. By her contributions she hoped to influence others to donate to Oregon State.

Mrs. McDonald first met Dean Peavy about 1929 when he was called in as a forest consultant on McDonald lands in California. She determined to help him realize his dream of making Oregon State School of Forestry second to none. In 1930 she made her first donation of $3,000. The donations made while she was alive and the provisions of her will account for 5,075 acres, or 75 percent of the present forest areas. To honor her, the Oregon State Board of Higher Education officially designated the area the McDonald forest in 1932. She also contributed many rare books and furnished the McDonald rare book room in the college library.

The forest is used today as a training ground to give students practical experience in surveying, cruising, and other forestry subjects. Because the forest area is so close, the forestry school does not need a summer camp to give students field training, as is done at many other forestry schools. OSC foresters get their field training in the forest during the regular school year.

In addition to McDonald forest, the school of forestry owns several other tracts of land. They are the Peavy arboretum, 181 acres, the Spaulding tract, 160 acres; the Blodgett tract, 2,400 acres; and the Adair tract, 4,000 acres.

The forest has two cabins, the club cabin and the dean's cabin. The dean's cabin was built for Dean Peavy by forestry school alumni as a place where he could relax from his duties. The forestry club cabin is the place where foresters hold the club meetings, steak fries, and dances.

HISTORY OF SCHOOL

1892: First forestry taught in a botany course by Moses Craig.

1894: Hough's Elements of Forestry used as a text.

1896: First forestry course taught in botany department by Edward R. Lake.

1904: Department of botany and forestry established.

1906: Four-year undergraduate and 1-year graduate program in forestry established.

1908: Department of forestry established.

1910: George W. Peavy appointed as professor and head of the department of forestry.

Girst class of forestry graduates: Harold D. Gill, Thurman J. Starker, Jack F. Pernot, Sinclair A. Wilson.

1913: School of forestry established with Peavy as dean; department of logging engineering established in the school.

1917: Forestry building constructed.

1920: Annual cruise founded.

1921: Graduate work in forestry authorized; Master of Science, Master of Forestry, and Forest Engineer degrees.

Forest land acquisition program inaugurated. Peavy aboretum and Spaulding tract acquired.

1925: First forestry club cabin built on McDonald Forest.

1927: Third major field of study, lumber manufacture, introduced; later changed to wood products.

1934: Dean Peavy appointed president of Oregon State College.

1935: Dean's cabin presented to G. W. Peavy by old graduates.

1936: Minor fields of study in forestry introduced: Forest recreation, fish and game management, grazing management, soil conservation, forest pathology, forest entomology, science, pulp and paper, and business administration.

1940: Dr. G. W. Peavy appointed dean emeritus and president emeritus. Professor E. G. Mason appointed acting dean.

1941: Oregon Forest Products Laboratory created in cooperation with the school of forestry.

1942: Paul M. Dunn appointed dean.

1946: Student personnel program adopted with staff man as head counselor.

1947: Three major curricula revised and names changed: Logging engineering to forest engineering; technical forestry to forest management; wood products to forest products.

1948: Forest manager for the school's forest properties appointed.

Short courses in cooperation with industry and public agencies introduced.

1950: Present forestry club cabin constructed.

1954: Forest experiment station established.

1955: W. F. McCulloch appointed dean.

1956: Fiftieth anniversary of 4-year program.

FORESTRY EDUCATION

(By Henry Clepper, executive secretary, Society of American Foresters, Washington, D. C.)

Technical training in forestry had been offered at certain European universities for more than a hundred years before the establishment of the first American school of forestry. Lectures on forestry and tree culture however were given in at least 22 land-grant colleges in the United States during the last quarter of the 19th century. This instruction was not professional in character; it was mainly for students of agriculture.

Generally, the lectures were given by teachers of botany and horticulture, and emphasized tree planting, farm woodlot management, and the influence of forests on climate and streamflow. The availability of such lectures, however, indicated a growing interest in forestry education; still, no body of courses was offered anywhere in America to prepare workers for careers in forestry.

But the advent of professional training was not far distant. In 1898 forestry instruction began at Cornell University, the first institution of collegiate rank to develop a forestry curriculum, and at the Biltmore Forest School in North Carolina, which offered a 1-year course in applied forestry. Both schools were subsequently discontinued.

Yale oldest

Yale University set up a full forestry curriculum in 1900, and now enjoys the distinction of having the oldest forestry school in continuous operation in the Western Hemisphere. Other colleges and universities followed rapidly.

In 1903 the University of Michigan and Michigan State University established forestry curriculums, as did the Pennsylvania State Forest Academy at Mont Alto, the University of Maine, and the University of Minnesota.

In 1904 three additional institutions set up courses: Iowa State College, Harvard University, and the University of Nebraska, which offered forestry instruction in connection with horticulture, then later dropped the work. In 1905 Colorado College started a course, but discontinued it in 1934.

In 1906 Oregon State College and the University of Georgia began training in forestry, but the latter institution was not very active during its first two decades.

In 1907 professional instruction began at Penn State, the University of Washington, and Washington State College. In 1909 the University of Idaho set up its forestry work.

Work increasing

In short, up to the period of the First World War, 24 schools had been established in the United States, and 20 were still in operation: Most were in land-grant colleges and offered a 4-year undergraduate curriculum. Yale had the only wholly graduate school. Manifestly, increasing employment opportunities in Federal and State forestry work and the attraction to young men of forestry as a career, were creating demands for professional education that the colleges and universities were not reluctant to fulfill.

Although the first two American schools (Cornell and Biltmore) were headed by German foresters, professional forestry education in the United States was characterized from the start by a typically fresh and independent outlook. With the primary aim of training men for the practice of a profession just coming into existence, the early schools were quite different in certain aspects from their European prototypes. The entire conservation movement, including education, was influenced by the crusading zeal of Gifford Pinchot and Theodore Roosevelt. An essential purpose was to reverse the trend of forest destruction and bring about the management of many million acres of publicly owned woodland that had been acquired and was being acquired by the Federal Government and the States. Forest educators entered into this program with fervor and serious intent.

Accordingly, during the early decades of professional education there was a marked shift in emphasis from subjects originally adapted from European training to those that better served American needs. A major influence on all schools was the character of the examinations given by the United States Civil Service Commission to recruit junior foresters for positions in the Federal Government. Forestry education, from a virile seed of indigenous origin, was growing into a lusty tree typically American in root, stem, and branch.

Study made

With the creation of so many new schools so fast, some leaders in the profession became apprehensive about the maintenance of professional standards. During the 1920's several prominent educators proposed that a study be made of "the education of men preparing for the profession of forestry."

This study was made possible by a financial grant to the Society of American Foresters from the Carnegie Corporation of New York. It resulted in the book Forest Education by Graves and Guise, published in 1932 by the Yale University Press.

Using this study as a foundation, the council of the society next authorized an examination of each school to determine the minimum standards of training essential to qualify graduates for membership in the society in the junior professional grade. This examination, started in 1933, resulted in a list of 14 approved schools. Six additional schools were declared eligible for approval provided certain standards were met. Thus the principle of accrediting was first applied to professional forestry education in America.

Accrediting has continued as a permanent activity of the Society of American Foresters. The work is carried on by the Committee for the Advancement of Forestry Education. In order to simplify accrediting procedures and reduce the cost to and workload of the institutions evaluated, the Society, along with other professional organizations, now undertakes its accrediting activities cooperatively with several regional associations of colleges and universities.

Thirty-six schools

As of December 1955, 36 colleges and universities in the United States offer instruction in forestry at the professional level. Two of these—Duke and Yale Universities—offer graduate degrees only. Of the 36 institutions, 26 are accredited by the Society of American Foresters. The remaining 10 have not yet met the standards for accrediting.

Since the first forestry degree was awarded in 1900, the schools have granted (through 1955) approximately 23,400 bachelor's degrees, and 4,300 master's degrees. Probably 90 percent of the degrees were in general forestry, the remaining 10 percent in such fields as wood technology, range management, wildlife management, forest recreation, and general conservation. The exact number of doctor's degrees awarded during the past half-century is not known; such statistics as are available indicate a total of about 400.

Perhaps the most serious threat to the establishment and maintenance of high educational standards in forestry is the constant possibility of new schools inadequately financed and inadequately staffed. Since World War II certain college presidents, including presidents of teachers colleges, have proposed establishing curriculum in forestry with little or no conception of what such curriculums on the professional level involve in cost, manpower, and facilities.

SUFFICIENT CAPACITY

Because of this possibility, and in some cases actual proliferation of weak forestry curriculums, the Society of American Foresters flatly recommends against the establishment of new schools for professional training in forestry unless adequately financed, staffed and housed from the start. In any case, the existing schools have sufficient capacity to supply the demand for professional foresters, which currently totals about a thousand each year.

In truth, the major problem in forestry education—a problem that appears to be general in education for the professions—is how to strengthen the weak institutions. Forestry cannot advance on a progressive educational front with one-quarter of the professional schools unable to meet the standards of accreditation, standards which in the opinion of many forestry educators are already too low.

Now, what of the future? Forestry education, like other aspects of the profession, is peculiarly influenced by nature, the outdoors, and living things. Because it is dynamic, it has been subject to continuous development and study. Expanding employment since the end of World War II constitutes a promise of continued educational growth. To be sure, changes in the character of forestry education are inevitable. But reviewing its

history up to this point, we have every reason to assume that most of the schools will continue to meet the greater demands of technical practice and broadening employment in the years ahead.

FROM THE PRESIDENT

The dominant characteristic of the school of forestry throughout the 50 years of its existence has been its ability to impart a lasting morale in its students—a zeal for work, a spirit for service, a hope for a broad acceptance of sound conservation ideas, and a confidence in their own ability. To accomplish this through the years has required great strength of leadership and the example of a devoted staff.

It may be that such is easier of attainment in the field of professional forestry than in other lines of work. There is something about trees that is poetic and to which man's better nature readily responds. At least a strong case for that idea can be made from even a brief survey of the profession in America and Western Europe. However, it wasn't always so and the history of man's wanton disregard of one of nature's greatest gifts is a sad one indeed. It's only in modern times, almost limited to the span of life in our school of forestry, that vision has replaced perversion and intelligent use has overcome profligate waste.

One of the miracles of our time is the acceleration that has taken place in the conservation and utilization of our forest resources. This has come about through persistent application of the scientific approach to forest problems. The school of forestry has played an important part in this notable development.

OREGON STATE COLLEGE,
A. L. STRAND, *President.*

A Tribute to Hon. John Taber

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. MARTIN of Massachusetts. Mr. Speaker, the Binghamton, N. Y., Sun on Monday published an editorial tribute to our good friend and colleague, JOHN TABER. I am sure that all of us echo the sentiments expressed in the concluding paragraph of the editorial which reads:

We add our warm congratulations to the deluge of messages he received on this 76th birthday, with the earnest hope that he will have many more such good birthdays, and many more years of such immensely useful public service to his fine neighbors and to America.

The editorial follows:

THIRTY-FOUR YEARS IN CONGRESS

The enthusiastic crowd of prominent men and women who gathered in Ithaca Saturday, and the distinguished personages who sent warm congratulatory messages to pay tribute to Congressman JOHN TABER on his 76th birthday, and his 34 years of outstanding public service in the Congress of the United States, did not merely applaud an able and brilliant man. They also applauded our political system and reaffirmed the often forgotten fact that an honest and courageous public official, once he gains the confidence and respect of the people, can be forthright and independent-minded and still be reelected to public office. To the pussyfooters, the policy-players, the timid, the expediency-minded, the doubletalking office-holders, JOHN TABER is a towering and irrefutable rebuke.

For 34 long years in Congress he has lived, worked, and won reelections by his very simple philosophy that a proposed step in public business is either right or wrong—it is either good for the public or not good. And if it is right and good, to fight vigorously for it; if it is wrong and not good, to fight just as vigorously against it. In his long years of service on the House Appropriations Committee, he has become a veritable human encyclopedia on Government operations. He knows just what should be good housekeeping in every Federal bureau and agency as well as a housewife knows the rooms of her own house.

His name has become a legend in every nook and corner of Federal Government—an emergency brake on any bureaucrat who might seek to spend recklessly, foolishly, or needlessly. They not only fear his sincere devotion to public economy but also his uncanny budget knowledge and accurate information. As a powerful and active force for good government, JOHN TABER has become a national, and highly valuable, public institution. He has saved the taxpayers countless millions in public funds. He has worked intensely, faithfully, modestly, never seeking the headlines or public praise.

Inevitably he has made enemies among the forces of special privilege, selfish interests, and various pressure groups. But the citizens of the Nation and the voters of his own congressional district know JOHN TABER well, and they hold a wholesome respect for his rugged integrity, and the sincere honesty of his forthright opinions. His whole public career is a forceful refutation of that glib, unwarranted wisecrack heard too often, that in our America a politician cannot be trusted. For JOHN TABER, the most unpolitical chairman the House Appropriations Committee ever had, one of the most unreachable powers in Congress, a dedicated enemy of any form of political corruption, the man whom no one would dare approach with an offcolor proposition, is himself a high-quality product of our political party system.

He started in politics as a Republican county committeemen, became the county chairman and served in that capacity for many years, always scrupulously following the simple rule that honesty is the best policy, good government the best politics, truth and frankness the best practice.

JOHN TABER has earnestly and unselfishly made public service his life work, and he has indeed made a tremendous success of it. The whole country, along with his congressional district, can well be mighty proud of Congressman TABER.

And we add our warm congratulations to the deluge of messages he received on his 76th birthday, with the earnest hope that he will have many more such good birthdays, and many more years of such immensely useful public service to his fine neighbors and to America.

Problems of a Small Farmer

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. LONG. Mr. Speaker, I ask unanimous consent to place in the CONGRESSIONAL RECORD at this time a sample of a letter which is self-explanatory and which I am receiving hundreds of from my district.

This gives you some idea of how Mr. Benson is helping the little farmers.

MANSURA, LA., *May 5, 1956.*

Hon. GEORGE S. LONG,
House of Representatives,
Washington, D. C.

DEAR MR. CONGRESSMAN: As I have done and tried everything I can to get a few acres of cotton to plant has failed, what I cannot understand is how will my family of 4 dependents live and survive on 1½ acres of allotted cotton to plant on the land I am cultivating. Being a farmer all my life and this year allowing me to plant only 1½ acres of cotton. I know it could be worked out better than that, but the committees out here have failed to help me out. Why is it so unjustly divided? I know in my own heart they could have helped me out, but have failed to do so.

This is my reason for writing you, so please with God's words, try to help me out, as this is the only cash income from crops I get, and I know with that very small amount of cotton to plant I cannot survive. Please tell me what to do to get more, and please help me out.

I thank you.

Very truly yours,

SAM LABORDE.

The American Legion "Get Out the Vote" Campaign

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. KEATING. Mr. Speaker, at a time when we hear so much partisan political talk from all sides, it is reassuring to hear an occasional voice raised to urge the American people simply to make use of their right to vote.

A fine address along these lines was recently delivered by National Commander J. Addington Wagner of the American Legion. In it he emphasizes the Legion's excellent 1956 slogan: "Vote as you please, but please vote." Commander Wagner's speech was broadcast over the facilities of the American Broadcasting Co. and reprinted in the April 19 issue of the National Tribune.

Under leave to extend my remarks, I include this keynote of the Legion's most worthy "Get Out the Vote" campaign:

"For God and country, we associate ourselves together."

So reads the opening sentence of the American Legion's constitutional preamble. That we may worship God according to our respective beliefs, it is necessary that we remain a free country. It is for this and our many other freedoms that Legionnaires have fought in three wars.

FREEDOM THREATENED AGAIN

Now, once again that freedom is threatened by the forces of a godless Communist conspiracy. This is truly the crisis of our time—not a political or economic crisis, I submit, but one that is moral. This greatest of all struggles is a contest between our hard-earned Judean-Christian civilization and Soviet materialism and barbarism.

In our country, the individual is infinitely important. To the Kremlin, the individual is but a number—just a number to use in the building of a soulless, atheistic society.

It seems most fitting that in this election year our attention be directed to one of our most cherished and prized freedoms, the freedom of the ballot.

This coming November 6 we will be able to cast that ballot and it will be in secret, with no hammer and sickle to coerce us.

Of all American special days, that day will have the least fanfare. Yet, of all it should have the deepest and closest meaning to every adult American. Let us not be deceived by the casualness of that day, for it may be the most important day of our generation.

The continuing apathy of a shockingly large segment of the American public to avail themselves of their vote is indeed to be deplored. Just imagine how those poor, hapless creatures behind the Iron Curtain would appreciate that freedom of choice in their government.

PRIVILEGE OF TWO BALLOTS

Actually, we Americans are allowed the privilege of two ballots. Besides the vote we may cast for a candidate for any office, each citizen has another vote which he cannot help but cast. His other vote is the fact that he did or did not vote. It is often the most important possession of the individual. When election day is over, each of us is inescapably counted among either the voters or the nonvoters.

It is safe to say that most of the nonvoters assumed that their failure to vote made no difference. Clearly, even if one vote does not make much difference in the naming of candidates to office, the only way millions of votes can be thrown away is one by one.

Every year a few more people peek under the surface and come up with the fundamental secret of democratic government that every politician knows: Nothing encourages poor government more than the failure of eligible voters to cast their votes.

It has been said that a light vote is a loyal party vote and compels the party to emphasize party interest. A heavy vote is a public vote and compels emphasis in the public interest. It has also been said by the experts that rain on election day makes for a light vote. The men who signed the Declaration of Independence pledged in time of great peril, "their lives, their fortunes and their sacred honor" to give us our election day. How cheaply or how dearly do we hold the lives, the fortunes, the honor and the blood that bought for us and insured to us election day? Will rain or any other obstacle bring a light vote this year? Will we again reveal to the world the spectacle of nearly 50 million eligible Americans ignoring the duty on which rests all our claims to an enlightened free world?

This year, perhaps as never before, we are striving for a united community effort to bring our national vote up to its original purposes and tremendous potentialities, to the end that our American Government will continue to be the envy of all nations, no matter which party wins.

To this end, then, American Legionnaires across the Nation will urge you again to adopt our slogan: Vote as you please, but please vote.

Vast Load of Responsibilities Is Placed on Our Congressmen

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. HUDDLESTON. Mr. Speaker, during the short time that I have had the honor of serving in Congress, I have often heard various colleagues deplore the apparent lack of appreciation which the daily press has for the arduous duties involved in representing the people of our respective districts in the Halls of Congress. In many instances I feel that this type of remark is well justified. However, on Monday, May 7, 1956, there appeared in one of the fine dailies of my district, the Birmingham News, an editorial dealing with some of the problems with which we Representatives are continually confronted. A member of the editorial staff of this particular paper visited Washington several weeks ago and the editorial was written as a result of the impressions the writer obtained while observing the proceedings in the House of Representatives.

It is indeed rewarding for us in Congress to realize that we do not go entirely unappreciated and it is, therefore, my pleasure to include the editorial in the RECORD under leave to extend my remarks:

Not many Americans, we suppose, nowadays think of Congressmen as having a nice, easy time of it, just voting out of infinite knowledge and wisdom on whether bills and other proposals are good for the country, meanwhile drawing good salaries and enjoying the pleasures of life in Washington.

But, relatively speaking, not many citizens either, we take it, have a full awareness of the tremendous load of responsibilities, the enormous demands on their time and efforts, confronting our national lawmakers.

One recent visitor in the House, while debate was proceeding on the President's veto of the farm bill, was impressed anew with the complexities involved in consideration of such legislation. Here was a subject that a competent student might easily spend full time exploring without exhausting the subject. Yet this was only one of a great number of difficult problems before Congress.

Of course, no Member could possibly master all subjects and questions coming before the lawmakers. Under the committee system study and consideration are divided among groups whose members may become specialists in their particular fields. But even these committees are loaded down with numerous proposals.

And though their reports naturally carry much weight with other Members, the individual Representative or Senator still faces the duty of making up his own mind on the basis of as sound a grasp of the issues as possible.

Commerce Clearing House, a national reporting service on tax and business law, in a late April release, pointed out that despite a backlog of more than 9,000 bills from the first session of this 84th Congress, new proposals were being presented at a brisk pace. This session is facing more work than did the previous session.

Comparing the first 15 months of the 83d Congress with the same period of the present Congress, Commerce Clearing House reports that in this session House bills introduced numbered, respectively, 8679 and 10,330; Senate bills introduced, 3,235 and 3,547; House joint resolutions introduced, 489 and 597; Senate joint resolutions introduced, 144 and 158; rollcall votes in House and Senate, 170 and 224; public bills approved by the President, 324 and 460. All along the line, it may be seen, proposals and action increased.

But committee on floor work is not all that demands time and effort of Congressmen. There are visitors to be seen, public activities to participate in, visits home to be made—and many other calls upon them.

How does a conscientious Congressman get through it all? We don't know. Yet we are confident that there are great numbers of such Congressmen who devote steadfast and valiant endeavors to their jobs.

Good heart and strength to them. They deserve public understanding and appreciation. They deserve, too, among themselves and on the part of the public more of direct and thoughtful effort not to pile up the loads of work uselessly or carelessly.

The Meaning of UNICO

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. RODINO. Mr. Speaker, in these times of industrial expansion, increase of scientific interest, and proposed voyages into the stratosphere, we are prone to lose sight of the down-to-earth activities daily carried on by the many benevolent service groups, whose volunteers aid worthy local and national projects ranging from family aid to the endowment of cultural interests.

In 1922 Dr. Anthony Vastola, an American of Italian heritage, gathered together 14 fellow citizens from Waterbury, Conn., and formed what is known today as UNICO National. This organization whose membership is now over 2,500 includes men of business and professional interests in some 50 cities throughout the United States, has had the singular honor of establishing 6 new chapters during the past 5 weeks. The name UNICO, based on the Italian word meaning unique, derives its form from the first letters of unity, neighborliness, integrity, charity, and opportunity. These five meaningful abstractions are the core of the Unican's creed which each member learns and aims to exemplify.

Over 1,000 students have studied or are now studying on UNICO scholarships. The Don Gentile scholarship fund alone has contributed over $25,000 to the assistance of worthy students. UNICO National is currently engaged in a program to raise money for the costly medical care of an Italian youngster stricken with a rare malady. UNICO is also raising money to provide a room in the International College of Surgeons. Of international interest UNICO is currently engaged in its most extensive financial participation. I am referring to UNICO's effort to raise generous donations for the erection of the Pius XII Library on the campus of St. Louis University. There in mid-America will be erected a great center of research which will house the treasured microfilm collection of the entire manuscript section of the Vatican Library in Rome. The completely functional building, the last word in modern library science, will include the name of UNICO among its founders.

While the national fund-raising campaigns are in full force, the many local philanthropies of the UNICO chapters

are still continued. Add to these hundreds of local projects, the half-million dollars raised for Italian relief and the generous thousands given to Boys Town of Italy, and we realize how completely philanthropic this society of Americans of Italians extraction has been.

In order to invite the deserved attention of what this growing organization is doing, I respectfully request that this tribute be recorded in the RECORD of this date.

The current president, under whose dynamic leadership the expansion program has made such rapid strides, is Alphonse A. Miele, businessman. President Miele himself represents the ideal Unican and has cast his ideals into action since he was elected to office, August 1955.

Requests for UNICO chapters have come from dozens of cities in all sections of the country. So inspiring has been the story of UNICO National that sincere tributes have been offered by civic leaders and church dignitaries in each city which is privileged to have a UNICO chapter.

The Importance of the United States Merchant Marine

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. W. Lyle Bull before the New York chapter, Alumni Association of the United States Merchant Marine Cadet Corps, at the Downtown Athletic Club, New York, on Friday, May 4, 1956:

ADDRESS BY W. LYLE BULL BEFORE THE NEW YORK CHAPTER, ALUMNI ASSOCIATION OF THE UNITED STATES MERCHANT MARINE CADET CORPS, AT THE DOWNTOWN ATHLETIC CLUB, NEW YORK, MAY 4, 1956

Mr. Chairman, distinguished guests, and members of the New York Chapter of the Alumni Association of the United States Merchant Marine Cadet Corps, by your invitation to address you this evening, on this happy occasion, I feel that you have honored me beyond my merits. A simple thank you seems hardly adequate; yet, there are no other words that express more deeply the sincerity of my appreciation.

Your testimonial to the distinguished legislators who carried the fight so successfully to bring about the statutory recognition of Kings Point as a permanent Federal Academy is, indeed, most appropriate. At best, however, this tribute is relatively small recompense for the many months of work and effort they devoted to the cause held dear by most of us in this room.

I wonder, frequently, whether the average citizen has even a vague conception of the demands made upon the time of our Senators and congressional representatives. In general, they seem to be considered as capable of being all things to all men and the workers of miracles. They become the repositories for the most astounding variety of problems and, when they fail of solutions satisfactory to the appellants, they are exposed to possible retaliation at the ballot box.

One has to be associated with a Government agency in Washington for a better understanding of the extent and nature of the appeals made to Members of the Congress. Sometimes I feel about Congressmen like I do about Ogden Nash's Purple Cow: "I'd rather see than be one."

I have a purpose in mentioning the arduous and complex burdens of the individual legislator. It is to emphasize the real measure of the debt owing to the distinguished gentlemen you are honoring here tonight and to those of their colleagues whose generous contributions of time and energy made possible the happy result you are celebrating.

The bill these kind friends guided, with such skill, through the tortuous legislative channels of both Houses, has brought new hope and encouragement to many more than the alumni of Kings Point; or to the students now enrolled; or to the administrative staff and faculty of the Academy.

It has restored the confidence of the countless thousands who adhere to the advocacy of a strong, modern and vigorous merchant marine as essential to our national welfare.

The Kings Point bill has told these people, in effect, that the Congress meant what it said when it incorporated, as a preamble to the act of 1936, the declaration of our national policy to foster and maintain such a merchant marine.

It has assured them, further, of congressional recognition of the often overlooked fact that more than just ships alone are needed to produce and successfully maintain a merchant marine; that a paramount requirement is for men of the highest order of technical proficiency and demonstrated leadership qualities—and with a sense of dedication to the best traditions of the maritime profession.

Shipping is about the oldest of our industries. It is also one of our most complex. While operated as a private enterprise, shipping is not a business in the usual sense of the word. So far as the United States is concerned, it is an instrument of national policy, maintained, in large measure, by public funds to serve the needs of our commerce and defense. The appropriations for Kings Point and the four State academies are a part (albeit a relatively small part) of this Federal support.

Unfortunately, this industry-government partner relationship is not sufficiently understood by the great mass of the public. The farther inland we get from our seacoasts the less it is understood.

To the great majority of people, if they think about it at all, the American merchant marine is something that operates in faraway places. Its problems, its work, and its service to our industry and agriculture are remote things that are of little interest and miles removed from their everyday affairs.

Because of the diverse activities and opportunities in this broad land of ours, and the comparatively few directly engaged in, or affiliated with, maritime affairs, we are not a ship-minded people in the sense that the British and Scandinavians are. Mother Necessity compels their understanding that their entire economies depend upon the ocean highways and that they must own and operate ships to survive.

It is evident that in the attempt to sell our merchant marine to the American people, the proper approach has not been found. Or, perhaps, the same old record has been played so often that the sense of the message it attempts to convey has been entirely lost.

Later this month we will observe Maritime Day. There will be gatherings in many cities throughout the country where countless speakers will orate on the poor old *Savannah* as the first steam-powered ship to make an Atlantic crossing. This happened 137 years ago and, if the truth were told, the *Savannah* covered a much greater distance under sail than by steam power. Others will hold forth on the glories that were ours in the so-called golden era of the clipper ship. When I listen to these things, year after year, I instinctively liken them to the reminiscences of an aging theatrical star while reviewing the yellowing, dog-eared press notices extolling her conquests and triumphs of the past.

There is no doubt that these historical facts are of interest and are things of which we should be proud, but I question their effectiveness as propaganda to win friends and supporters for the merchant marine of the 1950's. It seems to me we have available much more convincing material for this purpose.

Except for those directly connected with the industry, there are few people who appreciate what real progress has been made during the past few years toward putting our merchant marine on a firmer footing.

The more tangible evidences of this are the new construction programs of the Moore-McCormack and Grace Lines; the "Mariner" conversion programs of the American President and Pacific Far East Lines; and the projected revival of the Oceanic Steamship Co.'s passenger service between our west coast and Australia for which two "Mariners" are being practically reconstructed. At present the United States Lines is negotiating for the acquisition of 8 "Mariner" ships and the American President Lines for 2 in addition to those they have. It appears that the remaining "Mariners" of the original 35 completed within the past 4 years will soon be in private hands.

These are but the initial steps in the programs of replacement tonnage to which several steamship companies are committed to implement over the next 10 years.

There is talk now, too, of the possible building of a sister ship for the SS. *United States*.

As to tankers, the trade-in-and-build law has stimulated much new construction—and of tankers of much greater tonnage and higher speeds. The Navy, through MSTS, is aiding private industry in this field, by its program for the construction by private interests of 15 25,000 deadweight tons, 18-knot tankers to be chartered to MST for 10-year terms as replacements for equivalent tonnage in Government-owned T2-type tankers now in operation.

Perhaps the most significant development in new building—and to my way of thinking, one of the most encouraging—is the planned construction of several so-called roll-on-roll-off ships for the carriage of loaded truck-trailers. These will be employed, primarily, in our coastwise and intercoastal trades which are sadly in need of rejuvenation. I believe the Pan Atlantic Lines has plans for 7 and the American-Hawaiian Lines, some of 6 or 8. For some of these ships, speeds of up to 25 knots are being discussed. In addition, the Alaska Steamship Co. has in contemplation two ships of this type as combination truck and rail car carriers, while only last week it was announced that certain Hawaiian interests have plans for the introduction of ships of this type into the west coast-Hawaiian service.

The thing that impresses me most about this new type of ship is that we are finally doing something constructive toward improved means of handling cargo. We are finding that there are ways of doing the job other than by the old "block-and-fall" method handed down to us from sailing ship days.

All of these things are products of the industry/Government partnership to which I have referred. And the encouraging part of it is that they are progressing without the whiplash of the stress of war, which has been the principal motivating force over the past 40 years, insofar as our merchant marine is concerned.

It seems to me that our Congress has rarely displayed such a keen and continuing interest in our maritime affairs as during the past 2 or 3 sessions—and nothing but good can stem from this.

I know, of course, that you consider the passage of the Kings Point bill the most important of their accomplishments, but there have been other things. The extensive hearings and the prolonged debate on the so-called 50–50 law is a case in point. It is beyond my poor comprehension to understand why there should have been so much opposition to the provisions of this bill, seeking, as it does, to reserve to American shipping, only 50 percent of the movement of cargoes owned and/or financed by our Government.

Another accomplishment, and the one with, perhaps, the most far-reaching effect, is the comprehensive review of maritime labor and management relationships developed in the hearings conducted by the House Merchant Marine and Fisheries Committee under the chairmanship of Congressman BONNER of North Carolina.

While no new legislation has resulted from these hearings, it is my conviction that, notwithstanding occasional flashes of acrimony, they were of real benefit to both labor and management in promoting a better understanding of the problems and aspirations of each. Mutual respect and understanding in this area is a prime requisite for the successful fruition of our maritime endeavors and, day by day, this is developing in a most encouraging way.

I have tried to give you tonight, an outline of the sort of sales talk, I think, should be adopted to let the American people know about our merchant marine. Let us get away from reliance upon flag waving and emotional appeals. These sort of things lose their effect almost as soon as your listeners' blood pressures return to normal.

Present the merchant marine to our people as a dynamic, progressive undertaking that, for their economic well-being and own best interests, deserves their enthusiastic support. People have a peculiar, but natural, concern for their pocketbooks. Give them assurance that they are getting value received for the tax dollars used for shipping subsidies. And don't be apologetic about such subsidies.

"Subsidy," nowadays, is not the dirty word it once was. While, actually, the subsidy idea has been a part of our economic structure for years, through tariff applications, land grants, farm aid, and other means, the subsidy concept has come to be generally recognized as essential to maintaining the high living standards with which our country is blessed. And, speaking of farm aid, I suggest that, except for nudging Congress once in a while, when dealing with the public we get away from that time-worn comparison between amounts appropriated for shipping subsidies and those for Cheddar cheese.

You will have sensed, by now, that I am assigning to you Kings Pointers, the job of "selling" the merchant marine. Of course, this has been your mission since the day you entered the Cadet Corps. It is now an even more serious obligation as a part of the debt you owe our congressional friends to justify their confidence in having made Kings Point a permanent institution.

You can do the job, I know. Your salesmanship qualities have been demonstrated amply by the untiring devotion displayed and the hard work done by so many of you in "selling" Kings Point to the Congress.

I realize it is dangerous for me to single out any one individual for special mention in this regard, but I cannot refrain from suggesting that particular thanks are due to Joe Baker, whom I well remember as a bewildered "plebe." Were I to expand the list, I would be here for hours, but those of you who gave your time, and refused to acknowledge frustration, may carry on with that most comforting inner satisfaction that comes from the knowledge of a job well done.

As a matter of fact, I hold to the belief, very strongly, that a Kings Pointer is capable of doing about anything he sets his heart and mind upon—and doing it well. My duties during the past 5 years or more have necessitated a lot of traveling—over our own country and to places abroad. At practically every place I have visited, I have encountered Kings Pointers—as officers on merchant ships—as naval officers on active duty—as responsible officials of steamship companies—in Government departments—as students in my classes at Georgetown—and in a variety of other endeavors. I have never met one without experiencing an inner welling of pride and admiration. And I have heard many flattering things said of Kings Pointers by senior naval officers and shipping executives.

I consider myself fortunate to have had the opportunity to observe so many graduates in action, afloat and ashore, in so many diverse locations. Their generally fine performance is rather convincing evidence to me that the Kings Point concept of merchant marine officer training is basically sound in principle.

Such was the belief of Admiral McNulty when, over 30 years ago, he conceived the idea of a Federal academy for maritime training and, thereafter, expended unwavering devotion to bring such an institution into being.

Although the concept may be basically sound, this should not be taken to mean that it is not susceptible of refinements and improvements, and subject to prompt adjustment to adapt it to the necessities of whatever changes may arise in the industry's operating techniques.

To me, the academy at Kings Point is something more important than just a group of attractive buildings and a beautiful campus. It has the potential to be something more than just a place of instruction. It holds marvelous possibilities as a national center of research and experimentation in all fields related to the maritime industry and its problems. I earnestly hope these possibilities will be explored thoroughly and that full advantage will be taken of all that Kings Point has to offer.

I have studiously avoided any reference to the vital importance of our merchant marine to our national security, or as an auxiliary to our Armed Forces. My purpose in this deliberate omission is to emphasize the economic considerations, because I believe it is on the basis of such considerations that our merchant marine should be sold to the American public.

To me, our need of a thriving merchant marine as an essential instrument of national defense is so self-evident as to require no discussion. Our experiences in two world wars and the recent Korean incident have pointed up this fact in a manner much more convincing than any words of mine might convey.

As most of you know, I am connected with the Military Sea Transportation Service—probably the least understood of any of our defense activities—and, also, one of the most consistently badgered on all sides by legislators, shipping-industry associations, and labor representatives alike. It is usually described as a Government-maintained competitor of the American shipping industry. Actually, it is the best customer-shipper most of the lines have.

The misunderstanding about MSTS stems principally, I think, from a lack of knowledge or appreciation of the scope of our present-day international commitments, and the extent to which we are maintaining military installations in the far-flung reaches of the world, from the Arctic to the tropics. These commitments and the uncertainties of the existing world situation make it mandatory for our security that the Department of Defense have under its direct control, and immediately responsive to military authority, ships of appropriate types in sufficient number to meet minimum logistic needs in the event of sudden emergencies and as a base for prompt expansion under conditions of war.

In the more than 5 years I have been with MSTS, I have become firmly convinced that while the private shipping industry can serve the ocean transportation needs of the Department of Defense to a substantial degree under present conditions, it has definite limitations. Certainly, it is to be hoped we may look forward to an easing in world tensions and the full resumption of normal channels of trade sometime in the future. In anticipation of such a happy state, the shipping industry cannot, or should not, relax in continuing concentration on the maximum commercial utilization of its fleets if we are to attain and retain that place in world shipping to which we all aspire.

Well-Deserved Honors

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. RODINO. Mr. Speaker, it is a distinct pleasure to join in the sentiment expressed in the following editorial entitled "Well-Deserved Honors," which appeared in the Independent Press of Bloomfield, N. J., on May 3, 1956. It is a fitting tribute to two fine men whose unselfish devotion to community affairs, whose keen interest in civic problems and sincere desire to be of help to their fellowman, has made those around them aware of the fact that they are truly outstanding people. To each of them, may I wish many more days on this earth with the same happiness and joys that they have spread to others:

WELL-DESERVED HONORS

Testimonial dinners, like cherry blossoms, seem to pop out the first week of May and Bloomfield has two of unusual significance this week. On Tuesday night 450 turned out to honor Paul S. Procissi, retiring GM executive and civic leader, and an equal number or more will fete William Foley, retiring football coach and BHS athletic director.

Both of these men richly deserve this kind of tribute from their fellow citizens although they served their town in different ways. Procissi was a humanitarian, charity worker and civic leader; Foley, a gruff individualist who made sportsmen and fine athletes out of adolescent material. Although their fields of service were far apart, both served the community faithfully and well.

Procissi was a soft touch for anybody with a cause. Year after year he volunteered to head this drive or that and raised hundreds of thousands of dollars in our industrial districts for Community Chest, Red Cross and other causes. His scope was not limited to charity, however, as he served as Civil Defense Director and on a number of advisory town boards. As a successful businessman, he gave freely of his time and wisdom because, as he pointed out Tuesday night, "I like working with people."

Foley on the other hand was scarcely a soft touch for anybody. A tough, outspoken,

"diamond in the rough", Foley brought fame to Bloomfield gridirons more times than we can count. His teams made Bloomfield a place on the map and his coaching fame was known throughout the Nation. Sportsmanship and good physical conditioning were his aims and generations of Bengal athletes found them to be valuable possessions in later life.

It would be hard to find two men of such different natures yet impossible to discover 2 who are more deserving of these honors. It may be said that they have become a symbol of Bloomfield and the good works they leave behind them will have a salutary effect on this community for many years to come.

It can be said without question that both have earned their distinctions honorably and proudly. We join with the community in paying our respects to two outstanding citizens.

America and the Irish

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at the annual banquet of the American Irish Historical Society held at the Hotel Biltmore, New York City, on May 5, 1956. At the banquet, Mr. Farley was presented with the Society's Medal "in tribute to his personal integrity and distinguished public service":

AMERICA AND THE IRISH

You do me much honer in presenting me with the Medal of the American Irish Historical Society. This honor and this society, I am sure, will endure forever. I am pleased and happy to have my name listed for all time among that distinguished number of men and women who have received this award before me. My heart wells with many emotions. I am grateful, because it is so high an honor; I am humble, because I cannot help but wonder whether I deserve such recognition; I am proud that my family and so many of my friends are here to share in my moments of triumph; I am sorry that many who really earned this honor for me—one in particular who was at my side in my most need for so long—are not among us to share my joy, and I am delighted at receiving recognition from my fellowmen, especially men of the same racial stock. Because we trace our roots to common soil, you will understand, I know, that I accept this medal, with its flattering inscription from my old and valued friend, Robert F. Wagner, with that mingling of joy and sorrow, in mysterious blend, which marks the mystic and romantic Irish in their finest hours. While I count myself one member of the human race and one who truly loves all his fellowmen, I must confess I have a weakness for those from the isle of a people stern in their faith and merry in their fortitude. Like all of you, I have a heart that loves laughter and a soul that is eager for sentiment.

It is particularly pleasant to me that this honor comes, almost to the day, on the 50th anniversary of my setting out in this city to make my way in the world. I will not dwell on my early steps and struggles, as happy as they have become in recollection. My struggles were by no means against fearful odds and my triumphs were modest, indeed, but all have come to be pleasant in retrospect down the corridor of the years. What concerns me here is that the half century of which I speak has been an eventful one for the world, rather than for me. I count myself fortunate to have been around in this fruitful and eventful period. In my time the airplane was developed from the flimsy craft which I first saw hovering uncertainly over the Hudson River to the mighty machines which today span oceans and exceed the speed of sound. Surely no less miraculous has been the capture of man and music from flickering film and scratchy records to the amazing perfection we know today in film and television, and record and radio with their living fidelity and color. The automobile, the telephone and thousands of other inventions have eased our lives, added to our comfort and multiplied our knowledge.

In the 50 years, man learned more about himself than he had known in all the syllables of previously recorded time. Man began conquering his dreaded enemy, disease, by improved medical techniques and patient research, which worked wonders. Man has not and never will conquer death, but he has driven him back to insure many children, especially in our land, of a safe journey to maturity into adult life, and he has added years to the lifespan of the mature. The half century has seen pheonominal growth in education—in and out of classrooms. Today college is open to almost any child, who is willing, where 50 years ago only a few fortunates were able to attend college. Avenues for learning are open to all in the press and on the air. The vista of professions and careers has widened to limitless horizons. Ingenuity, determination, and perserverance have added to our comfort and our daily fare in various profusions. Truly, we have been fortunate in many ways during these 50 years.

Unhappily, man has not learned to control himself as well as he has learned to harness the bounties of nature. Within that half century, of which I speak, there have been two terrible world conflicts, which took frightful tolls in lives, destroyed staggering totals of property and culture, and wasted many gifts of nature. Out of these conflicts were born such fearful engines of destruction that it would seem that man's greatest progress has been toward his own destruction. During the last world struggle we evolved the tremendous and awesome destructive force of the A-bomb and since the struggle we have graduated to the H-bomb, weapons which contain the potential of obliteration of civilization as we know it. I am not one to despair over the arrival of the atomic age. Rather, I look about it as another of man's bright dawns. I am mindful that the mysterious and deadly force we know as electricity has been bent to man's will and is now an integral part of his daily life.

Electricity is accepted as our friend. The friend bears watching at times, yet it is mastered by children almost from their first toddling steps. Electricity has become perhaps our most valued servant. It is not too much, then, to expect that in time we will just as certainly and just as happily master atomic power and make it serve us. I am confident that we will someday bestow upon it as much affection as we now give to electricity and, when we do, it may be that man will have learned to conquer himself. It could be that the next half century will see this greatest of victories, along with tremendous strides in convenience and comfort, that will outmatch the accomplishments of the half century of which I am so proud to have been a part. I truly hope so.

My half century, if you will let me call it so, has been eventful, indeed, in man's relations to his fellowman. It has been an unhappy time for kings and tyrants, although dictatorship is not yet dead. However, it will surely die. Freedom and justice are on the march and, under God, will surely triumph because they are the way of morality. Without morality there can be no purpose or dignity for man. At times things may look dark and clouds of tension may appear to be lowering over our heads but the darkness will be pierced and the tensions will lift, I am certain.

In my half century, man's advances were not confined toward ending political tyranny alone. There was a revolt against economic tyranny, which brought a better and more equitable distribution of the fruits of labor. Some might say much of the world is in the grip of a more ruthless tyranny than the world knew 50 years ago, but it must be recognized that millions upon millions have won measures of independence and others will throw off fear and terror in time, as certainly as day follows night. I do not say the situation economically is perfect any more than I would say that it is perfect politically. The world is full of tensions, which could provoke a conflict more terrible than any we have known, and the world abounds with slavery as bleak as any we have ever known. Our country is under stress of forces which might, if carried to extreme, stifle initiative and enterprise and even freedom. It is possible that pendulums have swung too far and too rapidly in a number of directions. Nonetheless, I am not one to despair and look back on older days as better than those we know. I am confident that men of good will can work out conflicts and adjust differences. I am certain that men of initiative and industry will continue to climb toward new levels of performance and production which will advance the fortunes of men while preserving their freedom.

It is in this field of man's relations to man that I concerned myself over most of my half century. For some years I saw and was a part of it all. I was most fortunate in that, for the last half of those 50 years I have known personally and even intimately many men who have made history. It has been said that I have made a little myself. I like to think so. However, I do not propose to dwell on my deeds, nor even on my associations with the doers of deeds. I have had my part in history, for which I am humbly grateful. For me, my years in public service have had a million warm recollections, a million laughs, a host of friends and almost no regrets.

My half century has ended. My generation is passing. I say this without discontent. It was a wonderful half century in a wonderful world. There was hardly a dull moment in it. If I had it all to do over again I would try to end up with a million pleasant recollections, a million laughs, a host of friends and no regrets. It may be that I may still be able, with the help of my guardian angel, to erase my regrets. It may be those of my generation, who knew this half century as I do, did not solve our problems any too well. The problems were many and tangled and we were but humans and prone to err. We made many errors. We carried the torch of progress as best we knew how, however. Our steps may have faltered and the torch may have flickered but we did not let it go out. The light of freedom still shines, an inspiration for all the world.

Other generations may carry the torch higher and more steadily. Of this I am confident. I am not one who sighs for the olden days. The world today is a better and more comfortable place than when I entered it and, I am sure, it will grow more so. In this improvement I am sure men of Irish descent will play a major role, as they do today. I am aware that at the gatherings

of your society there is a tendency, born of pride and sentiment, to dwell on the glories of the Irish heritage.

This heritage is part of me. The Irish traditions have been part of my life since my earliest childhood. My father's parents migrated from Castletown, County Meath. My mother's parents came from Ireland about the same time in 1847 or 1848, being like my father's parents ambitious to improve their economic condition, and inspired with the hope of a new life in a new world. I was raised on tales of heroism and patriotism in the "Ould Country". I know of the great contributions of those of Irish origin to the military, political, cultural and economic development of this country.

No one is more stirred by pride in this contribution. I am proud of the Irish blood in me. I have made my pilgrimage to the land of my ancestors. I have walked the scenes they knew and breathed the air into which they sang their songs. No sentimental journey was more rewarding. Yet, I am not here tonight to dwell on the Irish heritage but on the American heritage, under which the Irish spirit blossomed and received its highest expression.

America owes a debt to the Irish, but the Irish owe a greater debt to America. Here was the Irish faith and fortitude fashioned in the forge of freedom to inspire the Irish to fight for freedom around the world and to win ultimately freedom for themselves at home. We must not forget that it was the free air of America that made possible the great and lasting contributions of the Irish to American life and culture. Ireland gave America fighters for freedom and America in turn contributed the fire of independence which set Ireland free.

Men are given to exaggeration of the merits of their birthplace, yet I know that mine had a profound influence on my life. I was born and raised at Grassy Point, in the town of Stony Point in the lower reaches of the majestic Hudson River Valley. I count it among my good fortunes to have been born and to have grown to manhood in this history-drenched area. Stony Point is, as you know, the scene of General Anthony Wayne's stirring victory over a superior British force during a crucial period of the Revolutionary War. This exploit made a vivid impression on my youthful mind. So much so that I have always taken a personal pride in "Mad Anthony's" triumph. The historic Treason House which was located nearby never failed to give me a thrill when I was in its neighborhood. Tappan, 15 miles away, the scene of Major Andre's trial and execution, was imagination stirring, for it was also 1 of General Washington's headquarters, secondary, of course, to Newburgh. And, I must add that I was the more pleased when I learned that the rosters of the forces which fought for and won independence were heavily sprinkled with Irish names.

From this area I absorbed a strong and abiding love for my country and its institutions. Although my roots go back to Ireland by a distance of more than a hundred years, that rooting is largely sentimental. My actual roots are American, like those of most men of Irish blood in this country; so much so that I have always thought of the Farleys and the Goldricks, my mother's name, going back not only to the times of the Revolution and the Colonies, but even back to the days of the early Dutch settlers.

So it is with all of us who trace kinship back across the sea to Ireland. If we come from New England we think of ourselves going back to the farmers who fired the embattled shot heard round the world and even further back to that brave and hardy band who trod on the rock at Plymouth. If we come from Virginia, we stir to the echoes of "Give me liberty or give me death" and we go back even further to the men who founded Jamestown. If we come from Pennsylvania, we share the suffering at Valley Forge and we quicken to the peal of the Liberty Bell. So it is with all of us from each State and each corner of the State whether the waves pound the shore, the sun rises over mountains or wind ripples its grain.

This comes not only from pride in the Irish blood that was spilled so that our freedom might grow, but it comes from true patriotism. Much as we love Ireland, we love America more. For America enabled us to give expression to the best within us. In America the Irish learned to be good neighbors. They knew what it was to be scorned. In time they were not without scorn themselves.

But out of the warmth of their hearts they learned to accept others. They are good neighbors now with those who held them in scorn and with those whom they scorned. Differences and difficulties were buried or subordinated among the greater and wider problems and interests of America, which was a haven and a home to all peoples. If we need proof of what good neighbors we have become we need only go back to last St. Patrick's Day to remember that on that great day everybody wants to be Irish and we welcome them into our family. There's a welcome for all friendly souls at all times.

By sharing Ireland with the peoples of other nations we share America the better with them. We all become kinfolk of those who crossed stormy seas to build on savage shores; those who fought in rags with eyes lifted to the horizon of freedom; those who answered calls for surrender with the shout "We have just begun to fight"; those who sanctified a Texas mission by choosing death to surrender; those who hallowed ground with the blood of brothers in the conflict that split the Nation but only for 4 years; those who dug for gold, and those who sought land. All these and many more went into the making of this country. Some were Irish and some were not, but all were Americans and our heroes, for they helped to make us what we are as surely as Wolfe Tone, Robert Emmet, Padraig Pearse, Daniel O'Connell, Charles Parnell, and all of those who came after them in succeeding generations.

No man thinks more highly than I do of the Irish that is in him. No man thinks more proudly of the accomplishments of the Irish among us. I glory in the abilities as well as the patriotism of the Americans of Irish descent. Yet, when we dwell on the Irish contribution I think that we have neglected the American heritage, partly fashioned by the Irish, which made the Irish contribution possible. There were days when the hand of oppression rested heavily on Ireland. In those dark days restless sons of Ireland came here and joined other restless sons of other lands to fight for liberty. By helping to enkindle that precious flame here they helped to light it around the world.

Since that sacred fire was struck on American soil, men of Irish blood have carried it around the world. Irish voices were raised for liberty in every quarter of the wind and Irish blood has been spilled on every continent to advance the cause of independence. As it has been so will it always be.

Massive Fiction Versus the OTC

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. BOLLING. Mr. Speaker, the Roscoe Drummond column which follows appeared in the New York Herald Tribune of Monday, May 7, 1956. Mr. Drummond is to be congratulated for his concise statement on this important issue now before the Congress.

WASHINGTON

(By Roscoe Drummond)

MASSIVE FICTION VERSUS THE OTC

The Eisenhower administration is going to have quite a fight on its hand to win one of its main objectives at this session: Congressional approval for United States membership in OTC—Organization for Trade Cooperation.

This is no big headline-making issue. Win or lose, it won't carry a doubtful State or lose a doubtful district. But OTC is the symbol of everything the United States has been trying to do for years, including the Eisenhower years, to expand the channels of profitable trade throughout the free world.

It is the strong conviction of the President:

That American labor, agriculture and business will be benefited by what OTC can do in expanding world trade.

That OTC cannot function effectively without the United States.

That America would be abdicating its world leadership and would be virtually conceding the field to the Soviets if we decide that OTC isn't worth the effort.

The congressional outlook is not as good as the 18 to 7 vote of approval which the House Ways and Means Committee gave to OTC. While the Democrats voted overwhelmingly, 14 to 1, for United States membership, the Republicans voted substantially, 6 to 4, against OTC. Obviously the President will have to do a lot better than that with his own party if he is to win.

Second, the House Ways and Means Committee voted strongly for OTC because its members have come solidly to grip with the facts and know that most of the arguments used against it are fabricated eyewash.

Things bring us to the oddly revealing circumstances that almost the whole opposition to OTC rests upon the most egregious charges which have not the slightest relationship to reality.

One can honestly argue—though I happen to think mistakenly—that we ought to dump the Reciprocal Trade Act, turn our back on the effort to build freer multilateral trade and put further subsidies on the American consumer to protect the prices of American industry.

But for particular industries, which don't want the hot breath of world trade to force them to be more efficient and more competitive, to argue that OTC puts the Nation's economy into international bondage, scraps the authority of Congress over tariff policy, sinks American sovereignty, and undermines United States industry is adulterated buncombe.

It does none of these things. The bill which would put the United States into OTC guards against all these things. There is no factual basis for such contentions.

The fact that the charges are being made and blandly circulated to Members of Congress suggests that the arguments against OTC are so weak that its opponents dare not use them. They are erecting instead a massive, miasmic wall of fiction which they hope will confuse those who haven't laid hold of the facts.

OTC does not involve any new tariff reduction authority, does not change any United States law, does not affect Congress' authority to legislate, does not give the President any additional powers, does not touch the safeguards of the Reciprocal Trade Act like the peril point, and the United States retains a veto over any action which affects American policy.

You wouldn't get Secretary of Commerce Sinclair Weeks or Cola G. Parker, president of the National Association of Manufactur-

ers, to support OTC, as they do, if it did any of these things.

OTC is made up of 35 countries which do 80 percent of the trade of the free world. It would be the administrative instrument to carry out existing trade agreements and iron out trade disputes within the framework of existing policy. It would play a big role in preventing other nations from discriminating against United States exports.

Secretary Weeks is no pie-in-the-sky visionary. His report to the Cabinet on OTC was: "With Soviet economic activities on the increase, the United States must strengthen its cooperation with free nations in the trade field. OTC is essential to this end."

Possible Cancer Hazard Presented by Feeding Diethylstilbestrol to Cattle

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following paper, prepared by four distinguished physicians and presented at the Symposium on Medicated Feeds held by the Food and Drug Administration on January 24, 1956.

Considering the already widespread and increasing use of diethylstilbestrol in cattle feed, this paper should interest everyone concerned with the public health. According to the authors of this article, estrogens implanted in poultry and fed to cattle may not be as harmless as the public has been led to believe.

This article presents another instance of the necessity to protect the public health by amending the Federal Food, Drug and Cosmetic Act so as to provide for the safety of chemical additives in food.

H. R. 4475, which I introduced in February, 1955, would give this protection.

POSSIBLE CANCER HAZARD PRESENTED BY FEEDING DIETHYLSTILBESTROL TO CATTLE

(By Granville F. Knight, M. D., president, American Academy of Nutrition; W. Coda Martin, M. D., vice president, American Academy of Nutrition; Rigoberto Iglesias, M. D.; William E. Smith, M. D.)

Introduction of the powerful drug, diethylstilbestrol, into the Nation's food supply prompts consideration of the actions of this compound. It is known to induce cancer (1), (2). It has also been found to stimulate weight gain. For the latter reason, there has developed a practice of administering this drug to poultry and beef cattle in the United States (3).

It has been estimated that more than 30,000,000 chickens per year are implanted with pellets of diethylstilbestrol, and that approximately half of the feedlot cattle in the country are now given feeds to which this drug has been added. In poultry, the pellets are intended to be inserted at the base of the skull on the supposition that this part will be discarded and not eaten. But among nine lots of poultry coming into the New York market and examined by inspectors of the Food and Drug Administration, about 35 percent of the birds were stated to contain such pellets in the neck. Similar findings emerged from subsequent investigations, and the residual diethylstilbestrol was reported as 3 to 24 milligrams per bird (4). It has been claimed that no appreciable quantities of diethylstilbestrol can be demonstrated in the tissues of cattle fed this drug (3), but this claim may convey a false sense of security for reasons subsequently given in this presentation.

Diethylstilbestrol can be made under conditions involving exposure to a temperature of 428 degrees Fahrenheit for several hours (5). The temperature recommended for roasting chickens is 350°. Temperatures of only 140° to 180° are found in the interior of roasts of beef (6). From these figures, it is apparent that diethylstilbestrol would not be destroyed by cooking, and could be conveyed to consumers of meat containing it.

It thus seems pertinent to review the effects that this compound can exert. Administration of estrogens, among which diethylstilbestrol is one of the most potent, has led to a wide range of pathological changes in human beings and in animals. In mice, rats, or guinea pigs, estrogens can induce polyps, fibroids and cancers of the uterus, cancers of the cervix, cancers of the breast, hyperplasia of prostatic stroma and of endometrium, tumors of the testicle and hypophysis, and leukemias (2).

In the experience of one of us (R. I.), uterine tumors have frequently been found in guinea pigs given as little as 1.5 milligrams of diethylstilbestrol or other estrogens in subcutaneously implanted pellets (7), (8). Indeed, tumors have resulted in guinea pigs exposed to as little as 8 micrograms (eight-thousands of 1 milligram (of diethylstilbestrol per day (7). Lower dosage levels have not yet been tested in guinea pigs, but in current experiments a pellet removed from a guinea pig 1 year after implantation has been found to retain sufficient activity to induce a tumor upon reimplantation into another animal.

Investigators at the National Cancer Institute have reported that cancers of the breast can be induced in mice by as little as 0.07 microgram of diethylstilbestrol per day (9). This dosage sufficed to induce breast cancer in about 50 percent of male mice, who do not develop such tumors in absence of exposure to an estrogen. A total dose of 30 micrograms was effective in these experiments, in which the drug was administered in a subcutaneously implanted pellet. These and other investigators found that diethylstilbestrol also induced tumors readily when given to mice by mouth.

Normal mice excrete between 0.05 and 0.1 microgram of estrogen per day (10). So delicate is the physiological balance that exposure to an approximately equal additional amount (0.07 microgram) of estrogen (diethylstilbestrol) per day suffices to induce cancer, as mentioned above.

From the above findings, it is obvious that the cancer-producing dose of this drug approaches the infinitesimal. Claims that no appreciable quantities of it can be demonstrated in tissues of cattle to which it has been fed must therefore be carefully scrutinized as to the sensitivity and accuracy of the test methods. An equally cogent consideration is that the fundamental mechanism of cancer induction by diethylstilbestrol is not understood. Many tumors are known to be caused by viruses (2). In mice, cancer of the breast has been traced to a virus. But, for its cancer-producing activity, this virus is dependent upon stimulation by estrogens, such as diethylstilbestrol. This virus remains in the tissues and exerts its neoplastic effects long after cessation of administration of estrogens. Absence of detectable estrogen in the tissues of animals treated with or fed such a substance thus offers no assurance of the absence of a cancer hazard in such tissues.

A great body of evidence shows that cancer-inciting chemicals can exert their effects in catalytic quantities, inducing changes in cells which are mediated by unknown substances transmitted from cell to cell long after the original cancer-inciting material ceases to be demonstrable in the tissues (2). No assurance of the absence of such substances can be offered consumers of tissues from animals treated with or fed a carcinogen, such as diethylstilbestrol.

In human beings, a variety of pathological changes have been found to follow administration of estrogens. In women well past the menopause, the course of breast cancer is slowed by estrogens, but in somewhat younger women it is accelerated (11). There are claims for primary initiation of cancer in women by estrogens (12), but these have been few in contrast to the great number and diversity of tumors following estrogenic treatment of animals. Now it has been found from animal experiments that the spacing of doses greatly influences the yield of tumors. Most important, it has been learned from animal work that intermittent administration of very large doses of estrogens is far less effective in inducing tumors than is a continuing exposure to an extremely minute dose. This phenomenon has been repeatedly observed by one of us (R. I.) in experiments conducted over a period of nearly 20 years in the laboratory of Professor Lipschutz (7). It is a continuing exposure to extremely minute doses that is to be feared from the introduction of estrogens into the food supply.

A prime consideration is the long period of time that elapses between first exposure to a carcinogen, such as diethylstilbestrol, and eventual appearance of a tumor. In animal experiments, exposure is customarily begun early in life and the majority of tumors arise when the animals are old. Experience in the results of administration of estrogens to human beings has been largely limited to treatment of conditions arising fairly late in life. By comparison, the majority of human beings thus far exposed would complete their life span before passage of sufficient time to observe a carcinogenic effect of estrogens. The introduction of estrogens into the food supply, however, presents the problem of exposure of human beings from birth onward.

That human beings are not immune to the cancer-inciting action of estrogens is shown by the fact that there are on record some 17 cases of cancer of the breast in men given estrogens, including diethylstilbestrol (13).

Yesterday, figures were presented to this symposium (14), which, according to our understanding, represent the finding of about 1 microgram of diethylstilbestrol per pound in the tissue of a steer given the prescribed amount (10 milligrams) of this drug in feed. One pound of such tissue would thus contain about 14 times the amount of diethylstilbestrol needed as a daily does to produce cancer in mice, for, as stated above, 0.07 microgram of diethylstilbestrol per day sufficed to elicit cancer in 50 percent of mice. Furthermore, claims for the absence of diethylstilbestrol in tissues have been based on a method whose limit of sensitivity (3), is, according to our calculations, in the range of 1 microgram per 1.1 pounds. This means that a pound of meat, certified as free of diethylstilbestrol, could contain nearly 14 times the amount of this drug necessary to induce cancer by a daily dose to mice. In the case of market poultry found to contain up to 24 milligrams of diethylstilbestrol per bird (4), one is dealing with an amount roughly equivalent to 342,000 times the daily dose necessary to produce cancer in mice.

It would therefore seem prudent that further careful consideration be given the matter of adding to the cycle of food supply a drug known to initiate or aggravate a serious disease.

Another Mississippian Honored—Mississippi 4-H Girl Represents United States Youth at International Teen-Age Conclave in Paris

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. COLMER. Mr. Speaker, I seriously doubt that among all of the 48 States of the Union there is another State that compares favorably with my native State of Mississippi in its contribution to leadership in the various segments of the society and economy and the Nation. Surely, there is no other State in our glorious union of States which furnishes more national leaders on a per capita basis. From time to time I have called the attention of this body to instance after instance where an outstanding Mississippian has been chosen in national competition over other Americans. For instance, there was Sgt. Jake Lindsey, of Lucedale, Miss., who, during the last months of the recent World War, was selected as the outstanding hero to receive the 100th Congressional Medal of Honor for valiant service rendered on the battlefield of France. Sergeant Lindsey enjoys the unique distinction of being the only recipient of that highly coveted honor to receive the Congressional Medal of Honor at the hands of the President of the United States in a joint session of the Congress.

Some 2 years ago when Boys Nation and Girls Nation held their national convention here in the Capital City of Washington, an outstanding Mississippi youth, Eddie Perry, of Bay St. Louis, Miss., was selected as president of Boys Nation, and, believe it or not, at the same time Miss Jerolyn Ross, of Meridian, Miss., was chosen as president of Girls Nation. This was indeed an unusual situation of an outstanding boy and an outstanding girl being selected to head up these two splendid youth organizations both from one State, the great State of Mississippi. I doubt, Mr. Speaker, if a parallel situation has ever existed or for that matter ever will again.

Only last week the Honorable A. Boyd Campbell, of Jackson, Miss., an old schoolmate of mine, retired as president of the United States Chamber of Commerce after an outstanding year's leadership of that great organization.

Other instances of Mississippi's contribution to the leadership of the Nation could be mentioned. But, Mr. Speaker, my purpose this morning is to call the attention of the House to another star that has been added to the galaxy of the crown of Mississippians' achievements.

Mr. Speaker, Miss Marilyn Graves, 19 year-old 4–H girl of Jones County, Mississippi, has just returned from Paris where she represented United States youth at an international teen-age conclave.

The Mississippi girl was one of 40 young women—20 from France and 20 from other countries around the world—who took part in a two weeks' conference to discover how teen-agers in many nations live, think, and feel.

Other countries represented were: Germany, Australia, Belgium, Argentina, Cameroons, Brazil, French Northwest Africa, Egypt, Spain, Denmark, Great Britain, Holland, Greece, Italy, Japan, Portugal, Sweden, and Switzerland.

Host for the meeting was a French magazine, Elle, and each delegate was selected by a leading publication in the country she represented. Miss Graves was chosen to represent the United States by the magazine, Seventeen, which reaches about 2½ million teenagers, and which last fall featured her in a magazine article as "Miss Young America in 4–H."

Commenting on Miss Graves' selection, Mrs. Enid A. Haupt, publisher of Seventeen, said: "It is a great responsibility to select a girl who will represent America's 8 million teen-age girls at a foreign conference. We are especially pleased that Marilyn is so active in 4–H work—because we feel this is such a typically American activity. Marilyn to us represents the best type of American girl because she has truly kept her 4–H pledge to use the 4–H's—head, heart, hands, and health—for her club, community, and country.

An outstanding member of this organization of farm youth, Miss Graves has traveled through the 4–H Club program to Minnesota, Chicago, New Orleans, and Washington, D. C.; given 230 speeches, and appeared on television and radio as a representative of the organization.

Miss Graves lives on a 260-acre farm with her parents and brother. They raise beef cattle and grow corn and cotton. A graduate of Jones County Agricultural High School and Junior College, she is now working for a degree in home economics at Mississippi State College for Women.

Thus, Mr. Speaker, another Mississippian has been honored and has received national recognition.

Statement in Support of Appropriations for the Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by me in support of appropriations for the Rural Electrification Administration before the Senate Appropriations Committee:

The city dweller first know the blessings of electricity as early as 1882 when Thomas A. Edison built his famous Pearl Street plant in New York. The rural dweller had to wait many years to realize these benefits. During the three succeeding decades the farmer waited, more or less patiently. Electric utilities, public and private, for a long time ignored him. Farmhouses were thought to be too far away from generating plants and were too far apart. There could be no profit in serving them.

Eventually the transmission lines crept out into the country from the cities, slowly and painfully. By 1935 only 10 percent of the Nation's farms were electrified and prospects of this percentage increasing rapidly were exceedingly dim in the midst of a period of depression. It was then that the Rural Electrification Act of 1936 was passed. The Federal Government then assumed the responsibility of bringing the blessings of electricity to the long-suffering farmer. Today over 94 percent of farms throughout this broad land are electrified. There are now over 1,000 REA financed sylstems, owned by the farmers themselves, which maintain 1,300,000 miles of line serving over 4½ million rural consumers. This is a truly remarkable achievement.

By means of electricity it is certain that many lives have been lengthened and made more complete. Productivity of the farm has attained heights unknown elsewhere in the world, due largely to the coming of electricity to the farm.

Over $3 billion has been authorized for loans. It is significant to me that repay-

ment of loans and of interest is almost 100 percent perfect. At the first of the year only 15 of the borrowers were delinquent more than 30 days and the amount overdue was less than one-tenth of 1 percent of the amount billed. Few businesses of any kind can boast of such a record.

The strength of the Nation is its people. Americans have become strong by accepting responsibility, demonstrating initiative and perseverance. Nowhere has this been better proven than in the Rural Electrification program. Once given the opportunity our rural dwellers have shown that they are mature and self-reliant. Today the financial position of the program is sound.

Every 7 years the farmer has been doubling his use of electricity. He has come to consider electricity as an absolute necessity, and it is resulting in a need for increasing the capacity of many REA systems. For that reason, and for the development of new sources of energy it is essential that more funds be made available to maintain efficiency and expand capacities of many REA cooperatives.

It is essential that the program be carried on, both for the purpose of improving and expanding existing systems and to reach the few remaining farms not yet served with electricity.

In 1949 Congress belatedly recognized an anachronism. Many farms, even in this modern age of electronics, had no telephones. It then authorized the REA to extend its lending services to interests, public as well as private, who would extend telephone service to those needing it, or to improve existing but poor service.

The first telephone loan was made in February 1950, at a time when the United States census showed only 38.2 percent of all farms had telephones. Variation was extremely wide in separate areas. By December 31, 1955, 415 borrowers had sought $273 million and already over 15,000 miles of lines had been constructed to reach 286,000 subscribers. This is a remarkable record for so short a time and deserves to be encouraged by all means. Authorized totals would include, at the end of 1955, 86,543 miles of line on 246 systems.

The activity of the REA rural telephone program has stimulated activity by all operating in the field. The job of getting modern telephone service on every farm in the United States is not REA's alone. All units of the industry are working toward that end.

In my own State I have witnessed the remarkable growth of these two programs. In 1935 only 2.6 percent of Oklahoma's farms were electrified when the first loan was approved. On January 1 of this year, 90.8 percent were electrified. Farms so served had increased from 5,648 to 108,079. Loans have been made totaling over $120 million, which will eventually result in nearly 62,000 miles of lines to serve over 151,000 rural consumers. I am proud to say not one of the 28 borrowers in my State are delinquent in repayment of their obligations.

In 1940 only 18.1 percent of Oklahoma's farms had telephones, and when the REA telephone program began only 1 out of 3 farms had phones. By the end of 1954 this had been increased to 44.8 percent, or 53,299 farms, served by 2,368 miles of line. REA rural lines have brought new service to 3,107 and 3,521 are benefiting from improved services. The nearly $3 million in loans to 9 borrowers is being well used.

The American farmer has little to cheer him in these days of surplus crops and depressed prices for farm products. But we must not forget that he has been a stalwart pillar of strength throughout our history, and he will be needed more and more in the future. Our increasing population will demand an ever-increasing amount of farm products. The health, happiness, and productivity of our farm population must be preserved. The REA programs of electrification and telephone service are essential to the farmer's efficiency and must be continued until there is no penalty to the rural dweller from the fact of living in the country. The farmer is entitled to the full use of electricity and of communication with his fellow no less than the city dweller. For these reasons, I appeal to you to grant the full amount sought by the REA for continuing unabated its useful and valuable program.

Kansas City, Kans., Armory Dedication

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. SCRIVNER. Mr. Speaker, the following news story from the Kansas City Star, of Sunday, May 6, 1956, relates the events of a historic day in Kansas City, Kans., when the city's new million-dollar National Guard armory was dedicated.

As you will see, the story gives short excerpts from talks given by Gen. Williston B. Palmer, Army Vice Chief of Staff; former President Harry S. Truman; and myself:

LINK IN DEFENSE: THE NEW KANSAS CITY, KANS., NATIONAL GUARD ARMORY IS DEDICATED AS DETERRENT OF WAR—REPRESENTATIVE SCRIVNER SAYS THE FACILITY IS EVIDENCE OF THE WILL TO FACE ENEMIES

In a ceremony replete with military honors and traditions, the new National Guard armory in Kansas City, Kans., was dedicated yesterday before 2,000 persons.

The event drew to the city former President Harry S. Truman, 18 generals, including the Vice Chief of Staff of the Army, Gen. Williston B. Palmer, and other Midwest military and civilian leaders.

Special tribute was paid to Col. Mahlon S. Weed, station commander, for his work of more than two decades to provide the city such a facility. Colonel Weed's reply was a simple "Thank you," and words of praise for the citizens of the community who made the million-dollar project possible.

TRIBUTE TO COLONEL WEED

ERRETT P. SCRIVNER, Representative in Congress from the Second Kansas District, who served as a lieutenant under the colonel when he was Captain Weed, paid this tribute:

"It is more than a building we dedicate today. It is a dream come true, a testimonial to the vision, tenacity, and faith of one man, Col. Mahlon S. Weed."

The Representative recalled the history of the Guard in Kansas City, Kans., pointing out such inadequate facilities of bygone years as a laundry converted to armory use, storefronts, and the basement of the Memorial hall.

"Today you see the culmination of years of effort," SCRIVNER said. "On this ground stands, by your efforts, this magnificent armory, in which the youth of today and tomorrow will receive training * * * that may some day not only save their own lives, but may very well save your country and your life."

HISTORIC ROLE BY CITIZEN

The speaker added that tax dollars for the armory are as a premium on an insurance policy for national security. He recalled the efforts of the citizen-soldier called to arms in all of America's wars and pointed out that the National Guard and Reserve forces furnish the major share of military manpower when war comes.

"With these marvelous modern facilities, our men will be far better prepared than they could have been otherwise," SCRIVNER said. "Even so, I am sure you join me in the prayer that even though prepared, they will never be called upon to serve in time of war. With them, let this be your slogan, 'Keep your guard up'."

The importance of the civilian components in the Nation's military picture also was stressed by Gen. Williston B. Palmer, Vice Chief of Staff of the Army, who was representing Gen. Maxwell D. Taylor, the Chief of Staff. General Palmer congratulated the citizens of Kansas City, Kans., for their efforts in providing the facility.

A PREPAREDNESS SYMBOL

"In generously providing this building," the general said, "the people of this city and of this State are to be commended. This is visible evidence of your determination to deter war, and the national guardsmen here are likewise dedicated to this purpose. The significance of this ceremony is that we are dedicating not merely a shrine to memories of past wars, but also a building to house the strength with which to boldly face our enemies, and which by its readiness will prevent conflict.

General Palmer was introduced by Maj. Gen. Joe Nickell, the adjutant general of Kansas.

Truman recalled his early days in the guard, telling of the payment of 25 cents a night to rent a dance hall as a drill hall, and providing a uniform.

The country has found out that the National Guard and the Reserve must be maintained," Mr. Truman said. "I am very much interested in what you are doing here. It is necessary that the country understands that its welfare depends on the civil population."

A WORD TO GUARDSMEN

Turning to the guardmen the former President counseled the men they should appreciate the facility they now have.

"Keep up the good work," he said, "you're the only safety this country has."

Beaming, Mr. Truman remarked as he finished: "I want to come back in about 20 years when I'm 90 to review you and see if you have shown any improvement."

In presenting the armory to the State, Mayor Paul F. Mitchum said it was a real pleasure for him to represent the citizenry of Kansas City, Kans., in the task. Gen. Calvin E. Berry, Topeka, a member of the State military board, accepted the facility and said:

"I express the deep appreciation of the Kansas Military Board to the citizens of this community for their untiring devotion to our national defense."

Brig. Gen. Frank Dunkley, Topeka, formally commissioned the armory as a military facility. Accepting the responsibility of the building for Colonel Weed, the station commander, was Lt. Col. John W. Breidenthal, executive officer of the station.

The Political Mill

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. COON. Mr. Speaker, there has been much talk from certain politicians

about giveaways by the Eisenhower administration and former Secretary of the Interior Douglas McKay.

I now see in the column The Political Mill, by Gould Lincoln, which appeared in the Washington Evening Star, that Mr. Rex Ellis, a well-known farmer and legislator who served 16 years in the Oregon Senate, has offered $1,000 if these gentlemen can substantiate their giveaway charges. It will be interesting to see how soon any of them collect the $1,000.

Under leave to extend my remarks, I wish to insert in the RECORD a portion of Mr. Gould Lincoln's The Political Mill column, as follows:

Former Secretary of the Interior Douglas McKay gave up his Cabinet post not long ago to run for the Republican senatorial nomination in Oregon. If he wins the primary election May 18, he will be Senator MORSE's opponent. The Oregon Senator has attacked President Eisenhower and Mr. McKay frequently, accusing them of giving away natural resources of the country to private interests.

A Pendleton, Oreg., rancher, Rex Ellis, has deposited a certified check of $1,000 with E. C. Sammons, president of the United States National Bank in Portland, to be given to anyone "who can prove by due process of law that the President of the United States or Douglas McKay has committed fraud in any transaction or ruling made by the President or by the Secretary," giving away any part of the public domain.

Mr. Ellis said he was making the offer in the interest of fair play—and that he did not consider the charges made against General Eisenhower and Mr. McKay fair play. He wants Senator MORSE or any one else making these charges to prove them "or admit they have been making false and malicious statements."

The Federal Civil Defense Administration

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. McCORMACK. Mr. Speaker, last October, I attended in Boston the national conference of the United States Civil Defense Council, which is composed of city and county civil defense officials. At that time, I became impressed with the difficult job faced by some 400 State and local civil defense directors at the conference and by the overall responsibility of the Federal Civil Defense Administration.

In order to help civil defense, and particularly its education and training program, which is of interest to all Americans, I introduced H. R. 10432, which will help develop national civil defense training schools. The following facts are of interest by way of background:

The Federal Civil Defense Administration expects to offer a graduate course during the coming months for civil defense command and staff personnel. Completion of this course will prepare a graduate to function effectively in an operational capacity during a civil defense emergency, natural or manmade. The course will be about 3 months in length.

Experience with the 1-week courses which have been conducted since 1951, have shown that many civil defense officials at the State and local levels who should attend such courses are not able to do so because of their budgetary limitations. Passage of this bill will enable more State and local officials to attend, thus assuring a greater uniformity in organization and training in civil defense throughout the Nation. If this bill is not enacted, most civil defense officials who so badly need this training will be unable to attend and the civil defense effort will be seriously handicapped.

The bill recommends payment of travel expenses and per diem allowances in accordance with Government travel regulations. Enactment of the bill would result in no additional increase in the Federal Civil Defense Administration's budget as the cost of the program would be absorbed in FCDA's 1957 appropriation.

Address of Allen W. Dulles, Director of Central Intelligence

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. HILLINGS. Mr. Speaker, I wish to call the attention of the House to a speech by Hon. Allen W. Dulles, Director of Central Intelligence, before the Los Angeles World Affairs Council on April 13, 1956. Mr. Dulles' excellent and expert analysis of the recent change in the Communist Party line is worthy of careful study.

The address follows:

PURGE OF STALINISM

(Address of Allen W. Dulles, Director of Central Intelligence, before Los Angeles World Affairs Council, April 13, 1956)

There is never a dull moment in my job as Director of Central Intelligence. Events which seem to defy analysis happen somewhere in the world every day. Few trends seem to follow a predictable course.

These last few weeks there have been developments in the Soviet Union which have puzzled all the experts who generally have ready answers—sometimes more ready than accurate—to explain Soviet conduct.

Just at a time when some are saying that everything is going wrong with foreign policy in the free world countries but that everything in the Soviet Union is progressing according to some great master design, the Soviet collective leadership, as they call it, comes forward to beat their collective breasts and indulge in the most extreme self criticism.

The men in the Kremlin now tell us that all they said earlier about events in the U. S. S. R. during the 20 years preceding Stalin's death is quite wrong; that in fact this was an era of infamy, crime, and shame. They admit that their past adulation of Stalin was based on fear not on fact. The man they themselves used to call the "glorious Stalin, genius of mankind" is now being publicly accused of "grave errors" and privately described as a malicious monster.

The Soviet leaders do not very clearly explain why the new collective leaders waited for 3 years after Stalin's death to tell it to their people. They do not make a very satisfactory showing as to why they themselves sat acquiescent in the seats of the mighty during all the period of Stalin's dictatorship, exercising great powers as members of his inner circle.

Possibly, as Khrushchev is reported to have admitted, the price of nonconformity was a bullet in the head. This is a very human excuse but a poor qualification for high office on the part of those who now assert the rights and prerogatives of leadership. In the free world, where we aspire to build on the great traditions of the past, not to repudiate them, we revere as our heroes and leaders those who refused to conform, whatever the risks, when the principles of liberty were at stake.

In the U. S. S. R., evidently, acquiescing in crime as the price of simple survival under a political tyrant is sanctioned as legitimate conduct. As they put it: "The point was not to save one's own life; the point was to save the revolution."

Before going further into the details of this strange development in the Soviet Union it may be worth while to review briefly what had been taking place there during the years of Stalin's power. Here we may find clues as to why the men in the Kremlin now take the serious risks of repudiating their late hero for having put the individual above party and substituting a personal dictatorship for a collective one.

Stalin himself ran through a series of revolutionary combinations, somewhat akin to collective leaderships, during the 1920's. For example, in 1924–25 he combined with Zinoviev and Kamenev against Trotsky. From 1925–27, a new alliance between Stalin, Bukharin and Rykov was formed and routed a Trotsky-Zinoviev-Kamenev combination. And finally, from 1927–29, Stalin worked with Molotov, Voroshilov, Mikoyan, and others to crush Stalin's recent allies, Bukharin and Rykov.

It was during the 10 years which preceded Russia's entry into World War II that Stalin completed the consolidation of his control over the Communist party machinery. By that time he had placed his loyal stooges in all important positions of authority throughout the Soviet Union and the Army was brought under political control.

Among the major charges said to have been leveled against Stalin by Khrushchev is the charge that in the late thirties he deliberately liquidated Marshal Tukhachevsky and thousands of the best officers in the Soviet Army, presumably to insure his political control of the military apparatus. Certainly today there is good reason to believe that Marshal Tukhachevsky was falsely accused of conniving with the Germans. There is some evidence that there was a clever German plot to discredit Tukhachevsky, which happened to fit in with Stalin's own plans.

We do know that during and after the war there was burning resentment among the Soviet's professional soldiers at Stalin's interference in the conduct of the war, his unjust and capricious belittling of heroes such as Zhukov and his arrogant claims to personal credit for Soviet victories. A senior Soviet general, for example, is recently reported as having privately branded their so-called documentary film, "The Fall of Berlin," which shows Stalin as the great military master mind, as a "tissue of lies."

Today the collective dictatorship is assiduously repairing the injured dignity of the military and incorporating its leadership into Communist Party membership. They must realize that, following the usual pattern of revolutions, the military leaders might tire of being the pawn of dictators, whether individual or collective.

But whatever the faults of Stalin in the prewar decade, one can harly ascribe them to his old age or senility. Stalin was then in his prime. Furthermore one can hardly believe that the acts of the dictator in a war from which he emerged as a hero are the motivating causes for the present attempt to liquidate his memory. In fact, the most recent Soviet pronouncements are tending to refer to "good" and "bad" Stalin eras. Naturally, there is no desire to repudiate such measures as farm collectivization and the rapid industrialization under the Five Year Plans, which are so closely associated with his name. The beginning of the 'bad" period was in 1934 when the great Stalin purges began. If they denounce his war record, the purpose here must be to eliminate him from the hero class and to give the military some of the credit he had arrogated to himself.

But to find the real reasons for the de-Stalinization campaign, we must, I believe, look to the more recent past, particularly to the hard autocratic period during the last 6 or 7 years of Stalin's life. Here we find two major motivations for cutting away from Stalin worship.

Internationally, from about 1947 onward to the time of his death, Stalin's often bellicose policy in the international field had been a failure and had tended to unite the free world against international communism. Domestically during this period his police state was meeting ever-increasing disfavor, not only with the helpless people, but with the top politicians, generals, and industrial managers who were essential to the working of the Soviet system. This began to create problems for the regime.

First, let us look at the international picture. In the immediate postwar era, riding the crest of the common victory and maintaining military strength and power, Soviet policy had notable successes. It consolidated the grip on the European satellites and helped the Chinese Communists to victory.

But beginning with about 1947 in Europe, somewhat later in Asia, the free world at last began to realize the implications of the forward drive of international communism and started to take countermeasures, and the tide began to turn.

What happened in these years? The Marshall plan, which Stalin and Molotov indignantly rejected and tried to defeat, was put into effect and Europe was saved from economic chaos. In Greece, the Soviet effort to take over by guerrilla tactics was thwarted.

When the Soviet attempted to take over Berlin and destroy this outpost of Western freedom, the Berlin blockade was frustrated by the airlift and West Berlin remains a showwindow of what the free world can do. Tito survived his ejection from the Cominform and the wrath of Stalin and struck back with telling criticisms of Stalinist policy—almost identical with what Soviet leaders are now themselves saying.

Later the North Atlantic Alliance was organized and despite Soviet threats the way was opened for Germant rearmament in close union with the West.

Thus frustrated in the European field Stalin turned to the Far East and, working with the North Korean and Chinese Communists, attempted to take over Korea as the first step toward driving America from the western Pacific. Again the Communists were blocked and, most important of all, an alarmed and awakened American public opinion proceeded to the defensive rearmament of this country. Our nuclear power was vastly increased.

It is understandable that Stalin's successors should have found it convenient to place upon him the blame for Greece, Berlin, Korea, Yugoslavia, German rearmament and the like, and in particular, for the generally hard Soviet line which has led to the buildup of American defense forces and NATO. It was these successes which led the Soviet Union to conclude that a peace treaty with Austria was necessary to build up their badly shattered reputation as peace mongers and to prepare the way for a summit conference, their pilgrimage of penitence to Belgrade, and their effort to line the Socialist parties into new popular fronts.

But the foreign scene, alone, by no means explains the urge the present Kremlin leaders felt to break with the hard Stalinist past. They were already making progress in allowing the memory of Stalin to fade in international recognition and prestige without going to the extreme of total destruction of the Stalin myth with their own people. Thus the clue to their present policy lies more in the internal Soviet situation than in the requirements of their foreign policy.

Domestically they have been caught in a dilemma. In order to compete with the western world in the fields of science and industry which was vitally important for their economic growth and their rearmament program, it was essential for the Soviet to speed up the education of their people, especially in the scientific and technical field. After Stalin's death the regime encouraged more objectivity in scientific inquiry, and put on the shelf some pseudo scientists such as Lysenko. After all they had found out early in the game that in the present nuclear age one could not fool around with scientists who tailored their art to the whims of Marxism.

Obviously, the Soviet leaders could not limit their educational processes to the scientific fields and more and more young men and women are graduating from schools, which correspond to our high schools and colleges, and are taking advanced degrees comparable to our degrees of master of arts and doctor of philosophy. Even with all the indoctrination in Communist teachings which they give to their young students it is impossible to prevent education from developing the critical faculties which every thinking human being possesses.

Furthermore, as part of their new campaign of sweetness and light, they have found it wise to take down some of the bars which have impeded travel between the Soviet Union and the free countries; and while the Iron Curtain still remains and there is a careful selective process as to those who are permitted to leave the Soviet Union or to visit it, it is obvious that today there is far more contact between the people of the U. S. S. R. and outside countries than at any time in recent years.

All this has tended to build up pressures upon the Soviet rulers to create an impression not only internationally but also domestically, that a dictatorship of the Stalin type was dead forever.

The Soviet leaders are trying to meet their external and internal dilemmas by finding a convenient "devil" which they can use to explain away past Soviet sins to the world abroad and to their own people as well as to demonstrate that the present rulers of the Soviet are different mentally and morally than they were under Stalin. Thus they hope that their own people will accept their protestations that the days of government by arbitrary policymaking, secret trials, deportations, and prison camps are over. Furthermore, they are again promising that they will do something to raise the standard of living so that the promise of individual freedom will be seasoned with a greater share of consumers goods and a more abundant life.

The extent of the opposition to the Stalinist type regime must have been gaged by the Kremlin as far stronger and deeper among the Russian people than we had dared to hope. Nonetheless, the destruction of the Stalin myth carries with it a very real threat to the internal discipline and unity of the Soviet Communist Party and the international Communist movement.

That calculated risk must have been taken deliberately by men who knew they had to have a scapegoat, if they were to hope to preserve the dictatorship on which their own power and very survival rested. By attacking the personal symbol of Stalin and the worst excesses of his rule, they hope to be able to preserve many of the essentials of the Stalinist system, now labelling it Leninism, the monopoly of all power by a single party, the complete subordination of the courts and individual rights to arbitrary party decree, the governmental control of the press and of all organs of public information.

This basic structure is meant to be preserved intact. Already the regime has publicly warned that some rotten elements have taken the de-Stalinization campaign too literally and are "trying to question the correctness of the party's policy." This, Pravda thundered, is "petty bourgeois licentiousness" of a kind the "party has never tolerated and will never tolerate." A dead and dishonored Stalin, therefore, is likely to be merely a device—here possibly a Trojan corpse rather than a Trojan horse—with which the long-suffering Russian people are, I fear, to be deceived in their expectation of a freer and better life.

Obviously the Soviet rulers concluded that it would take something more than a mere repetition of the old clichés to have any effect. Apparently the necessity was deemed to be urgent and impelling. They had tried to do the trick with the liquidation of Beria, but the secrecy surrounding his execution was hardly a persuasive bit of evidence of a new dawn of liberty. It was in the worst tradition of the Stalin era, and he, after all, generally gave his victims at least a drumhead public trial.

When the present Soviet leaders took the risks involved in their present policy, they must have carefully weighed the consequences. They must have realized the grave issues it would raise in the Communist world outside of the U. S. S. R., among the party faithful in every free country, and among their own peoples.

Abroad they probably hoped there would be some counterbalancing advantages. If it would bring about a feeling of relaxation in the free world, defensive rearmament here and among our allies might slow down, defensive alliances might tend to weaken, the possibility of peaceful coexistence, for which everyone yearns, might be more and more accepted. All this they hoped would give them time to build up their own strength, economic, and military. If we are naive, then the Soviet Union may get some international benefits from their present tactics.

But there is another side to the picture which bears pondering. The Soviet leaders may have had no real alternative and took the course which they felt held out the best chance of keeping their own power. The Kremlin leaders, as I mentioned, were under heavy domestic pressures to do something to persuade their people that a new era was in the making. During recent years the leavening process of education has developed the critical faculties of millions of Russians. The Kremlin can no longer sell the old line to all of their people. They must now rewrite not only the history of Stalin but rewrite the story they have been telling their people about the outside world.

These leaders—Khrushchev, Bulganin, Mikoyan, Kaganovich—have got over the hump of Stalin's death without losing their grip on his power. They profess a great deal of confidence in their ability to perpetuate the system of collective dictatorship they have instituted by basing it more broadly on the top layer of elite party managers, generals, engineers, and intellectuals who have a stake in the Soviet regime.

Only time can tell whether the present leaders with their past close association with Stalinism really can do this and make the

Soviet dictatorship work without going much farther and giving their people something more than mere lipservice in the direction of the right to free speech, free worship, and protection for the individual from arbitrary action.

Possibly what we are seeing will end up as a temporary period of attempted fraud on the Russian people, a cloak to sell them a collective dictatorship as against a personal dictatorship. Possibly it is a first hesitant step toward giving a greater number of the Russian people a chance to share in the decisions which shape their destinies. I am sure the Russian leaders themselves do not know how their effort to "de-Stalinize" the Soviet Union will turn out. I am also sure they would be dismayed if they thought they were paving the way for the establishment in Russia of what we could call a decent and responsible government.

The Communists, despite their self-confidence, do not and will not control the fate of mankind. In the face of firm free-world resistance to their international barbarities and exposure of their political frauds and malpractices, at home and abroad, and under the pressure of their own people, there may be a gradual move toward more normal modes of life and behavior. If so, then hopes of world peace will be given a mighty impulse forward. This possibility the free world must watch prayerfully, alert to opportunities for peace provided by progress in this direction. We must be equally alert to perceive and denounce the dangers implicit in the fraud of a mere attempt to bury a shabby past.

Should Recipients Have More Say in Our Foreign-Aid Programs?

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. FOGARTY. Mr. Speaker, as a member of the Appropriations Committee, I have an abiding and continued interest in the success achieved by our foreign-aid programs, particularly as they relate to the vital area of the Far East.

Recently my attention has been invited to a thought-provoking article appearing in the Washington Sunday Star on May 6, entitled "Should Recipients Have More Say in Our Foreign-Aid Programs?" Its author, J. A. Villamor, is a native of the Philippines but a naturalized American citizen and a lieutenant colonel in our Air Force Reserve. Colonel Villamor knows whereof he speakes. His record is an illustrious one, beginning with the days in 1936 when he was the first Philippine cadet to graduate from Randolph Field and continuing through the battles of the Philippines down to the present day.

As commander of the Philippine Pursuit Squadron, he was one of the few Philippine field officers evacuated with General MacArthur to Australia. Later by direction of General MacArthur, he was sent back to the island of Negros by submarine where he led the first small American party through Japanese lines to set up an allied counterintelligence network which coordinated all guerrilla activities in that area. His military missions in the South Pacific continued throughout the war and, after the liberation of the Philippines, he served in several important roles, both in the United Nations and as head of the Civil Aeronautics Bureau of the Philippine Government. Colonel Villamor found himself in the United States at the outbreak of the Korean conflict and volunteered his services to the American Government which accepted him as a lieutenant colonel, in which capacity he was sent to Saigon in 1951. Colonel Villamor spent more than a few years in Indochina and other vital areas in the Asiatic world where he viewed firsthand the incessant struggle between the forces of communism and democracy, which are seeking to win the bodies and souls of these unfortunate people.

Colonel Villamor is in a unique position to appraise our efforts, to properly influence peoples with whom he has a common bond of heritage and a deep understanding of their aspirations and desires. As a good American and one who loves this country, I believe his views are both timely and worthy of deep consideration:

SHOULD RECIPIENTS HAVE MORE SAY IN OUR FOREIGN-AID PROGRAMS?

(By J. A. Villamor)

Something has gone wrong with our foreign aid policy. I think many Government officials would agree with this appraisal.

But too many of the critics tend to blame our failures—whether they are large or small needs yet to be determined—on the recipients of our aid. "They are inexperienced and emotionally unstable," some will say, "and this naturally makes them gullible for Communist appeals." Others will claim: "They are just stupid, that is all."

The more kindhearted may say: "The Communists are only taking advantage of Asians' childish sentiments, something we cannot do."

But how many will say, simply, "it's our fault"? I, for one, believe the fault is primarily ours. Here is why:

A substantial portion of American efforts in Asia can be compared with the efforts of a brave, noble fellow who, with a brick in one hand and a pistol in the other, is determined to save a man who is dying of hunger and malaria and who lies prostrate in a room that is full of mosquitoes.

WRONG TOOLS FOR THE JOB

We are using the wrong tools for the job at hand.

It has become almost trite to say that the American emphasizes military aid too much. This, nonetheless, is the major problem.

Before we make our proposals we neglect getting answers to these vital questions:

Do the peoples we are trying to help want to have such a large military force as we think they should have?

To what extent must the national economics be adjusted to pay for these military forces?

Will these soldiers—usually the cream of the youth of these lands—be more valuable as soldiers or will it be better all around for them to be students, farmers and laborers?

Will these people have something to fight for besides having something to fight against when the time comes?

These questions ought to be explored in great detail before aid programs are decided upon. This should be obvious. But it is my experience that the answers are usually taken for granted by American administrators. Usually it has already been concluded by someone that "for their own good, they must have an army."

DO THE PEOPLE BENEFIT?

Economic aid programs are also charted with the wrong aims in view. Often the improvements we insist on do not truly raise the standards of living of the people—although they may make a great show of industrial improvement.

It happens even with strictly philanthropic programs, where the intentions of the donors are not open to question. There was a time last year when CARE packages arrived in Saigon with butter and cheese for people who did not have even rice—let alone bread—to eat with such delicacies. The cheese and the butter ended up in the black markets.

Many times the failures of our foreign aid have been due to our own unrestrained, let's-go spirit; our we-know-what's-good-for-you-better-than-you-do approach; our heavy dependence on material things to answer needs that are often largely spiritual; and, worst of all, perhaps, our tendency to forget the human problems—of peoples with hearts, minds, and souls, as well as stomachs, just like the peoples of the West.

In my opinion, our foreign aid ought to be directed more to the needs of the underdeveloped peoples as they see their needs, not as we see them.

True, we often do know what is best for these people more than they know themselves. But unless they can be convinced—and we do a very poor job of convincing them—our forcing on them what is good for them achieves us less than nothing.

THE NEED FOR DIGNITY

Secretary of State John Foster Dulles found on his last trip to the Orient that "there is throughout the Asian peoples a desire for Western recognition of their dignity." Other have mentioned the need for recognizing the Asian's dignity, but too few have stopped to think what this really means.

Another point which our foreign-aid administrators often miss: Asia is sick and tired of soldiers, diplomats, and merchants who, in spite of their good intentions, approach the problems of the poor from a special point of view. Asians respond, however, to the nonprofessional like President Ramon Magsaysay of the Philippines, an amateur (guerilla) soldier, an amateur diplomat, and an amateur politician fresh from the Filipino villages.

AMERICAN UMBRELLA?

Secretary Dulles reported, on his return from the Far East recently, that "the clearest single impression I received" was that "uniformly * * * the Asian leaders * * * desire the United States to be strong and that that strength should continue to be a sort of protective umbrella over other free nations."

I venture to suggest, however, that many have misjudged the Asians' desires. What they were probably saying was that they wanted the United States to be strong militarily, but not they themselves.

Asians, in other words, think the United States should be willing to play big brother, respecting a very delicate set of international Marquis of Queensberry rules. This Asian attitude is admittedly selfish. But we ought to be clear that this is their attitude, and that they are not ashamed to ask us to protect them, no questions asked.

The importance of paying attention to the attitudes of the people of Asia cannot be overemphasized. To ignore their attitudes, to interpret them only by western standards, to base policies and programs on one-way precepts—this is just about the fastest and surest way to bankrupt American policy in Asia.

Extracts From Address Delivered by Adlai E. Stevenson at Miami, Fla., on April 12, 1956

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 9, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD extracts from an address delivered by Gov. Adlai E. Stevenson at Miami, Fla., on April 12, 1956.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

EXTRACTS FROM ADDRESS OF ADLAI E. STEVENSON AT MIAMI, FLA., APRIL 12, 1956

Eleven years ago today a very great man died at Warm Springs, Ga. He had given greatly to this country, to this century, yes, to civilization. I wonder sometimes what America would be like today if it hadn't been for Franklin Delano Roosevelt.

President Roosevelt was at Warm Springs as he had been so many times before because of the cross he had to carry through the last 24 years of his life. For he was a victim of crippling infantile paralysis.

And today on this anniversary I want to pay my respects to the memory of this beloved man by talking with you for a few minutes about this matter of disease and sickness, of our war as a people against the killers who strike inside our bodies, of what we are and should be doing on this human battlefront.

We have within the past 2 years made dramatic and almost unbelievable advance against the particular enemy that attacked Franklin Roosevelt. But the plain facts are that we are doing pitifully, inexcusably little about finding answers to the other cruel mysteries which cause human misery and untimely death.

With 10 million American men and women suffering from heart disease, we spent last year only $16 million on research in this field or $1.60 for each person presently afflicted.

One of every seven of us as things are will die of cancer. Yet we spent last year on cancer research only $25 million—15 cents apiece per person.

With mental illness costing incalculable suffering and almost $1½ billion a year, we are spending $11 million less than 1 percent of that cost to combat it.

Last year we invested about a penny a person for research on arthritis and rheumatic diseases, cripplers of 10 million Americans.

The pennywise policies of the present administration so far as medical research is concerned are a shameful cost of what they call a businessman's government. A man wrote me this in a letter the other day: "Where cancer and heart disease alone killed more Americans under the age of 65 last year than were killed in the Armed Forces of this Nation during the Second World War and the Korean war together, it would seem that we should spend substantially more than we are to stop this toll upon life." I agree.

I am here asking your support in my candidacy for the Presidency of this Nation. I have refused in my campaign to make promises as a candidate I couldn't keep as President. I say to you that if I am elected to this Office I propose to use the powers and resources of this Nation to cut down killing and crippling disease with all the vigor we use to stop the killing and crippling which comes from war. A healthier nation is after all a stronger nation.

There are other things which must concern us if we are to fight back effectively against sickness and disease.

Roughly, a million American families will have to spend over half their income this year for medical care. In over 500,000 cases catastrophic accident or illness will consume the entire family income. And today there are 8 million American families in debt for medical care with much of this borrowing being at high interest rates from personal finance companies. In too many American homes a parent at some time or other looks down at a sick child, knows that something should be done and that there just isn't the money. It is high time that we advise a positive program to enable everyone who wants to have protection against the sudden and devastating costs of illness.

I have never proposed to socialize medicine and I am not in favor of national health insurance. There are other alternatives which are workable and in my opinion preferable.

Three out of every five people in this country are now enrolled in voluntary private prepayment insurance programs which cover health. Yet studies show that this membership includes mostly middle and high income families and all too few of the low income families who need it most.

I believe that these private insurance programs can be developed further so they will be attractive and within the reach of an even greater percentage of our people. And I urge further consideration of governmental programs to provide long-term low-interest-rate loans to groups which are organizing prepayment insurance plans and perhaps other forms of financial assistance to help to cover the initial costs of setting up such plans.

And surely the social-security program should be revised to provide that its benefits shall be paid in cases where covered employees become completely and totally disabled before reaching the usual retirement age. These are the cases of catastrophic illness in which the cost burden falls most heavily and often on those least able to carry it.

It is time, too, that we really do something about the shortage of doctors, particularly in some of the rural areas. There are today fewer doctors in proportion to the population than there were a hundred years ago. And there are fewer medical school graduates today than there were half a century ago.

We ought to take immediate steps to expand assistance to medical, dental, and nursing schools so that enrollments can be increased and standards still maintained. Legislation is now before the Congress providing for Federal aid for the construction and expansion of medical schools. The present administration opposed it last year. Now in election year the administration has seen the light of day and has come out for a program of Federal aid for medical training. But its program is wholly inadequate to meet the critical shortage of medical personnel. There is ample basis in immediate need to support the Democratic proposals now before Congress which call for the appropriation of $340 million over a 5-year period to assist in the construction of medical schools and for more adequate teaching and research facilities.

We must also speed up our hospital construction program with particular emphasis on building more hospitals for mental patients.

I know the complaints of the businessman's government now in Washington. This all costs too much they say, adding that it isn't really the Government's business anyway.

Well, I say to you that the one thing this great Nation can't afford is to let people die or suffer when it could be prevented.

And as for whose business it is, I say it is ours and that the Government is our servant.

It was Ralph Waldo Emerson who said that "humanity asks that government shall not be ashamed to be tender and paternal." And it was Woodrow Wilson who added that "you will notice that whenever the United States forgets its ardor for mankind it is necessary that a Democrat should be elected President."

Resolutions Adopted by the Midwest Federation of College Republican Clubs

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks, it is my pleasure to submit herewith for the RECORD resolutions which I have received from the Midwest Federation of College Republican Clubs which met at their annual convention in Topeka, Kans., on April 14, 1956:

RESOLUTIONS PASSED BY THE ANNUAL CONVENTION OF THE MIDWEST FEDERATION OF COLLEGE YOUNG REPUBLICAN CLUBS MEETING IN TOPEKA, KANS., ON APRIL 14, 1956

Whereas the United States has a severe farm problem today what can only be solved by nonpartisan action rather than a political vote-getting maneuver; and

Whereas it is surpluses that are creating much of the price suppression today and it is economically impossible to have price supports without surpluses; and

Whereas the problems of today cannot be solved by a program that has not only failed before, but also created the farm problem; and

Whereas much of the trouble lies in the Democratic 52-percent dollar which has not devalued further under the Republican administration; and

Whereas anybody who takes credit for high farm prices during the war had better take credit for the war also: be it

Resolved, That we endorse and fully support the administration farm program as presented by President Eisenhower and Secretary Benson and especially the soil bank plan and flexible price supports; and be it further

Resolved, That since the Congress has passed a farm bill contrary to the Eisenhower-Benson plan and since this bill would render the administration plan unworkable, we urge the President to veto said bill.

Be it resolved, That we commend President Eisenhower on his program and actions of the past 3 years and wholeheartedly commend him on his decision to run again for election.

Be it resolved, That we favor the further strengthening of the United Nations as an effective instrument for promoting peace.

Be it resolved, That we strongly urge our Government to make a strong effort to alleviate the Arab-Israeli conflict by mediation and planned resettlement of the Arab refugees, and be it further

Resolved, That we commend the administration's present policy in the Middle East as the one most likely to bring peace to that troubled area.

Be it resolved, That the United States should make a special effort to promote mutual understanding between the American and Russian people and should promote further cultural and educational exchanges with Communist nations.

Be it resolved, That the United States should continue to provide aid to free countries to promote the greater strength and solidarity of the free world.

Be it resolved, That the United States continue to support collective security in Europe through NATO and continue to support the Western Europeans in their efforts to unite economically, politically, and militarily.

Whereas the citizens of the United States between the ages of 18 and 21 are better educated and better informed than ever before in history; and

Whereas these citizens are wage earners and taxpayers without representation; and

Whereas these citizens provide more than 40 percent of the Armed Forces to defend their Government but are denied the right to help select this Government; and

Whereas today's decisions affect these citizens who are tomorrow's leaders: Be it

Resolved, That we recommend and endorse to the Congress of the United States an amendment to the Constitution lowering the legal voting age to 18 years.

Be it resolved, That we heartily commend Vice President NIXON on his excellent discharge of the Vice Presidential duties during the past 3 years.

Whereas education is the foundation of America's freedom and superiority; and

Whereas many college students and their parents are financially handicapped and often can't attend schools best suited to their needs to train them for their contribution to society: Be it

Resolved, That we recommend to the Congress that college tuition be a deductible expense from the income tax of the student or his parents.

Be it resolved, That copies of these resolutions be sent by the chairman of the federation to the chairmen of the Republican House and senatorial campaign committees and that they be urged to insert them in the CONGRESSIONAL RECORD or otherwise bring them to the attention of the Members of Congress.

Respectfully submitted.

J. ROBERT BARR,
Chairman.

Spanish War Widows

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include the lead editorial of the issue just out of the National Tribune, as follows:

PASS THE O'HARA BILL

We quote the following: "I shall be 83 years of age on August 2, and I have been in poor health for some time. Fees for my doctor and oculist, and the prescriptions each requires that I use, take up almost my entire pension, and I have left little indeed for clothing and other necessities. Fortunately, I have a son and a daughter, both employed, and I have been living with my daughter and her husband. Of course, they pay rent, and everything we eat and use they have to buy. This places quite a burden upon my children. In addition to the fact that I am unable to help them appreciably, if I should require the service of a companion or nurse, neither I nor my children could afford it."

That extract is from a letter received from the widow of a veteran of the Spanish-American War who is now receiving a dependent's pension of $54.18 per month. We already have received scores of similar ones since the so-called Bradley Commission made its report. Few of the writers have the good fortune to have the loving care of children, and the fear they express at the possibility of losing the meager monthly payments they now receive makes most pitiful reading. We quite well realize that there is no need to quote from them, and we have no desire to resort to tear-jerking. The situation that results from the release of the President's Commission on Veterans' Pensions constitutes a close approach to indefinable barbarism, especially as it applies to aged widows of veterans. We have, therefore, chosen to picture the reaction of one who finds herself in the most favorable position of any of our elderly war dependents; we leave to the imagination of our readers the situation faced by those who have no assistance whatever beyond their all too insufficient monthly pension checks.

No word of any kind having come from the White House since General Bradley submitted the findings of his Commission, we have no means of knowing whether or not the President had given any thought to what might become of the widows of deceased veterans when he called upon the Bradley group more than a year ago to examine and report on the treatment of the veteran class. He must have known that they have their individual worries and that they face specific problems, but he did not differentiate between them and veterans when he named the investigators and told them what they were expected to do. We have, therefore, searched the Bradley philosophy and recommendations more painstakingly for an answer to what probably should be the most human of its studies and findings and we were astounded to find that less than three pages covered what might conceivably be referred to as non-service-connected death pensions. Apparently the Commission was up against the bumpers on the whole question, and, if we can correctly interpret what must be considered at best as most confusing language, it just left widows and minor children in that overall group that must show "need" and be covered into social-security provisions, without defining just how this will be accomplished, and that they must also go off the public payroll if they should remarry.

We mean no discourtesy to General Eisenhower or to General Bradley when we point out how both here enter into the cruelest sort of conspiracy. Both have called upon the Senate to approve as soon as possible the Hardy bill that was passed last summer by the House of Representatives. That measure is entirely purposed to be magnanimous to survivors of members of the regular Armed Forces who die either in wartime or peacetime, making no distinction between the two but basing widows' payments on rank and length of service. The Bradley report says that all society should share the expense of this program as part of the risk of a public enterprise and it states that some beneficiaries now get too much in benefits and others too little. The enactment of that bill would provide, if the two Generals were to be considered still in service, that both widows would receive a minimum of $242 a month. And yet in another recommendation of the Commission, it is proposed that survivors of those who served in the ranks should not receive more than the base pay of the soldier except that food, clothing, and other costs should be valued as part of the pay. We presume that all of this discussion is just as confusing to the reader as it is to those of us who are attempting without much success to make some sense out of the report as a whole, and we admit that the more we study it the more confusing it gets, excepting as line by line and page by page it spells out more and more that the 96 percent of veterans who fought and won our wars, unless they suffered appreciable service-incurred disabilities, must be thrown upon the economic scrapheap, and the dependents of their dead with them, while the 4 percent of Regulars, whether they served in peace or war, should be given the red carpet treatment. Suppose, for instance, the widow of a Spanish War veteran were to have that yardstick applied to her—she would be allotted from $9 to $13 a month, or perhaps a few pennies more if some value were attached to stolen pigs or chickens foraged for the company cook. And their public enterprise happened to be a shooting war. It is all unimaginably silly, this Bradley report, unless one looks at it alone from the standpoint of the big brass. If there is one thing above all others that is deliberatedly emphasized in the entire study, it is the attempt to show that the professional serviceman is the salt of the earth and that those who left civilian life to fight our wars are still, if they were lucky enough to come home, nothing more than any other civilian. The more one reads this thing, the more it smells. Again we must insist that if the Congress accepts the Bradley recommendations, its members cannot realize what they are doing.

We began this comment by quoting from a letter written to us by an elderly Spanish War widow. Back in her younger days it was considered almost a sin for a wife to go out to work. Her place was in the home as the homemaker, and woe be to her man if he failed to provide for her. She earned no social-security credits, nor did her veteran husband who was 60 or more years of age before that law was enacted. We have searched the Bradley Commission report in vain to find where any consideration whatever is given to this situation. There is the suggestion that a delay of a year might be proper in adopting its proposals and that age 65 may be considered as a time of presumptive need for unremarried widows, but that income standards should be employed for them exactly as they would be for veterans and that they should lose such income as is derived from sources in excess of amounts underwritten by the Government. Then it is said, in the analysis, that the same social-security standards should be applied as they are to veterans. These references serve only to indicate additional commission confusion with respect to what it had in mind with reference to the veterans and dependents of wars preceding World War I who are on the pension rolls.

Spanish War veterans are not asking anything for themselves from this Congress, but they are requesting that the base pension of $54.18 monthly allowed to their widows be hiked to a minimum of $75 just in order to give these little old ladies half a chance to live in comparative decency. Few have those children about whom our friend wrote and who are paying all but her medical expenses, and, after all, there are only about 80,000 survivors. The cost of increased legislation would be minor and would decline rapidly, and to give them the added amount will not add to the appropriations for the Spanish War group because the veterans, paid at a higher rate, are rapidly meeting their maker. It is inconceivable to us that the Congress

would even consider offending the national conscience by placing these good people under any form of old-age assistance. Therefore, while those on Capitol Hill who are responsible for veterans' legislation try with us to read some sense into the Bradley report, we appeal to them to show their good faith by reporting now the O'Hara bill, H. R. 2867, that would not only relieve the fear under which our Civil War and Spanish War widows are living but would also give them the little added security they are entitled to have.

Reaching the Hearts and Minds of Men

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. DELANEY. Mr. Speaker, Members of Congress devote much time and effort attempting to reach the hearts and minds of men. Under leave to extend my remarks, I include an address given by an authority on this subject, the Honorable James A. Farley, together with editorial comment which appeared in the Pottsville (Pa.) Republican on April 21, 1956:

REACHING THE HEARTS AND MINDS OF MEN

(Address by Hon. James A. Farley)

Because of our relationship with our fellow beings, I am going to talk to you on the subject of Reaching the Hearts and Minds of Men. I have spent many years of my life in activities in which that was the major objective. I have kept before me this major purpose.

Of course, in politics, to which I devoted a good many years, the major purpose is to reach the hearts and minds of men. To be successful, the man in politics must gain the confidence of enough voters to persuade them to vote as he suggests. His entire life is devoted to an effort to please and to persuade. Sometimes, of course, he must, if he is honest, temporarily at least say some plain and unpleasant things. But in the long run, unless he does win and hold the confidence of people he cannot be accounted a success.

But all of us are working toward this objective, whatever may be our mission or profession. If we are selling goods we must win confidence. The person who is in business is in a sense like the candidate who is running for office, only the businessman must go to the polls every hour and every day. Whether he succeeds or not will be determined by the number of customers who vote for him. His purpose in advertising is the same as the purpose of the candidate for office—to keep his name or the name of his product before the people. There is also the problem of keeping people who are voting for you in business kindly disposed toward you. That is what is called good public relations.

If we are teaching the young we are directly reaching the hearts and minds of men, and our skill as a teacher depends upon our capacity to open those minds and hearts to what we have to impart in the way of knowledge and principle.

If we have authority over others we must win their respect and confidence before we can expect obedience.

If we are managing a ball team we must deal not only with the players but with the public, for without a favorable public there would be nothing with which to pay the salaries of the players.

In fact, if we want to have a happy life as well as a profitable one we must have friends, and the way to have friends is to reach their minds and hearts. I sometimes think that Thomas Jefferson meant by "the pursuit of happiness" the winning of friends.

This winning of the hearts and minds of others has been a recognized art for a long, long time. There were books written about it more than 2,000 years ago by the Greeks. Aristotle's great book on Rhetoric is a discussion of how to use words to win the confidence of others.

Of course, it is hard to put into exact form just how this art can be pursued most successfully. However, I can do nothing more helpful than to draw from my own experience some of the lessons I have learned about this art. And in doing so I will discuss a number of important points to remember.

In the first place, a person who is concerned in persuading other people to do something or buy something or just to be friendly and helpful must have what I shall call good manners. Now good manners is something more than knowing how to hold your soup spoon or how to dress when you go to a church wedding. It is much more than a capacity to say the pleasant but insincere thing. It is much more than mere tact. It is to feel and, above all, to show that you have a genuine concern in others. It means caring for people, respecting them, treating them as equals and sharing their fears and earthly concerns and their ideals. When these matters are felt and shown there need be no fear about winning confidence and winning friends, for this attitude will make itself known in a hundred ways.

Closely associated with good manners is what we call good humor. And I am not now talking about ice cream, with which my own product is a close competitor. What I mean is the manifestation in all outward dealings with the public of a calm and friendly disposition. This is especially true in politics. We have learned in that very complex art that the most certain way that a man can defeat himself is to get angry. People are not interested in other people's angers. Anger does not attract, it repels. It causes the victim to say and do things that he would not otherwise say or do. He loses his balance of judgment. He makes mistakes. He reveals defects in his own personality and in his own ideas. He lays himself wide open for debate. Sometimes it is not easy to maintain a calm attitude, but success in life, in any profession, and success in attaining our own peace of mind is only gained by meeting situations with a smile, by turning aside criticism and the ill-natured attacks of others with calmness and courtesy.

I have spoken of good manners and of good humor. And now let us consider another tribute—one for which I have acquired some slight reputation for excellence—a good memory. It is true that I have a pretty good memory for names and faces, and I have met a great many people in my life, all over this country and all over the world. I can get along all right without any special aids to memory but I do not always trust my memory alone—that is too risky. I have, throughout my life, made it a habit not only in politics but in business and socially to help that memory by keeping a brief memorandum of anything which seems important, and at the same time incomplete and unfinished. I keep that memo until the matter is closed. It is simple, easy way to stay abreast of responsibility and pending situations. Let us call it a profitable bit of detail.

I would like to add something at this point. It is not a manifestation of good manners for a person to go up to another and challenge him by saying: "Do you remember me?" That puts you at a great disadvantage if you happen to have forgotten. I have found that the best way to meet that situation when the challenge comes and when I am unable to remember is to answer frankly that I do not. Such an answer is not always pleasant for me but it is a good reminder to the other person that he should be tolerant and not expect too much of other people's memories. Of course, in my experience that has not happened too often and I am glad that it hasn't; but when I meet it I meet it frankly.

Another good rule in politics, business and daily life is always to keep in mind the fact that the other fellow is deeply concerned with himself. There is a lot of unselfishness in this world, but there is an awful lot of selfishness, too. Our own problems seem to us to be more important than anything else in the world. We want to hear about them; we want to have the other person address us in terms of our own needs and aspirations and ideals and desires. One of the greatest mistakes a candidate for office can make is to ask people to vote for him because of something that he himself wants or that he himself feels or that he himself has offered. When the public meets that sort of appeal it is most likely to turn away and say, "Well, we have troubles of our own. We will let you take care of yours." That brings me to what might be called the personal note in addressing other people. The most successful appeal that we can make is, figuratively at least, to sit down with them, listen to them, ask them about their problems, manifest an interest and, above all, talk to them in terms of their own lives and their own understanding. By that I don't mean talking down to people, for that is the most offensive thing that can be done. It is not a bad idea to go on the assumption that the other fellow knows more than you do. Maybe he does not, but you can be certain that he doesn't think so. A bit of humility is never out of place.

What I am trying to say is well illustrated by the changes that have come over the techniques of advertising and selling in the last 20 years. Advertising used to be mainly boastful or catchy—full of slogans, pictures of factories or of business executives. Today its chief aim is to try to be helpful and its keynote is service. It talks not so much about what a product is but about what it will do for you.

Many of you may have on different occasions noticed the various advertisements run by General Mills, showing a lot of quaint old trade cards which were the rage years ago. The ads have explained why they had discarded them in favor of Betty Crocker. The answer is that for all their appeal these old ads didn't help the customer, whereas Betty Crocker helps women to a better life.

The same thing is true in other products. Our own product Coca-Cola began to assume greater importance and greater significance when it became part of people's daily existence through The Pause That Refreshes. The Pause That Refreshes with Coca-Cola is successful because it enters into people's daily lives and renders them a welcome service.

This technique of being helpful can be applied to any problem of selling, whether it is political or material, whether we are trying to reach the hearts and minds of men for an idea or a product.

In initiating any campaign, whether it is political or selling or educational, it is very important to take note in the beginning of what might be called "the public mood." The public mood changes. In the campaign of 1932 Mr. Roosevelt and the others who were helping him had to keep in mind that the people were weary, fearful and discouraged. They were in the midst of a great depression, and poverty stalked on every side. Their purpose in that campaign was to offer something cheerful and hopeful. There come other times when the public is exalted by the appearance of prosperity, when it has forgotten its fundamental prin-

ciples. Those are times when the public needs to be reminded of the more serious aspects of life, when it needs to be checked in its enthusiasm. There are other times when a deluded public is in need of harsh reminders of solid truths. Grover Cleveland was the greatest exponent of straightforward truth-telling not only when he was Governor of New York State but when he was President of the United States. Sometimes he made enemies, but in the long run the American people have gained more and more respect for him and his simple honesty.

Now, I would like to say something about words and language. As the Bible says, "In the beginning was the word." And we might add, for the purposes of reaching the hearts and minds of men, that not only the beginning but the end is the word. There are all sorts of ways to tell the truth.

That reminds me of a story I heard sometime ago. It seems that a painter was employed to paint the walls of one of the large rooms in an insane asylum or, as you would say, a home for the mentally deficient. He was standing on the ladder painting, and a great many of the inmates came in and sat around watching him. After a while one of them arose and said, "A–11." They all burst out laughing at that. Later, another member of the group arose and said, "B–5." Whereupon there was a roar of laughter. At noon the painter asked one of the people what that meant. He was told that these people had heard their own jokes so many times that they had decided to number them and spare the trouble of telling all the details. In other words, these two numbers represented jokes which they all knew and enjoyed. In the afternoon the painter was again working and was being watched by the same congregation of people. At one point he turned around and said, "A–11." There was no laughter, no response. Later, he used the other number, "B–5," and again there was no laughter. After working hours he asked the same man who had told him the explanation before why they didn't laugh. The answer was, "It makes all the difference in the world how you tell the joke."

The fact is that the use of words has become so important in economics and politics and in other fields that they have invented a word to describe it, "semantics." When I was in Washington I used to hear a good deal about semantics, and I used to hear a good many people who were expert in it. Sometimes I thought they were using long words to say very simple things. That was especially true among the many economic wizards who came down there. In any event, this much-abused practice has a solid truth behind it. It must be realized that there are all sorts of ways of expressing a thought and that you can elicit a totally different response from your audience in accordance with the choice of words you use. In politics we call our machine "an organization," and we call the other fellow's organization "a machine."

Many movements in politics have been carried through to success on the basis of a single phrase. Oftentimes a phrase will convey a volume of meaning. Take, for example, the "good neighbor" policy. This phrase was carefully selected by people who helped Mr. Roosevelt as a means of expressing the right relationship between a big country and more or less distrustful and fearful little countries. When the words "New Deal" were put together the authors scarcely realized the importance of what they had created. But the press took up the phrase and carried it on as the description of a new political program.

Another thing that is important to remember is that people forget easily and it is essential to repeat and repeat. The name of a candidate must be kept constantly before the people, just as the name of a product. The company that I am with is not wasting its money with the innumerable signs that it puts out advising you to drink Coca-Cola. I assure you that we are not in the business of throwing away money. We are in the business of selling the product and in selling the product it is essential to keep repeating the advice.

And now I want to speak seriously about the most important way of reaching the hearts and minds of men. It should always be remembered that men do not live by bread alone. Our appeal must be constantly to what is noble and idealistic and unselfish in men. I mentioned earlier the fact that we must remember that a man is concerned with himself. I did not mean by that that his personal concerns are wholly materialistic.

We are hearing today altogether too much in politics about what this or that party or this or that policy has to give toward the material needs of citizens and voters. I have heard and read speeches in the last several years in which farmers, workers, and others were addressed as if they had no concern in the world other than better prices and higher wages. I think the people who are doing that have lowered their sights too far. People are concerned with the fine objectives of human life, with spiritual values such as patriotism, the love of home and the love of God.

In fact, I deplore the cynical attitude which frequently prevails in high political spots in this country and in others. We are told that if the act of a public official is not illegal that it is necessarily proper and always excusable. We are told that there is a fundamental difference between what is illegal and what is improper. I do not see this difference, because what is illegal is merely one of the improper things that happens to have been the subject of legislative action. We have got to pass judgment against, and so far as we can eliminate, the improper as well as the illegal in our public life.

Our public servants elected to high office have a duty far greater than that of merely enforcing the law and collecting taxes and spending our money. They have the duty of moral leadership in the country. For if they do or condone or permit things that are improper they are destroying the very fabric of public morals, and the poison moves down into all the ranges of our population. When men in high places make hundreds of thousands of dollars through their improper acts it is a hard thing to maintain purity and integrity in the sports of boys in college and on the sandlots of the Nation.

Behind all of our relations with our fellow beings there must be a common faith—faith in the fundamental integrity of man, in his constant effort to realize his highest ideals and his essential nearness to God.

It is that faith that in the last analysis moves the hearts and minds of men. It is the faith that makes great people and a great nation.

[From the Pottsville (Pa.) Republican of April 21, 1956]

EDITORIAL MUSINGS

(By Frank Toohey)

ANGER A HABIT FOR DEFEAT

The hearts and minds of men are the factors which bring them to ultimate success or doom them to failure. So says James A. Farley, former United States Postmaster General, who was a featured speaker at the annual meeting and dinner of the Greater Pottsville Area Chamber of Commerce a few days ago.

How true this is. Each of us, if we examine our thoughts, our plans, our movements can readily understand how our heart and our mind are actually in control. Human nature is a wonderful thing and what an attribute it is for a man to possess a kind heart and alert mind in his everyday life.

Farley declared that the winning of the hearts and minds of others has long been considered one of the greatest arts of man. Greeks wrote books about this subject more than 2,000 years ago. Aristotle's great book on rhetoric actually is a discussion of how to use words to win the confidence of your neighbors and those with whom you enjoy social life or do business day after day.

In an interview, Farley spoke of his early childhood life, how he was taught to respect the wishes and thoughts of others. Where he did not heartily agree, he found a way to tactfully sidestep the issue by turning to another subject of conversation or by extending compliments (not appearing willfully or with the obvious attempt to ignore what the other person said) and in almost every case, such a course prevented a controversy, perhaps a heated argument that may have resulted in the loss of a friend.

Farley said that he had made several visits to this section of the country and to the stranger, it is quite evident that everyone here was everyone's neighbor.

He said that one of the easiest ways for anyone to defeat himself or herself is to get into the habit of becoming easily angered. Anger, he said, does not interest other people and it only tends to lower the person so easily often angered in the eyes of his neighbors and friends.

Everyone makes mistakes, for it is human to err, Farley said, but if a person succumbs to anger frequently he is bound to reveal defects in his own personalities. An angered person lays himself open for unpleasant debates.

Farley pointed out in his interview with this musing that it is not always easy to maintain a calm attitude but he said success in life, in any profession and success in attaining our own peace of mind is only gained by meeting difficult situations with a smile, by turning aside criticism and the ill-natured attacks of others with calmness and courtesy.

Farley said that the Bible teaches "In the beginning was the word." He said to this could be added, for the purpose of reaching the hearts and minds of men that not only the beginning but the end is the word. He said there are all sorts of ways to tell the truth and to become known as one who is truthful is a great asset to any person.

Farley recalled when he was here years ago to officiate at the cornerstone laying at the new Pottsville post office at Second and Norwegian Streets. He said that this was "a great gift from the Democrats" and the other evening when he was here, he walked over to see it.

"Well the cornerstone at which I officiated is still there," he said laughingly.

Salute to the Commemoration of the Polish Constitution of May 3, 1791

EXTENSION OF REMARKS

OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. PILLION. Mr. Speaker, it is my privilege at this time to place in the RECORD the following resolution which was unanimously adopted at a mass meeting commemorating the 165th anniversary of the adoption of the Polish Constitution of May 3, 1791, held at the

Polski Home in Lackawanna, N. Y., on Sunday, May 6, 1956:

Whereas the Polish Constitution of May 3, 1791, was the most liberal and democratic document of its day, proclaiming respect for the human rights and the lofty aspirations for freedom of the individual; and

Whereas Russia has seized and still subjugates the Polish soil and other lands; and

Whereas this unfortunate example of Polish imprisonment by Communist Russia should stir and awaken our Government to fuller defenses against the evils of the Russian Government: Now, therefore, be it

Resolved, That we as Americans wholeheartedly dedicated to our freedom, feel dutybound in the name of justice and equality to pledge loyalty and allegiance to our great and beloved United States of America; be it further

Resolved, That we as American citizens of Polish descent, hereby repeat our pledge of loyalty and allegiance to our great and beloved United States of America; be it further

Resolved, That we appeal that our great Republic of the United States of America, which guarantees freedom and liberty to all, do everything in its power to restore those blessings of liberty to millions of enslaved Poles who are now suffering political, religious, and economic persecution in their land; be it further

Resolved, That by this resolution we show a formal protest against the existing conditions in Poland; be it further

Resolved, That the infamous articles of the Yalta Conference pertaining to the betrayal of Poland and other subjugated nations be further denounced by our Government; and be it further

Resolved, That copies of this resolution be sent to the President of the United States of America, Dwight D. Eisenhower; to the Vice President, Richard M. Nixon, President of the Senate; to the Secretary of State, John Foster Dulles; to United States Senators Irving M. Ives and Herbert H. Lehman; and to United States Congressmen John R. Pillion and Edmund P. Radwan.

Resolution committee:

WALTER J. LOHR, *Chairman.*
JOHN F. ASZKLER,
STEFAN GUZ,
JULIA MOLENDA,
JOSEPH F. KLJ, M. D.,
WILLIAM M. STYPOWANY,
Secretary.

Cold War Costs

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. BOSCH. Mr. Speaker, I am convinced that the time has come to give an accounting to the American people on the various phases of foreign aid since the inception of this program. Bureaus have been set up to administer the different programs and then they have died and others have come in their place. In my opinion, it has reached the point where the average American has no conception of what is being spent and by whom.

I would recommend the appointment of a commission along the lines of the Hoover Commission—nonpartisan with representatives from the House, Senate, administration, and citizens from private life. The commission would make a detailed study of all that has been spent and what we have received for our money.

This, I believe, would be helpful to all of us and would give us a better perspective as to what should be done in the future.

Under leave to extend my remarks, I include the following editorial of May 8, 1956, from the New York Daily News:

COLD WAR'S COSTS

President Eisenhower yesterday gave Congress its regular semi-annual report on Uncle Sam's so-called mutual security. During the past 6 years, he said, United States taxpayers have given more than $12.4 billion worth of planes, tanks, guns, and other military hardware to free world countries.

Ike believed that much of this military muscle had served its purpose in helping overseas friends face up to the Communist menace. He is convinced that North Atlantic Treaty Organization forces in Europe, including Greece and Turkey, look healthier now, thanks.

Altogether, the ex-general testified, countries receiving United States assistance now have a defense potential equivalent to "more than 200 divisions, over 2,000 naval ships and about 300 air squadrons." Those figures, though, include not only such genuine allies as South Korea and Nationalist China but neutrals and Tito's Yugoslavia. Thanks to us, Tito now has a streamlined modern army, to use as his Communist conscience may dictate.

Right now, and no surprise, the question—Are these gifts necessary?—is boiling up a vigorous debate in Washington.

Cocking a cynical eye at foreign giveaways in general, Senator WALTER F. GEORGE, Democrat, of Georgia, suggests firmly that a competent committee be appointed, to look into this one fast. How much benefit is the United States taxpayer getting from his enforced generosity? Are we actually helping our overseas chums as much as claimed by the bureaucrats in charge of our Santa Claus programs?

HOW MUCH GOOD IS DONE?

Senator GEORGE wants a committee—perhaps a reputable, nonpolitical outfit such as the Brookings Institution—to probe into the very fundamentals of our charity programs. Secretary Dulles, on the other hand, insists that giveaways, as such, are fine, period. He wants the surveyors to confine themselves to the technical questions of aid. Should it be a loan or a gift; should we hand out the stuff ourselves or let U. N. do the shipping and get the credit? And so on.

We're for GEORGE's complete, no-gobbledygook look-see into this costly and apparently never-ending program. But, most important, let's get on with that scrutiny fast. The American citizen, after all these years, certainly is entitled to a straightforward report on what results, if any, his tax money has been buying.

Steel Companies Raise Prices Now for Wage Increases Next July

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks, I include a letter I recently received from Mr. Edwin C. Kraus, president, Big Stone Canning Co., of Ortonville, Minn. The letter has reference to the fact that the steel companies have already raised their prices to their customers in anticipation of wage increases expected next July.

It was not too long ago, Mr. Speaker, when the officials of the steel companies went to the bargaining table prepared to negotiate with employee representatives. Today, if this letter is any example, they surrender months in advance and simply pass on the pay raises to the companies they supply with steel products. If that is collective bargaining, I do not understand the meaning of the term.

Just the other day we learned that United States Steel had reported earnings at the greatest rate in its history. I question their use of that word "earnings" for they surely have not yet earned the increased prices on their products to defray wage raises not yet in effect.

My correspondent is engaged in one of the most highly competitive fields of American industry—the merchandising of foods processed in his canneries. Like the farmers from whom he buys his commodities for canning, he has little or no voice in the prices he must pay for his supplies such as tinplate.

This is just one more of many examples we have seen of the cost-price squeeze that is being applied to our agricultural economy. Everyone else is making more money while this canner of quality products for American housewives and the farmers producing the vegetables for processing are squeezed still further. I hope that every Member of Congress, whether he represents producers or consumers of agricultural commodities, will thoughtfully read this letter from Mr. Kraus and then support us in our efforts to correct some of these conditions in rural America.

The letter follows:

BIG STONE CANNING CO.,
Ortonville, Minn., April 19, 1956.

Hon. H. CARL ANDERSEN,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CARL: I am attaching a copy of the letter that I received from John Kraemer who is the president of the Mammoth Spring Canning Co., of Sussex, Wis., in which the problem confronting the canner is very ably set forth. I heartily subscribe to the statement that there should be an investigation of this situation.

I might add for your information a few observations that have been made since this raise has been announced. It is the position of the steel companies that the raise in steel prices was made so as to provide for increased wages to steelworkers in July which is the date that their contract expires. There likewise was one other reason given and that is that more money was needed by the steel companies in order to further expand. Certainly both of these reasons are flagrantly inflationary.

I know that some of you are aware that there has been much concern about the increased cost of living and there has even been some agitation for an investigation of the disparity that exists between what the producer receives and what the consumer pays. The canning industry is one that can be proud of its record for it has held the line to the point that it is now my personal

opinion that an increase must be made in order for the canner to survive. At the present time, and this is the result of a survey that was made by the Minnesota Canners Association, both canned corn and canned peas are selling for less money than they did either in World War I or in World War II or the Korean conflict. As a matter of fact the records of my company indicate that back in 1918 cream style corn sold for $2 a dozen f. o. b. Ortonville whereas today you can buy all the cream style corn you want for $1.50.

While I do not subscribe to the theory that mere bigness in itself is monopolistic, I do believe that the fair test is whether or not actual competition exists. I am sorry to report that real competition is lacking among the majority of our suppliers.

Yours very truly,

EDWIN C. KRAUS,
President.

Correspondence Received Expressing Opposition to Fluoridation

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. BOLAND. Mr. Speaker, under unanimous consent, I insert in the RECORD letters which I received from citizens of my district requesting that their letters in opposition to fluoridation be placed in the RECORD:

NORTHAMPTON, MASS., *May 4, 1956.*

Hon. EDWARD P. BOLAND,
House Office Building,
Washington, D. C.:

Please oppose $3 million appropriation requested by Public Health Service to be used in combating dental disorders presumably by fluoridation which we know to be harmful.

DOROTHY AND PIERRE DREWSEN.

SPRINGFIELD, MASS., *May 3, 1956.*

Hon. EDWARD P. BOLAND,
House Office Building,
Washington, D. C.

HONORABLE SIR: I am writing to protest the granting of $2,971,000 to the United States Public Health Department to combat "dental disorders."

So-called scientific evidence is based on unwarranted conclusions and constantly repeated unproven statements. The Public Health Service limits reports to data favorable to fluoridation. I am asking Congress to analyze the Public Health Service statistics, especially the inadequate controls with the aid of independent, well-qualified statisticians. I protest the use of Public Health funds to propagandize the so-called benefits of fluoridation.

I ask that this letter be read to Congress and inserted in the RECORD.

Respectfully yours,

LEON E. BOND.

FLORENCE, MASS., *May 3, 1956.*

Hon. EDWARD P. BOLAND,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: Congress has been asked to appropriate $2,971,000 for the United States Public Health Service to use in "combating tooth decay."

I wish to protest against this appropriation.

Judging from the past, the Public Health Service would probably use a large part of it to further the promotion of fluoridation of public water supplies.

This is mass medication which is justifiable only for the prevention or control of a contagious disease, and tooth decay is not contagious. Such mass medication is a violation of constitutional rights, for no one should be compelled to take medicine for a noncontagious disease that he does not have, yet fluoridation of a public water supply makes it unavoidable.

May I suggest that you ask for a joint congressional investigation by competent disinterested parties on the constitutionality of fluoridation of public water supplies, and also for a scientific study of incidence of disease and mortality statistics in areas already fluoridated since the reports given out are often so at variance.

It is fantastic economy to medicate the water supply of an entire city when 99 percent of the water goes down the sewers and into commercial uses, while less than 1 percent is used by the small children it is supposed to benefit, and those children who may need or wish it, can obtain the treatment as easily as any other medication.

This is a very serious matter, and I object to its being promoted by a Federal bureau using Federal funds.

Very truly yours,

LOTTIE S. CORBIN
Mrs. Walter E. Corbin.

SPRINGFIELD, MASS., *May 7, 1956.*

Hon. EDWARD P. BOLAND,
United States Representative,
House of Representatives,
Washington, D. C.

DEAR ED: The enclosed newspaper clipping from the Springfield Daily News of February 8, 1956, will give you some of the background of my interest in fluoridation of the public waters. It is our understanding that Congress has been asked to appropriate almost $3 million for the use of the United States Public Health Service in combating "dental disorders." Before Congress passes upon this appropriation it would appear to be very much in order to request a joint congressional investigation by an independent committee to ascertain just how much of this money would be used for the engineering of consent in favor of fluoridation of public waters.

Such a joint congressional committee should examine carefully the following points of interest with reference to said fluoridation:

1. Possible unjustified invasion of liberty guaranteed by the United States Constitution and by State constitutions.

2. Possible violation of civil rights by suppression of news in regard to scientific data offering evidence against fluoridation, and unauthorized propaganda issued by the Publis Health Service to promote so-called benefits of fluoridation.

3. Lack of dissemination of information in regard to mortality statistics and high disease incidence in fluoridated areas.

4. Lack of analysis of Public Health Service statistics, specially with reference to inadequate controls.

I recommend to you for reading the November 1953 issue of the Dental Digest, which includes an article by Dr. Charles Dillon, entitled "The Bio-Chemistry of Florides." See also The Fluoridation Issue in Its Broader Aspects, by C. F. Eicher, doctor of philosophy, herewith enclosed.

An editorial in the Springfield Union, Saturday, April 28, entitled "Dangers in Democracy," concludes: "With all its imperfections, democracy has worked. It has maintained the necessary minimum of law and order with less cruelty, tyranny, and oppression than any alternative system. But the fact that Communist states often call themselves 'people's democracies,' is a warning signal. It should focus attention on the elements of check and balance, of scrupulous maintenance of personal and property rights which are the assurance that democracy will not degenerate into tyranny, first of the mob, then of some dictator."

It is my hope, Ed, that you will consider this matter seriously and perhaps read this letter to Congress and, if it is comprehensible, insert it in the RECORD.

Sincerely,

JOHN R. AUCHTER,
Attorney at Law.

Home Mortgage Debt Is Not Inflationary

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following release issued by the Dime Savings Bank of Brooklyn:

The $88.7 billion which American families are presently carrying as their home mortgage debt is a vital support to the Nation's economy and is not an unsound factor, it was asserted today by George C. Johnson, president of the Dime Savings Bank of Brooklyn.

"Actually, this $88.7 billion is an investment in America's future, and it will grow larger as the Nation grows larger," he declared. "The mortgage debt is neither inflationary nor beyond the ability of those borrowers to pay.

"It is only 11.2 percent of total personal savings, and is only 22.3 percent of the present rate of gross national product," the banker continued. "Creation of this home mortgage debt has added perhaps twice as many billions of dollars of real wealth to the Nation's economy, and it has developed for American homeowners a form of enforced, systematized saving which is one of the strongest supports of the economy we have."

Asserting that the home mortgage debt is sound and anti-inflationary, Mr. Johnson declared:

"Home buyers are decent, fine American families who are improving their living conditions because steady employment and good wages enable them to do so. They do not regard themselves as statistics.

"My 40 years experience with thousands of home-buying families prove to me that they consistently will meet their obligations.

"In all those years, I have never seen home buyers make a more careful study of what they can afford than at present. They are extremely well informed as to the carrying charges of a home and the relation of these charges to their incomes.

"Furthermore, no intelligent banker will allow any family to buy a home it cannot afford. Likewise, the Federal Housing Administration and the Veterans' Administration have established and insist on sound credit standards.

"People are not beguiled by liberal mortgage terms. They are buying homes to improve their living standards only after careful and intelligent consideration.

"Amortized mortgages and liberal terms, soundly based on the borrowers' ability to pay, enable increasing numbers of families to attain their longing for homeownership without hardship."

Mr. Johnson said his comment was inspired by "recent assertions from some quarters" to the effect that home mortgage debt is too high.

"These alarmists simply will not or do not examine the truly important economic factors involved," he asserted.

The principal factor overlooked is that millions of American families have shifted from the status of rent payers to the status of home buyers, according to the man whose bank originates and holds more home mortgages than any other savings bank in the world.

Mr. Johnson explained the situation thus:

"Those who claim that home mortgage debt is too high apparently overlook the fact that some 15 million families have ceased being rent payers and have become home buyers in the past 15 years.

"This is the real and basic reason why home mortgage debt has risen $71.4 billion since 1940. Almost all of the total rise is simply the substitution of mortgage payments for rent payments.

"The obligations assumed by rent payers have not and cannot show up in any mortgage debt studies, which only measure the obligations of homeowners. But rental obligations are just as much a part of the overall economy as mortgage obligations.

"So far as I can learn, relatively few economists have analyzed and reported on that fact, except the people in our own statistical and economic section and Nathaniel Rogg, chief economist of the National Association of Home Builders.

"From these sources I find that in 1940 the home mortgage debt amounted to $17.3 billion. It was carried by 11 million families, which meant an average indebtedness of $1,573.

"Today, the home mortgage debt of $88.7 billion is spread among more than 26 million families, so the average indebtedness is $3,412 per family.

"However, it must be remembered that since 1940, personal income has more than doubled. Therefore, in relation to 1956 income, the average home mortgage debt per family is less today than it was in 1940.

"Furthermore, nearly 3 of every 5 families in the United States today own or are buying their homes. In 1940, the situation was almost exactly reversed. Fifteen years ago, approximately 3 of every 5 families were living in rented quarters, and they had nothing to show at the end of the year except a dozen rent receipts.

"At least $7.8 billion each year is now being added to the savings of home-buyers today as they make payments on the principal of their mortgages.

"What this all adds up to is that home ownership and home buying makes a better and more stable national economy.

"I believe that President Eisenhower's economic report to the Congress 2 months ago summarizes the situation completely, when he said: 'A nation in which so many millions of families have growing investments in their homes and neighborhoods is likely to be governed by a high sense of responsibility.'"

Address Delivered Before the Sixth Washington Pilgrimage by Executive Director Theodore A. Distler, of the Association of American Colleges

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I am enclosing an address by Theodore A. Distler, director of the Association of American Colleges, delivered before the sixth Washington pilgrimage on April 28, 1956:

Fellow pilgrims, we are now gathered in a place that is the very center of our national life.

Under our incomparable Constitution, each of the three branches of the Federal Government has a vital role to play in preserving for Americans those rights of freemen which are proclaimed by the Declaration of Independence to be the whole end of government. But neither the President of the United States, as head of the executive branch and Commander in Chief of our Armed Forces, nor the judiciary, as interpreter and guardian of our Constitution, stands so close to the daily life of the ordinary citizen as the two Houses of Congress. Senators and Representatives reflect—State by State and district by district—the hopes and fears, the interests and aspiration, of their fellow Americans. In debating issues of public policy and in making the laws by which our lives are regulated, they strive to take account of our hopes and fears, to balance our interests, and to satisfy our aspirations. Here in the United States Capitol is expressed and distilled the consent of the governed.

"The voice of the people is the voice of God," said a scholar and statesman of the Middle Ages. In these words Alcuin anticipated by nearly a thousand years the basic principle of modern democracy: that every individual man, being made in the image of God and endowed with his own spark of the Divine Wisdom, is entitled of right to an equal share with his fellow men in determining the destiny of the society in which and through which they live.

But I do not think that Alcuin meant to suggest that the people were infallible, any more than our Founding Fathers conceived of the Republic as an infallible form of government. As a Christian, he knew that the children of God may betray the divine spark that is in them and sever themselves from their Father. He knew that God acts through us only insofar as we seek to know His will and subordinate our own wills to it. So too the Founding Fathers, while erecting in the Constitution every imaginable bastion of liberty, made provision through a careful system of checks and balances for the only certainty in political affairs—the certainty of human error. Again, Abraham Lincoln proclaimed that our Nation might win a new birth of freedom by the sacrifices of the War Between the States, but only under divine guidance. It has been the mark of the greatest statesmen down the ages to recognize with humility that "the wisdom of this world is foolishness with God."

At no time in history has this confession of human inadequacy been so urgent as in our own day. The quarrels and rivalries with which the human race has tormented itself from its first begininngs have been magnified into a demoniac menace by the growth of populations, the improvement of communications, the ever-accelerating development of physical sciences divorced from spiritual values, and the emergence of ideological conflicts on a worldwide scale. It is just a part of this awesome picture—but a part of portentous significance for Americans—that the old wistful dream of safe and dignified isolation has faded forever. There is no room for self-righteousness. No nation can shield itself any longer from contact with the rest of the world with a curtain of any material whatsoever. Whether we like it or not, our own problems have been immensely complicated by the changes that the world has undergone in our lifetime. And it must be said that our record in coping with them offers little ground for reliance on mere human wisdom.

We know from our own experience that the inescapable duty of every citizen to form his own judgment on these complex issues is a heavy burden. How much heavier is the burden we impose on the men and women we elect to represent us here and to take in our name decisions on which the life of our Nation and the peace of the whole world may depend. To an extent unmatched by any similar body in the world, they bear the weight of the world on their shoulders. They are answerable, not only in the formal sense to the electorate, but morally to the whole of humanity. This is a responsibility that calls for more than human wisdom.

I imagine that some such thought must have been present in the mind of Senator MONRONEY when he said to Representative BROOKS HAYS: "Don't you think it would be a good thing for us to have a place at the Capitol where we might meditate and pray, where the mood of prayer could be encouraged?"

Under the inspired leadership of these two men, both Houses of Congress, by unanimous vote, resolved to establish a room for prayer and meditation. Its purpose is twofold. First, it bears renewed witness to the historic conviction of the American people that this Nation is founded on trust, not in human wisdom, but in divine providence—and this in the spirit of religious tolerance embodied in the first amendment of our Constitution. Secondly, it offers our chosen representatives the opportunity of refreshing their minds and spirits in calm and quiet and, if they so desire, of seeking that divine guidance the need for which they have solemnly acknowledged.

You and I cannot normally enter the prayer room, for it is essential to its purpose that it should be reserved for Members of the Congress. But we know it is here, in the heart of the Capitol—at the center of the center. With that knowledge, you can go back to your own communities at the end of this pilgrimage and testify of the Republic: "God is in the midst of her; she shall not be moved."

Commissioner E. M. Webster's Views Opposing H. R. 4090

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. PELLY. Mr. Speaker, I urge Members of the House to oppose H. R. 4090, which was reported out by the Rules Committee yesterday. The bill would require the installation of an automatic radio alarm system on United States cargo vessels of 1,600 gross tons or more carrying less than 2 radio operators. If Members will read the 130 pages of testimony, it will be apparent to them that the issue here is not safety at sea.

The Commerce Department report recommended against enactment of this legislation. The Federal Communications Commission's report stated there was no justification for making the device mandatory.

It is important to note the comments of Commissioner E. M. Webster, not only because of his position as a FCC Commissioner, but because of his vast

experience in maritime radio safety matters. Commissioner Webster presented the FCC position on this legislation, the technical aspects of which were based upon laboratory tests of the proposed device. The Commission's comments were supplemented by personal views of the commissioner.

The gist of the FCC position was that ships on the high seas must operate under a common international formula for safety radio purposes; that so far as is known the present formula functions effectively; and that such formula had been reexamined and confirmed as recently as 1948 internationally, and 1954 domestically. The proposed requirement would superimpose upon this international system an additional procedure of ship alerting applicable to United States flag vessels only. The situations to which the additional procedure would apply were found either not to occur often enough to be a problem; to duplicate a present function, or to cause unnecessary and widespread alerting.

In addition, the Commission found from its laboratory tests that the device does not meet the requirements of the bill from the standpoint of its false response performance. Further, that various additional regulations involving transmission speed of radio signals, the standardization of signal characteristics and so forth, or the compulsory installation of ancillary automatic devices would be required in order to create conditions such that the true response performance would be sufficiently reliable.

On his own behalf, Commissioner Webster stated:

> I feel duty bound to tell you what I think based upon that experience and background. * * * All of these conferences, treaties, meetings, and legislation have had the one objective of producing a workable radio safety system which will be uniform all over the world. * * * Only through an international common standardized system can this be accomplished.

Commissioner Webster then listed five reasons why he opposed the legislation and concluded by stating:

> Drawing on my experience and knowledge, I cannot help but conclude that it [the call selector requirement] is unnecessary and premature.

Briefly summarized, the five reasons advanced by the Commissioner were that: First, there can be no assurance of operational reliability since there are no international criteria nor is there uniformity among radio operators in the way they send dashes and dots; such criteria have not even been discussed on the international level; second, no device should be made compulsory until after there has been sufficient experience and acceptance upon which to base an intelligent evaluation and decision; third, that whatever merit there is to the proposed devise, the features are those of convenience and should not be required as part of the safety program; fourth, the additional cost would discriminate against our merchant marine and cannot be justified as part of the safety system; and fifth, that the present international radio safety and distress system is performing its job satisfactorily.

The American Way of Life

EXTENSION OF REMARKS
OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable James A. Farley at the pathways-to-understanding dinner of the Golden Slipper Square Club, held in Philadelphia, Pa., on April 9, 1956:

THE AMERICAN WAY OF LIFE

(Address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., Golden Slipper Square Club, pathways-to-understanding dinner, Bellevue Stratford Hotel, Philadelphia, Pa., April 9, 1956)

We have heard a great deal in these past few years about the American way of life. I certainly have no quarrel with those who have so ably and eloquently discussed that subject. But I have wondered sometimes if in our glorification of the American way of life we have not forgotten that a way of life is, in the last analysis, the product of human beings. It is not a social or a political philosophy that someone has thought out and handed to other people as a guide for their activities. It is, rather, a name that we give to the habits and methods and characteristics of men acting in their relation to other men. In short, the American way of life is the product of a human being which we call an American.

I would like to consider for a moment that average American who has created the American way of life; who, in doing so, has built a great Nation and, in the name of that Nation, is impressing his character upon a wide and distracted world.

It took a good many things to create the average American. In the first place, he was the product of a problem that may be with us as long as men live upon this earth. He was the product of a continent called Europe, which has suffered for centuries from the fact that it could produce more people than it could feed. In these days, as we get into the habit of looking at the map of the world, we see in true perspective exactly what Europe is. It is a peninsula thrust out to the west and the south of a great continent. In many places its land is poor and its capacity for the production of food is low. Its natural resources are, and have always been, scarce and of doubtful value. For the most part, its coastline, especially in the north, is forbidding and in many months of the year almost inaccessible. Its rivers, in spite of the exalted songs and stories that have been written about them, are not great rivers. Its mountains, with a few exceptions, are not supremely great mountains. But its population has, at least in modern times, been excessively great. That population has been stricken time and again with indescribable calamities. It has been ravaged by disease; it has been beset by hunger. And because of these factors of inadequate resources and superabundant population, it has been cursed with the most bloody and continuous wars that have marked the history of the earth.

Those who made America were the product of that background. They left that barren and unfruitful continent for many reasons; some because they were hungry; some because they sought religious consolation; some because they disagreed with the political life of Europe; others because they sought adventure; and still others because for many reasons they were persecuted and injured at home. They came to America at various times, in various ways and for various purposes. Here they found the answer to the bitter necessities that they had experienced in Europe. They found that while there were hardships in the wilderness, those hardships were nevertheless capable of being surmounted by courage and hard work and fortitude and patience. Unlike those of Europe, our hardships in America were not man-made. Nature in America, while it exacted a price, was an honest merchant because when men invested their labor and their courage nature paid them a fair and ample wage. This was all early Americans asked for, and this they were able to get. They brought with them the elements of culture and constitutional government and the instinct of workmanship and technical skills, for in spite of its limitations, Europe at least provided that much for its children.

But Americans found it possible, because they were in the land of promise, to build upon these beginnings and to build better than they had known before. The culture that they imported expanded in America. Constitutional government found new ways of enabling men and women to live together. They multiplied their technical skills because they found ample resources to which they might apply that skill. And in the long years after they had founded a civilization upon the narrow ledge of this continent they discovered that whenever the curse of overcrowding impeded their movements they could move farther into the continent and find freedom all over again. And so the growth of America for 4 centuries was a process of endless new discovery. They went west because the west eternally satisfied their necessities.

It is out of great experience that great men are born, and it is out of great enterprise that a great people is born. As the boundless vistas of American opportunity opened and the population grew and prospered, so did each individual expand in his own views. For, in the last analysis, America was built upon individual men and women. They found in the beginning, as they struggled for self-determination and independence, that in spite of the fact that they had sought refuge from the jealousies and conflicts of Europe, that the source of those jealousies and conflicts had, like evil angels, preceded them to this continent. They found, even before national independence was created, that greedy empires had sought through military power to preempt the great American dominion, and that on the south and the west and the north and in the great seat at the east, they were surrounded by the encircling armies of European imperialism.

One of the most heartening things that we can recall, as in World War II we were beset by aggression on the east and aggression on the west, is that when we were, so far as population is concerned, only a fraction of what we are now, we were beset by the same dangers. In spite of our precarious position, we fought and won a war for independence. We established ourselves as a Nation, 13 States, in total area only a fraction of what we are now, by uniting in a desire to be free. By the courage of our men and women, by our enterprise, by diplomacy, by our power to expand, by purchase, and when all else failed, by war, we set about the task of freeing this country of the threat of foreign dangers. From the Thirteen Colonies, American moved to the west and crated new States out of the wilderness. They skillfully played the ambitions of the French, the Spanish, and the English in such a manner as to acquire a vast territory beyond the Mississippi. And as they acquired territory, unlike the practice of

imperial Rome, they made each acquisition of territory truly their own by settlement and development. These were not men who made compromises with forces that threatened them. They were men who destroyed those threats by their own indomitable strength and courage.

If the American Nation has, in its resources, in its political institutions and in its culture preeminence in the world today it is because strong men found three circumstances that favored the growth of a great nation.

The first of these circumstances was the great area of the country and the richness of its resources. No nation, truly great in every way, can be created without natural circumstances that favor its growth. There have been nations great in a spiritual sense which have grown in a small area and with a small population, but from time to time they have been the prey of physically stronger neighbors. The United States avoided that eternal threat of danger by the happy circumstance of its own position and size.

The second circumstance that favored our growth was the wise policy, inherent in the pioneers who settled this country, of creating, as they grew, political institutions that preserve individual freedom while they offer the broadest protection from selfish influences. They created a constitution sufficiently flexible to afford for all generations to come the possibility of change and growth.

The third circumstance that favored the growth of a great civilization was the fact that America was a meeting place of many cultures, many ideals and many diversified points of view. It has been the genius of Americans to accept immigrants of many sorts, to permit them to make their contribution to our common life, and at the same time to assimilate them and their descendants in a truly unified American tradition. We have stretched out our hands to the unhappy people of Europe. We have offered them opportunity for a better life than they had at home, and all we have asked is that they have strong hands and loyal hearts.

In the course of our growth we have, in general, avoided interference in the affairs of other countries. We have not been anxious to make others as we are. We have generously contributed whenever we could to permit other countries to live their own lives, to be free of oppression, and to grow as God and nature intended that they should. But we have not sought to impress our own culture upon others. We have learned this hard lesson from our own experience, because as we grew as a nation, we asked no help from others; we merely wanted the privilege of freedom to grow as we could.

A few years after the establishment of this Nation as an independent Republic, our statesmen conceived that our duty, in fact, that our safety, demanded that we, as the strongest Nation in the Americas, should assert leadership in the two Americas in permitting other small republics to grow as we had grown. Out of this arose the most specific American statement of foreign policy that we have ever created, the Monroe Doctrine. The development of this policy with reference to the Western Hemisphere required, on our part, not only great strength but great forbearance, for we did not conceive it to be the destiny of the United States to create an empire in the Western Hemisphere. The wisdom of our policy of living at peace with our neighbors, while at the same time we offer them the broad protection of our power, is witnessed by the fact that in World War II we had the friendship and solid support of almost all those countries.

But all of this national greatness comes back fundamentally to the American as an individual. Only sound men can make a sound nation. It has been the habit of pessimistic people to speak of the distintegration of American character. When at times we have seen evidence here and there that wealth and security have made people careless and pleasure loving, there have been those who have claimed that the fiber of America has become soft and that the inner integrity of our people has been destroyed. But these evidences of weakness were, after all, superficial and passing. Fundamentally, the American remains as he has always been. In the last war we had the proof of this inherent soundness. It is not alone that Americans in uniform upheld in every corner of the world the finest traditions of courage and skill. It was also a fact that on the home front Americans maintained order, willingly accepted supervision and turned with incredible industry and skill to the task of production.

There have been nations, like Germany and Japan, that exalted their efficiency. But the tests of 1943, 1944, and 1945 showed that efficiency is not created by the mere proclamation of an intention to be efficient. Efficiency rises from the strength of free people. In spite of many unfortunate failures of foresight, our American industrial life added glories to its achievement. American women in the homes, on the farms, in the factories, in the hospitals and in the Armed Forces proved themselves to be the worthy successors of those women who stood loyally beside their kin in Washington's army. American states and cities made their contribution to the national effort. Everywhere we found a spirit of cooperation and loyalty.

Our task, as we look to the future will be, in spite of the suggestions of those who have formulas for security and happiness, to bear in mind that the United States was not built upon formulas; it was built upon the individual. We shall retain the power that is essential to the maintenance of America's responsibilities in the world only so far as we retain the spirit of the pioneer in each individual American. The door of opportunity must be kept open. The American boy must be taught from experience that whatever he attains depends upon his own inner integrity. We have won the past by hard work and honesty and self-reliance. There is no better formula through which we can win the future. The greatness of the past, in its achievements, lights the way for progress that is assured if no man-made shadows blur the road. It is for us to preserve for our posterity what our forefathers created for us, a Nation of free people, ever helpful to others, but always selfish for the continuance, within our own domain, of the American way of life.

Despite our errors of omission and commission we remain steadfast in our Americanism. This is a great country. The greatness of our people today indicates the greatness we can attain in the future if we keep our feet on the ground and our eyes straight ahead toward the victory that is inevitable and the harvest it must produce.

Today America is confronted with our present peacetime's darkest fears, which could test our very endurance. Here we are now safely out of shooting wars and we are confronted with the foreboding shadow of a struggle even more terrible and deadly—the race for atomic arms supremacy. This threat to peace is none of our making but springs from the unholy ambition of one power, Soviet Russia, to dominate every way of life in every place in the world. We escaped one form of totalitariansim, fascism, to be confronted with another red fascism, perhaps more dangerous than the vanquished form.

It is my solemn conviction that the world will survive as a family of nations. The family bonds may be tightened in the four corners of the world after the manner of our sisterhood of states or within a worldwide family. The framework is not as important as cooperative achievement of law, justice, and peace. The alternative in this atomic age is an ever increasing race for armaments with its constant threat of common ruin. Without the shadow of a question, our civilization is indeed on trial.

In this time of anxiety, I am supremely confident that the destiny of this great Republic still lies before us, that our horizon is not a whit less limitless and not a shade less promising than that which lay before our forefathers in the blackness which followed the war for independence. We must not forget we are still a youthful Nation, as the world goes. Our strength and our talents will stand us in good stead. We are the hope of ourselves and of the world. We are certain to survive to bring lasting peace.

The Strategic Air Command

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. BROOKS. Mr. Speaker, the following 44 questions were asked by Senator SYMINGTON'S subcommittee of the Senate Committee on Armed Forces and were answered as indicated by Gen. Curtis E. LeMay in open hearings on April 30, 1956:

1. What is SAC?

SAC is the long-range atomic striking force of the United States, responsible to the Joint Chiefs of Staff through the chief of staff, USAF, as the executive agent.

2. What is the principal responsibility of SAC?

The mission of Strategic Air Command is to train and maintain an effective and secure nuclear air offensive force to conduct strategic air warfare. The objective of this mission is to become and remain sufficiently strong to deter aggression during a cold war and in cooperation with other United States and allied forces, to win the decisive airpower battle in a general war should it occur.

3. What are your views as to the best defense against a strategic atomic air attack?

Total defense is secured through two functions: First, through active and passive defense; and second, the offensive strike capability. All responsible airmen agree that it is impossible to provide an airtight defense against a well-coordinated and properly executed atomic bombing attack. Attrition will vary, depending upon the relative capabilities of offense versus defense, but a substantial part of the offensive force will always get through the defense. Therefore, the primary defensive force becomes the offensive atomic strike capability of sufficient effectiveness to provide a deterrent force. A deterrent force is an effective nuclear offensive force which is secure from destruction by the enemy regardless of what offensive and defensive action he takes against it. The striking force is considered effective if it can still inflict unacceptable damage on the enemy.

4. If two countries have the same relative scientific and military airpower, such as the United States of America and the U. S. S. R., is it in your opinion possible for one country to have purely defensive forces and measures adequate to effectively stop a strategic atomic air attack by the other country?

I think I have just answered that question by saying that it is the opinion of all responsible airmen, and the experience of all nations in wartime, that a purely defensive force cannot effectively prevent a substan-

tial portion of a properly coordinated and appropriately executed bombing attack from getting through.

5. Against what must SAC's required combat effectiveness be measured?

SAC has a double role under present national policy. First and foremost, it must possess sufficient strength and readiness to deter open aggression against the United States and its allies. Second, in the event such aggression does occur, SAC must be capable of immediate and decisive attacks against the enemy's warmaking capability. All modern military men, whether they be airmen, soldiers, or sailors, agree that no surface military tasks can be undertaken until air superiority is achieved. Therefore, the first thing that must be done in modern war is to win the airpower battle. Our required combat effectiveness must therefore be measured against this task.

6. Has SAC's combat effectiveness been adequate to enable it to discharge its responsibilities since World War II?

Yes; SAC has been maintained, as a matter of top priority, in a high state of combat readiness for immediate air offensive operations as required. It is considered that this readiness capability has provided the free world with its most effective deterrent to general war.

CHURCHILL. "The United States Strategic Air Command is a deterrent of the highest order and maintains ceaseless readiness. We owe much to their devotion to the cause of freedom in a troubled world. The primary deterrents to aggression remain the nuclear weapon and the ability of the highly organized and trained United States Strategic Air Command to use it." (April 1955 in a Parliament debate on airpower.)

7. Does SAC now have combat effectiveness sufficient to enable it to discharge its principal responsibility?

Yes; at the present time and in spite of recent Soviet gains in aircraft and weapons technology and production, it is considered that SAC continues to maintain sufficient advantage over the Soviet offensive capability to enable accomplishment of its primary roles. We must recognize, however, that a new factor has entered the equation, and that is that the Soviet Union has a long-range attack capability that it did not have 5 years ago. This factor creates the possibility of an initial surprise attack upon SAC which in turn would reduce its deterrent power and retaliatory capability. However, under any reasonable set of assumptions we believe we now have the capability of winning any war the Soviets might start. We are not capable of winning it without this country receiving very serious damage. Five years ago we could have won the war without the country receiving comparatively serious damage.

8. Is SAC stronger than the Soviet long-range air force?

At the present time; yes.

9. What are the three principal elements of SAC's combat effectiveness?

Aircraft and other equipment, weapons, a base system that is adequate for the support of the equipment, and skilled technicians, and professional people to maintain and operate the aircraft and other equipment.

10. How many wings are there now in SAC?

Fifty-one.

11. What different types of aircraft are there in these wings?

B–36's, B–52's, B–47's, RB–47's, F–84F's, RF–84F's.

The B–36's and B–52's are long-range heavy bombers. The bulk of our force is composed of the medium jet bomber, the B–47, which with sufficient refueling is capable of intercontinental operations.

12. When was the plan for the present number of SAC's combat wings established?

It was established in 1953 in connection with the 137 wing program which the Air Force is now concluding.

13. Has there been any change in this plan since it was established?

Yes; there have been minor changes, but none of consequence.

14. Has Russian offensive and defensive airpower increased more since the plan was established than we thought it would?

Yes; we did not think that some of the improvements the Soviets have shown would occur as soon as they have.

15. Are there any present plans to increase SAC's combat wings beyond those called for by this plan?

No; not that I know of. However, certain changes in the internal composition of the strategic force have been made and further changes are under consideration in recognition of the increasing requirement for heavy jet bombers with an intercontinental capability.

16. Is SAC's combat effectiveness in comparison to that of the Russian LRAF growing, remaining the same, or weakening?

Based on present programs known to me and the accepted estimates on what the Soviet program is, SAC's relative strength is expected to decrease.

17. If no changes are made in the present plant and programs for SAC, will SAC's power to discharge its responsibility weaken between now and the period of 1958–60?

The present plans for SAC will insure an increase in combat capability between now and 1960. However, in spite of this increase, if our estimate as to what the Soviet production in the long-range bomber field is correct, SAC's relative power to discharge its responsibility will decline during the time period.

18. What will be the effect upon SAC's power to discharge its principal responsibility by the period 1958–60 if SAC's combat effectiveness is not increased beyond present plans and programs?

As the relative strength of SAC and the Soviet Long Range Air Force changes in their favor, our ability to carry out our primary mission is lessened.

19. Could the United States be taking measures not now planned or programed to maintain strategic air superiority against the Russians?

Yes. There are measures not now planned or programed that could be taken to improve our future strategic air position.

20. What different kinds of long-range bombers do we now have in operation?

B–36's; B–52's.

21. Which is becoming obsolete?

The B–36.

22. What different kinds of long-range bombers do the Russians now have? Which of these is becoming obsolete?

The Soviets now have the Bear, which is a turbo-prop aircraft; the Bison, which is a jet-powered aircraft comparable to our B–52. These are new aircraft and neither is obsolete.

23. Is it not a fact that the quality of Russia's modern long-range bombers (Bison and Bear) is comparable to that of our own aircraft of the same type (B–52)?

If our estimates as to the performance characteristics of the Bison are accurate, then it is comparable to our B–52. The Bear, while a long-range bomber, is a turbo-prop powered aircraft and therefore its performance is greater in range but less in speed and in altitude than that of the B–52.

24. Is it not the fact that Russia is now producing its two types of modern long-range bombers at a combined rate higher than our present production of the B–52?

If our estimate of Soviet production is accurate, then they are producing Bears and Bisons at a combined rate substantially higher than we are producing B–52's.

25. Is it not a fact that we do not now plan to increase our rate of B–52's to a point it will equal the Russian rate of production of their two modern-type bombers?

The Air Force does not now plan to increase the rate of production of B–52's to a point where it will equal the estimated combined rate of production of their two modern-type bombers.

26. Is it not a fact that the Russians now have in their Air Force more modern long-range bombers than we have?

I assume you do not consider the B–36 as being a modern bomber. We believe they have more Bisons and Bears in their inventory than we have B–52's.

27. Assuming no change in our present plans and programs what, in view of our estimate of Russian production, would be the approximate relationship between our modern long-range aircraft force and that of the Russians by the period 1958–60?

At the period 1958–60 and under the assumptions stated, the Soviet Air Force will have substantially more Bisons and Bears than we will have B–52's.

28. Is it not a fact that, unless there is a change in our present plans and programs, the Russian Long Range Air Force will have greater striking power than SAC by the period 1958–60?

It is very difficult to answer unequivocably a question dealing with striking power during this time period. Striking power is a function of aircraft, weapons, bases, refueling capabilities, maintenance and training. Under the assumptions stated in the question, the Soviets will enjoy a numerical advantage in long-range bombers in the period 1958–60. We would be foolhardy to assume they would not also provide the weapons, bases, refueling capability, maintenance capacity, training and professional personnel to support this numerical superiority in aircraft. I can only conclude then that they will have a greater striking power than we will have in the time period under our present plans and programs.

29. Is it not a fact that under our national policy of peace and nonaggression, we must have an air force adequate to meet a surprise attack?

Yes.

30. Does this not mean that we should have a long range air force that, from the standpoint of striking power of its aircraft, is considerably stronger than that of Russia?

If we suffer a surprise attack, it is reasonable to assume that we will suffer losses to our force. The remainder should be strong enough to inflict damage on the enemy that will be unacceptable to him if we are going to succeed in deterring an attack in the first place. It is then reasonable to assume that the original force without losses should certainly be initially stronger than the Soviet force.

31. Will we, by 1958–60, have such a long range air force under present plans and programs?

I have already brought out that the Soviets will have a numerical advantage in long-range bombers during the time period, and again assuming they will provide bases, weapons, maintenance capability, refueling capacity and training to support this numerical advantage then we will be inferior in striking power to the Soviet long range air force by 1958–60.

32. Do you think there should be an increase in the number of B–52 bombers presently planned for SAC?

Yes, I believe that we should maintain the deterrent position that we have had over the past 10 years. I think this means an increase in the planned number of B–52's. Our force should be equipped with modern equipment, in sufficient quantity, at a rate that can be produced by our industry and absorbed by our units, and supported by our

base structure without unacceptable dislocation of industry and the national economy.

33. Under present programs and procedures, will SAC's bases be adequate by 1958–60?

In general terms the plan for expansion of the Air Force has developed ahead of the base structure to support it. The building of the bases has lagged behind the production of airplanes to form the wings; this has resulted in a shortage of bases and a crowding up of units and aircraft on bases. During the 1958–60 time period, the overseas base structure will generally provide an adequate capability for the Strategic Air Command. There will still exist some shortage of Z. I. bases. This will be overcome to a degree by the expeditious construction of additional bases that are currently programed. However, this will still not provide the desired degree of dispersal and will not give the desired base posture.

34. If changes are made in present programs and bases immediately, will it be possible to have an adequate base structure by the period 1958–60?

Changes in present programs and bases would permit an early beneficial occupancy date for some Z. I. bases, but because of the short construction season in the northern regions, would not insure a completely adequate base structure by the 1958–60 period.

35. Why has the provision of bases generally lagged behind the provision of aircraft?

As a general rule it is easier to obtain money for airplanes and equipment than it is to get public works funds for bases, including housing.

36. Is it necessary for the three elements of SAC's combat effectiveness that you have mentioned to be in balance?

Yes. The effectiveness of the strategic bomber offensive will be directly proportional to the availability of modern aircraft, manned by highly trained personnel, an adequate air refueling force, and properly dispersed and protected bases.

37. What is the significance of a proper ratio between jet tankers and jet bombers?

The ratio of jet tankers to jet bombers takes into consideration the range of the bomber itself, the bases from which they will operate, and the targets against which those bombers are directed. A bomber is not very useful unless it has the range to go from its base to the target. The present state of the art requires that tankers be provided in some cases to obtain this range.

38. Why is the jet tanker more valuable to SAC than the piston-prop tanker?

The slower conventional tanker, in order to make proper contact with its bomber, must depart up to several hours before the bomber. The bomber, forced to wait on the ground, is then exposed to enemy attack. The airplanes we are now refueling are jet airplanes. A jet tanker has the same general performance characteristics as the bomber and, therefore, can accompany the bomber, eliminating the rendezvous problems. In addition, the performance of the jet tankers is such that the refueling altitude is at a height above most of the weather, eliminating weather problems and adds to range because the bomber does not have to descend to piston-engine altitudes to receive its load of fuel.

39. How would you describe the situation that will exist under present programs as to the ratio between jet tankers and jet bombers by 1958–60?

The ratio of tankers to bombers that we now have programed is the best compromise we could come up with at the time the program was laid down. However, we could increase our intercontinental strike capability considerably from our planned base structure and with the same size of bomber force if we had more tankers than we are now programed to have.

40. If present plans were changed to establish an adequate ratio between jet tankers and B–52's, would this require the acquisition of substantially more jet tankers than is now planned?

Yes; this would require substantially more jet tankers.

41. If the decision were made promptly to acquire these additional jet tankers, could a satisfactory ratio be established between now and the period 1958–60?

Yes. If prompt action were taken now, I believe that the desired jet-tanker force could be provided by 1960.

42. Are your maintenance and operations funds adequate?

In the 1956 budget appropriations, Strategic Air Command lacked $36 million having sufficient M. and O. funds to purchase support equipment, to maintain our real estate, and to purchase other operating supplies. However, the lack of this $36 million has not, at the present time, reduced our combat effectiveness. If, however, it is not made up in the 1957 budget, it will reduce our combat effectiveness. We have included in our 1957 budget the additional $36 million, but Congress, of course, has not acted on this budget.

43. Is is not a fact that Soviet defensive capability has greatly improved in the last 5 years?

It is reasonable to assume that they would progress in their defensive capability and I believe they have.

44. What is your view of the relationship between long-range bomber force and the inter-continental ballistic missile?

The ICBM has a potential of being a good weapons system in the future. We should, by all means, press forward with our research and development program to produce this weapon at the earliest possible date. However, there are many difficult problems in this program and I believe that the first model of the weapon, both ours and the Russians', will be less efficient than the manned bomber. As time goes on this efficiency should increase and the weapon become more reliable and useful. I think it reasonable to say that the first ICBM will augment the manned bomber force, and at some later date will supplant a portion of the manned bomber force. But I do not believe that in the foreseeable future the ICBM will replace all of the manned bomber force.

Mr. Speaker, the following concluding statement was made by Gen. Curtis E. LeMay before Senator SYMINGTON'S Subcommittee of the Senate Committee on the Armed Forces at open hearings on April 30, 1956:

Mr. Chairman, I request the privilege of making a closing statement for the record in hope that I may further clarify to some extent our air-offensive requirements. I think I should insure that certain aspects of the problem be made as clear as possible.

For the time period we have had under discussion—that is, for the next few years—I believe that your questions and my responses have made it clear that, in my opinion, our offensive capability in terms of a long-range strategic Air Force could be improved considerably by the following actions if they are promptly taken:

First, the selection and retention within the force of highly skilled technicians and professional combat crews.

Second, the provision of an adequate base structure and other required facilities to permit the force to assume a more effective defensive and offensive posture.

Third, the provision of additional equipment, including long-range jet bombers and jet tankers to expand the force into as nearly certain a deterrent to war as it is possible to attain.

I am fearful, though, the impression might prevail that if these requirements were to be met in the next few years, we will have reached a point where we could face the future with some degree of complacency. Nothing could be further from the truth.

Meeting the requirements for skilled personnel, professional combat crews, necessary facilities, adequate bases, and a satisfactory defensive and offensive posture within the next few years is only an interim measure we are able to take with corrective action that is practicable now.

The problem of security is a dynamic one. The rate of progress achieved by the Soviets in the past few years demonstrates this. There is no indication that their rate of progress will not be sustained. It might even be accelerated. As their appreciation of the significance of air offensive power grows our efforts to retain the deterrent advantage must be continuous. This means that research and development for the weapons system of a few years from now must receive increased emphasis and vigorous attention today.

I have previously stated my views on the ICBM and the requirement for hastening its operational date as a matter of first priority. I also stated that in my opinion the manned bomber will be used by us as a primary means of long-range weapons delivery for several years to come. Therefore, it is most important that we address our efforts and our scientific and production capabilities to the development and production of the manned bomber "follow-on" our successor to the B–52/KC–135 combination, at the earliest possible date. We must have a modernized force in being to meet each new threat as it develops. Attempts to catch up once we have been overtaken can only result in keeping us off balance and in surrendering our ability to deter.

Finally, no military force can be any more effective than the logistic system which supports it and the physical plant which sustains it. There must be continued modernization of our logistic system to keep it abreast of our force modernization. And last but not least, if we are to derive a full measure of security from each dollar we invest in the force, there must always be provision of sufficient funds for the maintenance and operation of our physical plant, our aircraft and our supporting equipment.

Where's the Taxpayer's Surplus?

EXTENSION OF REMARKS

OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. DAVIDSON. Mr. Speaker, last month's issue of the U. S. News & World Report, in an article entitled "United States Treasury Strikes It Rich," tells us that for the year ending June 30, 1956, the Government's cash budget is to show a surplus of about $4,300,000,000.

The Wall Street Journal published on the same day as that article says that the Federal surplus will be only $2 billion.

Edward L. Dale, Jr., of the New York Times, quoted Mr. Eisenhower as having estimated in January of this year that the budget barely would be in balance, with a surplus of less than $250 million.

Before this so-called surplus disappears entirely, let us do something with it.

My first choice would, of course, be to use the major portion of any surplus revenue toward a reduction of our na-

tional debt, which is presently in the neighborhood of $280 billion. The administration seems very much in favor of this course.

Some Treasury officials are very proud of our military cutbacks even if we are dollar rich and security poor. Some people could sleep better with less of a cash surplus and, instead, an Air Force second to no other power on earth.

Let us not fool ourselves. There will be no large-scale reduction of the national debt. This so-called big surplus in the cash budget is quite different from a surplus in the regular budget, for it includes surplus income of social-security payments and other trust funds and excludes certain noncash transactions.

What does all this mean to John Q. Public who has a real tough time with his budget and somehow never has a surplus after he pays his taxes? It means he might stand a little consideration, also.

It is not demagogic to speak of tax reduction. Scientifically, taxes where necessary should be based on the ability to pay. Taxes and the basis for their imposition must be fair. Just as our people demand morality in domestic government and morality in international dealings, taxes must have a morally acceptable basic justification. People in the United States pay very high taxes because they have faith in the justice of their imposition. Heaven help the government whose people heed the anarchistic rantings and ravings of a demogogue such as France has had visited upon her in the person of the infamous Pierre Poujade.

I must stand opposed to tax reduction which has no moral or scientific justification. It is "Poujadism" to reduce taxes just because this is the year of a great national election.

If we have a surplus and taxes can be reduced safely and in good conscience without impairment of our national strength and essential governmental services, then Congress has the responsibility and, indeed, the duty to reduce them. I insist, however, that the reduction should be scientifically and fairly arrived at.

The reduction should be first and foremost for those upon whom the burden of taxes falls most heavily and cruelly. Our primary consideration must be for the man whose major problem is to make both ends meet, the taxpayer who labors under the greatest hardship and has the least ability to pay. Certainly we should eliminate for him any tax which is unfair or unjust before we do anything else in the field of tax reduction.

As a beginning, it occurs to me that a breadwinner must go to work every day. To do so, he requires transportation. This is an essential without which he not alone would be unable to support himself and his family, but likewise, which he would not be able to earn any income upon which our Government might expect him to pay a tax. The average large business enterprise is permitted deduction from its taxable income of legitimate travel expense. Our Federal Government does not permit deduction of transportation costs from the home to the place of business or employment, in fact, it does not even allow for travel expenses incurred in a journey to another city to accept or seek employment, and I maintain that this poses a classic example of unreality and unfairness in our tax laws and regulations.

Transportation to and from work is a vital item of a man's business expense.

Ordinary public transportation costs for the average citizen are a not inconsiderable amount directly and intimately connected with the business of earning a living or holding a job.

Whether a breadwinner daily travels to his job or place of business by train, bus, trolley, subway, or car, the expense for him in employing these essential facilities has doubled or tripled in recent years. For him, these truly necessary business or job costs are an increasingly heavy burden.

Is it fair, is it morally justifiable that our tax laws and regulations should refuse to allow these expenses as a proper business deduction? With the expenditure of transportation money from home to job, would there be a job to produce income?

In New York City a working man pays a minimum of $75 a year just to get from his home to his job and back each working day. This essential outlay is the very minimum he must pay. Many taxpayers are required to pay several times this amount. Commuters living in outlying districts and coming to a city to work each day are spending vastly more. It is sheer hypocrisy on the part of our tax regulations to characterize these sums as "living or personal expense"; they are in truth and in fact, job or business expenses. Why should not this taxpayer's legitimate business expense be deductible? Is not this morally right? Is not such an allowance fair play?

This seems to me to be far more scientific than some of the proposed across-the-board cuts. An increase in dependency exemption is urged by many as being logical, but the present dependency exemptions, in the light of existing living costs, are so unrealistic that a modest increase in the amount of such dependency allowances, which is all that could be expected, would not bring us very much closer to the all important goal of the just and equitable tax base.

I have recently introduced a resolution to study the efficacy of this proposal, its impact and its reasonableness, in the hope that we can approach the question of tax relief morally, scientifically, and fairly—not politically. This is, I think, all that our people ask for and certainly what they have a right to expect of us.

Heretical Orthodoxy

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. RIVERS. Mr. Speaker, Dr. William W. Adams, of the Southern Baptist Theological Seminary at Louisville, Ky., is one of the foremost teachers of the New Testament. In January of this year it was my great honor to hear this outstanding teacher deliver one of the most stirring addresses I have ever experienced. His title was "Heretical Orthodoxy." I obtained permission from this distinguished teacher to place this outstanding work in the CONGRESSIONAL RECORD.

Under permission to extend my remarks in the Appendix of the RECORD, I include, herewith, a letter under date of March 23, 1956, from Dr. Adams, along with this masterpiece on the New Testament. I commend it to every Member of the Congress:

THE SOUTHERN BAPTIST
THEOLOGICAL SEMINARY,
Louisville, Ky., March 23, 1956.

Congressman MENDEL RIVERS,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN RIVERS: A few statements are in place, as I send to you the material which you had every right to expect weeks ago.

1. Your request to make further use of my message, particularly my second message during the institute here in the seminary, was and is a needed encouragement to me. For it is most urgent that we do something besides talk about this matter. And no one person, or a few persons, can effect the needed action.

2. This message deals with highly explosive materials. There is more than dynamite here: it is atomic in nature. It cuts the foundation from under much of our denominational hierarchies—Roman Catholic, and all the others. And not one is guiltless. Even we Baptists who boasts of our democracy, our congregational and local church control, have plenty of popes in spirit and divisiveness, all to the incalculable losses to Christ's cause.

3. Jesus went to the cross as much for contradicting the claims of the religious, authoritative leaders of his day as for any other cause. I challenge anyone to show a case in history where ecclesiastical leaders (also political and economic and other leaders) ever surrendered their thrones or prerogatives, without a fight. Not all the "blind leaders of the blind" died in the first century. If you publish my message, it will be either ignored, or misconstrued, or contradicted in every possible way.

4. I have, accordingly, made a complete restudy of much of the Old and all of the New Testament, along with all pertinent known history down to A. D. 300, double checking every point, solely in the interest of accuracy and effectiveness. I was already heavily loaded with off-campus obligations when your request came. I have burned the midnight oil in producing what I am now sending you. The work is there, although it may not show in the article itself.

5. This further research on my part has served to prove to me that my message is not only basically true; it is undergirded with a mass of sustaining evidence. The proof is overwhelming. I have used only samples of it. I could only hint briefly near the end of the article at the perversion of this Biblical truth, as can be clearly shown in history, down to A. D. 300.

6. I wish you yourself would make an experiment, knowing that it will take some time. "I wish you would read this article slowly, studying each Scripture passage referred to, as you come to it. You are at liberty, of course, to decide that I do not prove my case. If that is true, you should discover it before you publish it.

7. If you decide to use this article, I hope you will insert early in the article something like this. "It will be worse than use-

less to read this article, unless you are willing to open your Bible and study for yourself each Scripture referred to, as you come to it. This article is designed to serve only as a guide to your study of the Scriptures for yourself. To substitute the reading of this article for the study of the Scriptures is unfair to all concerned."

8. If we could get this truth out and put it to work, I'm willing to say that it would result in a reformation that would reduce Protestant Reformation of the 16th century to a mere skirmish in the fight needed to uncover the true Christ and Christianity of history, without whom and which world chaos has only begun. Regardless of what you do, I am not through with this New Testament fact.

9. Genuine, effective, worldwide ecumenicity is impossible until our denominational leaders become willing to come down off their ecclesiastical and theological stilts, constructed largely of bunk and heresy, in a willingness to substitute Biblical and orthodox ideas, programs, and actions for mere traditional, pious platitudes.

10. We shall never enlist laymen properly in the work of our churches, until we show them from the Scriptures that they are not laymen—that they are ministers.

In length and content this article is almost exactly what I gave in my message to you men. I have not prepared a different message, I have just doublechecked all details.

I thank you most sincerely for giving this idea some consideration beyond the Saturday morning when you heard me discuss it in our Seminary Chapel.

Cordially and sincerely yours,

WM. W. ADAMS.

HERETICAL ORTHODOXY

(By Dr. W. W. Adams)

Yesterday our subject was Jesus Among Men. I had planned to continue today with a study of Jesus Among Men in the Person of His Disciples.

I have changed that plan for two reasons: One, the messages that have been brought to use here since I spoke yesterday morning, highlighted by what Billy Graham revealed to us regarding world conditions today. No normal person can hear those messages and forget them. Two, a question which many of you have been discussing among yourselves, and some of you put directly to me. "What can we do when we return home, more than simply report that we have attended an Institute? Is there anything we can do that will lead our churches to begin to do what will meet the needs of our day?"

I have taken your question seriously. When normally I should have been sleeping, I was praying and wrestling with your question. What I have decided to do today may miss the mark; but at least it does not deliberately dodge the question.

At this point we face what may prove to be insurmountable difficulties. One, the Bible and the Christian life, in their full dimensions and significance, lie beyond the reach of any one person. No one can accurately, completely and with perfect balance comprehend all that is involved. Two, in the centuries since Jesus was among men, so much human tradition, totally or partly false, has come into being, has been given Biblical and practical sanctity, and has been ensconced in our religious institutions and programs, that one wonders if we can ever uncover God's Word, so that its simple teachings can possess our minds and guide our actions. Three, we are not always willing to obey God's Word, even when we see its meaning. It will do no harm to admit the truth: ignorance of God's Word is not the only reason why we fail to apply God's remedy to our ills. Four, many times when we seek to explain something and we think we are enlightening our hearers, we only confuse them. At the beginning of a new school year, a rather large number of students enrolled in a certain class. After the second meeting of the class, one student did not return. Unable to learn anything about the student, the professor drew a line through his name. At the end of the semester, an assistant gave the examination. When the professor was reading the papers, to his surprise, he found a paper from the student who had been present only twice. Out of curiosity he read the paper. It proved to be the best of the entire lot. The professor had to search for an excuse to grade the paper down to 99. Completely baffled, he sent out an urgent call for a conference with the student. When the student arrived in the office, the professor stated the facts in the case and said: "You were present in the class only twice; you had no right even to take the examination. And yet I gave you a grade of 99; I positively do not understand it." The student replied: "I know you do not understand it; but I think I can explain it. You see, those two times I was in your class, I got confused; otherwise I believe I could have made 100."

We are all disturbed and largely for the same reasons. One, chaos is spreading and deepening everywhere. The forces of evil, disunity and disintegration are on the march, are more aggressive and effective today than are the forces of righteousness. It requires no prophet to see that, unless we can change this situation, some kind of horrifying world explosion seems to be inevitable in the near future. Two, we sense the gross disparity between the power of Christianity, as presented in the Bible and in our sermons, and the power actually manifested in our lives today, individually and corporately. The present demonstration of power in dealing with individual, group and world problems falls so short of what we say the Bible teaches and what we claim for the Christian faith that the masses of people today are not at all impressed with our claims.

It is in place to be a little more specific. In 1913, soon after I was licensed to preach in Liberty Baptist Church, Shelby County, Ala., our pastor, Rev. I. Y. Inzer, made a simple request of me. "W. W., I want you to find out why it is that, here in our church, with a membership of about 200, we can fill this large building twice a day during our annual revival in August, baptize from 1 to 3 dozens of members, and then, during the other 51 weeks of the year, I cannot find more than 50 or 60 members who will vigorously and persistently throw themselves into the church's program." In the 43 years that have passed since 1913, I have made contacts with ministers and other church leaders in all parts of our country. I make it my business to get the facts regarding our churches. A church with a membership of 100 will do well to average for the year 40 to 60 in the morning service; 25 to 35 in the evening service; 15 to 30 in prayer meeting (if any). For a church of 300, the average will be about 130 to 150; 75 to 100; 25 to 50. For a church with 1,400, the figures may be about 600, 250, 85. A church boasting 3,300 will be considered a success if the attendance averages 900, 350, 125. And it makes little difference where the church is located—in the East, the West, the North, the South. Nor do a few splendid exceptions to these averages change the national picture. We must remember also that those who do attend church services regularly may fall far short in putting Christianity into practice in all areas of life.

If we were not so accustomed to this situation we should be so frightened by it that we could not even think of living normal lives again, until we find the explanation and the remedy. It requires no intellectual acumen to draw the right conclusion: either what we claim for Christianity is not true, or somewhere in our individual lives and in the programs and activities of our churches, there is something basically and fundamentally wrong.

But what is it? Dare we even try to find it? Even if we should find it, are we willing to face it and do something about it?

I am not naive enough to believe that I can point out 1 or 2 weaknesses in our churches, the correcting of which will completely change the situation I have been describing. Of course it is not that simple. Nor can I expect in a speech of 30 minutes to convince all of you of the reality and importance of the causes I shall mention.

I am now ready and willing to point out to you what, as I see it, are the two most damaging heresies among our church people today. They are the dividing of the world and life into the secular and sacred; and the classifying of Christian people into laity and clergy. Does it shock you to hear me say that the Bible knows nothing about secular and sacred, laity and clergy; and that all things are sacred and all Christians are ministers? That is exactly what I am saying. If we could end these heresies and get our people to be Biblical in these matters, it would result in a reformation more dynamic and extensive than anything known in history since Jesus was on earth. You men have asked for something to do when you return home that will enable our churches to minister to the world of our day and to master the forces of evil. I am now answering your question.

First, go back home and lead your church people to recognize and to put into action the Biblical point of view; that all of life and all things are sacred; that the only sinful thing in existence is the wrong use of life and things, the substituting of ourselves and things for God, the creator of both.

We have been taught that some things are "secular" (Latin, saeculum, a race, age, the world); temporal, profane, worldly, because of their association with this age, this world; and not spiritual, eternal, ecclesiastical. Other things are "sacred" (Latin, sacer, sacred, holy, dedicated, devoted to God, religion, the church); to be hallowed, reverenced, respected, because of their association with the divine.

I challenge you to open your Bibles and study each of the following passages and see for yourself that:

1. Genesis 1: 31: Everything God made "was very good." That should not surprise us: anything that God makes is good, sacred. The wrong use of God's good earth has misled us into believing that somehow it is no longer good, sacred; but is secular, evil, unholy. The Bible's repeated and emphatic warnings against worldiness, using life and things as ends in themselves, and not for the good of mankind and the glory of the Creator God, has blinded us to the fact that all that God made—and he made everything except our misuse of what he made—is sacred and holy.

2. Exodus 20: 9: That "6 days shalt thou labor, and do all thy work." God would not command his people to do that which is evil, profane, less than sacred. Work is, therefore, of God, and is good, sacred, holy. No later revelation changes this fact.

3. Matthew 6: 33: That life is a unitary thing, not to be divided into two spheres constitutionally different in nature and value; that if we put God and his kingdom and righteousness first, "all these things will be added." Anything that God will add to those who practice the righteousness of his kingdom, and thus becomes a part of his kingdom, is not less or other than holy, sacred. Otherwise God's kingdom becomes a mixture of the good and the nongood, the holy and the unholy. Because some things are of secondary or tertiary importance does not justify their being classified as other than sacred.

4. Romans 11: 36: The universe ("all things," ta panto, the totality of things) is divine—"of him, through him, and unto him": it comes from God, through his creative action, and serves his purposes. Total and eternal glory, therefore, belongs to him. Everything God made, including us who live in and of the world, is designed and we should use it to contribute to God's glory.

5. John 1: 1-3; Colossians 1: 13-18: The Logos, God's Son, our Savior and Lord, is the one in and through whom, as intermediating agent, God created the universe, "all things"; "without him nothing was made that has been made"; he makes all things a cosmos, universe, and not chaos (in him "all things consist," hold together); and he is the end or goal of all things ("unto him"; all things are designed to further and perfect his universal and cosmic purpose).

6. Hebrew 1: 2: The Son is "heir of all things;" the Father projects himself into the future and will complete and consummate his eternal purpose in and with the universe through his Son, his heir.

7. Ephesians 1: 9-10: According to his eternal purpose and plan, the Father has come into our world in the person of his incarnate Son, to complete his program in all previous times, by heading up, bringing under one headship, one king, "all things"—in heaven and earth.

8. Romans 8: 15-17; Ephesians 1: 11-14: We, God's redeemed in Jesus Christ, are his joint heirs—to help him complete his ministry, which is as comprehensive as the universe and the human race; for the Father's plan is "to reconcile all things unto himself * * * on the earth, * * * in the heavens," through his Son; Colossians 1: 20.

9. I Corinthians 8: 6: The Creator God, his redeeming Son, we the redeemed, and the universe ("all things") are bound together in an eternal and sacred purpose and plan which only our rebellion can disturb. Our sin, which disturbs this divine and eternal oneness, is the only nonsacred thing we know anything about.

10. Romans 8: 19-22: All creation, now groaning under the load of vanity (emptiness) which is hers by virtue of having been placed involuntarily under sinful humanity, longs for and will share in the final liberty and glory of God's sons.

11. Our bodies are sacred. I Corinthians 6: 19-20: The body of each of you "is a temple of the Holy Spirit which is in you, which ye have from God; and ye are not your own; for ye were bought with a price: glorify God therefore in your body." I Corinthians 3: 16-17: Collectively, "ye are a temple of God, and the spirit of God dwells in you. If any man destroys the temple of God, him shall God destroy." It is logical, therefore, that Paul, in I Thessalonians 5: 23, should pray, "And the God of peace himself sanctify you wholly; and may your spirit and soul and body be preserved entire, without blame at the coming of our Lord Jesus Christ." This rating of the body as sacred, along with spirit and soul, is confirmed in John's prayer, Third John 2, "I pray that in all things thou mayest prosper and be in health, even as thy soul prospers." Romans 12: 1-2: We are, accordingly, "to present our bodies living sacrifices to God, holy and acceptable".

12. Therefore, it is high time that we recapture the Biblical message regarding the unitary nature and comprehensiveness of life. I Corinthians 10: 31: "Whether therefore ye eat, or drink, or whatsoever ye do, do all to the glory of God." Colossians 3: 17: "And whatsoever ye do, in word or in deed, do all in the name of the Lord Jesus, giving thanks to God the Father through him." I Thessalonians 3: 9-12: Do "your own business, and work with your hands * * * that ye may walk becomingly (and so win to Christ) toward them that are without, and may have need of nothing." I John 2: 15-17: Instead of satisfying our lusts in the world, and so substituting the world for God, let us love the Father by doing his will, including using all that He created for His glory.

Be done with the heresy that some things are to be hallowed and respected, because they are devoted to God, religion and the church; and substitute the Biblical message that all things are God's, intended to be used for His glory, and are, therefore, sacred. Ponder what it would mean if we could lead all our people to consider and to treat the totality of life and things as being sacred; that all time, material resources, and ourselves, including our bodies, belong to God and are to be dedicated to His glory and the highest welfare of humanity; that true Christianity cannot be confined to Sunday, and to church and to certain phases of life and relationships; but comprehends God, humanity, the universe, time and all of life! Then all of life would glow with a sacred and divine holiness, so that all people who are genuinely Christian would become a vital and active part of the church of the living Christ, who is in our world to "head up all things * * * in Heaven and earth."

If you men want something all-absorbing to do when you return home, here is one day's work for you.

Second, go back home and lead your church people to recognize and to put into action the Biblical message: that all Christians are ministers, and that, therefore, the most colossal and destructive heresy ever generated by the determined enemy of Christianity is the dividing of believers into laity and clergy. To call attention to all the scriptures that bear on this question would require hours. Here are some of the more important facts.

1. Judaism failed primarily because the Jewish people became so absorbed in their heirarchical, institutional life, and so devoted to the formalistic, ritualistic observances of their religion, that they lost sight of and failed in their one mission—to serve as God's priestly nation, in mediating God to all the nations (Genesis 12: 1-3; Exodus 19: 4-6). Through Amos (Amos 5: 21-24; cf. Isaiah 5: 1-7) God actually commanded the Hebrews to stop their entire temple (church) services, which had been substituted for practicing justice and righteousness.

2. The world into which Jesus came was overlaid with hollow, ritualistic, legalistic religion, under the supervision of authoritative leaders who constituted a highly organized religious order, binding heavy loads bear them (Luke 11: 46; Matthew 23: 4). Almost every vital phase of their religion had been covered over under a mass of human traditions: God's commandments (Mark 7: 5-13); the Sabbath (Mark 2: 23-28); genuine charity, prayer, and fasting (Matthew 6: 1-16); the primacy of right relationship with others (Matthew 5: 23-24); practicing justice, mercy, and faith (Matthew 12: 7; 23: 23); and striving for inward purity (Mark 7: 18-23). Jesus came to minister, as well as to die for men (Mark 10: 45). This led Jesus to break through the religious and social customs of the day that separated the leaders from the masses. He went to the people, wherever they were—in their homes, places of business, and religious and social gatherings, and in the open spaces. Jesus avoided and separated from nobody, unless he was first rejected. Moreover, he ministered to all the needs of people. There are no known exceptions. This comprehensive ministry, ignoring all divisions among the people, more than any other one factor, put Jesus on the cross. For the religious leaders, wedded solidly to their religious hierarchy and prerogatives, saw clearly that, if Jesus' spirit, example, and teachings should prevail, their entire profession, institutional program would collapse (John 11: 47-48; Luke 23: 2).

3. Jesus persistently sought to create a spirit of complete unity, equality, mutuality, and cooperation among his disciples; refusing to give priority to one person or group of persons, or to one ministry; always rebuking any manifestations of spirit and any move that would even suggest divisions or gradations among his followers and workers. His actions and words correspond; Luke 22: 27: "I am in your midst as one that serves." Disciples should pray that the Lord, not some ecclesiastical agency, will send forth laborers, not authoritative officials, into his vineyard (Matthew 9: 38; Luke 10: 2). Without any public ordination, and with no hint of any clerical orders, giving special authority and duties to no one or several individuals, Jesus appointed and sent out the 12 (Mark 3: 14; Luke 6: 13), and the 70 (Luke 10: 1-24), with one purpose only—to help him minister to the people.

What appears, at first sight, to be a special and authoritative office and function for Simon Peter, in making him the foundation of the church and the sole possessor of the keys of the kingdom, disappears completely, when all the facts are considered (Matthew 16: 13-20). The church is not founded on the man Peter (petros); it is not founded on any one person, not even Christ, or idea or experience. Jesus began his church when one person apprehended and was ready to confess and act upon the Father's revelation, that Jesus is more than man—that he is "the Christ, the Son of the living God"; that is, the Jesus is the Messiah, the King, the key to the kingdom, the one who has "the keys of death and of Hades" (Revelations 1: 18). The church is founded on the union of the Father and his redeemed sons, in the person of his redeeming Son. "My Father revealed this to you * * * and thou art Peter (petros), and upon this rock (petra, a mass of rock, a unity of persons, experiences, and actions), I will build my church." "Peter, through you, I shall now unlock other hearts and give to them the truth, the secret, the keys. Thus you will be building and loosing, determining the eternal destiny of men." Later on, exactly the same authority, responsibility, privilege and function were placed upon the church, all disciples, the total body of the redeemed (Matthew 18: 15-20; John 20: 19-23). Every believer strengthens the foundation of the church, and shares in the work of binding and loosing, unlocking or closing men's hearts to the redeeming, forgiving Christ.

Imagine the idea of an order of clergy, graded in offices, authority, and powers, surviving in such experiences as the following: Mark 9: 33-37; 10: 35-45: greatness, exaltation, and places of honor belong only to those who humble themselves (Luke 14: 11), becoming servants and ministers of all, even as Jesus came "to minister and to die for all"—the complete antithesis of the kingdoms of the world where rulers, exercising the authority and power of their high offices, lord it over their subjects. John 13: 1-20: Jesus, our Lord and Master, earned the right to say: "If I * * * have washed your feet, ye also ought to wash one another's feet." Neither Jesus, nor Peter, nor the other disciples knew anything about the primacy of Peter or anybody else. In the face of the example, spirit, and teachings of Jesus, only those who are strangers to Him could contemplate or tolerate the idea of gradations and divisions among believers.

Later on, Jesus sought to reclaim Peter, after his defection in denying his Lord, and to make of him a dependable shepherd in tending and feeding the sheep, rather than creating for him an authoritative office over the church. Jesus would be pleased to make of Peter a worker on the level with other disciples: (John 21: 15-19).

Unity among Christ's disciples and workers reaches its climax in Matthew 23: 1-12. I quote this passage in part. "But all their works they do to be seen of men: for they make broad their phylacteries, and enlarge

the borders of their garments, and love the chief place at feasts, and the chief seats in the synagogues, and the salutations in the marketplaces, and to be called of men, Rabbi. But be not ye called Rabbi: for one is your teacher, and all ye are brethren. And call no man your father on the earth: for one is your Father, He who is in heaven. Neither be ye called masters: for one is your master, the Christ. But he that is greatest among you shall be your servant. And whosoever shall exalt himself shall be humbled; and whosoever shall humble himself shall be exalted."

You are all brethren. You differ only in ministries rendered, serving as undivided witnesses and workers under your one and only Leader and Master, Jesus Christ. It is fitting, therefore, to hear Jesus pray: "that they may be one * * * perfected into one" (John 17: 22–23).

4. Jesus commissioned and empowered His disciples to continue and complete what He had begun. John 20: 21: "As the Father has commissioned me, so send I you." I am sending you in a way that corresponds to (as, according as), and will continue the commission my Father gave to me, in all essentials. These essentials must include Jesus' purpose, spirit, program, and methods.

If we consider all the commissions Jesus gave to His disciples (Luke 24: 13–49; Matthew 28: 16–20, cf. First Corinthian 15: 6; John 20: 19–23; 21: 15–23; Act 1: 3–8), we discover that He commissioned the 11 apostles, along with many believers. This is further confirmed by the fact that Jesus empowered at least 120 disciples (Act 1: 15; 2: 1–4) for witnessing, including "the women, and Mary the mother of Jesus, and his brethren" (1: 14). Power for ministry was given to all believers, and was not limited to a small, clerical group.

5. Jesus' disciples were true to their commission. From Acts to Revelation, the records are uniform: the disciples never betrayed their Lord. They held steadily to His purpose, spirit, program, and methods.

More specifically the disciples knew nothing of laity and clergy: all were ministers in one Chrstian body, whose head was Christ, and whose life, inspiration and guide was the Holy Spirit. Among these ministers (all believers), there was no gradation of officials, no order of clergy, placing one group over against and in control of other ministers, or the church as a whole. They differed only in the types of ministries rendered. Christ calls every one to salvation and ministry. The New Testament knows nothing about calling one to salvation and not to ministry also.

Since the universe and all of life are sacred, and every believer is dedicated to his Lord who commands him to "be perfect, as your Heavenly Father is perfect" (Matthew 5: 48), all things must be done in the name of the Lord Jesus, and to the glory of God the Father. Some ministries are more conspicuous, strategic, significant, and essential than others. This makes it imperative that Christ's followers have leaders, and that they lead, oversee, administer, and guide in the interest of the unity, health, growth, and ministry of the body. The spirit endows each believer for the ministry he should perform, for the good of the body. And so we find believers with gifts for guiding the disciples in fulfilling the worldwide mission of their common Lord.

But this can never mean that some believers are ministers (clergy, called) and others are something else, laity, for example. Nor does this mean that some ministers (disciples) are lifted above others in office, authority, powers, and dignity. They are distinguished only by the types of ministries performed, within the one united Christian body. For "ye are brethren"; "he that humbles himself shall be exalted"; "I am in the midst of you as one that serves"; "if I, your Lord and Master, have washed your feet, ye also should wash one another's feet"; "he that would be first and greatest among you shall be servant (slave) of all"; "follow thou me."

The early Christians followed their Lord. That these things are so is the uniform teaching of the New Testament. Here are a few samples.

A. In the Book of Acts:

Acts 2: 17–21, 39; cf. Joel 2: 28–32: The Holy Spirit is available to you and "to your children, and to all that are afar off." The Spirit's mission is to prepare all believers to prophesy—to minister for Christ.

Acts 2: 43–47: Here all believers, including the apostles, live and work together in perfect unity—in the home and in the temple, encompassing all of life—all possessions, day by day.

Acts 4: 23–31: Apostles and the company of believers prayed together, and were all empowered for further witnessing. There was no division of ministers here—no laity and clergy.

Acts 8: 14: "The apostles * * * sent * * * Peter and John" to Samaria. Peter was servant, not head of the apostles.

In Acts we find many trusted and effective leaders: Peter, John, Stephen, Philip, Barnabas, Paul, and others. Each was free to go and minister as the Spirit guided him, without apostolic or ecclesiastical control. The Lord's angel and the Holy Spirit, not Peter or a bishop, directed Philip; Acts 8: 26–29. What bishop or church authorized Ananias to minister to and to baptize Saul? Acts 9: 10–18. Paul was free to see that the new converts were baptized, even at night, without a directive from the bishop; Acts 16: 33.

Acts 11: 22: The church, and not Peter, and not the clergy, sent Barnabas to Antioch.

Acts 15: 1–29: The apostles, elders, and all the multitude of brethren (verses 2, 4, 6, 12, 23) shared in the discussions and conclusion of the great Jerusalem conference.

Acts 6: 1–6: The apostles and the multitude of disciples worked together in choosing and ordaining the first deacons. This was not elevating disciples to an office, with authoritative, ecclesiastical powers over others. It was only a commonsense division of labor, dedicating these men to a special and urgent type of ministry—serving tables, attending to certain business matters. The seven were pastors' assistants. And neither the apostles nor the deacons, nor both together, constituted a clerical group, in control of and over against the laity. Apostles and deacons were servants, not masters of the body of believers.

Acts 13: 1–3: Barnabas and Saul were not ordained to the ministry. They had been ministering for years (Acts 9: 20–30; 11: 22–26, 30). Nor did this ordination exalt them to an ecclesiastical office. It was a simple act of recognition, commendation, and cooperation with reference to a special ministry of missions, under the Spirit's (not apostolic or ecclesiastical) direction.

Acts 20: 17, 28: Among the best known ministers among early Christians were elders and bishops. But there was no gradation, placing one group over the other. Bishops and elders were interchangeable (see Titus 1: 5–7), neither was subordinate to the other.

B. In Paul's writings:

Galatians 2: 11–14: "Paul resisted Cephas to the face, because he stood condemned"; and this was done publicly—"before all." Was not Paul a little rough on the first Pope? Or had Paul, along with the others, never heard of Peter's headship over the apostles, bishops, and elders?

I Thessalonians 5: 12–22: Note the long list of duties and ministries in which all the Thessalonian believers shared, under the direction of their leaders.

Colossians 1: 18; 2: 19; Ephesians 1: 22; 4: 15; 5: 23: "Christ is head of the body, the church."

Colossians 3: 15; I Thessalonians 4: 7: Christ who had already called them to salvation calls them also (all the members of these two churches) to sanctification and a life of peaceful cooperation among the members of the one body: all are called to be good ministers within the one Christian body.

Ephesians 4: 1–16: Paul says, "I * * * beseech you (Christians in Ephesus) to walk worthily of the calling with which ye were called." All the believers, not a limited group, are called. Verses 4–6: They must keep, never break, the unity which they share as members of Christ's body—"the unity of (created by) the Spirit." The heart of this unity is the Trinity: One Spirit, one Lord, one God. Verses 11–16: The victorious Christ gives gifts to men; so that some disciples, ministering within the body, as apostles, prophets, evangelists, pastors, and teachers, seek to "perfect the saints unto the work of ministering." Some specially gifted ministers so lead that all the saints will share in the work of ministering. Some ministers help all the saints to be good ministers, with the end in view of building up Christ's body, so as to effect unity of faith and knowledge, the maturity of all believers, after Christ's example, and under his headship.

This one passage makes it completely impossible to divide believers into laity and clergy (called, ministers).

Ephesians 4: 11; I Corinthians 12: 4–31; Romans 12: 3–8: One wonders if we can ever get our people to comprehend and to practice what is contained in these passages. Paul states categorically (I Corinthians 12: 4–6) that there are "diversities of ministries and workings." He proves his point. Taking these passages together and in order, here are some samples of diversities of ministries: apostles, prophets, evangelists, pastors and teachers, wisdom, knowledge, faith, healings, miracles, powers, discerning of spirits, tongues, interpretation of tongues (I Corinthians 12: 28) helps (assistants), governments (counsels or managers). These lists are not intended to be exhaustive; they only illustrate the fact that, within Christ's body, many ministries are needed and provided. In I Corinthians 12: 12–27, Paul makes his climatic argument: God has "tempered the body together" (verse 24); and the life and health of the body requires that every member of the body perform his ministry faithfully and in full cooperation with all other members.

We find here perfect mutuality, interdependence and unity, calling for full cooperation within the Christian fellowship, as planned and projected into the future, through His disciples, by Christ, the head of the church.

C. In Peter's writings:

There is time to discuss only one—and it is enough.

I Peter 1: 1; 2: 1–10: Note that Peter is speaking, not to a limited group, but to all believers, "sojourners of the dispersion." They are to get rid of all sins, and participate fully in the life and ministries which Christ provides for and expects of His disciples. It is a mutuality of life, privilege, responsibility, and services. It is like a house filled with dynamic, cooperating, active people. In this house, Christ the Lord (not Peter) is "the chief cornerstone, elect, precious." Around this Christ all believers "are built up a spiritual house, to be a holy priesthood, to offer up spiritual sacrifices, acceptable to God through Jesus Christ." Others have rejected this Christ, the chief cornerstone, but God made Him the head of the corner. In contrast to those who were disobedient, "ye (all believers, and not a limited, clerical group) are an elect race (a race is a unit, not divided,

and you are elect, chosen), a royal priesthood (priesthood of all believers, to serve the king, in his kingdom), a holy nation (a 'nation' is a unit, not divided, and you are a holy, dedicated unit), a people for God's own possession" and purposes. God called all of you (not a clerical group) thus to live and minister together, with the purpose of "showing forth the excellencies of him who called you to share this united and universal priesthood of all believers."

Peter is completely unaware of any primacy for himself, or for anyone else.

D. In the Book of Hebrews:

Hebrews 7: 26–27; 13: 15: We, the disciples of Christ, minister under the one high priest, Jesus Christ, who has sacrificed himself "once for all," and so is not repeated. Our high priest "makes intercession for us," even as the Holy Spirit does (Romans 8: 26, 34). The sacrifice for our sins is complete, never to be repeated. It is expected that we "offer up a sacrifice of praise to God."

E. In John's writings:

Only one passage is needed.

Revelations 1: 5–6: Christ our Redeemer "made us a kingdom, priests unto his God and Father." Exodus 19: 5–6: God made Israel to be His priestly nation, through which He would bless all the nations of the earth, as He had covenanted with Abraham to do (Genesis 12: 1–3). Israel failed in that mission. John now declares that Christ's followers (all of them) take Israel's place as priests through whom Christ will win his kingdom.

The priesthood of all believers who are Christ's ministers. All are priests, ministers, workers, under the one high priest and leader, Jesus Christ.

In the New Testament, neither the Father, nor the Son, nor the Spirit, nor Peter, nor John, nor any and all believers knew anything about the priority or headship of Peter, nor of any other believer or believers; nor had they any knowledge of the colossal heresy of dividing believers into laity and clergy. They were all loyal to Him who said: "Ye are all brethren."

THE PERVERSION OF CHRISTIANITY

Here is a summary of this tragic story. Any group of people living and working together must have leaders, overseers, administrators—various functionaries. The early church had them. There were "apostles"—trusted, influential, personal witnesses and interpreters of Christ. Administrators were called "elders" or "bishops" (the words were interchangeable). "Bishop" (overseer) was not the title of a church officer; it was simply the description of one function of elders or leaders. "Deacons" were assistants to pastors and other leaders.

But these ministers were not a clerical, official group of church rulers. The total body of believers, the people, were the determinants in their Christian fellowship and ministries, including their leaders. The people, all believers, constituted the church; and the leaders served the people, rather than the other way around.

The perversion of Christianity is not difficult to explain. The church needs and the Holy Spirit provides able, qualified leaders. It is both natural and easy for effective leaders to enlarge their prerogatives and powers, especially in times of crises. In the second and third centuries, many such crises arose, such as what books to include in the Canon; and how to meet and master dangerous heresies. Strong administrators were needed and provided. Some of them abused and violated their trusts, gradually making themselves more powerful. Despite protests from the discerning, by the end of the third and the beginning of the fourth centuries; the perversion was well near fixed, especially in Rome. The "clergy" were strong enough to silence the protesters.

These rulers, designating themselves "the called" (kleros, called, clergy) seized upon another Greek word to refer to those not called—the word laos, people: laos, laity.

The final result is too apparent to need extended comment. We call a minister to our church and, in effect, we say: "You do the ministering; we are not ministers, we are laity." We lose over half our members (ministers), our churches accomplish a small part of their potentialities, society rots, chaos deepens, and the devils in hell have fun.

I challenge you men to do three things. One, create a committee to produce a reading list of pertinent materials and, believe me, it is ready for you. You must first get the facts. Two, see if you can make a beginning in your local churches to correct this rankest of heresies. Three, return here next year for another institute, but give it a title that is not totally false: not "laymen and world evangelism"; but "ministers and world evangelism."

Interest Rate on United States Savings Bonds Should Be Raised

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the following editorial by Mr. Leslie Gould, which appeared in the May 4, 1956, issue of the New York Journal-American. Although Mr. Gould advances some cogent reasoning for raising the interest rate on Government savings bonds, I doubt whether this administration will do anything about it. These are the bonds the little fellow buys.

HIGHER RATES ON SAVINGS PUT QUESTION MARK ON E BONDS

(By Leslie Gould)

There's not much point in a person buying the Government's savings bonds as long as the current interest rate and the method of calculating it holds.

The question of patriotism no longer is involved. They are just another investment, and interestwise not such a good one.

A person can do better currently buying in the market another piece of Treasury paper. Treasury notes can be bought in the open market below par, thus giving an interest return of better than 3 percent.

Mutual savings banks in New York are paying 3 percent, some from the day of deposit and others from the first of the month of a dividend period even if the deposits are made on the 15th. So, the rate is slightly better than 3 percent. Where the banks compound the interest quarterly or semiannually the rate is even better.

The savings bonds—designed for the little investor—yield nothing for the first 6 months and if cashed in at the end of the year, the fellow gets only 10 cents interest for his $18.75. If he had the $18.75 money in a savings bank he would receive close to 60 cents.

NEARLY 10 YEARS TO CATCH UP

Taking an easier "deposit" figure of $75, if this sum were invested in a savings bond the buyer would get at the end of 5½ years $86.40. But if he had put his $75 in a savings bank, he would have $88.88—or $2.48 more income.

It is not until the maturity date—9 years and 8 months after purchase—that the bond interest catches up with the 3 percent return on a savings account.

When savings bank interest was 2½ percent, it took 7½ years for the savings bond to come even on investment return, and when the bank rates were 2 percent it took 6½ years.

There is this to be said for the savings bonds, the interest doesn't fluctuate, as it can for banks.

A DIVERSIFIED INVESTMENT

When a person makes a deposit in a savings bank, he is making an investment in Government bonds as well as in mortgages and other types of securities, including bonds of corporations and municipalities and revenue agencies, like the turnpikes.

This money goes to work and the bulk of it in the community where the depositor lives. It helps finance homes, and in doing so makes for local work.

The interest on the savings bonds is taxable, as is also interest on bank deposits. The British exempt the interest on their savings bonds, and also the prizes on their new "lottery" savings bond. The interest on the United States savings bonds should be at least 3½ percent.

Legalized Tax Evasion

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I would like to include an article from the February 24 issue of the U. S. News & World Report. This article carries an eye-opening account of the methods being used by high income bracket business executives who earn a fat salary with many fringe benefits which, apparently, is tolerated under our present tax structure.

Mr. Speaker, it occurs to me that the appropriate committee of the House should investigate the system being used by these tycoons to the end that existing loopholes might be plugged so that these people would pay their fair share of the income tax burden as it was intended when the income tax laws were passed by Congress. The lower income groups who do not have access to such harmless-sounding methods of tax evasion are certainly paying their fair share. This practice, approved by the present administration, has the effect of destroying the intent of our income tax laws. It also discriminates against the white-collar employee and the industrial workers. When wage increases are granted to our low-income workers, they willingly pay the additional amount in income taxes. There is no reason why industry should grant raises which are supposedly tax proof as these people are in a much better position to pay the additional taxes than the low-income families.

Mr. Speaker, for the benefit of my colleagues, I am including this article:

HOW TO BE WELL PAID IN SPITE OF TAXES—MORE AND MORE FIRMS GIVE INCENTIVE EXTRAS TO EXECUTIVES

With income taxes what they are, a salary increase doesn't mean much to a highly paid executive any more.

So business firms are devising new methods of paying their executives. Aim is to give the executives more money, the tax collector less.

Official records show how some big corporations are managing to do this.

All over the country, corporations are finding new ways to raise the pay of business executives.

Simple boosts in salary are losing favor. Instead, you find executives getting such things as stock options, installment bonuses, profit-sharing plans, retirement guarantees, life insurance policies, deferred benefits of all kinds—and big expense accounts.

It's getting so you can't tell how much an executive really makes by merely looking at his monthly pay check.

The reason for all this is to be found in the high income-tax rates. Those rates range up to 91 percent in the top brackets of pay. At such rates, an ordinary increase in salary is turning out to be of little value to an executive who already is highly paid. He finds the Government takes most of the increase away from him in the form of income tax.

Corporations, as a result, are finding it harder to keep a topflight executive. One of the highest-paid film executives in Hollywood, for example, recently gave up a salary reported to exceed $500,000 a year. He plans to start producing pictures for himself. The idea is that he can make at least as much money that way—and keep more of the money he makes.

If the executive is able to take advantage of the capital-gains tax instead of the high rate on regular income, he will pay only a 25 percent tax on the profit he makes from his pictures.

To match such advantages, and to hang on to executive talent, corporations are devising a variety of pay plans. The purpose of all the plans is to give company officials more money that they can keep for themselves—in other words, to protect them against the tax collector.

To find out what pay plans are being used, and how they work, members of the board of editors of U. S. News & World Report talked with experts, checked the reports filed with the Securities and Exchange Commission by scores of corporations.

This survey shows that hundreds of business executives now are managing to build up sizable estates, despite high-income taxes.

One executive, for example, received total salary and bonus of $108,000 from Continental Can Co. in 1954. The company, in its report to the SEC, estimated that he had only $50,010 of this left after income taxes. But that turned out to be only part of his total compensation.

The company set aside $21,733 in cash and 380 shares of stock to be paid to the executive after he retires. The stock, valued then at $20,710, is now worth about $30,000.

During the year, this executive also exercised a stock option to buy 10,000 shares of Continental Can stock at $35 a share, on which the paper profit is now more than $400,000. In addition, he has the company's guaranty to pay him $30,000 a year for life after he retires, on the condition that he is able and willing to render advisory and consulting services to the company.

Here, in the case of this executive, you find several of the pay plans now being used to save taxes.

Earn now, collect later, that's the key to most extra-pay plans. The idea is to postpone the actual payment of the money until such a time as the executive's income drops and he can receive the deferred payment at a lower rate of income tax.

When payments are deferred, conditions usually are attached. To collect the deferred payments, an executive may be required to remain with the company for a fixed period, or agree not to work for a rival concern if he does leave, or to hold himself available as a consultant.

These conditions are designed primarily to qualify the benefits for favorable tax treatment by demonstrating that the executive has not really earned the benefits until he actually receives them.

The conditions, however, also serve another purpose. They bind the executive to his corporation with golden chains. A man will think twice before taking a job with a competitor if it means giving up a small fortune in accumulated benefits for the future.

Tax status of some of the extra-pay plans has yet to be legally clarified. One plan, however, has a clear and approved status in law. That is the stock option plan, which is gaining widespread use. It works like this: An executive is granted the option of buying a specified number of shares in his company's stock at a fixed price.

The executive may buy this stock at any time during the life of the option, which may run 5 or 10 years. And the price to him remains the same, even though the market price of the stock may rise substantially.

Then, when the executive sells that stock, he pays only the 25 percent capital-gains tax on the increase in the stock's value, instead of the higher income tax that would apply if he had been given a similar amount in salary.

The way in which stock options must be handled to qualify for capital-gains tax instead of income tax has been clearly spelled out by law.

Huge profits on stock options have been realized. SEC reports show, for example, that an executive of the Columbia Broadcasting System in 1954 picked up options to buy 17,000 CBS shares at $24.75 a share, and 33,000 shares at $38.25 per share. The stock later was split 3 for 1. At present market prices, the paper profit on these stocks amounts to more than $2 million.

During that same year, an executive of the Aluminum Co. of America exercised his option to buy 18,900 Alcoa shares at $58.75 per share. A 2-for-1 split in 1955 converted them into 37,800 shares now worth $2 million more than the purchase price. This same executive, in 1954, was paid $200,000 in salary and was voted $50,000 additional to be paid after he steps down. He is also eligible for $45,471 in annual retirement benefits.

The retirement-pay idea is now being used for many company officials. This not only means security for the future, but is also another way of postponing payment to save on income taxes, if certain conditions are met. The executive gets his pay increase, in effect, after he goes off the payroll, and drops into lower tax brackets.

Reports to the SEC list one executive who has a contract with Federated Department Stores calling for "an allowance of $55,000 a year for life upon termination of his active employment." If he should die before collecting 10 installments, his family would get the payments until 10 installments had been paid. So this provision amounts to an estate of at least $550,000.

Such allowances as this can be in addition to a company's regular retirement program for all employees.

Life insurance policies, with the company paying all or part of the premiums, also are used to provide future rewards for executives.

Thrift plans provide another way to reward executives at lower costs in taxes. Standard Oil Company of New Jersey puts up an amount equal to 1 to 3 percent of an employee's annual pay toward annuity purchases. The percentage varies according to the employee's own thrift payments—and the company's contributions are substantial in the case of an executive in the upper brackets. One executive of Standard Oil, for example, received credits of $13,225 from the company in 1954 under the thrift plan, in addition to his salary of $195,000.

The company expressly states that its thrift contributions are not considered as current pay—and hence not subject to personal income tax in that year, because the employee "receives no benefits unless and until his annuity payments commence."

Installment payments of many kinds are employed to soften the tax collector's bite. A big bonus, for instance, which normally would be paid at the end of an unusually profitable year, may be split into several installment payments. One idea here is that part of this bonus, at least, may fall into a year when business is bad and no bonus would normally be paid. Or, in some plans, payment is postponed until the executive retires.

Either way, the tax bite is smaller because the executive's total income in the year when he receives the money is less and his tax rate lower.

Conditions generally must be applied to the eventual collection of deferred payments to qualify them for tax benefits.

SEC records show numerous examples of such installment payments.

E. I. du Pont de Nemours & Co. spreads its bonuses over 4 years. Top bonus award in 1954 was $400,000—in addition to the $169,000 salary paid to the executive who got that bonus. Nine other Du Pont executives were awarded $250,000 bonuses, also in installments.

Radio Corporation of America spreads its "incentive awards" over five annual installments. Incentive pay to executives of General Electric Co. is divided into two equal parts. One is payable in cash at the time of allotment. The other is converted into GE stock which, with accumulated dividends, is paid in 10 to 20 annual installments after the executive retires.

Profit-sharing benefits also are being paid now on the installment plan. Goodyear Tire & Rubber Co. pays them in the form of company stock in 10 to 15 annual installments. P. Lorillard Co. pays profit shares in cash—but part is held until retirement.

Expense accounts, to escape income taxes, must be justified as "ordinary and necessary." In these days of aggressive selling, however, large expenditures are often accepted, especially in entertaining potential customers.

One publicity executive in New York, although a bachelor, maintains a big home in the heart of Manhattan where he entertains business prospects—and the cost of the home is charged off as business expenses to his client. Many companies also maintain yachts, private planes, resort homes, or other luxuries which can be charged off to company expenses because they are frequently used by business associates.

Tax rules can be tricky. Some extra-pay plans may not achieve the results intended. But the idea of paying executives in other ways than salary is spreading. And, often, substantial tax savings result.

This Man Nixon

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. BOW. Mr. Speaker, "This Man Nixon" is the title of an interesting and informative article on the Vice President appearing in the May issue of Town Journal The article was written by Ray Henle, one of our best-informed

Washington correspondents, and I believe Mr. Henle lays to rest many of the strange and unwarranted criticisms of the Vice President that have been circulated in recent months. Under leave to extend, I include the article as part of my remarks:

When Election Day 1952 rolled around, vice presidential candidate RICHARD MILHOUS NIXON was tired. The young Californian had in 4 months traveled 67,000 miles. He had made 286 speeches, more than Ike and more than either Democratic candidate.

"We've done all we can," he told Bill Rogers, his youthful campaign adviser and close friend. "Let's drive down to Laguna Beach and relax."

They bought a football and down on the sand passed it back and forth. Three Marines coming down the beach saw them and got into the game.

At one point, both the vice presidential candidate and a young Leatherneck dived for the ball. For the first time, the Marine saw NIXON close up. "Gee," he exclaimed, surprised but puzzled, "aren't you some kind of celebrity or something?"

Today, millions of Americans are like that young Marine. They study Mr. NIXON'S face and actions carefully—and they aren't quite sure about him. What kind of man is he, really? What is his actual political stripe? Judging by what he has done up to now, what could we expect of him in the future? Is he a man of caliber or a shrewd opportunist? Could we trust him? It's important to know, for he will almost certainly be nominated for a second term as Vice President—and will, because of Ike's heart attack, be sized up as a possible President.

It will take a shrewd voter to pierce the fog of accusation, rumor, and praise and come up with a fair decision. His enemies contend that he is a brash, ambitious "Tricky Dicky" bent on winning the Presidency by fair means or smear. He rouses more ire among liberal Democratic leaders than any other Republican. Yet, by the political rule book he would seem an ideal candidate on anybody's ticket.

Let's see what Mr. NIXON has working for him:

A. His is the traditional American success story. As a schoolboy, he helped in his Quaker father's general store in Whittier, Calif. He had to pass up the chance for a Harvard scholarship; not enough money. Instead, he went to Whittier, a local college, graduating second in his class in 1934.

At Duke University Law School, he graduated third in the class of 1937; he had a scholarship and kept his expenses down by living in a farmhouse.

A World War II veteran (he started as a Navy lieutenant (j. g.) and wound up as a lieutenant commander); he spent 15 months in the South Pacific (including 28 nights under bombardment at Bougainville).

He has a charming wife and two uninhibited children. Mrs. Nixon, like her husband, came up the hard way; orphaned early, she worked in hospitals and department stores to put herself through the University of Southern California. She met RICHARD NIXON in a little theater group in Whittier (where she taught at the high school).

In 6 years NIXON rose from an unknown small-town lawyer to Congressman, to Senator, to Vice President.

Politically, can you beat that?

B. His conduct last fall, when no man could say the President would live, was faultless; and no one has had more opportunities to make a mistake. To many, it stamped him as a man of restraint, good taste, and propriety.

C. Add to this that Mr. NIXON is young (43), a notably effective speaker and tireless campaigner, and possesses an outstanding record as an investigator of Communists, and you have the composite of what a campaign manager would dream about.

Yet this does not jibe with what many people visualize. As a Washington-based reporter, I have made it a practice to ask "NIXON haters" to tell me:

"Just what, exactly, do you have against NIXON?"

In many cases, they answer simply, "I don't know—there are some people you just dislike—he's one." Sometimes, they get more specific:

1. "He always looks like he needs a shave, seems scowly and jowly, like Russia's Gromyko."

2. "He doesn't stand for anything; he sacrifices principles to expediency."

3. "He was corny and emotional in that 1952 telecast; that 'Checkers' dog incident gagged me."

4. "I hear he's anti-Semitic."

5. "He ran a dirty campaign against his opponents in California."

6. "He called Democrats 'traitors'."

7. "He's an opportunist."

8. "Too young. Inexperienced."

There's a ninth reason—one never stated. He put Alger Hiss in jail—and in doing so embarrassed many liberal columnists and Fair Dealers who labelled as "red herring" Republican attempts to expose Communists in Government. Such public humiliation is hard to forgive.

Moreover, the known fact that Mr. NIXON was in 1952 "acceptable as a Vice President to the right wing of the Republican Party" did not endear him to the so-called liberals.

But back to the eight charges:

The first one sticks. Mr. NIXON does have a dark, heavy beard; and if that's a disqualification, he's a goner. He must shave twice and sometimes three times a day. Actually, he is exceptionally neat and tidy. His clothes are skillfully tailored, and he wears them with more ease than most men. He is clean and wholesome looking.

The "jowls," too, have been a target. One California farmer wrote him after a 1953 telecast: "Was it mumps or was it chewing tobacco? I say it's mumps. Joe says it's chewing tobacco. Please settle our bet."

The scowl, I challenge. Even senior colleagues on the Hill who eye his rise with jealousy regard him as "a regular guy who hasn't taken on any airs." On the occasions when I have talked to him, he always had a ready smile.

In public, the Vice President appears serious much of the time. "If you want to know why," a Cabinet aide told me, "you ought to know the state secrets he's carrying around in his head. It's a wonder he dares talk to anybody. Also, don't forget that, as a young man, he's better off with a restrained manner." Certainly he makes a sharp contrast with the Alben Barkley jovial Veep. "But," say his friends, "what's worse than a young clown?"

The second allegation, that Mr. NIXON revolves as the Republican wheel revolves, is partly true, partly false. Senator KARL MUNDT, Republican, of South Dakota, put it this way: "I would expect DICK NIXON to vote with the Republicans for a limited concept of Government, a balanced budget, strong national defense, curtailment of the Communist conspiracy at home, and a return to private industry of tasks it should perform. He would be against expansion of socialism." In this respect, he is a party man.

As a freshman Congressman, he voted with most GOP Congressmen 83 percent of the time. But in the Senate, his party-loyalty record dropped to only 70 percent. Mr. NIXON on one occasion refused to go along with labor legislation more restrictive than the Taft-Hartley Act. He worked energetically for Marshall plan aid for Europe; voted for Greek-Turkish aid.

As one White House assistant put it to me: "NIXON'S outlook in both domestic and foreign affairs, as I see it in Cabinet meetings, is as close to President Eisenhower's as anyone's in the administration."

We move on to the Checkers broadcast. It certainly contained poltical "corn"; however, President Roosevelt used his own dog Fala on occasion, but with his customary Shakespearean flair. The one was "finished Broadway"; the other, Whittier little theater.

Nevertheless around 2 million people—an unprecedented number—wrote or telegraphed their approval of the Checkers telecast. Telegrams alone ran to 125,000.

The comment that Mr. NIXON is anti-Semitic presumably stems from his campaign for the Senate in 1950 against Mrs. Helen Gahagan Douglas. Mrs. Douglas did not call NIXON anti-Semitic, but somehow it got whispered.

In this same campaign his manager and close friend, Murray Chotiner, was of Jewish faith. The Anti-Defamation League of B'nai B'rith came to his defense. But the whispers persisted.

I myself have never heard Mr. NIXON utter a word, in private or public, which could remotely classify him as anti-Semitic or anti-Negro. His Quaker faith would form a natural, fundamental birthright of revulsion to such.

What about these "dirty campaigns" in California House and Senate races?

Well NIXON is a campaigner. He confronts his opponents with embarrassing but indisputable facts. No doubt he'll campaign with the gloves off again. Voters seem to like it; he swamped Mrs. Douglas by a 680,000 vote margin.

Did he call Democrats "traitors"? I examined the speeches he made during the 1952 and 1954 campaigns and couldn't find where he did. So I asked the Democratic National Committee to document the charge, and was given a four-page fact sheet. Here was the most damning statement I could find:

On October 18, 1952, in Utica, N. Y., Mr. NIXON said: "I charge that the buried record will show that Mr. Truman and his associates, either through stupidity or political expedience, were primarily responsible for the unimpeded growth of the Communist conspiracy within the United States. I further charge Mr. Truman, Dean Acheson and other administration officials for political reasons covered up this Communist conspiracy and attempted to halt its exposure." He made ungentle statements but never charged "treason."

Is Mr. NIXON an opportunist? Well, I know from personal knowledge that he has twice offered to remove himself as a candidate—first during the "NIXON fund" charge in 1952, second a few weeks back. He said he wouldn't want to be a liability. Would he be?

The answer, I think, lies primarily in the voter's reply to the question, "is he too young and inexperienced?" not for the Vice Presidency but possibly for the Presidency.

There's no doubt but that he's pulled boners in public, but he's learned by his mistakes and has matured fast.

Mr. Eisenhower has described him as "the best prepared Vice President in American history." That's quite a statement.

Mr. NIXON presides over Cabinet meetings in the President's absence; is the first Vice President to preside over the important National Security Council. He spearheads liaison with Congress (and is generally credited with bringing Democratic Senator WALTER F. GEORGE into the President's confidence on foreign policy). He relieves the President of many tiring social engagements. And he has represented the President as a good will ambassador in the Far East and Latin America. What he learned there has exercised a profound influence on policy.

He left an enduring friendliness with the Indian people. Evangelist Billy Graham, recently returning from his own India tour, told Mr. NIXON: "In contrast to some of the other representatives we have sent to India, you won friends."

In Washington, the National Security Council was impressed, too—by the Vice President's penetrating analysis of the Far East and its problems. "He spoke for more than an hour, extemporaneously," recalls an official who attended the meeting, "and when he had finished the Council stood and applauded. It was the first time that hard-boiled crew ever did that for anyone to my knowledge."

How come Mr. NIXON engenders such respect from associates? For one thing, as a good lawyer, he does his homework. Most men would relax in a plane flying from one capital to another. Not Mr. NIXON. Before he visited any city on his Far East tour, he arranged for a United States Foreign Service officer stationed there to join his party and fly in with him. That gave him valuable counsel on local customs and problems; he arrived primed.

Of one presidential candidate in recent years it was said, "you have to know him to dislike him." It seems to work just the opposite with NIXON. He doesn't display it in public like Ike does but he has warmth.

During his 1952 campaign, the commercial airline pilots flying Mr. NIXON became admirers, even passed out campaign literature for him on their days off. His train crew, expecting a bawling out one day for almost backing into a crowd, heard him say instead: "Forget it. We all make mistakes. You've done a fine job." They'd have flown the train after that.

There's little doubt that the Republican National Convention, meeting in San Francisco's Cow Palace on August 20, will renominate DICK NIXON for Vice President. It is true that the President asked him to consider whether that would do the most for his political future. The Vice Presidency, traditionally, is a poor steppingstone to the White House unless the President dies in office. No second-term Vice President has ever been elected President.

However, I believe that DICK NIXON, with full knowledge of these facts, will go for the Vice Presidency again. He lacks administrative experience and he knows it. On the other hand the highest Cabinet job available to him (Secretary of Defense) is a thankless headache. And the California governorship isn't available. His best move, his friends believe, is to rely on the growing role of the Vice Presidency.

Moreover, Republican Party leaders don't give him much choice. Some of Ike's original Citizens for Eisenhower advisers did suggest that Mr. NIXON is "too controversial, has too many enemies"—but none will admit it now. In contrast, Republican leaders have set up a virtual "we want NIXON" chorus. GOP Chairman Leonard Hall said flatly that "it will be Ike and DICK" again. Senator WILLIAM KNOWLAND, who inherited the Republican right wing, discounted talk that he is anti-NIXON. The still-powerful Thomas E. Dewey has publicly praised the Vice President.

Republican voters, too, rose to his support when some 23,000 in New Hampshire wrote in his name for Vice President in the presidential primary. It apparently was a spontaneous voter reaction to the "dump NIXON" talk.

At the Democratic National Committee, opinion is split. Some think NIXON would draw effective fire that cannot be directed at Ike. Some remember his vote-getting ability and hope the Republicans nominate someone else.

As to NIXON's friends, they say simply: "A lot of people have thought they had DICK NIXON out on a limb—and have themselves ended up on the limb with NIXON using the saw. It could happen again."

American Legion's Reply to Report of President's Commission on Veterans' Pensions

---

EXTENSION OF REMARKS
OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. BECKER. Mr. Speaker, under consent granted by the House, I am including a statement in the RECORD on behalf of the national executive committee of the American Legion, which is in answer to the report by the President's Commission on Veterans' Pensions. The statement follows:

REPORT OF NATIONAL COMMANDER'S SPECIAL COMMITTEE ON THE BRADLEY COMMISSION

APPOINTMENT OF PRESIDENT'S COMMISSION ON VETERANS' PENSIONS

On March 5, 1955, the President of the United States appointed a Commission on Veterans' Pensions, with Gen. Omar N. Bradley as Chairman. By letter of the same date from the President to General Bradley, the President endeavored to outline generally the need for, and the scope of, the investigation to be made by that Commission which we shall refer to as the Bradley Commission. Although stating that he was in full accord with the policy of having the Nation respond generously to the needs of the veteran, including the awarding of pensions and other benefits, the President pointed to certain changing conditions in our economy and society and concluded from this that the time had come for some agency to assess the structural scope, philosophy and administration of pension, compensation and related nonmedical benefits furnished to the veteran and his family, together with the relation between those benefits and others, such as social security, which have been provided to citizens without regard to their status as veterans.

A staff was assembled to assist the Bradley Commission. After analyzing the President's basic directive, the staff concluded that it should study the following general subjects which, for convenience, may be divided into three major groups, as follows:

1. Pensions and the effect which the development of social security legislation has had upon the need for them.

2. Disability benefits, the establishment of service connection, whether by presumptions or otherwise, rating schedules, statutory award, rehabilitation, and readjustment programs, and education and training programs.

3. The authority and effectiveness of the Administrator of Veterans' Affairs.

APPOINTMENT OF NATIONAL COMMANDER'S SPECIAL COMMITTEE

National Commander Collins was deeply conscious of the fact that, under the slogan of "efficiency and economy in government," there had been previous and substantial assaults upon the structure of veterans' programs. He correctly diagnosed that the activities of the Bradley Commission, even though dressed in the robes of presumably advanced social and economic thinking, could easily produce an equal and similar assault on those programs by branding them as inconsistent with recently developed concepts of social planning and advancement, and economic orderliness and well-being. He believed that the American Legion should prepare itself in advance to receive the results of the Bradley Commission's studies. He believed that the American Legion had an obligation to make an objective survey of its own program in the light of modern conditions. He believed it essential to determine whether there could be merit in the proposition, rumors of which had already been heard, that social progress made anachronistic the 150 years of legislation by the Congress acknowledging that a special obligation was owed to those who had served and saved the Nation in time of war.

On April 4, 1955, National Commander Collins appointed Carl J. Rees, Deward H. Reed, and Donald R. Wilson as members of a special committee and charged them with the responsibility of reviewing the veterans' program as it had developed and of placing it in proper perspective with reference to the welfare of society as a whole.

The tenure and function of this special committee were continued by National Commander Wagner.

This special committee was authorized to employ a research specialist and other personnel and to conduct its activities within a budget of $12,000. It was also instructed to work closely with those divisions of the American Legion whose principal area of concern might be embraced within the scope of the Bradley Commission's activities.

Bertram G. Davis, of the legislative division, was employed as the special committee's research expert.

The committee, as such, has met eight times. In addition, individual members of the committee, of its staff, and of the Legion staff in general, have met with the staff or individual members of the Bradley Commission on numerous occasions.

The committee's expenses to date amount to $5,976.78.

At this juncture, the committee wishes to pay its respects to Mr. Davis's outstanding performance as research specialist. It is the belief of the committee that his work which is embodied in comprehensive memoranda setting out the facts adduced by research and the tentative conclusions to be drawn therefrom is of permanent value to the American Legion and will serve the American Legion well, long after the Bradley Commission's report has been forgotten.

In addition, the committee wants to express its appreciation to Robert M. McCurdy, the chairman of the rehabilitation commission, and all the members of the rehabilitation staff for the cooperation which has been extended, for the guidance which has been given, and for the depth and precision of the knowledge which has been made available.

Other divisions of the American Legion, such as the American Legion Magazine and the chairmen and staffs of other commissions within the American Legion, the staffs of several departments, such as the Department of New York, and a host of individual members of the American Legion, have contributed immeasurably to the activities of the committee.

PRELIMINARY COMMENTS ON BRADLEY COMMISSION REPORT

On April 23, 1956, the Bradley Commission transmitted to the President its final report, setting forth its so-called findings and recommendations.

The report is 410 pages long. It is divided into 2 parts, 1 of which deals with the highlights of the Commission's findings and recommendations, and the other of which purportedly sets out in detail the Commission's findings and 70 separate recommendations.

We are not unaware of the fact that the membership of the Bradley Commission as such was made up of many fine and intelligent gentlemen who approached their assignment with the utmost earnestness and sincerity. We have no reason to question their integrity or the sense of responsibility which motivated them in their deliberations. Without casting any reflections upon them, we must express our regret at the end-product of their labors. Perhaps the scope of their inquiry was too great to permit its successful accomplishment within 13 short months. Perhaps the hampering influence

of a staff somewhat brash but unskilled and lacking adequate background in the field of veterans' affairs contributed confusion instead of clarity and thus failed to serve the true and honorable needs of the individual members of the Commission.

However well intended, the Bradley Commission's report comes to us filled with clichés, self-contradictions, inaccuracies, looseness of expression, non sequiturs, statistical monstrosities, and thrilling discoveries of the obvious. It is a disappointing piece of work. It is tragically preoccupied with extolling the virtues of the goddess of social security, not for what it is but for what it may be at some indeterminate time in the future. It is on this altar that the veteran is to be stripped of the dignity of a special status which throughout the history of our country has always been accorded to him. Now, under a new concept, arbitrarily and unnecessarily announced by a mere commission of the executive branch of the Government, the veteran is told that since he performed no special service, the Government owes him no obligation in his declining years other than to give him a general right, if properly employed, to buy and pay for social security like any other citizen.

The presumptuous nature of the Bradley Commission's pronouncements is practically an insult to the Congress of the United States, the consistent guardian of the welfare of the veteran. The Bradley Commission, with only the wisdom of 13 months of activity on the part of governmental theorists, has concluded that the Congress, which has had 150 years of experience in developing the veterans' program and in keeping that program intact and progressive while at the same time legislating for general social needs, doesn't comprehend its full responsibilities to all the people, including the veteran, and that by discharging one of its responsibilities it must forget that historically it has an additional responsibility to the Nation's defenders. The report is discouraging and dangerous—discouraging because it belittles the contribution of the veteran to his country; dangerous because by stealth cloaked in compliments it exalts the welfare state and denies that there is any room in such a state for, according to the veteran, a special dignity because of service to country.

MAJOR AREAS OF CONCERN

Your committee does not conceive that it is its function to give to the national commander and the national executive committee a point-by-point analysis of the recommendations of the Bradley Commission. It is the belief of your committee that this is a project which can more successfully be discharged by the duly constituted commissions within the American Legion and their respective expert staffs. Nonetheless, the special committee does believe that it has the obligation of pointing out and establishing, as a possible guide for further work, a general frame of reference within which specific comments on specific recommendations may be fitted. The accomplishment of this task can best be achieved by a consideration of the following major questions:

(a) Is there, at present, any clear national philosophy of veterans' benefits?

(b) Does the concept of social-security benefits preclude the orderly and economic development of pension benefits to veterans?

(c) Has the program of disability, rehabilitation, and readjustment benefits been reasonably effective in serving the ligitimate needs of the qualified veteran?

(d) Has the Veterans' Administration been reasonably successful in the performance of the functions for which it was created?

We believe that the report of the Bradley Commission, as well as the conclusions to be dawn from the research of your special committee, may be properly embraced and considered within these four questions which will be discussed in the order in which they were stated.

(a) *Is there, at present, any clear national philosophy of veterans' benefits?*

The Bradley Commission arrives at the astounding conclusion that because the present structure of veterans' programs, like the common law, is only an accretion of laws based largely on precedents built up over 150 years of piecemeal development, there is, therefore, no national philosophy of veterans' benefits. Starting from that premise, the Bradley Commission then indulges itself in a peculiar form of self-aggrandizement and proudly announces that it, by its own labors, has developed, apparently for the first time, a philosophy whose guiding principles can enable the Nation to discharge its obligation to veterans generously. If this announced accomplishment were true, we would all be eternally indebted to the Bradley Commission for its contribution. Unfortunately, for the Bradley Commission, its philosophical creation is composed of the body of philosophical principles evolved over the course of our country's history, but emasculated or distorted by the introduction of some new and dangerous concepts which would destroy the philosophy of veterans' benefits as it has evolved and substitute in its place a set of sociological principles not particularly related to the peculiarities of the veterans' problems.

The Bradley Commission's most radical departure from the existing philosophy of veterans' benefits (a departure which will be considered in greater detail later in this report) is to be found in the statement that military service in time of war or peace is merely an obligation of citizenship and should not be considered inherently a basis for future Government benefits. It continues by stating that our national survival requires that every citizen do his part and make whatever contribution is required of him. It is apparently in the making of this statement that the Bradley Commission feels that it has made a major contribution to the philosophical concept of veterans' benefits. It is in the making of this statement that your committee feels that the Bradley Commission has cruelly departed from the philosophy of veterans' benefits and has laid the foundation for a wholesale assault on the veterans' program.

We take it that the history of aid and benefits to the American veteran which has evolved out of the constant concern of the Congress is a record of general devotion to the welfare of those citizens who have had to give up their normal civilian activities in order to defend the country in times of war and danger to our national safety and security. Veterans' benefits have come to be regarded, therefore, as special, and as benefits to be added to those benefits which the veteran may obtain as a citizen alone. We are not unaware of the current encouragement which has been given to the argument in many quarters, even on the part of some of the members of the American Legion, to the effect that being selected or volunteering for service to the country in war is merely the discharge of one of the duties of citizenship. The argument continues that, by virtue of having done only what is required of a citizen, the veteran cannot logically consider himself to be a member of a special group of citizens. We would acknowledge the validity of the argument up to a point, but we would demand that the argument be carried to its only logical conclusion. It is true that one who serves in the Armed Forces of this country is discharging an obligation of citizenship, but the fact which has escaped the Bradley Commission and others who pause at that point is that there are some who discharged this obligation of citizenship and some who failed to discharge it. It is not sufficient to gloss over the disparity between the discharge of these obligations of citizenship by saying that in modern war all people are subjected to hazards. So long as we maintain our Armed Forces, so long as we call them defenders of the country, and so long as we subject them to the necessary disciplines and deprivations which an adequate military establishment must demand, we have created for them special obligations, duties, hazards, or responsibilities which set them apart from the role which they would play as citizens alone. By reason of their peculiar sacrifices and hazards, they become a class of citizens select in nature and distinguished by peculiar service. No governmental commission, no amount of sophistry can deprive them of that special status. Your committee is strongly of the opinion that the claim of special status for the American veteran is an eminently sound and valid claim, and your committee points out that if the American Legion ever abandons that belief and belittles the distinctive character of that service, it will have played false, not only with well-established historical precedent but also the very reason for its being.

Acknowledging that historically the veteran has been regarded as a special class, we may also further conclude from the study of the history of veterans' benefits that the Congress has, through legislation, further subdivided the veteran class into those who are disabled as a result of their military service and those who merely by virtue of their military service are entitled to recompense. The Congress has consistently endeavored to maintain an equitable ratio between compensation payments and pension payments. At the same time, the line between service-connected and non-service-connected benefits and pensions has moved steadily in the direction of more inclusive benefits for a larger proportion of all veterans. A liberalization of benefits has almost inevitably followed every war as the needs of veterans increased. These obligations assumed by the Government throughout our history have never been limited to mere recompense for physical loss or suffering because of military service, nor have they been limited to men who actually were in the battle line.

It is through the establishment and refinement of principles such as the above that our present veterans' program has evolved and developed. If the Bradley Commission would depart from this history and this experience, it must carry the burden of proving conclusively that the departure which it recommends is not only necessary, but that it will not do violence to the moral obligation which the Nation owes to its defenders. It is the opinion of your committee that the Bradley Commission has failed to carry this burden of proof, that it has contented itself with the pronouncement of platitudes in justification of a radical departure from acknowledged and well-established practices.

(b) *Does the concept of social-security benefits preclude the orderly and economic development of pension benefits to veterans?*

Much of the Bradley Commission report is a concentrated effort to establish a preconceived notion that the social-security program has become an adequate substitute for veterans' pensions. This is a significant and hostile part of the report. It reflects little sound or honest thinking, but it does mirror the antagonism long noted in certain sections of the administrative branch of the Government toward veterans' pensions. Successive studies by the executive branch of the Government under both major political parties have attempted to find rationales for justifying the elimination of pension benefits.

The most noteworthy predecessors of the Bradley Commission report were the two Hoover Commission reports of 1949 and 1955. Both of these had the flavor, not of objective studies but of planned attacks.

The sections of the Hoover Commission reports dealing with veterans' benefits were so obviously biased and malicious that no firm platform was established from which an attack could be launched that would convince the Congress. Antagonism in the Hoover reports ran high, but the arguments were weak and specious and obviously labored.

Even before the failure of the second Hoover report, busy brains in some branches of various Government agencies were casting about for a new device that could be used to provide a more successful platform from which to destroy large segments of the veterans' program which Congress had labored so hard to establish. Several years ago, someone in the Government conceived the idea that it could be argued that the social-security program should make a splendid rationale for finding that veterans' pensions and some other veterans' benefits are no longer necessary. Where the idea began is not certain. It was put forth clearly in the "Hughes" study made by the Bureau of the Budget in 1953. The thought was quickly parroted and gained great currency in the executive branch of the Government, particularly in several agencies that do not deal intimately enough with veterans' affairs in their day-to-day operation to have a clear notion of what the veterans' programs are and how they operate in detail.

About a year and a half ago, the notion that social security is today an adequate substitute for veterans' pensions was worked into a public statement of the President—not, we believe, by the Administrator of Veterans' Affairs, but by someone closer to the President than to the veterans program. At that time, August, 1954, President Eisenhower grudgingly signed a bill increasing by a small amount some of the existing monetary payments to veterans and their dependents. He stated, as he signed it, that he did so reluctantly and that it was his opinion that such benefits were probably no longer necessary because of social security and other general welfare programs of the Government.

He said that he would appoint a committee to look into this matter and to study the whole structure of veterans' pensions and compensation. Thus was the Bradley Commission born.

It should be noted that the theory that general welfare programs have, or should be considered to have, displaced veterans' pensions had not in any way been demonstrated. No specific conflict between the veterans' pension program and the social-security program had been pinpointed. No facts had been arrayed which clearly showed that social security was, in fact, serving the purpose which veterans' pensions previously had served. The idea had merely been deliberately repeated with increasing frequency, but always without clear demonstration. In view of this history of events that led up to the creation of the Bradley Commission, it is not surprising that the Commission apparently viewed it almost as an instruction from the President to find a rationale for affirming that pensions are now antiquated because social security has taken their place. In any event, the final results of the Bradley Commission report affirm that it struggled to justify this concept.

However, the Bradley Commission has been able to do no more than simply to repeat the thesis again. It does repeat it and states affirmatively that it is its opinion that the advent of general welfare programs, and social security specifically, has brought about a new era in which pensions for veterans are no longer necessary. It specifically says that all pensions should be tapered off and eventually eliminated. This is a softer and, on the surface, a more friendly approach than the one taken by the Hoover Commission. It has much more molasses and less vinegar than the Hoover reports. That is, it says "Let's taper the pensions off and complete the elimination at some time in the future." In other words, let's not hang veterans' pensions at daybreak, let's strangle them slowly.

Only one thing is needed to convince the American Legion, and veterans generally, that veterans' pensions can be ended and social security can be accepted as the perfect modern substitute; that is, to demonstrate clearly and factually, rather than merely make unsubstantiated claims, that without damaging the contractual rights of its present participant, social security, in its actual workings and design, is in fact a program that would and does offer to the Nation's veterans—in recognition of their war service—the same security and the same special consideration for special services rendered to the Nation in time of national danger that the pension program has provided.

Unfortunately, the Bradley Commission has been unable to carry this burden successfully.

Undoubtedly, the Commission would have given a clear demonstration if it had been able to. It is to the discredit of the Bradley Commission that it continued to advance and strengthen the argument by repetition in the face of a patent inability of establishing the point with a factual demonstration. On page 133 of its report, there is a passage headed "Need for a Factual Approach." The Bradley Commission, under that heading stresses that "Our national policies must be developed in the light of a full factual picture." We commend adherence to that thought to the Bradley Commission. We search the report in vain for the facts that permit the identification of social security as a substitute for veterans' pensions. None are offered. Actually, no factual demonstration is possible, for the reason that social security is not and cannot be a substitute for veterans' pensions. If an attempt were made to make it so, it would work mischief not only to the veterans' pension program, but to the social-security program as well.

Social security is based upon a tax placed upon some, but not all, individuals, in the form of a compulsory insurance premium, based upon the amount of money earned in certain not all-inclusive private employments. When its benefits, not always the maximum, are paid, the amount of the benefit is in substance based upon the length of time worked in such private employments as may be covered by the law and the amount of money earned during that time. These are the essential facts of social-security coverage and benefits.

The Bradley Commission ignores these facts. It philosophizes that the veteran is not entitled to a preferred status. Then, on the basis of its disregard for the facts and its enunciation of a radical and unacceptable change in our basic philosophy, it states, as a supposedly constructive conclusion, that veterans must be rewarded for their war service in times of personal need by merely paying to them an amount based upon what they earned, provided they worked in private employment covered by the Social Security Act, and like all other citizens in such employment, paid the tax levied upon them during the years that they were so employed.

The substitution of social-security benefits for pension benefits is subject to numerous and logical objections. There are such vast differences between the two programs that it is ridiculous to envisage the abolition of the pension structure. For example, social security is merely a form of compulsory insurance to which one who is employed, with certain exceptions, must contribute. It is, in essence, an insurance contract whereby, for a stipulated payment, one party is obligated to compensate the insured upon the happening of a contingency. Veterans' pensions are not based upon a contractual relationship with the Federal Government. They are based upon the performance of duty in defense of one's country in time of war. They are not payable to all veterans but only to ones in need.

Your special committee takes the position that, as a form of compulsory insurance, which was never intended to meet even the minimum needs of its beneficiaries. Social security cannot be considered as a substitute for veterans' pensions, but must continue to occupy the role originally intended for it, namely, that of providing a base upon which can be erected other benefits.

The veteran who, as any other citizen, has fulfilled his social-security contract is entitled, as a matter of law, to receive the benefits of that contract. It is a tragic error, however, to say that he is entitled to nothing more. The ingratitude and contempt which produced such an error are emphasized by the basic factual differences between the two programs. Social security and pension plans are completely dissimilar. Veterans' pensions are payable by reason of honorable wartime service, with the basic criteria for payment predicated upon unemployability due to a prescribed degree of disability. Unemployability, without more, will not establish entitlement to pension. The additional requirement of a prescribed degree of disability is a necessary factor in showing entitlement. Under social security, unemployment is only a determinant in arriving at a figure that will eventually be paid. Unemployability is not a factor. Under the pension program, age is not a prerequisite to the payment of benefits. It is a factor for consideration with respect to pensions. Under social security, age is a definite requirement.

Under the veterans' pension program, there are income limitations which must be met. This factor insures that only veterans in financial need can receive a pension. Under the social security program, income is a factor only if earned and derived from employment covered by the Social Security Act. Because payment under social security is a right based on monies contributed, benefits are not confined to the needy as such.

These are only a few of the irreconcilable differences which may be enumerated between the veterans' pension program and the social-security program. When you add to these factors an acknowledgement that social security was never intended to meet even the minimum needs of its beneficiaries, it becomes all the more impossible to reconcile the establishment of social security with the proposition that it should supplant all other benefits. Such a substitution would leave untouched and uncared for the vast numbers of those who, prior to age 65, because of prescribed degrees of disabilities making them unemployable, are in need of financial assistance. It would deprive them of the dignity of claiming such assistance as a gratuity from a government which they had well served.

Thus, if you want a blueprint for creating mischief, we can think of no better means than to adopt a national policy that would attempt to make social security serve the very different function of veterans' pensions.

The Bradley Commission professes that there is at present an overlap or conflict between veterans' pensions and social security. It does not pinpoint any such overlap or conflict beyond these general terms.

What is the relation between the two? The fact is that social-security benefits bear neither more nor less relation to veterans' pensions than any other income a veteran may receive. Social-security benefits are so much money in the veterans' pocket. The money is no different from money he may re-

ceive as pay for working, as dividends from stocks, as retirement pay from an employer or as proceeds from an annuity. Any conflict or overlap between the pension program and the social-security program can be no different from any conflict or overlap created by any other income which the veteran may receive.

Is there an overlap or conflict between any of these sources of income and the pension program? It is almost tragic that the Bradley Commission is unaware that by long-established law, an overlap that it conceives to exist does not exist at all. Except for the Spanish War veterans, who would never come under any of the proposals of the Bradley Commission, one of the conditions which a veteran must meet today in order to qualify for a pension is that his income from other sources must meet a needs measure, prescribed by establishing levels of other income which—if the veteran is over them—will disbar him from receipt of a pension.

Thus, all income which a veteran may receive is now, and has been for some time, considered to contain the germs of overlap or conflict with the pension program. The overlap was removed by laws which are today, and have long been, part of the existing veterans' pension legislation. Social security benefits are, under today's law, included in that income which would disbar a veteran from a pension if it contributes to raising his nonpension income above the income levels stated in the law. It is this automatic check that prevents any overlap which appears to be utterly unknown to every spokesman of Government agencies and every adviser to the President who professes that there is conflict between social security and the veterans' pension program.

Believe it or not, on page 18 of its report, the Bradley Commission recommends a change in the law by which the receipt of social-security benefits would be considered as income that would count in determining a veteran's need, for pension purposes.

It is not funny that a distinguished commission proposes that the law be changed to make it what it already is.

Summing up this preposterous mess of argument over nothing, the factual approach so strongly urged by the Bradley Commission yields just this:

1. Social security cannot be made to serve as a veterans' pension program without doing mischief to both programs.

2. The only possibility of an overlap or conflict between the veterans' pension program and any source of other income including social security benefits has long been properly taken care of by provisions of the veterans' pension laws.

Your special committee can report very briefly regarding this matter of social security.

First, the committee warns that the argument repeated by the Bradley committee will continue to be used—in the same specious form as in the past—in the hope that more and more repetition will persuade more and more people—so that this pure figment of a hard-working brain on a predesigned project of the Bureau of the Budget may create a chink in the armor of veterandom through the "big lie" technique.

Second, your committee advises that when the day comes that social security provides security to war veterans sufficient to replace veterans' pensions, that will be taken care of automatically. When social security benefits actually do that, such assistance which will carry all veterans over the income ceilings prescribed in the present pension laws will make itself known by the workings of the present law. On that day, the Veterans' Administration will report that it is paying no pensions, because other programs have carried every living veterans' income over the needs ceilings defined in the pension laws. According to the figures of the Veterans' Administration, that condition has not arrived yet, in spite of the apparent belief of the Bradley Commission and others that it has.

(c) *Has the program of disability, rehabilitation, and readjustment benefits been reasonably effective in serving the legitimate needs of the qualified veteran?*

Primarily, the Bradley Commission approves of the program of disability, rehabilitation, and readjustment benefits which has been developed for the American veteran. It finds that we have developed reasonably successful methods for meeting the needs of our veterans. It asserts that the service-connected needs should be accorded the highest priority among the special programs for veterans and that service-connected compensation and death benefits should be liberal and even generous. It further states that the rehabilitation of disabled veterans and their reintegration into useful economic and social life should be our primary objective.

We cannot and do not take exception to such laudatory and sound statements. Nonetheless, we do have serious questions regarding the approach which the Bradley Commission employs toward the problem of improving the services which are offered to the service-connected class of veterans and to the rehabilitation and readjustment phases of the veterans' program.

We, of the American Legion, would certainly be the first to concede that none of these programs are perfect. We recognize now, and have recognized throughout the course of our existence, that there is constant need for change. We cannot concur, however, in some of the radical, unrealistic and ridiculous suggestions adopted by the Bradley Commission.

1. Presumptions

As illustrative of the type of improvement which the Bradley Commission suggests, and of the viciousness of it, we mention its recommendation that the presumption of service-connection for chronic diseases, tropical diseases, psychoses, tuberculosis and multiple sclerosis should be withdrawn. The Bradley Commission goes even further and states that there is otherwise in the law sufficient protection for the veteran to establish service connection of any and all diseases, and that accepted medical principles can reasonably and accurately establish the onset of a disease and the disability process.

It is apparent from a recommendation such as this that, while the Bradley Commission pays lip service to the duty owed to the service-connected, it would destroy the ability of large numbers to establish service-connection. It has a vastly overrated regard for the extent of medical knowledge. It credits the field of medicine with an omniscience which most doctors wish that they possessed.

Then the Bradley Commission compounds this offense by completely disregarding the fact that the question is not entirely a medical one. It is also in part a legal one. The purpose of a presumption is to free the veteran from carrying an unconscionable burden of proof in the establishment of the service-connected origin of a disease or a disability. As a part of the theory that the veteran should be given the benefit of the doubt, the principle behind the granting of a presumption says to the American veteran that it would be unfair in some cases to require him to prove medically that a given disease or disability did in fact have its inception during the course of his service, or resulted directly from that service. It states in substance that, in those instances in which it would be unfair to impose such a burden upon him, he is entitled to a presumption that the disease or disability did emanate from his service. This is a rebuttable presumption. It imposes upon the Government the burden of going forward with the evidence. It enables the Government, if medical knowledge is what the Bradley Commission says that it is, to rebut the presumption and to deny the veteran his service-connected status.

It is the opinion of this special committee that until American medicine has reached a point where it can determine with more than a reasonable degree of accuracy whether in fact certain types of diseases did or did not have their inception during the course of a man's service, the veteran should be entitled, in the areas of doubt now listed, to the presumption that his disease or disability, within reasonable periods now or to be specified, was a result of his service. Even if medical knowledge ever reaches the point where it can definitely establish the onset of a disease, there would still be no vice in continuing the presumption so long as we made it a rebuttable presumption. The knowledge that would eliminate the necessity of a presumption in favor of a veteran would also enable the Government to rebut the presumption.

The inclination of the Bradley Commission to reach absurd results at the expense of the veteran makes many of its recommendations suspect and belies its announced motives.

2. Rating Schedule

The Bradley Commission is dissatisfied with the present rating schedule. We of the American Legion are also dissatisfied in some particulars with the rating schedule. As a matter of fact our rehabilitation commission has for a considerable period of time constantly suggested changes in the rating schedule and is now ready, when the time comes, to suggest specific improvements in connection with it.

We do not object to a review of the rating schedule, nor to a revision of it. However, we want to know, with more than a reasonable degree of certainty, the basis upon which the review is going to be conducted, and the basis upon which revisions are going to be made.

Our present rating schedule is founded upon the theory of the average impairment of earning capacity. We all acknowledge that, as an average, it is not an absolute guide in the individual case, but we also know from our experience that we cannot administer any program which is geared solely to the individual case. So we have accepted the best standard we were able to find.

The Bradley Commission, by its research and in some of its charts, has established that, for the most part, the average-impairment-of-earninng-capactiy theory has done a remarkably wonderful job. The Bradley Commission's charts show that in most categories of disability the amount of disability compensation drawn by the disabled veteran—when added to the amount which he is able to earn from whatever job he holds—is remarkably close to the average annual income of the nondisabled veteran. It is apparent, therefore, that the average-impairment theory has been a reasonably successful standard.

The Bradley Commission is concerned, however, with the establishment of other factors which might be worked into a rating schedule. It is concerned with compensating a veteran for pain and suffering, for social inconvenience, for the increased mortality, and so forth. If the Bradley Commission wants to add a figure which will take into account these factors, in addition to the figure established to compensate the veteran on the basis of the average impairment of his earning capacity, we certainly would have no objections to such a review. However, we do not dignify even the average-impairment theory by calling

it a scientific formula. It is merely a guide. It is one of the best guides that could be worked out under all circumstances. We would not want to have the Bradley Commission or anyone else think that you could reduce either the impairment of a man's earning capacity, or an evaluation of his pain and suffering, or his social inconvenience, or his increased mortality to a final and absolute and completely compensatory formula. We believe that such an approach is highly egotistical. We are willing and anxious to have the service-conected disabled veteran compensated further than he is now, but we caution against leading the American public to believe that this is being done in accordance with an absolute, compensatory formula.

Nonetheless, we believe that a new rating schedule should be promulgated. It has been 10 years since the promulgation of the 1945 schedule. The comments and disability evaluations contained in the present schedule represent the consensus of medical opinion of a period sometime prior to 1945. The nine extensions to the 1945 schedule have led to some confusion and have made the use of the present rating schedule unwieldy, thereby decreasing its efficiency and accuracy, and there are other contemplated changes which, if incorporated into further extensions of the 1945 schedule, will further complicate that schedule.

It is our belief that a new rating schedule could be made to represent the sum total of medical and technical knowledge of the Veterans' Administration, the major veterans' organizations, and the medical profession acquired in the years since 1945—all of which would tend to produce evaluations that would be more compatible with present medical knowledge and experience.

3. Ten-Percent and Twenty-Percent Ratings

Perhaps no area of the Bradley Commission's report more glaringly demonstrates duplicity and factual inaccuracy than the section on 10 percent and 20 percent disability ratings.

First of all, the Bradley Commission is shocked by the fact that there are over a million veterans in this disability area. The Bradley Commission now finds it wrong that there should be so many such veterans, and because of their numbers proposes to eliminate them.

The Bradley Commission attributes the large number of awards in this area, in part, to the alleged fact that there is a requirement that no future examinations are scheduled once the veteran's disability reaches the prescribed minimum rating for his condition. This is a flagrant misstatement of the Veterans' Administration's requirements. On this erroneous basis, it proposes to meet its commitment to deal liberally, even generously with these service-connected cases by reducing or destroying the entitlement of the largest single group of disabled veterans. It questions but does not refute the medical soundness of these ratings and then proposes to settle these so-called medically unsound ratings by an immediate outlay of money. In other words, it wants to buy off claims which it thinks are invalid even though many of the 10 percent or 20 percent disability ratings today can turn into the 100 percent service-connected disability ratings tomorrow.

The Bradley Commission's treatment of this sensitive and important segment of disabilities is confused, distorted, inconclusive, and unconvincing; even so, it is presumptuous enough to ask the Congress to buy this package, the contents of which are not known even by the Commission.

4. Statutory Awards

The Bradley Commission is apparently deeply disturbed over the existence of statutory awards. It has recommended in substance that consideration should be given to incorporating statutory awards within a comprehensive rating scale that will encompass economic, physical, life-impairment and other factors.

Your special committee is inclined to wonder whether the Bradley Commission gave any attention whatever to the development of statutory awards. Statutory awards were a part of the American scene as early as July 1864. From a historical standpoint it can be said, therefore, that the Congress of the United States has, for almost a century, recognized and shown concern for the problems of those who have lost their limbs, or their ability to see, or who are otherwise seriously disabled.

This solicitude has been outwardly manifested by successive Congresses through the passage of laws designed to benefit the group under discussion. A study of the history of statutory awards will reveal that the Congress has long been of the opinion that the same criteria cannot be employed in evaluating the disabilities of the group which is the subject of statutory awards as that employed in evaluating the disabilities of those less obviously disabled.

We cannot understand what objection the Bradley Commission has to the exercise by the Congress of a power which the Congress obviously has to legislate certain so-called statutory awards. We must conclude that the Bradley Commission has 1 of 2 objectives in mind. Either it wants to save money by abolishing statutory awards, or it wants to tell the Congress how to legislate statutory awards, not by special legislation, but by incorporating them into a basis for a rating schedule. If the Commission's objective be the latter of these two, then the recommendation is senseless, because it would be condoning statutory awards in effect, but merely stating that they should be part of the rating schedule. It should make no difference to the Commission how the Congress accomplishes its legislative purpose. We are driven therefore to the conclusion that the Commission has in mind the ultimate abolition of these additional awards which the Congress has always thought to be meritorious.

This is merely another instance where the words of the Bradley Commission tend to cover up what must obviously be its real motives.

5. Education, Training, and Readjustment Programs

As to education and training programs and readjustment assistance programs, the Bradley Commission seems to be of the opinion that they have been properly devised and used; that they must be recognized as the best way of discharging the Government's obligation to the nondisabled; and that such programs not only benefit the veterans, but contribute materially to the stability of the society in which they live.

We are, of course, inclined to agree with these general statements. We have long been aware that no piece of legislation, nor its administration, can be entirely perfect. We are aware of certain abuses which occurred under the GI bill, but we are also familiar with the fact most of the possibilities of abuse were cured when the time came for the enactment of a Korean GI bill. We, of the American Legion, have every reason to be proud, first of all of our leadership in the establishment of the original GI bill and of our further leadership in supporting the Congress in correcting abuses which have arisen under it in time to incorporate those corrections in the Korean GI bill.

We are even now suggesting additional improvements in connection with the administration of these programs and have manifested our continuing concern and constructive contributions by various resolutions passed at our national conventions and by legislation now pending before the Congress of the United States.

We are not persuaded, however, that the Bradley Commission is completely in accord with the proposition that these education and training programs and readjustment assistance programs are primarily the function and the responsibility of the Veterans' Administration. We detect in certain of the recommendations of the Bradley Commission an effort to disestablish some of these programs from the Veterans' Administration and to turn the administration of those programs over to other agencies. We are deeply disturbed by any such effort on the part of the Bradley Commission or any other agency of Government. We have fought too long and too hard for the establishment of a separate Veterans' Administration and for the establishment of the concept that the affairs of the veteran should be treated as a separate entity by a special branch of government.

As illustrative of the type of encroachments which we believe the Bradley Commission would make upon the integrity of the veterans' program, we refer to its attitude toward the housing problem.

It is well known that the American Legion has asked for an extension of the home-loan guaranty program from its expiration date in 1957 to 1960. We are aware that this was necessarily a program which was slow in starting. Now that the veteran has had an opportunity to establish himself in the community and to take up the reins of his profession or business, he is in a better position to consider taking advantage of the assistance offered by that program. This will have a tendency to result in confusion created by the considerable influx of veterans' applications for home loans immediately before the expiration date of the benefits. We believe, therefore, that the program should be extended.

The Bradley Commission, however, speaks of phasing out the program by merging it into FHA. This is the same general attitude as was adopted by the Hoover Commission, it would tend to destroy the integrity of veterans' housing; it would eliminate an important function being performed by the Veterans' Administration; and it would not be in the best interest of the American veteran. The ultimate effect would be to destroy the entire concept of veterans' housing. The immediate effect would be to place the veteran in competition with the nonveteran for housing. It was exactly this which the original act was intended to forestall.

This type of proposal and those constituting a wholesale attack on veterans preference and other proposals which would eliminate or curtail veterans' benefits make the Bradley Commission's entire report suspect. Words of praise are so frequently followed in the report by suggestions which would dismember and destroy the veterans' program.

(d) Has the Veterans' Administration been reasonably successful in the performance of the functions for which it was created?

On this question, the Bradley Commission concludes that, on the whole, a reasonably effective job has been done by Veterans' Administration in furnishing veterans with the benefits intended by Congress.

We are in accord with this general conclusion.

The Bradley Commission is concerned, however, with clarifying the mission of the Administrator of Veterans' Affairs to reflect his positive responsibility for the comprehensive analysis of program and long-range policy development, including the function of advising the President. The Bradley Commission suggests further that the Administrator's personal staff should be augmented to include the highest caliber of professional advisors in such fields as economics, statistics, public administration, and sociology. The Bradley Commission further recommends that the research and statistical re-

sources of the Veterans' Administration departments should be strengthened. It suggests that serious consideration be given to making the Administrator of Veterans' Affairs a member of the Cabinet, and that, in any event, the President should establish a Cabinet subcommittee on veterans' affairs, with the Administrator of Veterans' Affairs as a special member.

Your special committee cannot object to proposals such as these. We are aware, of course, that such professional personnel as have been suggested may possibly, with charts and graphs and statistics and statistical projections, submerge the Administrator and overburden him with that type of detail which is so dear to the heart of the average governmental researcher and statistician. Nonetheless, a reasonably strong Administrator of Veterans' Affairs should certainly be able to discharge more fully his obligation to the veteran and to the country by a proper analysis of the material which could be prepared for him and upon the basis of which he could provide a greater degree of leadership in the field of veterans' affairs than he now does. In this connecton, we would suggest that no real leadership in the field of veterans' affairs is possible until the complete dominance of the Administrator by the Bureau of the Budget is relieved.

There are other suggestions made by the Bradley Commission in connection with the office of the Administrator of Veterans' Affairs. One of these is that an additional limitation should be placed on his authority by more precise requirements and definitions and that the rules to be promulgated by him in large matters affecting and eligibility of veterans for benefits or involving changes in program objectives should be made subject to advance notice to and advance review by appropriate agencies of the Government.

So long as such a recommendation does not interfere unduly with such independence as the Administrator of Veterans' Affairs has been able to salvage, we would see no serious objection to the recommendation. As a practical proposition, any reasonably responsible Administrator would in all probability make it a point to discuss his major objectives with responsible officials in other areas of the Government which might be affected by one of his pronouncements. However, we would strenuously object to the elimination of the authority of the Administrator by making him subservient to, or dependent upon, the approval of other agencies of Government prior to taking a proper action in the field that is exclusively within his own domain. If we were to condone any such result as that, we would in effect, be depriving the Veterans' Administrator of all of his functions and turning those functions over to other agencies of Government. This has never been, and is not now, the intention of the American Legion or of any major and responsible veterans' group. We have fought too long and too hard for the establishment of a separate department to be concerned with veterans affairs now to abandon that concept and turn it back to the same confusion from which it was once salvaged.

The Bradley Commission also suggests the establishment of a central administrative review, without affecting the ultimate finality of decisions by the Administrator of Veterans' Affairs.

Your committee sees no great vice in the establishment of such a central administrative review. It is true that it might well result in a standardization of decisions in different sections of the country. It is an additional expense; it is an additional step in the prosecution of a veteran's claim. We suggest that such problems as have developed might be just as ably handled by the present Board of Veterans' Appeals.

Finally, the Bradley Commission suggests that the laws affecting veterans should be codified and that in that process of codification, emphasis should be placed on simplification with mindfulness of the direct personal impact of the statutes, and that similar treatment should be given the related regulations.

Certainly, your special committee has no objection to making veterans laws and regulations more simple in language and in clarifying and codifying those laws and regulations which govern such a large segment of our population. We warn however, that such a project of codification and simplification could easily be turned into the vehicle for the embodiment of such changes as have been suggested by the Bradley Commission. The House of Representatives recognized such a danger as we now point to and specifically provided in the bill which it recently passed that the codification which it authorized be not used to change existing law.

CONCLUSIONS

The Bradley Commission and its staff have labored mightily and expensively to bring down a very small bird. In spite of the presumed omniscience of the governmental employees of the staff of the Bradley Commission, we of your special committee are disposed to place the fate of the American veteran where it has always been—in the hands of the Congress of the United States. The Congress has developed and will continue to develop a clear national philosophy of veterans' benefits. It will continue to relate those benefits properly to the other areas of legislation with which the Congress concerns itself for the social betterment of all the people. It will insist upon protecting the veterans as a class to which it acknowledged, during periods of war, a special obligation. It will not abandon that special obligation by substituting for it, as suggested by the Bradley Commission, the opportunity to participate in social-security benefits which as citizens we are already entitled to do and for which, if we participate, we will have paid monetarily. It will continue to work effectively and constructively to take care of the demonstrated needs of the disabled veteran. It will protect him from overly egotistical individuals who would misrepresent the breadth of medical knowledge and destroy the veterans' capacity to obtain the benefit of presumptions in establishing his service-connection. It will protect its right to concern itself with special classes of disabilities which it believes may best be handled by the use of statutory awards. It will preserve the integrity of the rehabilitation and readjustment benefit programs, protecting them against absorption by agencies of Government which believe that the veteran is owed no special obligation and which would seek to build little empires of their own at the expense of the best administration of the veterans' program.

The Administrator of Veterans' Affairs, if a courageous and independent individual, will be able to administer the program that the Congress has defined for him, recognizing that he is a member of the executive branch of the Government and having due respect for the remaining members of the executive branch of the Government and the programs which they administer.

We must reluctantly conclude that the Bradley Commission, in its report, has demonstrated that it bears close resemblance to the previous Hoover Commission. It is another step in a little understood effort to represent the veteran as the creator of large problems adversely affecting the rest of America, who must be chastened, reduced in dignity, and made to forget that at one time he was assured of the gratitude, respect, and continuing regard of all.

We do not know how many dollars have been spent in these efforts to diminish the statue of the American veteran, but whatever dollars have been spent have been wasted. We suggest that the time has now come to stop these senseless investigations of the same subject over and over again. The Congress is a capable body, aware of its legislative enactments in their entirety. It is accountable to the people. It is aware that many of those people who elect it and support it are veterans to whom pledges were made and will not be broken.

The American Council for Judaism

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. MULTER. Mr. Speaker, the New York Board of Rabbis is an association of Orthodox, Conservative, and Reform Rabbis in New York and vicinity.

It represents Judaism, protects religious rights of Jews, encourages Jewish education and philanthropy, and is a force for civic betterment. It conducts a chaplaincy program in 160 hospitals, prisons, mental institutions, youth shelters, and homes for the aged, ministering annually to 250,000 men, women, and children.

On Sunday, May 6, it issued a release, as follows:

ONE THOUSAND THREE HUNDRED RABBIS DENOUNCE COUNCIL FOR JUDAISM—JOINT DECLARATION OF RABBIS OF THREE BRANCHES OF JUDAISM CHARGE ANTI-ZIONIST GROUP WITH DISTORTING PRECEPTS OF JUDAISM—SCORE GROUP FOR ATTACKS UPON U. J. A. AND ISRAEL BONDS—ACCUSE COUNCIL OF MISREPRESENTING THE JEWISH PEOPLE BEFORE BAR OF PUBLIC OPINION

NEW YORK.—One thousand three hundred Rabbis representing all three branches of American Judiasm—Orthodox, Conservative, and Reform—in a joint declaration issued today, denounced the American Council for Judaism, asserting that this group has "consistently misrepresented the Jewish people before the bar of public opinion." The Rabbis also charged that the American Council of Judaism "has consistently maligned and impugned the integrity of Jewish institutions, organizations, and causes, and has consistently distorted the precepts of Judaism which it purports to serve."

This declaration and the names of the signatories were made public today by Rabbi Emanuel Rackman, president of the New York Board of Rabbis which had circulated the statement in the wake of attacks made upon Israel and Zionism by the American Council for Judaism at its convention in Chicago last week.

The joint declaration severely reprimanded the anti-Zionist organization for what it termed "slanders" against American Jews "who adhere to the ideals of Zionism," and also charged the council as being "neither American nor Jewish in spirit or in concept."

Although many individual American rabbis and rabbinic organizations have assailed the American Council for Judaism in the past, this is the first time that so large a segment of the American rabbinate has united in a public declaration of such severe criticism against the organization. It was issued, the rabbis said, "only after search-

ing our conscience," and with the realization of "the full implication of our words."

The declaration also dealt with the council's attacks on the national fund-raising institutions in behalf of Israel in this country. "We view with contempt the council's attempt to dissuade Americans from helping their fellow Jews and the State of Israel through contributions to the United Jewish Appeal and the Israel bond drive," the rabbis stressed in their declaration, adding: "If the council is unwilling to aid in the rescue and rehabilitation of harassed Jews, let it at least not frustrate the efforts of those who would."

Concerning the council's professed brand and interpretation of Judaism, the declaration stated:

"We assert that the council is neither American nor Jewish in spirit or in concept. We call the attention of the American public to the fact that this group represents numerically an infinitesimal fraction of American Jewry. It has been repeatedly repudiated by the great Orthodox, Conservative and Reform communities in Jewish religious life. It has been repudiated by all major Jewish organizations.

"Judaism, we believe, has sufficient breadth and depth to embrace a wide range of varied points of view, but we declare that there is no room in Jewish life for Jews whose words and acts would result in the destruction of the State of Israel and in incalculable harm to the Jewish people."

The signatory rabbis further served notice that "as loyal Americans interested in the survival of a dynamic democracy in a backward part of the world, we, the undersigned, will not be deterred from speaking up on behalf of Israel or of any other nation when we feel that principles of justice and morality have been violated."

The declaration further emphasized that "in doing so, we are in the mainstream of the finest American tradition. We will not be deflected from exercising this right by a small minority, however vociferous, that finds evil in the honest expression of this anxiety."

Asserting that the council's "real goal is the complete disappearance of the Jewish people," the declaration charged that "in pursuit of this aim the council not only attacks Judaism but America herself."

The declaration concluded:

"For in its incessant drive for soulless conformity, in its hysterical compulsion to efface what is distinctively Jewish from Judaism and what is permanent in the people of Israel, the council seeks a monolithic America in which all cultural and spiritual variations are obliterated. This drive, which stems from insecurity and tragic self-hatred, does as great an injustice to America as it does to Judaism."

Following is the full text of the declaration issued by the American rabbis, as referred to in the release:

STATEMENT ISSUED BY AMERICAN RABBIS

We, the undersigned, members of the American rabbinate, wish to make the following observations with respect to the organization known as the American Council for Judaism. We do so with reluctance, and only after searching our conscience: but we do so in the conviction that we would be derelict in our high duty in the calling we follow if we failed to make the truth known.

Realizing the full implication of our words, we state unequivocally that the American Council for Judaism has consistently misrepresented the Jewish people before the bar of public opinion; it has consistently maligned and impugned the integrity of Jewish institutions, organizations, and causes; and it has consistently distorted the precepts of Judaism which it purports to serve.

We assert that the council is neither American nor Jewish in spirit or in concept. We call the attention of the American public to the fact that this group represents numerically an infinitesimal fraction of American Jewry. It has been repeatedly repudiated by the great Orthodox, Conservative, and Reform communities in Jewish religious life. It has been repudiated by all major Jewish organizations.

Judaism, we believe, has sufficient breadth and depth to embrace a wide range of varied points of view, but we declare that there is no room in Jewish life for Jews whose words and acts would result in the destruction of the State of Israel and in incalculable harm to the Jewish people.

Most reprehensible of all the council's slanders is the charge that American Jews who adhere to the ideals of Zionism are guilty of "dual loyalty." This is a lie which has long been the tool of anti-Semites; with contempt we see it revived today by those who call themselves Jews. It is not difficult to understand why the American Council for Judaism has received commendation for this vilification from Gerald L. K. Smith, Conde McGinley, Merwin K. Hart and others long identified with anti-Semitic movements in America. Every fair-minded American knows that American Jews have but one political allegiance—and that is to the United States.

As loyal Americans interested in the survival of a dynamic democracy in a backward part of the world, we, the undersigned, will not be deterred from speaking up on behalf of Israel or of any other nation when we feel that principles of justice and morality have been violated. In doing so we are in the mainstream of the finest American tradition. We will not be deflected from exercising this right by a small minority, however, vociferous, that finds evil in the honest expression of this anxiety.

We view with contempt the Council's attempt to dissuade Americans from helping their fellow Jews and the State of Israel through contributions to the United Jewish Appeal and the Israel Bond Drive. If the Council is unwilling to aid in the rescue and rehabilitation of harassed Jews, let it at least not frustrate the efforts of those who would.

As religious leaders, we cannot find in the Council's activities or in its statements, any indication that it really represents Judaism. The Council's philosophy is one of complete negation: it denies the existence of the Jewish people, rejects traditional Jewish religious ceremonies, the Hebrew language, and Zion itself.

The council's real goal is the complete disappearance of the Jewish people. In pursuit of this aim the Council not only attacks Judaism but America itself. For in its incessant drive for soulless "conformity", in its hysterical compulsion to efface what is distinctively Jewish from Judiasm and what is permanent in the people of Israel, the Council seeks a monolithic America in which all cultural and spiritual variations are obliterated. This drive, which stems from insecurity and tragic self-hatred, does as great an injustice to America as it does to Judaism.

I am not burdening the RECORD with the full names and residences of each of the signatories but I have on file in my office the complete list of the 1,300 rabbis who signed the statement. I shall be happy to make it available to any Member who is interested. These rabbis reside in cities and States from one end of our country to the other.

A New England Issue

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert an article that appeared on the editorial page of the May 3 issue of the Houlton Pioneer Times, a weekly newspaper in my congressional district.

Mr. Speaker, all of New England has been disheartened by the unfavorable decision rendered by the Civil Aeronautics Administration with regard to the petition of the Northeast Airlines to extend its services south from New York to Florida.

The Northeast Airlines has appealed for a reversal of the negative decision, believing that the examiner was not keenly conscious or adequately appraising of certain beneficial factors in Northeast Airline's favor.

All of New England and all of Maine are ardently hopeful that this adverse decision will be reversed, thereby granting to Northeast Airlines the opportunity of extending its services to a greater number of our American communities.

The newspaper article follows:

A NEW ENGLAND ISSUE

The entire New England State area has an interest and a concern in the outcome of the appeal made by Northeast Airlines to have set aside the adverse decision of a CAA examiner on its petition to extend its service southward from its present New York City terminus, to Miami, Fla., and to substitute therefor affirmative action on its original application.

This interest and concern has nothing to do with any bias in favor of air carriers as opposed to other means of transportation. Rather, it should be, in our judgment, construed as an objection to what appears very much like discrimination against the New England States. Most of us will now agree that airlines, as a factor in the transportation of humans as well as freight, are here to stay.

Northeast is the only airline that serves all of New England. As such, its successful operation and the reasonable expansion of its services can have a considerable influence on the economy of this area as well as being incidental to the normal industrial and commercial progress of these six States.

One of the exhibits which might well have been given more consideration than it apparently was was the fact that Northeast, of all the airlines petitioning for the Florida run, was the only line which had ordered a large fleet of airplanes especially for use on this extended run. This should have been taken as convincing evidence of the determination of the carrier to give the utmost in service to its patrons and its willingness to back up its confidence to compete successfully, with the investment of a staggering number of dollars.

The seasonal factor was another sound argument which seemingly received little attention. Northeast operates on a peak schedule basis during the summer months but its loads per plane are considerably smaller in the winter season. Extension of

its lines to Florida would have enabled the line to achieve greater operating stability by being able to shift planes from southern runs to northern runs, and vice versa, when the demands of the season dictated. The effect on net earnings of such an arrangement is obvious.

As we understand it, Northeast, like many other airlines, is the recipient of substantial Government subsidy, probably through mail contracts. Its limited operation thus far has made this necessary in order to maintain its service in its area of origin. If it continues to be confined to that same area, it is evident that subsidy will also have to be maintained. However, it is reliably reported that the extension of its line to Florida might be expected to make a material difference in its overall financial picture, with the result that the subsidy might possibly not be needed.

There were many other angles to the appeal which it is hoped will induce the entire CAA board to reverse the decision of its examiner and award the franchise to Northeast who, in our opinion, of all the petitioning carriers, made out a stronger case. This, of course, in addition to the normal desire to see New England fairly treated and not either bypassed or ignored.

Annual Pilgrimage to Old Stone Church

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. ABBITT. Mr. Speaker, 350 years ago this year, a little band of pioneers set said from Blackwall, England, in three small sailing ships, the *Susan Constant*, the *Godspeed*, and the *Discovery*. These are the people who, after a harrowing, 5-month-long journey, landed in what was later known as Jamestown in the sovereign State of Virgina—my State.

Across the river there was later established the little town of Smithfield, a pioneer in another notable way, in the production of unique food products which have become famous the wideworld over.

And this month, the month of May, is the time of the annual pilgrimage to Smithfield for the benefit of the Old Stone Church in Smithfield, St. Luke's Church, the oldest known church still in existence. This old church was first built in 1632, a year before the first record of the settlement as a port for tobacco export, 120 years before the formal establishment of Smithfield as a town in 1752.

An important part of this annual pilgrimage in honor of olden times, is the serving of famous, unique Smithfield ham sandwiches. No other spot in the country can produce Smithfield hams. They have been shipped overseas for about 200 years. There is, on record, an invoice for the year 1779 for hams shipped to the West Indies. And one for the 19th century for ham shipped to Her Majesty, Queen Victoria.

But, gentlemen, there is another unique food product which originated in this colonial settlement, that is the now-popular barbecue. Yes, gentlemen, though other parts of this great country claim the barbecue, the Encyclopedia Americana will tell you that the word was in use in Virginia prior to 1700. It further states that the institution of the barbecue is of southern origin. And in a cookbook from Colonial Virginia, printed in 1742, there is a recipe marked "old recipe from Toano, Va.," for "barbecued squirrel."

Now, when we are marking with due respect the establishment of the colony at Jamestown, the building of a church at Smithfield, the development of the famous Smithfield ham, I believe that we should, at the same time, honor the pioneers who first prepared meat in a savory sauce by open-kettle simmering, even as it is still done today in Smithfield, Va. For the barbecue, one of this age's most delicious heritages, is but one more of the wonderful gifts handed down to us by those valiant pioneers of two centuries and more ago.

Charles Cotesworth Pinckney

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. RIVERS. Mr. Speaker, under permission to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include herewith a treatise on the distinguished South Carolinian, Charles Cotesworth Pinckney, one of the coauthors of the Constitution.

This thesis was prepared by Miss Martha Richards Robeson, daughter of our distinguished colleague, EDWARD J. ROBESON, JR., and was her term paper at William and Mary College.

Miss Robeson has done a commendable piece of work on this famous South Carolinian. Her paper demonstrates excellent research and excellent factual information on this great American:

CHARLES COTESWORTH PINCKNEY

"My heart is altogether American, and neither severity nor favor nor poverty nor affluence can ever induce me to swerve from it." [1]

On the 25th day of February 1746, in Charleston, S. C., an aristocrat was born. Webster defines an aristocrat as "one who has the sympathies, habits, and temper of mind" common to the aristocracy, "those regarded as superior to the rest of the community as in rank, wealth, or intellect." [2] The aristocrat was Charles Cotesworth Pinckney who fulfilled this definition so completely that it might well have been written to describe him.

Born of a fine, old, established South Carolina family, Pinckney carried the spirit and ideals of Southern aristocracy with him throughout his life. His father, Charles Pinckney, was prominent in colonial affairs during his lifetime, and at one time was chief justice of the province in which Pinckney was born. His mother, Elizabeth Lucas Pinckney, was a celebrated woman planter in her own right, having developed and promoted in her State the cultivation of indigo, a product which greatly enhanced South Carolina economy during the colonial period.

Footnotes at end of speech.

The Pinckneys could well afford to give their children the best of schooling. Charles Cotesworth Pinckney was educated at Westminster, at Oxford, and read law at Middle Temple in London. In 1769, he returned to Charleston to practice his profession, establishing his residence, "Belmont," at East Bay in Charleston. Although not a brilliant lawyer, Pinckney was "learned and essentially sound, possessed of some commonsense" [3] and had a large practice.

"He was of an imposing figure, genial, full of fun and humor, liberal in opinion, dependent and penetrating in his judgment of men and movements, universally trusted and admired, constantly engaged in public undertakings." [4]

These public undertakings consisted of a variety of political activities. The year of his establishment as a lawyer in Charleston, Pinckney was elected to the provincial assembly. In 1773, he was appointed acting attorney general for three areas in his State: Camden, Georgetown, and Cheraw. Two years later he was elected a member of the First South Carolina Provincial Congress, remaining a member of the lower house for 3 years. In 1779, after his election to the upper chamber of the legislature, he served as its president.

Perhaps the most important contribution that Pinckney made to his State, and the one to which he devoted himself the most energetically, was not in the field of politics but in that of the military. While serving in the Provincial Congress, Pinckney was a member of a special committee charged with local defense. In 1775, as a captain, he commanded the first regiment of South Carolina troops, and the next year he was made a colonel in the South Carolina militia. A short time afterward, he began his active participation in the Revolutionary War. Following his engagement in the defense of Fort Sullivan, Pinckney left his regiment and moved north to aid Washington at Brandywine and Germantown because of his eagerness for action when hostilities were temporarily ceased in the South. In 1778, again in command of his troops, he participated in the Florida campaign and in the siege of Savannah. During the attack on Charleston, Pinckney was in command of Fort Moultrie, and at the fall of the city he was captured. While a prisoner of war for 2 years in Philadelphia, from 1780–82, certain British officers sought to detach him from the colonial cause. To them he gave memorable answers attesting his loyalty:

"If I had a drop of blood that could flow dishonorably, I myself would let it out.

"If I had a vein that did not beat with the love of my country, I myself would open it." [5]

Although these statements seem today to be rather effusive and perhaps a trifle vain, there can be no doubt that they mirror the intense devotion of a man proud to serve his country.

When Pinckney was released in 1782, he was commissioned a brigadier general. Fifteen years later, when the stress of feeling produced by the revelation of the famous XYZ affair seemed to indicate that preparations should be made for war, Washington selected Pinckney for the rank of major general. Washington had hesitated at length in giving Pinckney a lower rank than Hamilton because of the former's place and influence in the South.[6] When his attention was called to the fact, Pinckney turned to Hamilton and said this:

"Let us first dispose of our enemies. We shall then have time to settle the question of precedent." [7]

Pinckney was primarily a soldier, but he was not limited to rendering military service only. John Danvers has observed in a

Footnotes at end of speech.

pamphlet on this man that he was "a soldier, statesman, and friend of his country." [8] In 1788, Charles Cotesworth Pinckney journeyed from South Carolina to Philadelphia to assume the duties of a delegate to the Constitutional Convention.

"Having aided in the establishment of our independence, he was appointed one of the convention for forming a constitution for the government of the Union, and there distinguished himself by a strenuous support of that constitution." [9]

The attitudes that Pinckney evidenced at the Convention were rooted in his ancestry, his environment, his training and experience. He was dedicated to the support of these principles which he believed were for the best interests of the people of the new Nation and particularly the people of his State and other States sharing the same problems that faced South Carolina. He was described by an observer at the Convention in the following manner:

"Charles Cotesworth Pinckney is a gentleman of family and fortune in his own State. He has received the advantage of a liberal education, and possesses a very extensive degree of knowledge. When warm in a debate, he sometimes speaks well, but he generally is consideerd an efficient orator. Mr. Pinckney was an officer of high rank in the Army, and served with great reputation through the war. He is now about 40 years of age." [10]

At the Convention, Pinckney was known as General Pinckney, since he held the rank, in order to distinguish him from a younger cousin bearing the same first and last names, also a delegate from South Carolina. Because of his interest and experience in military affairs, he embraced definite ideas on the manner in which the military department of the new Government should be organized and administered. Even though he joined delegates from other States in desiring that the individual States retain a large share of power, Pinckney was firmly convinced that there were certain spheres of authority which should rest solely with the supreme government. The military was one of these. Pinckney believed that the States would never keep up a proper discipline of the military and it was essential, because of this, to place the entire control in the National Government. "For a part to be under the general and a part under the State governments would be an incurable evil." [11] He, therefore, thoroughly agreed with George Mason who presented a motion for "a power to regulate the militia," [12] for he thought it necessary to give the direction of the militia to the responsibility of the general government. In proving that uniformity was essential, he cited several instances during the Revolutionary War in which dissimilarities in the militia of various States produced serious difficulties.[13] Pinckney was appointed a member of the grand committee to consider Mason's motion on the subject of the regulation of the military forces, which committee decided to give the general government the power of regulation.

A zealous member of the Church of England, Pinckney was, however, aware of the prejudice and danger to the political institutions of the country that a religious qualification for office could produce. He secured the insertion of the clause in the Constitution stating that "no religious test shall ever be required as a qualification to any office or public trust under the United States." [14]

Two serious debates in the Constitutional Convention centered around the slaves of the South. Pinckney, as an aristocrat, born and raised in this area of the country, keenly perceived the significance of the place of the southern slave. The time and effort spent by the people of the South in training the slave race, the immeasurable value of the slave to southern economy, the worth of the slave as property—these Pinckney recognized as matters that must be protected if the Constitution were to receive any measure of support from the delegates of those States involved. Pinckney, himself, for example was not satisfied with the provision for "privileges and immunities of citizens of the United States." He appeared to lean toward the position that some provision should be included in favor of property in slaves.[15] Consequently, one of the most prominent stands that Pinckney assumed at the convention was that which he took in regard to the slavery issue.

He declared it to be his firm belief that, if he and his colleagues from other Southern States were to sign the Constitution, and in order to secure its approval, support it in their respective States, the problem of slaves must be seriously studied. During the discussion of the importation of slaves, Pinckney stated his position in the following way:

"South Carolina and Georgia cannot do without slaves. As to Virginia, she will gain by stopping the importations. Her slaves will rise in value, and she has more than she wants. It would be unreasonable to require South Carolina and Georgia to confederate on such unequal terms." [16]

He continued his argument by contending that the importation of slaves would be for the interest of the Union as a whole. He proceeded to point out the economic importance of the continued importation and use of slaves:

"The more slaves, the more produce to employ the carrying trade; the more consumption also; and the more of this, the more revenue for the common treasury." [17]

Pinckney conceded that, to place a duty on slaves as on other imports, would be acceptable as reasonable. He made clear, however, that such action could be considered as an exclusion of South Carolina from the Union.[18] On the matter of Congress' right to control commerce, either interstate or foreign, Pinckney's views may be stated thusly, as found in the records of the convention.

"It was the true intention of the South to have no regulation of commerce; but considering the * * * interest the weak Southern States had in being united with strong Eastern States, he thought it proper that no fetters should be imposed on the power of making commercial regulation, and that his constituents, though prejudiced against the Eastern States before he came here, would acknowledge that he had found them as liberal and candid as any men whatever." [19]

When the commerce problem resolved around the sensitive subject of the importation of slaves, the debate became heated. The tension between the Southern States, attempting to preserve the institution of slavery, and the Northern States, in favor of abolishing it, grew. When the convention finally decided that the importation of slaves must be stopped, the date 1800 was selected as the year for the cessation of the slave trade. Pinckney, however, moved to strike out the words "the year 1800" as the year limiting the importation of slaves and suggested that "the year 1808" be inserted in its stead.[20] This 8-year extension allowed 20 years for the accomplishment of this purpose. "This was one of the most conspicuous and important compromises of the convention." [21] Although the Northern States had won a victory, the Southern States were more reconciled to the condition by the advantage of a few more years in which to reduce and finally stop the importations.

Pinckney's frank opinions on the subject and the part that he played in securing the compromise are summarized in the pamphlet about him, Picture of a Republican Magistrate of the New School, in an excellent manner:

"In the convention, he argued against any restriction upon the passing of navigation acts because of the liberal construction of the Eastern States toward the views of the Southern States.

"A few months later, in his State legislature, in answer to objections to the limitation of the slave trade to the year 1808, he explained:

" 'In short, considering all circumstances, we have made the best terms for the security of this species of property it was in our power to make. We would have made better if we could, but on the whole, I do not think them bad.' " [22]

The slave problem recurred during the heavy debate on representation. Pinckney, a confirmed States' righter, was joined by representatives from other States in pleading that the slaves be counted as whole persons when plans for the representation of the various States were being formulated. This was a useless plea because of the objection of many of the delegates to slavery as an institution, the jealousy of some of the Northern States of the southern economy based on the institution, and the passage by the convention of the law stopping the importation of slaves. For these reasons, a move to count the slaves in the manner that the slave-holding States wished was impossible. Pinckney proposed another compromise; according to this plan, three-fifths of the slave population would be counted for the purpose of apportioning representatives among the States. This three-fifths compromise was one of the most vital of those suggested at the convention. Although the desire of the South to protect its interest and realize the full protection of its slaves was defeated, this compromise did give some measure of consideration to this area while satisfying the other States.

During a discussion of representation and taxation based on representation, Governor Morris moved to add to a clause in the Constitution empowering the legislatures of the States to vary representation according to the principle of wealth and the numbers of inhabitants, a proviso that "the tax shall be in proportion to representation." [23] Pinckney was in favor of this idea and felt that it could not be justly objected to; however, he foresaw that the revision of the census, if left to the direction of the State legislatures, would never be carried into execution. "He thought that the rules must be fixed and the execution of them enforced by the Constitution." [24] In this instance, he desired an assertion by the National Government that this taxing could be controlled.

At another time, in order to safeguard the taxing powers of the Government, Pinckney made the following proposition: "That all duties, imports, excises, prohibitions, and restraints, laid on or made by the legislature of the United States, shall be uniform throughout the United States." [25]

Pinckney's views on taxation present a seeming contrast. Whereas in one instance he recommended control by the National Government, in another he hinted of a definite fear about too much control that might be exercised. He stated on the occasion that he was alarmed over what had been said the day before concerning the Negroes and the taxing of exports. He cited that South Carolina, in 1 year, had exported to the amount of 600,000 pounds of sterling, "all of which was the fruit of the labor of her blacks." [26] Advocating the insertion of a clause restraining the national legislature from taxing exports, Pinckney made a charge concerning his State's representation in relation to her exports and the taxing thereof:

"Will she be represented in proportion to that amount? She will not. Neither ought she be subject to a tax on it.

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

"The rule of wealth ought to be ascertained and not left to the pleasure of the legislature and property in slaves should not be exposed to danger under governmental institutions." [27]

In the crisis of the Constitutional Convention caused by the struggle over representation, Pinckney's attitude again reflected his aristocratic background. "Whereas Madison and Mason championed election by the people, Gerry and the two Pinckneys were conspicuous in their support of election by the State legislatures." [28]

"An election of either branch by the people, scattered as they are in many States, particularly in South Carolina, would be totally impractical." [29]

He disagreed wholeheartedly with the delegates who thought that a choice by the people, rather than by the State legislatures, would be a better safeguard against bad measures. In order to prove his point, Pinckney cited a case in South Carolina where the people were notoriously for paper money as legal tender; however, the legislature had refused to concede to their wishes, the reason being that the legislature "had a deeper sense of character and greater wisdom, and thus were restrained." [30] He felt also that, if the legislatures were denied the privilege of electing the representatives of the States, they would be even more jealous of the National Government and more cautious in protecting their rights. If the States were granted this particular participation in the Government, the business of selecting their representatives, there would be more harmony between the States and the general Government.[31]

When a motion resolving that the members of the first branch be elected by the several States for a term of 3 years was before the convention, Pinckney moved that "instead of being elected by the people, the members should be elected in such a manner as the legislatures of the States should direct." [32] His reasons for this were concise:

"1. This liberty would give some satisfaction in that the State legislatures could then accommodate the mode to the convenience and opinions of the people.

"2. That it would avoid the undue influence of large comapnies, which would prevail if the elections were to be made in districted areas.

"3. Otherwise, disputed elections must be referred to the general Government which would be attended with intolerable expense and trouble." [33]

These opinions of Pinckney were based on his experience in the Government of his State, where he had gained a deep understanding of the feelings of the people of South Carolina.

Pinckney's second stand concerning representation concerned the members of the National legislature and centered around his opposition to payment of Senators. He moved to strike out the clause of a resolution calling for Senators "to receive fixed stipends by which they may be compensated for their services." [34] When it became evident, however, that this motion would not pass, Pinckney assumed the position that, if Senators were to be paid a salary, then the payment should be made by the State legislatures. Pinckney was attempting in this case to retain for the States a greater measure of control over their Senators, induce a greater responsibility on their part, and allow the State what he considered a fair share of power in the Federal scheme. Accordingly, Pinckney petitioned unsuccessfully for the passage of his motion, for he thought that, "if the Senate was to be appointed by the States, it ought, in pursuance of the same idea, to be paid by the States." [35]

Footnotes at end of speech.

Pinckney also proposed 4 years as a suitable term for Senators. He based his views upon this premise:

"A longer time would fix them at the seat of Government. They would acquire an interest there; perhaps transfer their principles and lose sight of the States they represent. Under these circumstances, the distant States would labor under great disadvantage." [36]

A greater evidence of Pinckney's fear of encroachment by the National Government upon the proper rights of the States evolved in his ideas on the motion to make members of the first branch of the national legislature ineligible for an office in a particular State. He moved to strike out this motion.

"He argued for the inconvenience to which such a restriction would expose both members of the first branch and the States wishing for their services.

"It would seem from the ideas of some that we are erecting a kingdom to be divided against itself." [37]

Concerning the selection of men for other high offices in the National Government, Pinckney's views caused him to urge landed property qualifications for the executive, judicial, and legislative department officials:

"The importance of the Federal judiciary would require men of the first talents; large salaries would be necessary, larger than the United States can afford in the first instance. Neither did he think that fixed salaries would answer the problem, for he doubted it would have either a good effect or a good appearance for new judges to come in with higher salaries than the old judges." [38]

Pinckney's whole attitude on the question of whether or not salaries should be paid to Federal officers reflects his aristocratic background. In the South of his day, as well as in the South of a hundred years later, it was the tradition for the wealthy to give freely of their time and abilities to the service of their community. They were well-born, well-bred, and well-educated. This group felt it was a duty to engage in public service. Confident that they were well-fitted to carry the burdens of this public service, the members of the aristocracy knew that they had the natural capacity and superior training necessary. Therefore, it was natural for Charles Cotesworth Pinckney to feel that the business of this new National Government, as established by this convention, should be delegated to men of that caliber, members of the aristocratic element in America, willing to freely serve to the best of their ability, prompted not by a desire for pecuniary reward, but by a profound interest in and a deep love for their country.

The most significant contribution of Pinckney during his entire participation in the Constitutional Convention was a move which may have preserved the convention and enabled us to be governed by the Constitution formulated by it. This move occurred during the heated debate over the Virginia and New Jersey plans which proposed two different methods of allotting representation among the several States.

Pinckney's conception of the Union was similar to the views held by other delegates whose sense of responsibility to their States was, of necessity, forced into a secondary position. As he remarked when stating his position on the payments of Senators, "I am for making the States as much as can be conveniently done a part of the general Government." [39] At one point, Pinckney even asked Edmund Randolph, who presented the Virginia plan, whether he meant "to abolish the State governments altogether." [40] The main differences were not so much produced by the delegates' wish to preserve State sovereignty completely, but by a fear that the

Footnotes at end of speech.

State would be completely destroyed, as Pinckney's query of Randolph indicated. Neither was it so much the large States versus the small States but it was the question of whether any State could be preserved in this national framework.

These were sentiments of men who jealously guarded the rights and privileges of their States. These were men who struggled to gain what they considered the best and for the people that they represented. And Charles Cotesworth Pinckney was one of them. Yet, when opposition became too strong to permit him, and other men sharing his views, to execute their desires, he sought to find the best possible education. When the entire document was finished, even though there were many parts of it which he did not wholly sanction, he bent every effort to support this Constitution which, he recognized, was, of necessity, a compromise for all. The record states that "he proposed that a committee from each State should be appointed to devise and report some compromise." [41]

Charles Cotesworth Pinckney is not regarded as one of the leaders of the Constitutional Convention. His contributions cannot be compared to those of Madison or Randolph, Wilson or Morris, but "when he spoke, it was with conviction, and what he said was listened to with respect." [42] It is significant to that Pinckney either propoesd or played a prominent part in securing the three chief compromises of the convention.

1. In the deliberation over the slave trade, he suggested the year 1808 as the year for the stoppage of the trade in order to allow a 20-year period after the writing of the Constitution.

2. In the crucial controversy over representation, he suggested the three-fifths plan, by which three-fifths of the slave population was counted for purposes of allotting representatives.

3. In the crisis of the convention, that of the problem of representation in the Congress, he prosed the great compromise, by which a way was found to combine the best points of the Virginia and New Jersey plans.

Without these compromises, the American Republic, as we know it today, would not have been possible.

"We may therefore see an interesting and illuminating example of the fact, too often lost sight of, that the sombre experiences of the weary members of the Confederate Congress had a direct and immediate effect on their work when, as members of the convention, they understood the task of constituting a new government." [43]

When a few of the delegates refused to sing the document because they were not completely satisfied with it and continued to criticize it, Pinckney made this statement: "We are not likely to gain any converts by the ambiguities of the proposed signing." [44]

"He thought it best to let the form speak the substance. If the meaning of the signers be left in doubt, his purpose would not be answered. We should sign the Constitution with a view to supporting it with all his influence, and wished to pledge himself accordingly." [45]

Pinckney fulfilled his pledge, he did not leave his work half done. After working tirelessly in the National Convention, he returned to his native State where he played a prominent part in securing ratification of the new constitution in the South Carolina Convention of 1788.[46]

The most excellent choice of words to characterize the life of Charles Cotesworth Pinckney was selected by Charles Chancey when he said this:

Footnotes at end of speech.

"His love of honor was greater than his love of power, and deeper than his love of self." [47]

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, ———, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, ———, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Bible, Neuberger, Laird, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

Address by Hon. Alexander Wiley, of Wisconsin, Before Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 10, 1956

Mr. WILEY. Mr. President, on Saturday last I was privileged to speak to the Veterans of Foreign Wars at Oshkosh, Wis. It was Loyalty Day. On that particular occasion I was given a citation by the Veterans of Foreign Wars. I ask that excerpts from the address which I delivered on that occasion be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SENATOR WILEY STRESSES ACTION AS SYMBOL OF LOYALTY: OUTLINES IMPROVED PROGRAM FOR VETERANS: EXPRESSES SERIOUS CONCERN OVER BRADLEY COMMISSION FINDINGS

I am happy to join you in this luncheon today to celebrate Loyalty Day.

I know that you need not be reminded of the meaning of loyalty. For who, over the breadth of our great land, knows the meaning better than you V. F. W. men who have left our shores to fight and sacrifice for life and country.

Each of us is loyal in his own way in civilian life. We obey the laws; we live decent lives in our communities, doing what is requested of us.

But real, true loyalty is more than that. It is pursuing our freedom. It is helping to develop the greatness that is our land. It is inventing and producing the good things of life. It is performing our jobs the best way we know how—whatever our station is in life.

TRUE LOYALTY IS NOT STATIC

Loyalty is not static; it is a growing thing. Out of heartfelt loyalty, we must work toward progress, and attainment of future goals—which are now only dreams and visions.

We must accept the challenges in this atomic-jet age, and create things for a better life.

ACTION, NOT WORDS

Loyalty, as you know, must be demonstrated by action.

It was so demonstrated on the battlefield by you and your buddies.

It must and will be demonstrated in the Halls of Congress, in the office, factory, farmfield, and on every roadway of American life. It must be an active, living spirit of patriotism within each of us, flaming with the fiery zeal of modern-day Patrick Henrys.

Each of us, in his own way, doing a good job at that which he knows best and does best, is the kind of all-around loyalty that needs to be demonstrated.

LOYALTY DAY CELEBRATIONS

As we celebrate, the tramp, tramp, tramp of our marching men thrills our hearts with pride.

A tramp tramp, tramp—echoing in our hearts—is also the memory of men who have given their lives for us, who have died for our freedom, who protected our land of liberty.

To the hallowed memory of these great men of our past, and to the promise of the future, we need to rededicate our efforts to preservation and improvement of our climate of freedom.

FULL USE OF FREEDOM

We must make full use of our freedoms:

Freedom to live as we choose, to open a business, to enter a profession.

Freedom to travel, to be educated, to enjoy our rich heritage of music, art, and drama, and to benefit by the tremendous technological and scientific progress of our country.

Freedom to participate, freely and imaginatively, in our future progress.

WE MUST REBUFF COMMUNISM

We must realistically acknowledge that short of annihilative war communism is with us to stay, at least, for a while.

This major evil in the world today is not an abstract, theoretical form of Government. This is a real, ever-spreading totalitarianism that uses all the methods of deceit, terror, threat, promise, and subversion to attain its goals.

COLLECTIVE LEADERSHIP—A FARCE

The recent declaration of a return to a collective leadership by the Soviets, of course, is a farce. This is a mere disguise under which the top-echelon Communists are struggling for power. Why? Because not one of them is yet strong enough to assume the ghostly cloak of Stalin as supreme dictator of the Kremlin.

But the specter of Stalinism hangs over the Communist leaders. All the crimes he is accused of will be perpetrated again by other dictators of this Soviet regime oppressing the populace behind the Iron and Bamboo Curtains.

WITHOUT COMMUNISM WE WOULD HAVE A FREER LIFE

Without communism, we would have a freer life. We would have the opportunities to concentrate on building for a better America and a better world.

Without communism, we could apportion a greater share of our resources to feeding the hungry, sheltering the cold, and going about the tasks of enriching the earth with a better economic, cultural, and spiritual life.

As it is, we have an uneasy tension in the world. Free nations are attempting, by every possible means, to avert the capture of more innocent people by Soviet despotism, without the holocaust of a nuclear war.

Such a war, we are all aware, would destroy cities and nations. It would make the earth a wasteland in which only the mutilated escapees of atomic and hydrogen war would exist.

We must utilize every possible means, national and international, to avert such a war of human annihilation.

NATO

The recent proposals for achieving greater benefits from NATO, I believe, should be completely examined. We should weigh carefully the undeveloped idea of making the NATO military alliance, in fact, an economic and political force for peace.

As you know, Secretary Dulles is in Paris right now, together with the representatives of the other NATO nations to explore the possibility of utilizing NATO for the lessening of international tensions.

NEED OF LEADERSHIP

Our leadership, at whatever level it exists, must be constantly attuned to the progress of our times, and to the problems of our State and Nation. We must provide for the changing needs of our people and eradicate the shortcomings of existing programs.

A soldier can no longer go into battle with an old flintlock or muzzle loader; he must have modern weapons. So it is, if our country is to progress, that we must have new and modernized laws and programs to fulfill the needs of our fast-moving age.

ANTISUBVERSION

We must, of course, exert every effort toward meeting the external challenge of communism. This must be accompanied by a tough policy toward internal attempts at subversion.

The FBI has done an admirable job of keeping a finger on Communists and their activities.

As a member of the Senate Judiciary Committee, I, too, have had the opportunity and the responsibility to legislatively assist in this effort. I have joined in many legislative proposals to strengthen our laws.

Some of the objectives of my recent legislation are:

To toughen the penalties against seditious conspiracy and advocating the violent overthrow of the Government.

To crack down by requiring registration of Communists or other foreign agents who have been trained in espionage or sabotage.

To strengthen the antiperjury statutes, by simplifying the problems of convicting perjurers.

LAWS A-PLENTY—YET NEW LAWS ARE NEEDED

As we look at the maze of laws and statutes on the books, we might be inclined to think that enough laws have been passed to last this country for generations to come. However, this is not true. Laws become obsolete—just as guns, machinery, and automobiles become obsolete.

We are ever in need of new different laws—to cope with ever-new needs of our people:

Laws for projects like the St. Lawrence seaway, to handle the increased commerce in American products.

Laws for tax reforms, liberalizing social security, and for cultural and educational purposes.

Laws to resolve the problems of agriculture, conservation, and water pollution.

And many other refinements of laws and statutes are required to meet the needs of modern times.

These legislative acts must, of course, be in accord with technological and economic changes, as these affect our population.

INCREASE IN VETERANS

In recent years, as we are all aware, there has been a tremendous increase in the number of veterans in the United States. In 1940, there were only 4 million veterans. These, and their families, represented only 11 percent of the population.

Today, there are over 22 million veterans. These, with their families, number 75 million, and constitute more than 45 percent of our total population—49 percent, if those still in the Armed Forces and their families are included.

VETERANS' PROGRAMS ARE FAIRLY GOOD

The status of veterans' programs, on the whole, is good. Naturally, however, there is considerable room for improvement. Changes in military, economic, and social conditions have outmoded some of the early concepts of veterans' benefits. The philosophy of help for veterans must be modernized, and the whole structure of our programs brought up to date.

The objective of an adequate program, of course, is to help the veteran overcome special, significant handicaps incurred as a consequence of military service.

These programs are based on the realistic acknowledgment that (1) we owe a special debt to our ex-servicemen, and (2) our veterans face special problems arising from their adjustment to society, when they rejoin the ranks of the civilians.

IMPROVEMENT OF VETERANS' PROGRAMS

We need public acceptance of the hard facts of life that, while the threat to the free world exists, it is likely to be the continued duty of each qualified civilian to make an individual contribution to our national defense.

Meanwhile, we must strengthen, rather than weaken, our veterans' programs.

We must improve the pattern of transition from civilian to military, and back to civilian life.

We need to provide more adequate benefits for the families of veterans (especially those in remote camps and outposts), including hospitalization and medical care. For these families suffer displacement, either in surroundings or in financial circumstances, often as great as the veteran himself.

In addition, we need to:

Iron out the existing inequities in the present programs of benefits to completely disabled veterans.

Provide adequate housing for servicemen, to provide them with satisfactory standards of living.

Preserve and improve retirement entitlements.

Continue and expand efforts to rehabilitate disabled veterans and integrate them into our social and economic life.

Develop a successful Reserve program, to unite with our active Armed Forces, for the needs of national defense.

SENATOR WILEY'S LEGISLATION

As you may be aware, I have been constantly concerned with the problems of providing adequate benefits for veterans. In the 84th Congress, I have introduced legislation for such projects as:

New Veterans' Administration facilities at Wood, Wis., to replace obsolete hospital and domiciliary units.

Extension of the GI home-loan benefits. (Only 17 percent of our Wisconsin GI's have thus far utilized their home-loan entitlements. If not renewed, the opportunity expires under present law in July 1957.)

And, too, I have offered legislation for construction of urgently needed housing for personnel in the Armed Forces and their families.

I have, of course, been an ardent supporter of well-merited benefits to veterans, dating back far beyond my participation in the original GI bill of rights for World War II veterans.

WARY OF BRADLEY COMMISSION REPORT

As you know, the House Veterans' Affairs Committee is now studying the Bradley Commission findings. The consensus seems to be that there are some sound recommendations made by this Commission on behalf of the severely disabled, combat veteran.

I am, however, extremely wary and seriously concerned with some of the Commission's additional proposals—for example, those relating to service-connected disabilities. Such proposals would undermine present programs which have proved necessary and effective in benefiting the Nation's ex-servicemen.

You may be assured of my vehement opposition to efforts to undo programs that have proved both desirable and successful in providing much-needed benefits for those who have served our country.

VETERANS' LEGISLATION IN CONGRESS

There are, as you know, literally hundreds of other legislative proposals before the Congress. Consideration of these, however, has been temporarily postponed, pending review and evaluation of the Bradley reports.

These pending bills, as you are well aware, touch upon a multitude of subjects: Pensions, employment, hospitalization, rehabilitation, educational benefits, and other real, significant problems facing veterans of today.

CONCLUSION

Since we are expecting a continuation—temporarily, at least—of world tensions, we must gear our veterans' programs, as our national-defense effort, to the long haul.

On this loyalty day, we must reaffirm our dedication to fulfilling the needs of those who have shown the utmost loyalty and devotion to our country.

Buoyed up by the spirit of loyalty—based on action—I believe that we shall succeed in meeting the great challenges of our times, of defeating atheistic communism, and of providing the greatest benefits for all our people.

Address by Hon. Herbert H. Lehman of New York, at Cornerstone Laying Ceremony of B'nai B'rith

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 10, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at the cornerstone-laying ceremony of the B'nai B'rith, in Washington, D. C., on May 6.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR LEHMAN AT CORNERSTONE LAYING CEREMONY, B'NAI B'RITH, 17TH STREET AND RHODE ISLAND AVENUE, NW., WASHINGTON, D. C., ON MAY 6, 1956

If we were today dedicating the cornerstone of an ordinary building, however, beautiful it might be, however, useful or even, however, helpful to the community, this would not be an especially remarkable occasion. Our Nation's capital has many such beautiful structures, and has had many such occasions. But neither this nor any other city in the land has contemplated an institution like the one which is being launched by this cornerstone laying here today.

It is fitting that a unique establishment should be sponsored by a unique organization. B'nai B'rith is unique not only because it is America's oldest Jewish organization, having been founded in this country nearly 113 years ago. It is the only group that unites Jews of different doctrinal practices of the Judaic faith, of different economic backgrounds, of different social and political ideologies, and of different views on the fate and future of our people. And B'nai B'rith unites them, more than 350,000 men, women, and young people, for common action in a constructive program on which they can all agree, to promote the welfare of those of our faith, the interests of our beloved country, and the well-being of humanity generally.

I am proud that I have long been a member of B'nai B'rith, as was my father before me.

But if B'nai B'rith is unique, so will be this building whose cornerstone we dedicate today. For in spite of the fact that Jews have been part of the fabric of America for more than 300 years, this will be the first shrine in which their innumerable and priceless contributions to our country will be dramatically demonstrated. Elsewhere there are magnificent libraries and museums of Judaica, rendering splendid service to scholars, historians, and teachers. But only on this corner, where we stand today, will there be a popularly designed exhibit for all the people, showing Jewish contributions to American democracy, in the capital of world democracy.

It has been said that the mortar of ancient Judaic tradition cemented the foundations of American democracy. What are some of the basic concepts common to our faith and to our country? I would say they include liberty under law, equal justice for all, the sanctity of human personality, and the right of all to seek a richer, fuller, and more abundant life.

And on the strong foundation of these concepts and traditions, we have built in this country the freest and most democratic society the world has known in modern days. And have here the freedoms have been developed to as great an extent as any other place on earth.

That achievement—and not merely material wealth—has made America great. And because history has propelled us into the position of moral leadership, we cannot shirk the responsibility that accompanies that leadership.

Today the challenge posed by communism to our free way of life is more formidable than ever before. The new and softer face presented by the ruling group in the Kremlin reveals no weakening of their basic determination to impose their kind of society and their view of man upon the whole world. The free world is properly concerned lest the Communist bloc, by concentrating all its human and material resources, achieve military superiority.

The Kremlin is building weapons as destructive as those we have developed. Indeed, they may be building them faster today than we are. But as long as Communist pilots, soldiers, scientists, and workers have to keep looking over their shoulders to see if they are being shadowed by their suspicious and intolerant masters, we should enjoy a clear advantage. If our scientists can work free of the restraints of serving any ideology but truth, we should not need to fear being outstripped by Communist technology. And we would have a better claim, too, on the minds and hearts of the millions throughout the world who are still uncommitted in the contest between democracy and communism.

Unforunately, we in this country have weakened our own cause by misreading the nature of the Communist threat, and the true requirements of American loyalty and security. For too many years we have lived in a fog of synthetically manufactured fear. We have treated with elaborate dignity the smears and reckless charges which in a happier day we would have recognized immediately as false. We have seen Congress permit its Chambers to be used as a privileged sanctuary for the launching of irresponsible assaults against the good name of perfectly loyal individuals and institutions.

In the last year or two, the fog has begun to lift. For this improvement, courageous

individuals, and organizations like B'nai B'rith and others, who refused to be stampeded or silenced by the political demagogues, are to be congratulated. But much remains to be done.

Only the other day the Attorney General proposed to Congress the adoption of a law that he said would permit Government agencies to retain employees against whom security charges have been filed until final adjudication of their cases. This surely is the plain requirement of American due process, and one that is long overdue in view of the hardship that has been visited upon thousands of suspended employees who were finally restored to their jobs after months of heartache.

But the Attorney General does not need this authority from Congress. The Administration today has all the power it needs to institute, by executive order, this necessary reform. The Attorney General does little to improve the climate of freedom when he shows the lack of political courage implicit in passing the buck to Congress.

Many years ago, we proudly turned to the world the face of our Statue of Liberty with words of welcome that kindled hope and enthusiasm in millions of hearts in the tired lands of the old world. But in recent years the words of welcome have been blurred by the cruel hardships and inequities we have written into our immigration laws.

B'nai B'rith, to its credit, has fought constantly to return to the American tradition of humanitarianism and equality in our immigration laws. And we have made progress on this front. Today the principal leaders of both political parties have publicly and repeatedly decried the gratuitous insult offered to seven-eighths of the peoples of the world by the national origins quota system—a system that just a few years ago was considered too dangerous even to criticize.

I assure you that it would be vastly encouraging to me to see this Congress retract the insult inherent in the national origins quota system and make honorable amends, not only for the sake of our prestige everywhere, but for the sake of our own traditions and self-respect. I pray that this culmination of our efforts will one day soon be realized.

As men and women who support the spread of democratic ideals everywhere, we are deeply troubled by the present situation in the Middle East. Today, Communist influence is strong there because of the vast quantity of aggressive armaments sold to Egypt by the Soviet bloc, while Israel's pleas for defensive weapons from the United States have gone unheeded.

We all pray that the present cease-fire, brought about by the United Nations, will endure, and ripen into real peace. But unless it does—and I fear it will not—the danger of war will continue. The best interests of our own country require a just and lasting peace in the Middle East. But peace cannot be established by merely wishing for it. It must be sought by bold and courageous action. One part of such a course of action would be to furnish defensive arms to Israel now—before it is too late.

The policy of our Government has not seemed to those of us outside the administrative branch either bold or courageous. I trust and pray that that situation is going to be remedied. I will not cease to raise my voice in protest until it is remedied.

One facet of this policy which has attracted my concern in recent months has been our Government's tolerance, and even complicity, in the intolerable discriminations practiced against American citizens by the Saudi Arabian Government and others. Once upon a time, our Government would have denounced, with fine indignation—as it frequently did in past generations—any government which sought to distinguish between one American citizen and the other on the basis of his religious faith or descent. But today, our Government actively connives with the Government of Saudi Arabia, for instance, to keep American soldiers who happen to be of Jewish faith from serving in American installations which happen to be in Saudi Arabian territory.

I know that great issues are at stake in the world today, but what greater function of American sovereignty is there than the traditional function of upholding the integrity of American citizenship? What greater obligation rests upon the American Government than the denial to any nation, regardless of the interests involved, of the right to distinguish and discriminate among American citizens on the basis of their religious faith?

I favor a policy of friendship with all Middle Eastern countries, and indeed, a policy of large-scale assistance to the Arab nations, as well as to Israel. But I place little store on relationships which are grounded on appeasement and acceptance of discriminations which are alien to every tradition we hold dear.

And so, as we glance briefly over some of the large issues that agitate our world today, we are increasingly conscious of the need for high and noble ideals that can serve as a beacon for our endeavors. Such ideals will be embodied in this new B'nai B'rith Building. They will serve their purpose well if they fill us not only with a modest pride in what people of our faith have already achieved in this blessed land, but with a firm determination to continue to be worthy of our great Jewish and American heritage.

Right-to-Work Legislation

EXTENSION OF REMARKS
OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, May 10, 1956

Mr. GOLDWATER. Mr. President, yesterday it was my pleasure to address a meeting of the Young Men's Business Club of New Orleans at New Orleans, La. I ask unanimous consent that the text of my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR BARRY GOLDWATER BEFORE THE YOUNG MEN'S BUSINESS CLUB OF NEW ORLEANS, NEW ORLEANS, LA., MAY 9, 1956

One fact should be made crystal clear before this discussion gets underway. I do not profess to speak for the Republican Party nor for the administration when I direct my remarks today to the subject of the right to work. I support right-to-work legislation, as do many members of the Republican Party, and, I am happy to say, also many members of the Democrat Party. I wanted to clear up this point being starting, because many times when a member of a party stands up to speak on a subject some people immediately take his remarks as being the position of his party or the administration that he represents. I do not represent the Republican Party nor the administration in these remarks any more than does Secretary of Labor Jim Mitchell when he attacks States rights. He has a perfect right to do that. I have a perfect right to defend them. The remarks that I make today, then, are my own, BARRY GOLDWATER, and mine alone.

It is time that we stop and ponder over what has been accomplished under the right-to-work laws since they were first enacted slightly over 10 years ago. Since that time a total of 18 States have seen fit to take advantage of section 14 (b) of the Taft-Hartley law and enact legislation in their States that guarantees the right of a worker to obtain and keep a job without being a member of a union; and, on the other side of the coin, to guarantee the union man the right to gain and hold a job in spite of his being a member of a union. When these laws were first enacted, in fact when the very spirit of 14 (b) was first developed, the CIO said that these would be right-to-wreck laws, they said that this section of Taft-Hartley and the subsequent enactment of right-to-work laws were destined to destroy unions. Now let's take a look at the record and see what has happened since the first enactment of these laws.

In 1945 there were approximately 54 million people in the civilian labor force and 14,800,000 of these are estimated to have belonged to unions. This means that in 1945, 27.5 percent of the civilian labor force belonged to unions. In 1955, and these figures are only estimates because the complete figures are not available as yet, we find the laboring force in the neighborhood of 64 million, with 18 million estimated to be members of unions; which would mean that 28 percent of the civilian labor force belonged to unions in 1955. Certainly, these figures do not indicate that there has been any destruction of the union movement nor any appreciable slowing down in the rate at which membership has been growing. But let's look further at what the right-to-work laws have accomplished in the 10 years that they have been in existence.

Secretary Mitchell said in Los Angeles last summer that the right-to-work laws have adverse effects on communities that adopt them. Now let's again turn to the record and see what has happened during this period. The study that I refer to will include only 11 of the 18 States that now have right-to-work legislation because only 11 of these States have had the laws a sufficient length of time to be able to base any judgment upon their experience. I want to commment at this point, also, before getting into these figures—that we cannot assume that the right-to-work law alone is responsible for the remarkable record that has been made in these various States; however, we can call it coincidence and it is still a true fact that the States that have enacted right-to-work legislation compare more than favorably with the rest of the Nation in any area we care to explore.

Total nonagricultural employment in the 11 States has risen 21 percent. During this time the total population in these 11 States has increased by 12 percent. During this same period, a 14 percent rise in nonagricultural employment occurred in the United States, while the Nation's rise in population was 12 percent. Now, going to another economic area, in the 11 States with right-to-work laws passed during the 1946–1948 period, the number of business establishments has increased approximately 24 percent while at the same time the increase nationally in the number of new business firms was only 15 percent. When we investigate the income from wages and salaries, we find that in the 11 right-to-work States that we are studying there was an increase of 69 percent, while the national income derived from wages and salaries rose just above 59 percent. While these increases were occurring, the opportunity to work was on the rise in the 11 States more than it was in the Nation as a whole. In the 11 right-to-work States we are examining, man-days idle due to work stoppages dropped 33 percent between the period of 1947 and 1953, while nationally the decline in man-days idle was 18 percent.

Surely these figures should convince even the most skeptical that the fears of the CIO that the right-to-work laws would wreck the unions and the fears that are expressed by Secretary Mitchell that these laws are detrimental to the communities that enact them are baseless and groundless. I must reiterate that we cannot say that the right-to-work laws in themselves have created these situations, but it is a peculiar circumstance that in the States in the Union that have enjoyed the most healthy gains in nearly every area of their economies, we find right-to-work legislation.

Having looked quickly at the history of the right-to-work period, I think it is well at this time that we stop and ask ourselves why this legislation became necessary and why 18 States have passed these laws and why other States are seriously interested in adopting them for the protection of their own workers and their own economy. The concept of the right to work is based upon two premises, the first of which is the freedom of the individual and the second the right of association.

Let's explore the first one first—freedom of the individual. The right-to-work bill is a civil-liberties measure. As more and more employers in the country were signing agreements with the union or closed-shop clauses, it became evident that with the arbitrary power placed in unions, a man's membership in a union was becoming more important than his rights as a citizen because his livelihood depended on maintaining his membership. The obviousness of this fact created an interest among the very workers affected in the States that have enacted these laws to the extent that sufficient interest was aroused to create their passage.

I believe that the best expression I have ever read concerning the freedom of the individual was expressed by Mr. Bennett B. Patterson in his book, the Forgotten Ninth Amendment. Mr. Patterson said, and I quote, "Individual freedom and the recognition and development of the spiritual nature of mankind are the essence of democracy; indeed, they are the essence of life itself. We believe that by nurturing and encouraging the natural development of the individual to the point that he will achieve his greatest work, society as a whole will profit in the greatest measure."

Our whole system of government and our whole system of enterprise is based upon individual rights and freedom. Our basic writings abound with the proof of this statement and we need only look at the Declaration of Independence to find the substance of all our freedom. The Declaration of Independence says, "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." That is not only the cornerstone of our Republic, an expression recognizing the source of our freedom as stemming from God, it also spells out our fundamental rights. The right to work is one of our rights. It is fundamental, for without it a man cannot retain the right of liberty or the right to pursue happiness, for both are dependent on his right to work.

For years those people who now travel erroneously under the name of liberal have been stating that the right to a job is one of the basic human rights and they go further to say that our Government is not only bound to protect this right but must create it. These same pseudoliberals are highly concerned today because 18 States have passed legislation or contained these provisions in their constitutions to protect the workers from being deprived of their jobs by reason of membership or nonmembership in a union.

The question that rises at this point is this: Is the right to a job really a basic human right or is this right restricted to union members only? Actually, there is no right to a job in this country or any other country that follows our concepts of freedom. Man was created equal, our Declaration of Independence says. He was created equal because he was a free child of God, but at the point of his birth the equality ceased. The right to a job, if such a right does exist, exists only in man's determination to get a job and to keep a job, and if there are rights connected with that then those rights are wrapped up in the expressions of the right-to-work law that recognizes that a right to work, whether a man belongs to a union or not, is a basic right, expressed in our Declaration of Independence and further outlined at various places in our Constitution.

The right to work is coextensive with the right of life itself. Shakespeare said something about this, and while Shakespeare was no labor-management relations expert, nevertheless his philosophy certainly can apply. In The Merchant of Venice, he wrote, and I quote, "You take my house when you do take the prop that doth sustain my house, you take my life when do take the means whereby I live." When a man must belong to a union to obtain or retain work, then that man does not have the right to work under our concept of rights and we, in effect, if we fail to recognize that, would be living in agreement with Shakespeare's quotation, "You take my life when you do take the means whereby I live."

Let's look at the Constitution and see what the Constitution has to say about the subject of right to work and the other rights which man enjoys in connection with employment. The famous fifth amendment of the Constitution says in part, "No person shall be held to answer for a capital or otherwise infamous crime," then it goes on to list several other exemptions and says, "nor be deprived of life, liberty, or property without due process of law." Certainly, if a man is forced to join a union in order to obtain or retain employment, that action, being one of compulsion without the process of law, violates that part of the fifth amendment. Likewise, if a man were denied employment because of membership in a union, that action would be in similar violation of this amendment. Quite similar language is contained in the 14th amendment which says in part, and I quote, "Nor shall any State deprive any person of life, liberty, or property without due process of law."

Thus we see in amendments 5 and 14 the clear intent of the Constitution to protect any right bearing upon life, liberty, and property and the right to work is fundamental to these rights. If a man is denied work by either nonmembership or membership in a union, then he is deprived of these rights without the due processes of law.

There is another amendment, not often referred to by students of the Constitution, or generally known by the American public, but it contains what is to me one of the basic statements about our rights. The ninth amendment says, and I quote, "The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."

When our Constitution was framed, in fact when our first basic papers were written, after our forefathers began to think about our concept of freedom, all of these documents believed that our rights were inherent because these rights and freedoms came from God. They didn't believe it was necessary to outline in detailed form each and every one of these rights and that is the reason that the Bill of Rights was not written when the Constitution was first presented. It was only after these wise designers of our documents began to think that the time might come when there would be some doubt about these rights that they set them down in the first 10 amendments to the Constitution. Believing the rights to be inherent by virture of their being a gift from God, the Constitution set out to protect these rights. The 9th is a broad statement of the protection and extent of these rights. It recognizes that all the rights of men are protected. It recognizes that the individual and not the State or the Federal Government is the source and basis of our social comport. It further recognizes that sovereignty rests with the individual. The right to work is a right that must be protected if the very rights of life, liberty, and the pursuant of happiness are to be maintained in this Government of ours.

Near the outset of this discussion, I stated that there were to aspects to the right-to-work bills, one being the rights of the individual, which we have just discussed, and the second being the right of association. After having studied these laws for the past 10 years and after having watched their operation, I have come to the conclusion that the right of association is probably the heart of the right-to-work movement.

The freedom of association being an important side of the right-to-work coin, we should see what our Constitution says in amendment I about this freedom. It says, and I quote, "Congress shall make no law respecting an establishment of religion," then it goes on and states, "or the right of the people peaceably to assemble." Again we get back to the freedom of the individual, for this right springs from the liberty of the individual to order his life as he sees fit, to choose where he will work, to choose his church, his political party, his lodge, his union—if he desires to affiliate with any of these. No law should compel him to join, or condemn him for joining, any organization or group. Some men want to belong to unions, some do not, it's as simple as that; but some union leaders want the right of assembly destroyed by the extension of compulsory unionism into the States where that right is now protected. There are young men who want to belong to the organization that I am addressing today, there are other young men who do not want to belong to it, and I am sure that both sides would resist any Federal law that would say that all young men have to belong to this organization. They may not want to belong because they don't like some of the members, they may not want to belong because they don't like the program; there are many reasons that would make a man hesitate at joining any organization, just as there are many compelling reasons that make men want to associate with others in the pursuance of a common objective.

Having reviewed the past history of the right-to-work movement, and having refreshed our minds on what I consider to be the two important points involved in any argument for a right-to-work law, let's look briefly into the crystal ball of the future to see what might be in store for those States who have, by an expression of their citizenry, adopted these laws.

There are several bills in both Houses at the present time that would destroy section 14 (b) of the Taft-Hartley. As is to be expected, the pseudo-liberals of today, blinded by their devotion to the doctrines of Walter Reuther, are the ones who have introduced and who are pressing for this legislation. One of these individuals is a Member of Congress by the name of JAMES ROOSEVELT. Mr. ROOSEVELT said on March the 15th of this year, and I quote, "I am sure he," referring to his father, "would have been horrified at the so-called right-to-work laws and would have done everything he could against them." Now again, in an effort to keep the record perfectly clear, I would like to remind the son of our former President of what his father once said on this subject, and I quote, "I tell you frankly that the Government of the United States will not order, nor will Congress pass, legislation ordering a so-called closed shop. It is true that by agreement in many plants of various industries the closed shop is now in operation. This is a

result of the legal collective bargaining and not of Government compulsion on employers or employees. It is also true that 95 percent or more of the employees in these particular mines belong to the United Mine Workers Union. The Government will never compel this 5 percent to join the union by Government decree. That would be too much like the Hitler methods toward labor." Now if the remarks of the senior Roosevelt do not refresh the memory of the son, I would like to refer JIMMY to what his mother once said in her column My Day, "I do not believe that every man and woman should be forced to join a union."

I inject the Roosevelt name at this point only to show the extent to which some of the younger generation of the pseudo-liberals will go in order to confuse the issue. While both President Roosevelt and Mrs. Roosevelt were strong advocates of strong unions and both did a lot to help in these movements and both provided constructive thinking to the progress of these organizations, both of these liberal-minded people recognized that compulsory unionism has no place in America.

It is difficult to understand why there exists here in America, the land of the free, the desire on the part of some people to force a man to join a union in order to gain and retain employment. There are unions in other parts of the world, successful unions, there are countries that are far more unionized than the United States, so with this in mind I obtained a report from the International Labor Organization and there are some interesting revelations in that report. Seven of these countries have compulsory unionism in some form but none of them have compulsion by law. The others prohibit, except in some rare cases, and these cases by collective agreement only. The most unionized group of countries in the world, the Scandinavian countries, prohibit compulsory unionism by law—it is not allowed—and yet, in spite of that, we find a greater percentage of the working people belonging to unions in these countries than in any other countries in the world. Universally, compulsory unionism is frowned on. Leaders across the world recognize that in compulsion you also have the seeds of destruction, but allow a man the freedom to join or not to join and when a man does become a union member after exercising his free right to determine this choice, he becomes a good union member and an asset to his organization that only can strengthen that group.

Maybe in this country Walter Reuther is afraid of free men's choices. Perhaps he doesn't recognize that free men recognize the need and the value of unions; that free men will join unions when the unions show free men that they are better off belonging to them than not belonging to them. Perhaps he doesn't recognize that Americans do not like coercion, that Americans do not like to be told what to do or when to do it, or to have to pay for a right to do it. Perhaps Mr. Reuther is not aware of the fact that many members of his union and many people who do not belong to unions do not like the way that his union has violated the desires of the minority group of his organization.

I speak now of political freedom and in this I speak for the President and for the Republican Party, for Ike told the AFL–CIO merger convention last December that "The rights of minorities holding differing social, economic, and political views must be scrupulously protected and their views accurately reflected."

And I speak of the forgotten civil-rights problem, I speak against the use of compulsory union dues for political purposes, and in that I feel sure that I speak for a strong minority of the union movement and for a great majority of the workers who are nonmembers of unions. Mr. Reuther's reply to the President's request that these rights of minorities be protected was merely that his unions would spend more, that they would destroy the Republicans, and that somehow they would get around the law, which they are doing today.

Here is a civil-rights violation that crosses both racial and political lines, yet it is being ignored by these same pseudoliberals. I am not talking about a mere handful of individuals, although I would stand up for the rights of any individual American. I am talking about some 8 million Americans who have become second-class citizens as a result of the merger of the AFL and the CIO.

These second-class citizens come from both sides of the political fence. They are Republican workers who are forced to pay compulsory union dues, part of which are used for candidates whom the workers personally vote against. But they are also Democrats who find these compulsory union dues used to influence Democrat primaries. And you in the South know that this primary is the equivalent of the general election in the North.

I say to you in all sincerity that this is not a labor-relations problem—it is a civil-rights problem since it amounts to nothing less than nullification of the vote of an individual American, and I am sure I don't have to explain nullification to southerners.

Now what can you and I do, people who are interested in this right-to-work move, to protect it, to see that the Federal statutes remain on the books, that allow the several States to have these laws. I think you and I have to engage in a program of education. This program of education does not entail a bitter fight with some leaders of the union movement, it entails explaining to the working man what we mean when we talk about the right to work. If this is done, not only with the working man but with management itself, then I feel that a free expression of the people of the States will be heard by the State legislators and that the legislators assembled will act in accordance with the wishes of the people.

This is a matter of freedom that you and I are discussing today. It is a matter of nothing else. It is not wrapped up in economics, it is not wrapped up in the social problems of America, it is wrapped up in the basic freedoms of America and as Americans you and I have a duty to see that those rights and freedoms are observed and protected.

Florida and the Creation of a United States Fisheries Commission

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. CRAMER. Mr. Speaker, I have recently introduced a bill, H. R. 10874, to establish a sound and comprehensive national policy with respect to the fisheries to create and prescribe the functions of the United States Fisheries Commission; to strengthen the fisheries segment of our national economy and to provide aids and studies, all being provisions contained in a "National Fisheries Act of 1956."

Under this bill there would be established a Commission, under the Department of the Interior, bipartisan in nature, to attend the problems of an industry that is of great importance to the Nation as well as the State of Florida. The Sunshine State has long ranked as one of the Nation's greatest sea-food producers. Annually Florida landings have amounted from 7.1 percent to 10 percent of the national output. Florida fishermen, operating from the most extensive coast possessed by any State, in addition to producing a high proportion of the national output of fishery products, also lands more species of fish than any other part of the country. In 6 of its 8 most valuable fisheries, Florida has continued to be the principal United States producer and in the past few years has moved into the fore as a shrimp producer. Economically these products are of great importance to my State and nearly a $100 million annual retail value is placed on Florida production.

Because of this and my general interest in fish and wildlife, I am most concerned with the careful study and conservation of our resources and the orderly marketing of these products. Under such a Commission as I have proposed, greater facilities for study and resource programs could be carried out. The economy of the industry could be protected from ill-advised practices and the promotion of sales and introduction of new merchandising and packaging methods and studies connected therewith would be of prime importance.

This is not an individual effort on my part but part of the effort of many Members of the House who believe such an important issue should be brought to the attention of the entire country and through the introduction by many Members of identical bills, point out the need for this Commission. Through their trade organizations, the fishing industry has fully discussed the many problems facing them today and endorsed such action. Through this long term discussion and by hearings and studies in the Senate Interstate and Foreign Commerce Committee where a committee print of the bill has been presented, it is believed that this bill, identical with many others introduced to this session of Congress, is a practical and workable method of gaining unanimity in the efforts to revitalize this industry.

As a benefit to all the industry throughout the Nation and particularly to this important segment of Florida's commerce I shall vigorously endeavor to obtain passage of this measure during the 84th Congress.

Under permission to revise and extend my remarks, I include the following article prepared by Dr. Carter C. Osterbind which outlines very well the importance of the fishing industry and the need for further research in Florida:

A SHORT REPORT ON FLORIDA'S COMMERCIAL FISHERIES

(By Carter C. Osterbind, associate research professor; and Elise C. Jones, assistant in research, Bureau of Economic and Business Research)

(EDITOR'S NOTE.—This article is based upon the recently published book entitled "Florida's Commercial Fisheries—Markets, Operations, Outlook," State Economic Studies No. 7, which may be obtained from the Bureau of Economic and Business Research, College of Business Administration, University of Florida, Gainesville.)

Commercial fishing is one of Florida's oldest industries, and through the years this State has ranked high in the production of fishery products. The latest data giving both the pounds and value of landings by States

are for the year 1952. In that year Florida ranked fourth among the States and Alaska in value of landings and sixth in volume of landings. California, Massachusetts, and Alaska ranked, in that order, as the three leaders in the value of landings. Florida was exceeded by these three areas also on a volume basis. Louisiana, falling only slightly below Florida in value of landings, ranked third among the States on a volume basis, while Maine fell in fifth place.

VALUE OF FLORIDA'S CATCH

Florida not only has ranked high among the coastal States in pounds and value of fish landed, but the value of these landings to the fisherman has been a substantial percentage of the total value of the fish catch in the United States and Alaska. In 1953 the aggregate value of Florida landings for the year reached an alltime peak of $31.5 million. This amount was 9.7 percent of the $325 million combined value of landings for the United States and Alaska. At the end of 1954, however, Florida's annual landings had dropped in value to $24.5 million, or 7.1 percent of the value of landings in the United States and Alaska.

Florida fishermen, operating from the most extensive coast possessed by any State, in addition to producing a high proportion of the national output of fishery products, also land more species of fish than do the fishermen of any other part of the country.

In the United States, Florida, the sole producer of sponges and the principal producer of red snapper, mullet, pompano, and a number of other varieties of seafoods has recently moved to the fore in the landings of shrimp.

In 6 of its 8 most valuable fisheries, Florida has continued to be the principal United States producer. In 1951 this State produced 93 percent of the Spanish mackerel, 82 percent of the grouper, and 79 percent of the mullet landed in the United States. In addition, Florida producers accounted for almost 20 percent of the shrimp catch. Among its eight most valuable fisheries Florida may be considered as a relatively minor producer only of menhaden. A comparison of the remainder of the Florida fisheries to those of the United States and Alaska reveals that for a very large proportion of the species landed in Florida, the State's fisheries are the sole or principal producers.

In recent years Florida's most valuable group of fisheries has been shellfish. The importance of shellfish is shown by the data below giving the pounds of fishery products landed in Florida, their total value, and their value per pound to the fisherman, by major groups of fisheries, for the years 1953 and 1954.

1953

Group	Pounds	Total value	Value per pound
Finfish:	*Thous.*	*Thous.*	*Cents*
Edible	65,445	$8,181	12.5
Nonedible	70,413	746	1.06
Shellfish	70,987	22,464	31.6
Miscellaneous	42	131	314.4
All groups	206,887	31,522	15.2

1954

Group	Pounds	Total value	Value per pound
Finfish:	*Thous.*	*Thous.*	*Cents*
Edible	64,571	$8,180	12.7
Nonedible	42,458	521	1.2
Shellfish	63,686	15,789	24.8
Miscellaneous	21	51	243.3
All groups	170,736	24,541	14.4

The average value in 1953 of 31.6 cents per pound of shellfish was a primary contributor to the highest total value of landings in Florida's history. In both 1953 and 1954 the shellfish group, made up principally of shrimp, spiny lobsters, and blue crabs, was Florida's most valuable fishery. In spite of the sizable decrease in 1954 of the value of shellfish landings, which is accounted for by the decrease in the per-pound value as well as the decrease in the landings of shrimp, the shellfish fishery was more valuable to Florida than all of the State's other fisheries combined. An expansion of the shrimp fishery and the other principal shellfish fisheries could quickly raise the value of Florida landings to new levels. The high value per pound for the miscellaneous group was attributable in both 1953 and 1954 to the per-pound value of sponges. This once very important fishery has suffered from a depletion of beds and study is now underway to see what may be done to restore the source of supplies as well as the market for the sale of sponges.

To appraise further the value of Florida's fisheries the values of fishery products at successive levels of distribution are included. Although statistics on the margins of processors, wholesalers, and retailers are not available, estimates have been made to show approximate values. According to estimates for the year 1953, Florida landings at the processor level had a value of $53 million; at the wholesaler level, $75 million; and at the retailer level, a value of $98 million.

Having examined the value of fishery products produced in Florida, and their relative importance it is appropriate to consider some other aspects of the economic importance of Florida's fisheries.

PRODUCTION FACILITIES, EMPLOYMENT, AND FISHERMEN'S INCOME

Production facilities in the fisheries consist, in general, of boats and vessels, fishing gear, and equipment, and fishhouse facilities for packing, processing, freezing, and storing. The last census of these facilities was taken in 1950. At that time the Florida fisheries were using 5,820 boats, 872 vessels (crafts of 5 or more tons) with a tonnage capacity of 11,726, and gear having an estimated value of $2.3 million, with the estimated total value of these facilities ranging from $8 to $15 million. Since 1950 many large shrimping vessels have been added to Florida's fishing fleet and a number of these vessels, equipped, have a value of $40,000 or more each. Although the total investment in fishhouse facilities is not known, the Bureau's survey in 1953 revealed that on the average the investment per firm was not large. Only 7 percent of the reporting firms had plants valued at more than $50,000, while over 46 percent had plants valued at less than $10,000.

Although the fishery employment figure is not strictly comparable to the other employment figures because of differences in the definitions of employment, it will serve for general comparisons.

Employment in Florida in 1950

Employed labor force	1,009,100
Employed in agriculture	123,000
Employed in manufacturing	108,300
Employed in wholesale and retail trade	240,400
Employed in construction	90,600
Employed in fisheries	10,300

Of the 10,300 people employed in the fisheries, 1,600 were classified as casual fishermen—those whose principal business was something other than fishing and who received less than one-half their annual compensation from fishing. Thus, in the summary statistics some individuals are counted as being employed in two industries. Although the number of employed fishermen did not exceed 1 percent of the employed labor force in Florida in 1950, in certain areas the importance of fisheries as a source of emeployment is much greater than this percentage would suggest.

Fishermen ranged from less than one-tenth of 1 percent of the employed labor force in Broward County to 35 percent in Franklin County. In 12 counties fishermen were over 5 percent of the employed labor force; in 7 counties, over 10 percent; and in 3 counties, over 20 percent. In all of these counties fishermen were clearly an important component of the total employed labor force. In 2 counties, Monroe and Collier, there were more fishermen in the labor force than either farm laborers or manufacturing employees. As would be expected, in the counties having the largest total labor force—Dade, Duval, and Hillsborough—the number of fishermen constituted a relatively small proportion of the total. The 3 counties leading in number of fishermen in 1950 were Monroe, Pinellas, and Franklin. The relative importance of fishermen to the employed labor force in these three counties, however, was very different. In Franklin County, as previously noted, they constituted 35 percent and in Monroe, 17 percent, while in Pinellas they were only 1.5 percent.

Employment conditions and the quality of workers in the fisheries have long posed problems to the industry. Some employers believe that the fisheries do not attract young men because of the long hours, the irregular seasonal nature of the employment, and the low wages. According to the 1950 census of population, the age distributions of employed oystermen and fishermen and of the total employed civilian labor force were not significantly different. In comparison to specific types of employment, however, differences may be found. For example, a larger proportion of those employed as operatives and kindred workers in manufacturing fall in the age range from 14 to 34 years than do those employed as oystermen and fishermen. Conversely, a larger proportion of oystermen and fishermen are in the age group of 45 years and over.

According to the 1950 census, the median income of oystermen and fishermen in Florida, based on the 1949 income received, was $1,239, which was considerably below the median income of $2,122 for those in the male civilian labor force. A comparison of incomes received by fishermen and oystermen with incomes received by manufacturing operatives and kindred workers and by all male workers in the experienced labor force in Florida reveals that a much larger proportion of the fishermen and oystermen fall in the low income classes of from $1 to $999 and from $1,000 to $1,999 per year.

Although the low level of income in the fisheries definitely contributes to the labor problems of the industry, it should be remembered that there are a number of factors contributing to this level of wages which are controlled by the skill and initiative of the individual fishermen themselves. In 1950 over 51 percent of the oystermen and fishermen were self-employed. Those who were not self-employed were compensated in most cases on the basis of a rate per pound or on the basis of a fixed proportion of the value of the catch. Thus, for most fishermen compensation was directly tied to the volume of landings and to the price paid per pound for the fish. This raises the significant question of the possible relative effects of production and market influences on the earnings of fishermen.

VALUE OF FISHERY PRODUCTS MANUFACTURED IN FLORIDA

Nonedible finfish landed in Florida are processed both in and out of the State and a very large proportion of Florida's edible finfish and shellfish is sold to out-of-State buyers without being canned or packaged.

Similarly, a large proportion of Florida's seafoods going into the local retail markets is not canned or packaged. However, canning, packaging, and processing are becoming more important in Florida, and the growth of these activities may have an important effect upon the future of Florida fisheries. In 1953 the total market value of Florida's production of packaged and canned finfish and shellfish products and byproducts was $4,090,299.

The production of breaded, cooked, and peeled shrimp has increased greatly in the past few years and has become the most valuable processed and packaged fishery product produced in Florida. The aggregate sale of this product in 1953 was valued at $2,239,383. On the basis of average producer's margins it is estimated that the above production represents a value added of $1,659,843.

FLORIDA'S OUT-OF-STATE MARKET

An assessment of the value of Florida's fisheries reveals that, although the amount invested and the number of people employed are comparatively small, this State accounts for a substantial percentage of the total value of seafoods landed in the United States and Alaska. Florida's relatively high position in production makes it appropriate to consider some characteristics of the market for these products and some of the factors influencing this market.

Producers in the Florida fisheries are in substantial agreement that out-of-State wholesale buyers constitute their best market outlets. In a survey in 1953 by the Bureau of Economic and Business Research the Florida producers were asked to specify in the order of rank their five most important out-of-State market outlets. Their responses revealed a market of considerable scope. Indicated as falling within these ranks of importance were 69 cities located in 24 States and the District of Columbia.

New York, though more remote than many of the States named as important, was ranked first by more producers than was any other State. Three nearby States—in order, Georgia, Alabama, and Louisiana—followed in the number of rankings. Among the important market States were included such States as Nebraska, Iowa, Illinois, Michigan, Indiana, Ohio, and Pennsylvania. The inclusion of wholesale buyers in these States, in the producers' listings of their most important market outlets, indicates not only the scope but also the consumption potential of the area served by Florida producers.

The wholesaler, however, is only the first link in the chain of distribution and the full scope of the market necessarily looks to the location of ultimate consumers. Consumer studies by the United States Fish and Wildlife Service have revealed that Florida-type fish and shellfish are used and identified by consumers located throughout the Nation. The studies indicate that although the market has national characteristics, very little is generally known by consumers about the major varieties of Florida finfish while a great deal is known about the major varieties of shellfish. This is an indication of the need to develop a better marketing program in the distribution and sale of Florida finfish. The preferences of consumers and the regional differences in these preferences point to both a changing market and a great potential market. Factors such as these make it evident that improved marketing practices by producers will have a considerable bearing on market participation in the future.

The volume figures of commercial fish landings in the United States and various other parts of the world show that, over long periods, as population has increased the landings of fishery products have also tended to increase. It may be deducted, therefore, that demand has been a dominent influence in determining the quantity of landings. On the assumption that this influence will continue and that supplies of seafoods from all sources will not suddenly fail to meet the demand, the expected continued growth of the Nation's population and the relatively stable per capita consumption of fishery products become valuable guide lines in appraising the future national market for seafoods.

The latest population projections by the United States Bureau of the Census indicate that by 1960 the population for the Nation is expected to be 16 or 17 percent greater than it was in 1950, and that by 1965 it will be 23 to 25 percent greater. In rough terms these figures give an indication of the potential percentage growth of the demand for seafoods if the per capita consumption continues to be fairly stable. In the national market supplied by products from American fisheries as well as by imports from other countries, domestic per capita consumption averaged about 9.8 pounds in the 10-year period from 1939 through 1948. From 1949 through 1954, the average was approximately 11.0 pounds—a significant increase in the total market picture. With improved facilities for better distribution and marketing, and with greater selling efforts, it is possible that there will be a further increase in the per capita consumption of seafood products.

Since population projections and per capita consumption figures both point to an increasing demand for fishery products in the national market, in general it may be said that there will be a good demand for Florida fishery products if the Florida producers can meet the conditions of the market. Even in this favorable market climate, there are several serious problems common to most Florida fisheries which must be solved before the Florida producers can improve—or even maintain—their position as suppliers in the national market. To meet this situation, attention must be given, among other things, to the cost of production.

HIGH COST OF PRODUCTION

One of the most serious threats to the Florida producers' position is the growing competition from low-priced finish from other parts of the United States, as well as from foreign countries. One obstacle basic to meeting this competition is the Florida producers' high cost of production; for, despite the low average wages received by Florida fishermen, the relative cost of labor per pound of fish landed is high.

The high cost of labor per pound of fish landed is probably due to the manner in which the fisheries have developed.

The nearness of the fishing grounds to port and the type of boats and gear effective in landing such important species as mullet and Spanish mackerel have made entrance into Florida fishing industry relatively easy, as well as attractive to many with limited investment capital. As some of those who entered the business prospered, they were able to enlarge their operations by adding small boats to their existing fleets. Since the method of fishing was such that the large producer had little opportunity to reduce his operating costs as the size of the operations increased, it appears that the greatest advantages emerging from large-scale production were in marketing rather than in production. These advantages consisted mainly of better market contacts and a broader knowledge of the southeastern market for fresh unprocessed fish. In recent years, however, as the large firms have found their market position challenged by fishery products from sources other than Florida, the type of operation which has proved advantageous over a long period is now presenting problems that permeate all phases of the industry.

Although the precise average profit or loss from Florida boat operations cannot be ascertained because of incomplete cost data, results from a survey of Florida fisheries by the Bureau of Economic and Business Research provide cost data on a limited number of producer-owned boats. Although these data purport to show no more than the reported cost experience of the number of boats designated, they do give an indication of the relative importance of the main elements of cost and the magnitude of the cost per pound of fish landed. Cost data were obtained on only three types of boat operations, but these three types accounted for approximately 80 percent of the value of marine fishery products landed in Florida in 1951: (1) mullet and Spanish-mackerel fisheries (gill nets); (2) red-snapper and grouper fisheries (lines); and (3) shrimp fisheries (otter trawls).

Mullet and Spanish mackerel boat operations: Figures on the average cost in 1952 of 21 mullet and Spanish-mackerel boat operations show that although the average fisherman's wage was only $1,413 for the year, the average labor cost per pound of fish landed was high. With the exception of expenditures for gas or fuel, the average operating costs per pound of fish landed were approximately the same for both mullet and Spanish mackerel boats. For these 21 boats the reported major costs plus the estimated depreciation actually exceeded the value of their gross receipts. With a labor cost of 5.9 cents per pound, in addition to the other out-of-pocket costs amounting to 4.6 cents, there was little margin left; when the depreciation was taken out, the producer actually had incurred a loss. These figures are for the year 1952; it should not be inferred that these producers operate at a loss in every year.

Given this cost situation at the production level, the existing transportation rates, and the customary markups at the various levels of distribution, it is estimated that fresh Florida mullet and Spanish mackerel moving through the New York wholesale market (an important market for Florida producers) will require an average retail price of from 29 to 36 cents per pound. This is the price for fish in the round—not drawn or dressed. If mullet and Spanish mackerel are drawn or dressed the required price will be from 39 to 48 cents. If the two varieties are filleted by the retailer, the required price per pound would be from $1 to $1.20. If mullet and Spanish mackerel are filleted, packaged, and frozen before distribution, it is estimated on the basis of an average price of 10.8 cents per pound paid to the fishermen, that the required minimum retail price would be 94 cents. As used here the term required price indicates the estimated price which results when the customary margins and transportation costs are added to the average price paid to the fisherman plus any processing costs that may have been incurred before distribution. The actual market price on some occasions is higher or lower than this average estimated price depending on the particular conditions of the market. However, use of the estimated required price makes it possible to appraise the approximate price results of production costs.

Snapper and grouper boat operations: Boat operation cost figures for snapper and grouper fishing are based on the operations of 9 Florida boats ranging in size from 29 to 40 feet—with the majority from 34 to 38 feet. With the exception of one which reported only grouper landings, all boats landed both grouper and snapper. The average wage of the fishermen on these boats was $2,150 for the year while the per-pound cost of labor was 9.2 cents. The very manner in which certain costs, such as labor, groceries, bait, and fuel, are incurred causes them to be high or low per pound of landings depending on the average value of landings

per trip. Maintenance and depreciation per pound, on the other hand, will be high or low depending on the total number of pounds landed during the accounting period. Thus, those snapper and grouper boats operating only a few months out of the year had a higher depreciation and maintenance cost per pound of fish landed than did the boats operating a greater number of months, whereas their respective costs for labor, groceries, bait, and fuel, per pound of fish, did not show the effects of the short operating season. Labor and groceries, which are by far the greatest expense items, equalled 68 percent of the value of fish landings.

On the basis of the average price of 16.6 cents per pound to the fishermen, the estimated required retail price of grouper in the round moving through the New York wholesale market would be approximately 35 cents per pound. If drawn, the estimated required price would be around 47 cents; if in steaks, around 70 cents; and if filleted, around $1 per pound. These figures are based on the customary margins and average weight losses experienced in the various types of processing indicated above.

Shrimp vessel operations: Since vessel operations and fishhouse operations are often integrated in the Florida shrimp fishery, it was necessary to apportion the aggregate returns between the two operations to derive the gross margin on shrimp vessel operations. On the basis of the method of apportionment applied, the average gross receipts to 22 shrimp vessels was $26,900—an average of 48 cents per pound of headless shrimp.

The per-pound costs are high in comparison to the two other types of fishing operations examined, and the percentage distribution of expenses differs in that the nonlabor costs account for a much greater proportion of the total expenses. Even so the labor costs were 18.2 cents per pound of shrimp landed. Based on the average costs and margins found for shrimp vessel operations and the corresponding margins for fishhouse operations, it is estimated that headless shrimp moving through the New York wholesale market would require a retail price of at least 97 cents per pound.

At times the shrimp fishery has been one of Florida's most profitable fisheries. The high returns to producers, both in the aggregate and on a per pound basis, and—in comparison to other fisheries—the high return to labor, suggest that downward movements in prices may be absorbed with less difficulty by this fishery than by other fisheries in Florida.

On the basis of the cost figures shown for the three types of fisheries and the estimated price effects of these costs, it seems evident that if Florida is to compete effectively in the national market the cost of production per pound of fishery products in the two finfish fisheries must be reduced. Whether the high per pound cost of production—a major problem in the mullet and Spanish mackerel fisheries—stems mainly from curtailment of production attributable to market forces, or whether it is due to method of fishing or type of gear used, is a question that needs to be answered.

CONCLUSIONS

Florida's commercial fisheries are an important component of the fisheries of the United States and Alaska, and the State's fisheries have, because of the rapid increase in the value of its shrimp fishery, attained an even greater relative importance in recent years. The market served by the Florida fisheries is extensive in scope and has possibilities of further growth if producers can meet the increasing competition in the national market. The high cost of production in the finfish fisheries poses a real problem—one that requires a reexamination of both production and distribution practices.

Apparently, then, there is no easy solution to the production problems of the Florida producers of edible finfish. While it is not outside the realm of possibility that technological innovations may bring about profound changes throughout all industries—including the production and marketing of seafoods—in looking ahead to the next decade, it seems more likely that any pronounced changes in fishing operations and marketing practices will involve only a greater emphasis on processes and methods already known or in use.

Summer Camps Run by Communists

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 10, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to insert in the RECORD an article on summer camps run by Communists, which appeared in the Manchester Union Leader for April 6, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN CONWAY LAST SUMMER—REVEAL FELLOWSHIP SPEAKERS CLOSELY LINKED TO COMMUNISTS

(By Reg Abbott)

CONCORD.—It can now be revealed that at least two of last summer's speakers at World Fellowship, Conway, have extensive records of fraternization with Communists.

They are William Hinton, of Putney, Vt., and Mary Jane Keeney, of the U. N. staff. Their Red-associated backgrounds are matters of public record.

The fact that they were here in New Hampshire sharply illustrates one angle of the State's antisubversive investigation. Namely, that the probe keeps tabs on many known Reds and—as an incidental result—helps keep Communist activity here at a minimum.

It is this aspect of the antisubversive probe carried on by Attorney General Louis C. Wyman and his staff which would be first to suffer if the recent United States Supreme Court decision against the Pennsylvania statute were to halt State investigations.

This is one thing Wyman is seeking to protect in urging congressional action to restore State authority in Red hunting.

World Fellowship and its director, Dr. Willard Uphaus, have been a special subject in Wyman's probe from the start. A major issue between them has been the attorney general's attempts to obtain, through court action, the complete list of speakers and guests at the fellowship center in 1954 and 1955.

OUT ON BAIL

Uphaus, as a matter of fact, is now on $1,500 bail pending decision on an appeal to the State Supreme Court, after he had been found guilty of contempt, in January, in refusing to furnish the lists.

Wyman warned, in his 1955 legislature report that "substantial activity at World Fellowship the last two summers should not be overlooked. Individuals with records of both Communist Party membership and lengthy records of pro-Communist affiliation have come to World Fellowship from all over the United States to engage in discussions."

REVEALED IN PAMPHLET

The fact that Hinton and Mrs. Keeney were at Conway was revealed by Uphaus himself, in a pamphlet just at hand called World Fellowship. Edited by Uphaus, the publication says of Hinton that "he * * * has recently lived and worked with Chinese farmers * * * told how they were organizing and their cultural and productive activities in the new order."

Mrs. Keeney was listed as an "authority on Germany." She was at Conway in July, is listed as an economist and foreign affairs analyst.

One other speaker of interest to New Hampshire is mentioned in the Uphaus publication. This was: "Prof. Gwynne Daggett, professor of English at the University of New Hampshire, described the situation with respect to civil liberty in that State and illustrated by an account of New Hampshire Attorney General Wyman's attempted interference with his free exercise of teaching."

Professor Daggett, it will be recalled, was in charge of a UNH class before which Paul Sweezy of Wilton delivered a lecture March 22, 1954. The Supreme Court ruled early this month against Sweezy's appeal from a contempt finding in superior court in this case. Sweezy has now challenged the legality of the New Hampshire antisubversive law.

HINTON RECORD

Hinton appeared before the Senate Internal Security subcommittee chaired by Senator WILLIAM E. JENNER early in March, this year. It was not his first such appearance. This time, the committee wanted to know more about his experiences in China after the Reds took over that nation. And they also wanted to know more about a trunkful of documents allegedly belonging to him, seized when he slipped back into the United States via Moscow—in 1953.

From the record of the JENNER committee meeting in Washington, September 27, 1954, it appears that JENNER told the committee that Hinton, an ex-newspaperman, had been farm manager at the Putney school, run by his mother. Owen Lattimore was once closely associated with the school, the committee was told.

JENNER said Hinton was sent to China near the end of World War II by the United States Office of War Information. He returned home in the spring of 1946 and became organizer for the National Farmers' Union. He returned to China for the U. N. Relief and Rehabilitation Administration in 1947.

ON RED PAYROLL

Senator JENNER, in the RECORD, then went on: "When the Moscow-armed Chinese Communists took over the Chinese mainland in the fall of 1949, this man Hinton remained as an employee of the Communist government." JENNER added: "Since his arrival in this country, he has been propagandizing on behalf of the brainwashing, soul-killing Red Chinese, whose soldiers were torturing and slaying Hinton's fellow Americans at the very moment he was on Red China's payroll."

Mrs. Keeney was listed by Uphaus as having discussed: "The attack on civil liberties of people in the United Nations."

Records here show that she was convicted on a contempt of Congress charge in the United States district court, after she had refused to answer questions about who had aided her in getting a U. N. job. That decision was reversed on a technicality in 1954.

MRS. KEENEY 'EXPERT'

Here is a summary of her background, contained in the court record: "The jury has been told that appellant had been very closely associated with important members of the Communist underground and overground, that she and her husband became close acquaintances and fraternized with one Silvermaster and one Ullman who were well known as alleged espionage agents working for the Russian Government in obtaining secrets from our Government, that she has

been active in the Institute of Pacific Relations, whose ramifications were to undermine the security of the United States and to accomplish certain activities of the institue in foreign affairs that would 'line us and them up with the Soviet Union'."

Both Nathan Gregory Silvermaster and Capt. William Ludwig Ullman have been identified by FBI Director J. Edgar Hoover as spies. Both once worked directly under the late Harry Dexter White in the Treasury Department.

Brazil in the Future of America

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, May 10, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Brazil in the Future of America," delivered by Mr. J. Peter Grace, president of W. R. Grace & Co., delivered before the Executives Club of Chicago on April 20.

Mr. Grace is a dynamic leader of our new generation of top business executives, but he speaks against a background of more than a century of experience which his firm has had in Latin America. In addition to his business duties, Mr. Grace has devoted considerable time and energy to various Government advisory groups seeking to encourage and develop the further growth of United States private investment in Latin America.

The address given before the Executives Club of Chicago is one of several made by Mr. Grace in recent months calling attention to the great contribution which American businessmen and investors can make in developing the economies of the Latin Amercian Republics. I highly recommend its reading to Members of the Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BRAZIL IN THE FUTURE OF AMERICA

(By J. Peter Grace)

Mr. Chairman, to be invited to lunch at all by the Executives' Club of Chicago is a distinct privilege. But to be invited to be your speaker is an honor which should belong to a much more learned man that I. I gratefully acknowledge your generosity in selecting me—only, however, in my capacity as the representative of the 45,000 men and women in 21 countries who really constitute W. R. Grace & Co. On their behalf and on my own, I thank you for this privilege.

Although W. R. Grace & Co. has more recently become known primarily as a United States chemical company, it has its roots deep in Latin America, and the lessons we have learned during more than a century in that rapidly developing part of the world will always remain a basic part of our business philosophy.

On various occasions in the past I have referred to the importance of Peru, where our company was founded more than a century ago, and of the vital role of Chile, Venezuela, Colombia, Mexico, and other Latin American countries in the history which is being written in our time.

Today I should like to discuss with you the significance of a Latin American country which is perhaps more vital to the future of our Western World than any other. I refer to Brazil.

This vast and dynamic nation is now within striking distance of its manifest destiny of economic and political greatness, and I should like to discuss it from the point of view of a businessman. But before going any further, I should emphasize that 20 years of training in the Grace organization have taught me that no North American should think of a Latin American country purely as a business proposition. Latin America has a vital part in our present and a much more important role in our future. The point is that we can engage in business there, earning a profit for our stockholders, and at the same time contribute to the future security of the Western Hemisphere.

Although our main Latin American interests have been concentrated in the west coast countries of South America, still the Grace organization has been active in Brazil for more than a half century in trade and commerce. From our long experience in Latin America we are convinced that, for massive growth potential, the opportunities in Brazil are unmatched in the world. I hasten to state that our own knowledge of the industrial field in Brazil is by no means as profound as that of many American concerns whose headquarters are right here in Chicago. In fact, Chicago is a really great center of knowledge in this country regarding Brazilian and other foreign business.

When this country needed an Assistant Secretary of State for International Economic Affairs, it turned to the First National Bank of Chicago to select Herbert Prochnow. A Chicago firm, International Packers, in partnership with the Kleberg family of the King Ranch, is revolutionizing the cattle-raising industry in central Brazil by introducing the Santa Gertrudis breed. This has enabled an English beef type of cattle for the first time to resist the local ravages of hoof and mouth disease and climate. In addition to highly efficient management of its 40,000 head of cattle and 155,000 acres of land, this company has also won the praise of Brazilians for its modern techniques of land clearing and development. The first survey for this project was made by a Chicagoan, A. Thomas Taylor, together with Robert J. Kleberg of the King Ranch. In two small Beechcraft planes, they covered the entire Matto Grosso territory, the Grand Parana, and explored the Brazilian interior to the Paraguayan and Bolivian borders. There is no question that Tom Taylor and Bob Kleberg know more today about the great potential of the interior of Brazil than any other Americans.

To those who would regard Chicago as something less than internationally minded, I would like to mention International Harvester, Sears Roebuck, Fairbanks Morse, Armour, Swift, Wilson, Abbott Laboratories, Quaker Oats, Pullman Standard—just to name a few of the many great Chicago companies doing business in Brazil. Despite the already great economic stake we have in Brazil, I am sure that all of you will agree with me that we have not even begun to begin the job of developing the United States-Brazilian economic relationship to the fullest. This I think is one of the most important elements in our economic foreign policy for the second half of the 20th century.

Today we have already made a good start in this direction. Total United States direct private investment in Brazil at the end of 1954 amounted to $1.1 billion. Excluding the $1 billion of United States capital invested in the petroleum industry in Venezuela, Brazil has more United States direct private investment than any other Latin American country. Equally impressive is the fact that, during the 8 years from 1946 to 1954, total United States direct private investment in Brazil increased 225 percent and manufacturing investments, where our best opportunities lie, at an even greater rate—325 percent.

Soviet Premier Bulganin's recent economic manifesto to Latin America indicates that there is danger of a vacuum in economic leadership in the Western Hemisphere. The United States must assert that leadersip, and to do so it must work particularly closely with Brazil.

The challenge as it pertains to Brazil is not one of political cultivation, for our countries have been friends for generations, even before Brazil declared herself a republic and adopted a constitution modeled after our own. Rather, the challenge is an economic one.

You will all recall that Brazil's dynamic new President Kubitschek made a special trip to the United States just before his inauguration last January. He invited American businessmen to bring their talents and their experience to his country. The question now, therefore, is whether American private capital is going to increase substantially its investment in Brazil, working with Brazilians in developing their tremendous natural resources and their huge industrial potential.

To start off with, I would like to give you a few highlights on Brazil. First of all, Brazil is big—both in area and in population.

In area Brazil accounts for half of South America. To make an even more pointed comparison—and I hope that some of my Texas friends may hear this one—Brazil is bigger than Texas. As a matter of fact, it is bigger than Texas plus all the rest of the United States, including Texas—and that is big in anybody's book.

Brazil's population presently stands at 58 million people, which is just under one-half of South America's total of about 122 million. This country's vitality can be further appreciated by the fact that its population is increasing at the amazing rate of 2.4 percent a year—or at a 30 percent faster rate than in the United States.

To put it another way, Brazil's present population is greater than the United Kingdom, and four times that of Canada. By the end of 1980, its population is estimated to equal over 105 million, or 60 percent of the present population of the United States.

Equally impressive as the vitality of the Brazilian people, is their quality and character, one of the nation's greatest assets. They are by nature a kindly, pleasant, cooperative people. They have unusual patience and sense of humor blended with quick intelligence and great common sense. They are working with missionary zeal to develop their country to take advantage of the opportunities now opening up for them and their children to get ahead. The street cleaner sees his son go into factory work earning good wages. The mechanic's assistant today opens a one-man repair shop tomorrow. The small-business man firmly expects to make a million before he quits.

We know, this exciting story very well because this is the way the United States grew in economic strength. A strong middle class with increasing purchasing power is rapidly developing in Brazil. This opens up promising new economic vistas in an area which is big, in a market that is growing and in a country that wants American capital.

In the lifetime of many of us here, Brazil has turned itself from an agricultural country which imported just about everything, including ice, to the most highly industrialized nation in Latin America. In the 10-year period from 1940 to 1950 alone, Brazil almost doubled the number of her industrial establishments from 49,000 to 89,000 and they are estimated at 115,000 today.

Today Brazil is manufacturing an increasingly substantial part of its own needs including railway equipment, radios, refrigera-

tors, machine tools, precision instruments, diesel motors and many other products.

In 1938, Brazil's crude steel production amounted to only 101,000 tons. By 1954, its production had risen to 1,292,000 tons, an increase of 1,200 percent. During this same period, crude steel production in the United States rose from 32 million tons to 88 million tons, or by 175 percent.

Brazil produced 109,000 tons of paper other than newsprint in 1938 and, by 1954, 298,000 tons, an increase of 175 percent. In the United States, the production of paper excluding newsprint increased from 5.4 million tons to 11.8 million tons, 120 percent.

In the 1920's Brazil had only 1 cement plant. Today it has 31 and the industry is planning to spend $50 million in expansion to meet demand. Since 1938, Brazil's cement production has risen from 681,000 tons to 2.7 million tons, or by 290 percent, about twice as fast as the 150 percent increase in the United States during this period.

In 1946 electric refrigerators were mostly imported and were only for the wealthy. Today Brazil produces 100,000 units a year and production is scheduled to be doubled within the next 2 years. Before the war all window glass installed in Brazil was imported. Today four large modern plants are supplying the ever-growing market.

Undoubtedly, the greatest symbol of Brazil's economic growth is the dynamic area of Sao Paulo. Fifteen years ago the Sao Paulo area was important principally as a coffee, cotton and textile center. Brazil accounts for 51 percent of the total cotton spindles in all of Latin America, 45 percent of which are located in Sao Paulo. Exports of cotton and coffee from this area account for 46 percent of all of Brazil's exports. Furthermore, the Sao Paulo district today represents the largest concentration of industrial strength and potential in Latin America and accounts for the following:

Forty percent of Brazil's total industrial establishments.

Forty-five percent of the installed electric capacity.

Thirty-five percent of the railway mileage.

Sixty-five percent of the petroleum refining capacity.

Twenty-five percent of the steel and laminated products output.

At the end of 1954 it is estimated that about $600 million of United States direct private investment—60 percent of the total for Brazil—was concentrated in the Sao Paulo area. This amount is greater than for any of the other Latin American republics with the exception of Venezuela, Cuba and Chile.

A visitor to Sao Paulo today can practically see this growth taking place with his own eyes. Back in 1949, he would have seen only three skyscrapers being constructed. Last year he would have seen 47 new skyscrapers being added to Sao Paulo's rising skyline. In the urban area of Sao Paulo, new buildings are being started on the average of one every 18 minutes. As a further indicator of the tempo of activity, there are approximately 40 round trip flights daily, excluding international flights, between Sao Paulo and Rio. Excluding in-transit passengers, air traffic through Sao Paulo has increased from a total of 264,000 passengers in and out during the year 1946 to 997,000 passengers in 1955, an increase of some 277 percent.

Belo Horizonte is another example of a Brazilian boom town. Fifty-eight years ago it was staked out for a population of 200,000 as a capital for the mineral-rich state of Minas Gerais and laid out like Washington and Paris. Today it has over twice that many people—440,000. An industrial area outside the city limits has been filled and a new one is being planned. A German firm has set up a 96,000-ton rolling mill. RCA is building an assembly plant for tubes and electronic parts. Some 12 other plants are either being built or already in operation. Population is increasing at the yearly rate of 5.4 percent, or over twice the rate of the entire country. Fifty-five flights a day are handled by the city airport. Belo Horizonte, in short, has all the sounds and sights of a first-class industrial boom town.

In specific industries the names that lead the industrial fields throughout the world are far from strangers in Brazil.

In chemicals you will find Du Pont, Solvay of Belgium, Koppers, Union Carbide, Imperial Chemical.

In pharmaceuticals, Squibb, Eli Lilly, Parke Davis, Pfizer, Merck, Bayer, Ciba, Geigy.

In tire production, Firestone, Goodyear, Goodrich, Dunlop, Pirelli of Italy.

In automotive assembly, Ford, GM, Chrysler, International Harvester, Mercedes-Benz, Fiat and Volkswagen. Supporting this mushrooming automotive industry are more than 800 independent plants, supplying parts and materials to the assembly lines.

This impressive array tells a dramatic story of Brazil's industrial boom. It is the story of an economy expanding at a remarkably rapid rate.

During the period 1946–1954, Brazil's gross national product increased at an average annual rate of 7.5 percent, the highest of any country in Latin America. This compares with an average annual rate during the same period of 3.2 percent for the United States and 4.4 percent for all of Latin America—Brazil included.

In terms of volume, the gross national product of Brazil in 1954 amounted to $13.9 billion. This was 30 percent of the total gross product of all Latin America.

One of the most attractive features of the Brazilian economy is the tremendous growth potential of its consumer market. Today only 20 million, or approximately one-third of its 58 million people make up the consumer population, thus leaving two-thirds yet to be brought in.

I am sure that many of you are wondering how United States companies have fared in Brazil in the past. The answer is that despite political unrest, exchange difficulties and inflation, American business has done exceedingly well in Brazil. Just as a few examples, I cite the following:

American Home Products' investment in Brazil has increased 270 percent since 1950 and its sales volume, 375 percent.

Sears, Roebuck opened its first store in Rio in 1948. To this it has added 2 in Sao Paulo and 1 in Santos. Practically everything Sears sells is manufactured in Brazil by Brazilians according to its own specifications.

The Lone Star Cement Co. established a Brazilian subsidiary in 1933 with a capacity of 800,000 barrels a year. Today its capacity has been expanded to 3.6 million barrels.

Ford has found in Brazil a major export market. Through its Brazilian subsidiary, Ford has sold some 130,000 vehicles there in the period since the end of World War II. By 1948 Ford became so convinced of the great potential of the Brazilian market that it decided to replace its old assembly facilities with a new $14 million plant, which was completed in 1953, with a capacity of 125 cars and trucks a day.

Ford's local purchasing program, started in 1949 and aimed at helping Brazil conserve foreign exchange and develop local industry, is an excellent example of how foreign capital can assist in strengthening a nation's economy. Today Ford purchases about 3,000 different items locally and the percentage of local material used in a Ford truck has risen to approximately 32 percent by weight.

We definitely think the Brazilian investment climate is good. Brazil is eagerly seeking and needs foreign investors, but she wants and obviously requires the kind that will stay on for the long pull and help in her industrial and economic development. I think it is a serious mistake for any of us to insist that Brazil conform to our every possible request before we consider investing. Real partners who come to stay will prosper in Brazil.

Brazil is understandably sensitive and has little regard, as we do, for the Monday morning quarterback. To our advantage her people, plainly and simply, like Americans and they say so. Our own Washington and Lincoln are great political heroes there. Brazil has stood by us in war. She is sending us her students and engineers and doctors for study. Last year alone, 507 of her students and 88 of her doctors were being educated in the United States. Dr. Milton Eisenhower, on his memorable Latin American trip, noted Brazil's interest in American tradition and history. President Kubitschek is in the best American tradition of the self-made man. He worked his way through medical school and fought his way to national leadership, rising from such poverty that he wore his first pair of shoes at the age of 11. President Kubitschek's administration already reflects this same drive and energy.

I do not venture to predict that the dilemma of coffee prices which has plagued Brazil's export trade and her exchange position will soon be solved. I would urge, however, that as friends of Brazil we take a more sympathetic attitude toward her need for a fair return on coffee, her largest export. After all, she is not asking for a handout and every dollar she gets for coffee comes back to us in the purchase of United States goods.

I will, however, venture one prediction, and that is that Brazil in the very near future will take affirmative steps to solve her petroleum problem in her own way. Today Brazil is spending almost one-third of her dollar earnings on oil imports and there appears to be no doubt that President Kubitschek is determined to bring about a speedy solution to this vital problem.

Gentlemen, Brazil offers an opportunity for United States private capital unique in our times. This great nation has a definite and important place in the future of America. With much of Brazil's economic potential yet to be developed, our dependence upon Brazil in the years to come will constantly increase. American technology may substantially change this situation but for the long run we must assume, I feel, that Brazil will be one of our most indispensable economic allies. We should sow our confidence in this country now, for what we do today in Brazil will determine in the years ahead what Brazil will do for us.

In the future Brazil will take her rightful place among the leading industrial nations of the world. For those of us who go into Brazil now and work with the Brazilians in developing their country at this very time when they are growing and seeking our help, the returns over the years should be eminently rewarding. Therefore, it is to our own interest as well as to hers that we accept the invitation now being offered us to share in Brazil's destiny.

The Pius XII Memorial Library

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. ADDONIZIO. Mr. Speaker, it is my privilege to be a member of UNICO, a national organization of Americans of Italian heritage whose aims are signi-

fied by its motto, "Service Above Self." This organization is designed to encourage and foster Americanism and at the same time to preserve the love for the ancestral land and culture of the membership. UNICO members are asked to make great sacrifices, not for any personal gain, but for the happiness found in service to others. UNICO, which derives its name from the first letters of the words unity, neighborliness, integrity, charity, and opportunity—has carried out an impresive program of philanthropy since its founding in 1922, both on a local and national scale. Thus, the members of UNICO show their gratitude to America which has enabled them to give expression to the best within them.

Of the countless civic and humanitarian activities of the UNICO chapters throughout the country and of UNICO national, perhaps the most unusual is the currrent effort to raise donations for the erection of the Pius XII Memorial Library on the campus of St. Louis University. Under the able leadership of National President Alphonse A. Miele, of Bloomfield, N. J., and Dr. Nicholas S. Vitale, a national vice president, this unique project is making admirable progress. President Miele delivered a most interesting address on the subject at a sectional meeting of UNICO for the State of Pennsylvania groups at Wilkes-Barre on March 24, 1956. I know that the membership will enjoy reading President Miele's speech which follows:

INFORMATIVE TALK BY PRESIDENT MIELE

Dear fellow Unicans, when our beloved founder, Dr. Anthony Vastola, and his 14 fellow citizens and Waterbury, Conn., founded Unico in 1922, they envisioned the growth of chapters both in number and in prestige. Today that realistic dream is being fulfilled. Unico currently is enjoying an era of high civic reputation in 18 States across the Nation, because its name has become synonymous with civic and national projects ranging from aid to local charities to founding memorial units in the International College of Surgeons and in the Pius XII memorial library to be erected on the campus of St. Louis University. It is about the latter subject that I would like to talk to you tonight.

Among the treasures preserved in the Eternal City of Rome is a vast collection of precious manuscripts which have been kept for centuries in the Vatican library. Realizing the danger of earthquake, fire, or (God forbid) even atomic attack, several of the literary and scientific treasures of the world would be lost, for there has been no duplication of these documents. A singular event took place on November 1, 1950, when, at St. Louis University in St. Louis, Mo., a history scholar and the college librarian won the permission of the university president, the Very Rev. Paul C. Reinert, S. J., to petition for the privilege to microfilm the manuscript collection of the Vatican. Six weeks later Father Anselmo Albareda, chief librarian of the Vatican, granted the unique request. For 25 years other institutions had sought this permission. St. Louis, however, the industrial center of our country and equally strategic location as far as safety is concerned, seemed a likely repository for the Vatican papers. Following this permission came the almost insurmountable task of choosing material to be microfilmed. It meant two trips to Rome, the acquisition of highly technical equipment, a series of conferences with learned librarians, both at home and abroad, and the finding of a donor who would pick up the check for the microfilming process currently costing around $300,000. Since this was during the Korean War, microfilm equipment was hard to come by, but with technical counseling from such able consultants as Edward Freel of Remington Rand and Mr. M. B. Brand of the Graphic Microfilm Co., the university authorities were led to sources whereby the project could get under way. The United States Air Force also released an additional film developer. This particular machine, costing $15,000, in one thermostatically controlled process develops, washes, dries, and winds the film as fast as the cameras can use it. To the assistance of the two priests in charge came the Knights of Columbus Foundation for the Preservation of Historic Documents, which agreed to pick up the check for the cost of the microfilming. Dr. Carl Rossi, chief technician of the Vatican microfilm laboratory, organized a team of camera technicians and since 1953 the process has been a reality.

Among the documents being reproduced are manuscripts in Greek, Hebrew, Sanskrit, and Oriental tongues. The majority of the volumes, however, are in Latin, Italian, French, German, or Spanish. The manuscripts cover a broad subject matter with no particular emphasis on eccleciastical matters. Scholars from all over the Western World, regardless of creed or nation, will be welcome at Saint Louis University to engage in investigate research. Their effort will give a new quality to American culture and a rich refreshment to American scholarship. Requests have already come from hundreds of institutions for information of the microfilm that has already been received. Currently the precious film is being stored in the Vatican Room of the general university library. So great was the attention given the project that the university authorities, foreseeing the need for a greater service to scholars and an increased need of facilities for the university student body of some 12,000 students, proposed a new, spacious, and serviceable library which would become a new home for the Vatican documents and be supplemented by the 800,000 volumes now in use in the university's central library. At this point in the project the university president, Father Reinert, requested permission of the Pope to name this great center of research in honor of His Holiness Pope Pius XII. This extraordinary permission was granted in the form of a letter to Father Reinert, signed by the hand of the Pope on January 2, 1953. Since then all roads of interest led not only to Rome but to Saint Louis, U. S. A., which is destined to become a mecca for American scholars.

UNICO is privileged to lend its united interest and philanthropic prestige in the promotion of this program. Dr. Nicholas S. Vitale, a well known Saint Louis physician and a graduate of the university, as well as a national vice president of UNICO National, is spearheading UNICO's effort to be identified in a fitting memorial with a program which is so near and dear to the interests of the Supreme Pontiff.

As Farther Reinert recently said, "As history cannot be denied, we also know that the nature of men does not change. As it was the voluntary action of the Italian people throughout the centuries to recognize and preserve the great works of scholarship and the fine arts, so we know today that American citizens of Italian heritage will be equally alert to support and perpetuate the same treasures of the ages."

These few facts, I feel, will give you a preview of our most important undertaking for the years of 1956 through 1958. As president of UNICO, I have found the interest high among our membership and having myself been close to this project (in fact having accepted the honorary chairmanship) I know that you will share with me the extreme pride that comes to every Unican when he feels that he and his organization have contributed both spiritually and materially to the transporting of these ancient literary and scientific treasures from the banks of the Tiber to the shores of the Mississippi. Possibly you and I, certainly our sons and daughters, will profit by the advent of this rich plasma to American education.

Freedom Crusade

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. DODD. Mr. Speaker, the continued imprisonment of 13 American citizens by the Chinese Communists is rapidly becoming a national disgrace, mostly because of the apparent lack of concern on the part of the American people over the plight of these people.

Recently the Very Reverend Harold W. Rigney, S. V. D., who was a prisoner in Red China for 4 years and 2 months, came to Washington and together with several Members of Congress, I had an opportunity to talk with him and to hear his dreadful story at first hand.

While Father Rigney was confined, his friends in the United States worked tirelessly for his release through written petitions and prayer.

Since his return to the United States, Father Rigney is doing all that he can to see that those who are still imprisoned in Red China are released.

Father Rigney and his friends have organized a nationwide freedom crusade, in which millions of Americans will be asked to write and petition for the release of our 13 innocent American citizens.

I am particularly interested because John Downey, of New Britain, a resident of my district, is under a life sentence on the usual trumped-up Communist charges.

I ask that every Member of Congress help us in this crusade and I insert herewith a copy of the circular which is being distributed by those who are active in this patriotic and humane movement:

DIVINE WORD MISSIONARIES, TECHNY, ILL., FREEDOM CRUSADE

Question. What is it?

Answer. The Freedom Crusade is a nationwide letter-writing campaign to Chairman Mao Tse-tung, head of Red China's Government, politely petitioning the release of 13 Americans still held prisoners by the Chinese Reds. This crusade has been launched by Father Rigney and is being conducted with the cooperation of the Back of the Yards Council, Chicago.

Question. Who is Father Rigney?

Answer. Very Reverend Harold W. Rigney, S. V. D., is a Divine Word Missionary, whose 10-year prison sentence in Red China was cut down to 4 years and 2 months by prayer, publicity, and letter writing.

Question. Will it work?

Answer. The letter-writing campaign will work because the Red regime in China is very sensitive to publicity. Moreover, the communistic rulers of China will be more in-

fluenced by letters from laborers, farmers, and labor unions than by requests from our industrialists and politicians. Letters of children will also exert a great influence.

Question. Where was it conceived?

Answer. The campaign was conceived in those dreadful prisons in China by Father Rigney, who felt that just such a campaign was needed to free him and all other Americans rotting in Red prisons.

Question. What is the address?

Answer. The address is simply: Chairman Mao Tse-tung, Peking, China. There is no need to give your return address.

Question. What do I say?

Answer. Your letter should contain three points:

1. Give your name, your occupation (this is most important), the name of your union, if any, and—if married—state the number of children, if any.

2. Then courteously remind Mao Tse-tung that his Government promised in September of 1955 to free the 13 American prisoners still held in China. Say that you would like to see him carry out this promise. And if you have time, list the 13 prisoners.

3. Conclude by saying you hope to see Mao Tse-tung demonstrate the policy of leniency which he professes toward violators of the law, by applying leniency in full to these 13 American prisoners.

Question. Why use airmail?

Answer. The misinformed Chinese will be astonished to see that American laborers can afford airmal. In Red China a carpenter must work several hours to purchase an airmail stamp. Airmail postage to Red China is 25 cents per half ounce. Ten-cent air letters and eight-cent letters via ordinary mail can be used but are less effective.

Question. Will a count be kept?

Answer. Keeping tally of the number of letters sent to Mao Tse-tung is most important for publicity reasons on a national and international basis. Individuals and groups should immediately report the number of letter they have written by sending a post card to: Father Rigney, Chicago, Ill. The tabulating will be done by Chicago's Back of the Yards Council.

Question. Who are the 13 prisoners?

Answer. They are businessmen and missionaries, Protestant and Catholic: Rev. John William Clifford, Jesuit, San Francisco, Calif.; John Thomas Downey, New Britain, Conn.; Richard George Fecteau, Lynn, Mass.; Rev. Fulgence Gross, Franciscan, Omaha, Nebr.; Rev. John Alexander Houle, Jesuit, Glendale, Calif.; Paul J. Mackensen, Jr., Lutheran missionary, Baltimore, Md.; Robert E. McCann, Altadena, Calif; Rev. Charles Joseph McCarthy, Jesuit, San Francisco, Calif.; Rev. Joseph Patrick McCormack, Maryknoll, Palmyra, N. Y.; Rev. Thomas Leonard Phillips, Jesuit, Butte, Mont.; Bishop Ambrose Henry Pinger, Franciscan, Lindsay, Nebr.; Hugh Francis Redmond, Yonkers, N. Y.; Rev. John Paul Wagner, Franciscan, Pittsburgh, Pa.

Question. Give a sample letter.

Answer. The envelope address: Chairman Mao Tse-tung, Peking, China.

The letter:

DEAR CHAIRMAN MAO TSE-TUNG: I am John A. Brown, a carpenter, a member of the United Brotherhood of Carpenters. I am married and have five children.

In September of 1955 your Government promised to release all Americans, and today 13 are still in prison. I would like to see you carry out your promise. The names of the prisoners are (here insert the names if you have time):

I have heard of the policy of leniency which you profess toward violators of the law. It is my fond wish that you carry out this policy of leniency by applying it in full to these 13 American prisoners, releasing them from prison and helping them to leave China and return to their homes.

Sincerely yours,

JOHN A. BROWN.

Question. Are more circulars available?

Answer. More of these circulars can be obtained by sending your address and stamps to cover return postage to: Father Rigney, Chicago, Ill.

FELLOW AMERICANS: I know what prison life is in Red China, a veritable hell of mental and physical tortures. I am sure these 13 prisoners are going through the same or similar tortures I endured. If your letter helps reduce even to a small extent the imprisonment of these fellow Americans, it will be well worth while and they will be eternally grateful to you as I am to the tens of thousands who wrote letters in my behalf.

Sincerely yours,

Father HAROLD RIGNEY, S. V. D.

Keep Your Guard Up

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. SCRIVNER. Mr. Speaker, on Saturday, May 5, 1956, in my home town of Kansas City, Kans., a million-dollar National Guard armory was dedicated.

It was my honor and privilege, not only as a Member of the United States House of Representatives, and a member of the Defense Subcommittee of the House Appropriations Committee, but also as a former National Guard man for many years, to be selected to deliver the address of dedication.

That address follows:

I am happy to be home—home in a city whose citizens, not looking with outstretched hands to Uncle Sam, voted to spend their own money in building such a splendid armory, the most practical, usable armory I have ever seen. Quite frankly, and honestly, it is a much better, more practical and beautiful armory than you would have had if Uncle Sam had been mixed up in its construction, telling you how to build it, and what you could or could not incorporate in it.

I am happy to be here, in my official capacity as a Member of the United States House of Representatives, and of the Subcommittee on Defense Appropriations which provides the funds, not only for our regular military services, but also for the United States National Guard. I am proud of my nearly 20 years of service in the National Guard, both as a member of the 35th Division in World War I and later years after I made Kansas City, Kans., my home.

I am not here as a recruiting officer for the National Guard, but if I were here in that capacity, I would point out that despite the cynical smiles and sweet talk we now receive from Red Khrushchev and his Kremlin crew we must face the hard, inescapable fact that as long as Soviet Russia remains a menace to the peace and security of the world—including the United States of Amerıct—we must maintain a strong national defense, of which the National Guard is such an important part.

For this reason young Americans face an obligation of military service for the next 10, 20, 30, perhaps 50, years.

I would point out that in the local units of the National Guard young Americans can serve with men of their acquaintance and from their community—serve, and continue their studies—serve and work on their jobs—serve and live with their families and friends.

National Guard service, in peace or in war, is an honorable service, in which any American can take great pride. It is an important part of our national defense. That importance is recognized by the Regular Army—as proven by the message of Gen. Maxwell Taylor, the Army Chief of Staff, and the presence of his Vice Chief of Staff, General Palmer.

Audie Murphy, of whom you have heard or read, is recognized as the outstanding hero—the most decorated American soldier in World War II. Audie Murphy, holder of the Congressional Medal, is again serving his country—not in the Regular Army—but in the United States National Guard. If National Guard service was not an honorable and important service, service in which any soldier can take pride, do you think for a minute that Audie Murphy—hero, soldier that he is—would be in its service? The question answers itself.

I am happy, too, to be here on this occasion, upon which we dedicate this building, for another reason. It is more than a building—it is a dream come true—a tangible testimonial to the vision, tenacity, and faith of one man, Col. Mahlon S. Weed.

Years ago, as a 1st lieutenant, Company G, 137th Infantry, I listened long hours to the "Skipper," for he was then Captain Weed—draw his word picture of what we needed to properly train troops.

At that time, the National Guard armory—called that for lack of a better name—was the old theater, now the site of a laundry, at 15th and Central, just around the corner from here.

Offices and supply rooms were in small, insecure storerooms, with no heat in winter and no ventilation in summer. A side street was our drill field.

Later on the armory site was the basement of Memorial Hall—where units during drill had to dodge countless 36-inch square pillars; where classrooms were inadequate; where all other activity had to stop if any practice firing was to be done.

Even so, the National Guard units that trained there were well-trained and the men who were trained in those units went into World War II and made outstanding records, earning high awards and battlefield commissions—all trained under the leadership of officers like Captain Weed, Capt. Leo Swoboda, Capt. Harry Lyon, Captain Adams, Lieutenant Starry, Major Gloyne, and ever so many others, citizens of this community who saw and shared Skipper Weed's vision.

World War II found our National Guard units ready to answer the call to service from that inadequate memorial basement armory—these units were under the station commander, the late Lt. Col. C. P. Barshfield.

Company G, 137th Infantry, Capt. Mahlon S. Weed, commanding.

Second Battalion Headquarters Company, 137th Infantry, 1st Lt. Don A. Starry.

Medical Detachment, 161st Field Artillery, Maj. Louis Gloyne.

Band, 127th Field Artillery, W. O. Charles M. Nixon.

Thirty-fifth Signal Company, Capt. Clyde B. Adams, and 2d Battalion Headquarters Batteries of 127th Field Artillery, formerly 114th Cavalry, commanded by Capt. Leo Swoboda and Capt. Harry Lyon.

After World War II was ended, most of these men came home. Some had died in combat. National Guard activities were renewed in the basement of the Memorial Building, old units were revived, new units were organized. Today, in Kansas City, Kans., we have 8 units: Company F, 137th Infantry; Company G, 137th Infantry; Headquarters and Headquarters Company, 2d Battalion, 137th Infantry; 2d Battalion Platoon Medical Company, 137th Ifantry; Headquarters and Headquarters Company, 197th Transportation Battalion; 137th Transportation Truck Company; 42d Army Band; and 772d Engineer Company.

In addition, facilities are provided for the administrative headquarters, 137th Infantry,

and the three Regular Army advisers stationed here to supervise and assist with training.

These new units, with the advance of military science, demonstrated the need for new facilities. Many plans were developed and discarded.

Finally, with the bond election almost unanimous, the way was clear. Today you see the culmination of all those efforts. On this ground stands, by your efforts, this magnificent armory, in which the youth of today and tomorrow will receive training from experienced, dedicated men, noncommissioned, as well as commissioned, officers, training that some day may not only save their own lives, but may very well save your country and your life.

The history of the National Guard of the United States is part of the history of this Nation. Militia, it was called in the early days, but militiamen have made history in every war from the minutemen of Concord and Lexington, the Civil War, the Spanish-American War, the Mexican Border War, on through St. Mihiel, and the Argonne of World War I, to the steamy, slimy islands of the Pacific and the battlefields of north Africa, Italy, France, Belgium, and Germany in World War II—men who made history in the grey dawn of Omaha Beach, at St. Lo—right up to the very gates of Berlin—after bitter battling at Bastogne through that cold, cold Christmas of 1944.

In World War I over one-fourth of the troops in Europe were national guardsmen (including the 35th Division). World War II saw 9 National Guard units fight in Europe, and 9 in the Pacific. All turned in magnificent records, just as they did later in Korea.

And speaking of Korea, there are many interesting facts not generally recognized or appreciated by the general public. One of them is that Korea was not a so-called brushfire war. It was a war of considerable magnitude as demonstrated by the fact that nearly 2 million more men served during the Korean conflict than in World War I, and we World War I veterans thought that was a big war.

The other fact is that, in that conflict in faroff Korea, again it was civilian soldiers that carried the greater part of the burden.

As may be expected, in view of the almost overnight suddenness with which Korea began, the first ground troops in action were those hastily assembled Regular Army forces then on duty in the Far East. As the war progressed the ratio of Regular to non-Regular decreased so that in December 1951, 2 out of every 3 enlisted soldiers were civilians: National Guards, reservists, and selectees.

In the ranks of officer personnel, Army—and this was generally true of the Air Force, and the naval aviation—from the very beginning 4 out of every 5 officers engaged in the Korean conflict were reservists—non-Regular Army officers.

What was true there and in other wars will always be true. This Nation is not a military nation. Military service is not overly welcomed as career. We have never maintained a large peacetime military force until now. When, in this period of uneasy peace, we have just under 3 million men in service, a Regular Army of over 1 million, nearly a 1-million-man Navy, and almost a million-man Air Force.

Even so, when the "chips are down," "when the bell rings" when another war comes upon us, the major portion of our military manpower will, as it has in the past, come from our civilian soldiers such as the men in these and other National Guard units—and the Reserve components.

Today, as we sit here, Air National Guard pilots in jet planes, such as those participating today, are on the end of runways—on active duty—ready to answer any scramble warnings, as an every-day integral part of our air defense command—minutemen in every sense of the word—on the alert 24 hours each day—in the service of their country for its security.

We used to hear the phrase "A million men spring to arms overnight." That never was true, and it is further from the truth today than ever before.

The science of war, while basic, is ever-changing. The bow gave way to gunpowder, used in the early day, ineffective, highly inaccurate matchlock weighing nearly 20 pounds. These gave way to our effective, accurate, light-hand weapons of today. The pike gave way to the bayonet, which, incidentally, was originated in Bayonne, France, where it got its name when it was but a short sword or pike point to be inserted in a gun muzzle to make that early day doughboy a pikeman as well as a musketeer. Horse cavalry grudgingly gave way to tanks. Hand semaphor has been replaced by radio. Runners save their lives and legs by walkie-talkies. Television today shows a commander what goes on up front. Trucks, jeeps, helicopters and one-man "flying platforms" take the place of "shank's mare." Recoilless weapons, rockets, and missiles of many types displace some of the old artillery. Electronic devices of amazing complexity are just short of miraculous.

We sing in our national anthem about "the rockets red glare; bombs bursting in air." From those rockets used in the War of 1812, the new honest John is a far, far cry; and when it comes to the puny pop and flare of those bombs—as compared to our A and H bombs—there really is a change. Antiaircraft artillery is being superseded by Nike and other guided missiles, which can seek, track, and strike enemy planes.

The old Jn—the early days Army "Jenny"—has been surpassed by jets, fighters and bombers, and guided missiles—pilotless bombers—in effect.

Our new modern Army, of which the 27 divisions of the National Guard and 27 Air National Guard wings are such an important part, needs new modern training facilities. Here in this modern building, which you have given them, your citizen-soldiers will learn about these modern weapons, radio, radar, electronics, the new as well as the older weapons of war. The faith and confidence you have shown in them will be returned to you a thousand-fold in the years to come.

After all, these young men are your sons; the pay they receive, and it amounts to one-half million dollars per year, is spent right here in their home community, which means that this is not only an investment in the future security of our Nation, but looking at it from a selfish angle, it is also a good business investment, because each one of those dollars turns over seven times before it leaves the community.

You have given a modest sum in your tax dollars, a premium on your insurance policy for national security. These young men who train here will give of their time—time taken from pleasurable pursuits, time taken from their families, time taken from vacations, perhaps they may even give their lives, all in order that you and the Nation may sleep better tonight and every night.

No one knows when they may again be called upon for peacetime duty, just as they were on black Friday, July 13, 1951, when the biggest flood of all times hit our homes.

No one knows when these units will be called into Federal service. Maybe tomorrow, perhaps never. Yet with the advent of atomic power, with Russia a menace to world peace, when it is possible, though not probable, that nearly any part of our Nation might become a target, the National Guard becomes more and more an integral part of our national defense system.

So it is with great pleasure that I share with you the joy you have in dedicating this building to the service of your community, your State, and your Nation, to be used in the training of your youth for service in time of war or peace. These young men serving in the units which will use this armory, I am sure, will in the future, just as their fathers did in the past, serve with skill, courage, and loyalty—serve in such an exemplary manner that they themselves, and you, will have great pride in their service and exploits should the call ever come.

With these marvelous modern facilities they will be far better prepared than they could have been otherwise. Even so, I am sure you join me in the prayer that, even though prepared, they will never be called upon to serve in time of war.

With them let this be your slogan, "Keep your Guard up."

At the conclusion of these remarks, and as a part of this dedication ceremony, I will present to Col. Mahlon Weed, station commander, this United States flag, which at my request was flown over the United States Capitol on the 5th day of August 1953, an anniversary of the 5th day of August 1917.

That date of August 5, 1917, does not mean much to today's generation, but to us older veterans of the National Guard it was a momentous day in our life.

That was the day when all of the National Guard units in the United States were mustered into Federal service for World War I.

Among those guardsmen was our guest, former President Harry S. Truman, who entered service as captain of Battery E, 129th Field Artillery; another was your host, then Sergeant Weed, Company H, 137th Infantry; Pvt. Errett P. Scrivner, later Pfc., took his oath along with others in Battery B, 129th Field Artillery.

Many of the leaders of this city, Kansas City, Kans., ceased being civilians on that day when their units were also mustered into service:

Company A, 137th Infantry.
Battery E, 130th Artillery.
Company B, 110th Engineers.
Company C, 110th Engineers.
Two ambulance companies, 110th Sanitary Train.
A section of ammunition train, 42d Division.

All of us—all of them—are proud of their service—which we will never forget although others may. Our service helped bring victory—just as National Guadsmen always have and always will.

We were proud to serve under our country's flag then—just as we are proud to live under it today.

This flag is more than mere threads of Red, White, and Blue. In its folds are contained all the glorious history of the past, and the hopes of the future of this great Nation.

And, as Francis Scott Key said, about the Star Spangled Banner, in those closing words of our national anthem:

"Long may it wave o'er the land of the free, and the home of the brave."

And it will wave long, because this Nation is—has been—and will be the land of the free because it is the home of the brave.

Brave because they have faith—
Faith in themselves—
Faith in their country—
Faith in its future.

An above all because they have an abiding faith in God—the Divine Providence—that has guided and guarded our beloved Republic for nearly 200 years.

Confident Public Keeps Spending at High Rate

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. SPRINGER. Mr. Speaker, many Members of Congress are wondering about the confidence of people generally in our economy. Recently, the Federal Reserve Board in cooperation with the University of Michigan conducted a survey of the consumers' view for 1956. It indicates a high rate of spending for the remainder of 1956. This is the most hopeful sign for the continued prosperity of our economy. A résumé of this survey was reported by the columnist, James E. Roper, in last Sunday's Washington Star, and it is herewith appended.

THE CONSUMER: CONFIDENT PUBLIC KEEPS SPENDING AT HIGH RATE

(By James E. Roper)

Consumers, their confidence in the future strong, will be pouring dollars—their own and borrowed—into the economy at a brisk clip come election day. Their spending may be slightly above that of last fall.

That is the opinion of a number of economists who study consumer habits. They hasten to qualify it, however, with the warning that the American housewife—the No. 1 consumer—is an extremely volatile person and that her responses, however whimsical, to events can change the outlook completely.

But putting aside the intangibles, the economists find several reasons for expecting high spending for food, clothing, housing, automobiles, entertainment, and the other consumer items.

THE CONSUMERS' TALK

The consumers' own expression of what they intend to do is reflected in a survey conducted by the Federal Reserve Board in cooperation with the University of Michigan.

The survey, made early this year, found that consumers view their current financial situation favorably, are optimistic about their own income prospects, and are very optimistic about prospects for business generally.

Compared with a survey a year earlier, the Reserve Board said, about the same proportions of consumers reported plans to buy new and used automobiles, other durable goods, and new and used houses, and to undertake home improvement and maintenance.

The Federal Reserve Board found that two-fifths of the consumers felt they were better off early this year than at the beginning of last year, and less than one-fourth felt they were worse off.

As for the future, nearly two-fifths of the consumers interviewed said they expected to be making more a year from now. Less than one-tenth said they expected to be making less.

WORDS OF CAUTION

Having said all of this, however, the Federal Reserve Board cautions:

"Consumer plans to buy, expressed early in the year, should not be taken as a forecast of what consumers actually will buy during the year. Many factors, some of them impossible for consumers to know in advance—such as changes in prices and credit availability, attractiveness of new products and models, and changes in general business conditions—will influence consumer buying during the year."

In examining the probable outlook for this fall, therefore, it is advisable to examine not only what consumers say they will do, but what they actually have done so far this year.

On balance, they have spent a little more than they did a year earlier. It is true that automobile sales have lagged so badly that production is running 25 percent or more below a year ago. Housing starts show a 20-percent decline.

These declines, however, are below the record-breaking figures for 1955. By almost any other comparison, the activity this year is encouraging.

STORE SALES UP

Consumers are spending liberally on soft goods, too. For the Nation as a whole, department store sales so far this year have been running about 6 percent above a year ago. In Washington, they are running closer to 10 percent. Most store owners see the trend continuing.

Debt is mounting. At the end of February, installment debt—on such things as automobiles and other durable goods—totaled $27.7 billion—$5 billion more than a year earlier. Mortgage debt and installment credit are up, too.

This reflects the country's enthusiastic confidence in the future. But it makes the consumers more sensitive to any changes in the business outlook. If the consumers—with or without reason—suddenly lose confidence in the future, they could cut back their spending so sharply that the whole economy would be jolted.

This is a danger that causes some economists to keep their fingers crossed. But so far, the consumer—as buoyant and well-heeled as ever in the history of the United States—seems intent on spending freely and confidently.

Philadelphia's Position in East Coast Cab Case

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. GRANAHAN. Mr. Speaker, as a Member of the House Committee on Interstate and Foreign Commerce which has jurisdiction over the work of the Civil Aeronautics Board and which originates all legislation dealing with aviation matters, I have never believed in having the committee intervene in pending cases. I think all of my colleagues on the committee would agree with that point of view.

On the other hand, as a Member of Congress from Philadelphia, I believe it is my right and my duty to make sure that my city's position on aviation route matters is clearly brought out.

There is now pending before the CAB an important case involving east coast routes, a case in which some of my New England colleagues have evidenced strong interest. There have been a number of statements in the CONGRESSIONAL RECORD bearing on the case and on the examiner's report.

For that reason, Mr. Speaker, I am herewith inserting in the Appendix of the CONGRESSIONAL RECORD, for the information of all those interested and concerned, the position of the city of Philadelphia, jointly with the Philadelphia Chamber of Commerce, on this matter.

In this connection, I include an article from the February 23d issue of the Chamber of Commerce News of Greater Philadelphia entitled "Chamber of Commerce Pushes for O. K. of New Flights to South America," an article from the same publication of April 19 entitled "CAB Examiner's Report Reviewed; Chamber of Commerce Urges Fourth East Coast Carrier"; and, following that, the statement of exceptions of the city of Philadelphia and the Chamber of Commerce of Philadelphia to the initial decision of Examiner Thomas L. Wrenn in the case known as the New York-Florida Proceeding, Docket No. 3051, et al.

The material referred to is as follows:

[From the Chamber of Commerce News of Greater Philadelphia of February 23, 1956]

CHAMBER OF COMMERCE PUSHES FOR O. K. OF NEW FLIGHTS TO SOUTH AMERICA

The chamber this week endorsed an application of Pan American World Airways, Inc., before the Civil Aeronautics Board which would give the International Airport here its first 1-carrier, 1-plane service to Caribbean, Central and South American areas. The city administration joined with the chamber in asking for CAB approval of the proposed service.

At the same time, the 60-man board of directors of the chamber also favored the authorization of Northeast Airlines, presently operating between New York and New England points, to extend its service as far south as Philadelphia.

PROPOSED BY MILLER

The board took the action after hearing the resolution proposed by Walter P. Miller, Jr., chamber president, which said in part:

"Philadelphia, the third largest city and the second seaport of the United States, has a substantial community of interest with other Atlantic coastal area cities and all Latin American and European countries * * * (but) to and from Latin America there is no single carrier, one-plane airline service and the existing domestic and trans-Atlantic services are not adequate to meet the needs of the business and commercial interests of Philadelphia."

SERVICES JUSTIFIED

The resolution also noted that the "community of interest" between Philadelphia and many points in New England justified the authorization of single-carrier, single-plane services between the two areas.

In the case of Pan American World Airways, the action before the CAB proposes to serve Philadelphia with 3 nonstop daily flights to Miami, Fla., 2 of which would continue on to Latin American points, giving the city its first 1-carrier, 1-plane service to that part of the world.

WOULD BE BOON

In commenting on the board action, Miller pointed out that the proposed single carrier, one-plane service to Latin America points would be a "boon to the fast-growing industrial and commercial links between our area and our good friends in South and Central America. It would be a tremendous stimulant to trade relations, as well as facilitating the travel of businessmen and tourists between the two areas."

Miller pointed to an obvious need for additional service to Miami, Fla., in view of an increase during the first 6 months of 1955 compared to the first 6 months of 1954 in travelers between Philadelphia and Miami from 32,914 to 48,045 or a gain of 46 percent. He compared this to an increase of only 21.6 percent in travel between all east-

ern cities and Miami during the same period.

NEW YORK BOTTLENECK

"There is also," said Miller, "a steadily growing need for additional 1-carrier, 1-plane service to New England, particularly such as Northeast Airlines would provide, by-passing the bottleneck caused by stops at New York."

[From the Chamber of Commerce News of Greater Philadelphia of April 19, 1956]

CAB EXAMINER'S REPORT REVIEWED; CHAMBER OF COMMERCE URGES FOURTH EAST COAST CARRIER

(By Samuel H. Williams)

Civil Aeronautics Board Examiner Thomas L. Wrenn has issued his report and recommendations in the important east coast route proceeding. It is in this proceeding that the chamber and the city of Philadelphia are endeavoring to have the CAB establish 1-carrier service between Philadelphia and important Latin American areas by authorizing Pan American World Airways to operate between Miami, its present Latin American terminal, and Philadelphia.

Although the examiner does not recommend that Pan American be selected as an additional carrier in this route, now served by Eastern and National, he recommends many changes in the Philadelphia east coast air transport pattern that, if approved, will be of substantial benefit to Philadelphia. Among his recommendations was that Delta Air Lines be awarded a route between Philadelphia and other northeast cities and Miami, with service to many intermediate points.

FOURTH CARRIER URGED

The chamber and city will, however, urge upon the CAB that a fourth carrier should be authorized to serve this important route and that this carrier should be Pan American, which could provide the Philadelphia area with sorely needed Latin American passenger and cargo service. Such additional service will be urged in exceptions to be filed to the examiner's report and oral argument thereon.

Furthermore, the chamber and city will urge that, while the examiner recommends substantial improvement in Philadelphia's New England service with respect to certain cities, there is a need in the public interest for the authorization of a carrier that can serve other and smaller New England points by overflying New York.

OTHER RECOMMENDATIONS

The authorizations recommended with respect to New England include the removal of a route restriction that precludes Eastern Air Lines from providing Philadelphia with service to Boston, Providence, Hartford, Springfield, and New Haven, except on flights originating or terminating south of Richmond, Va. or Charleston, W. Va. Furthermore, National Airlines' route would be extended so that it could provide Philadelphia with service to and from these points.

In addition, United Air Lines and Trans-World Airlines would be authorized to provide Philadelphia with service to and from Boston on the north and Washington on the south, serving the intermediate points of Hartford, Springfield, and Baltimore.

WANTS RESTRICTION REMOVED

The examiner recommends that a route restriction precluding National Airlines from handling local traffic between Philadelphia and New York-Newark be removed.

Capital Airlines would be authorized to serve Norfolk and Newport News, Va., without making a stop at Washington as is now required.

WOULD PERMIT DIRECT SERVICE

Eastern Air Lines would be permitted to provide Philadelphia with direct nonstop service to and from such west coast Florida points as Tampa, St. Petersburg, and Clearwater, without making a stop at Atlanta, Ga., as now required.

The Delta authorization recommended would provide Philadelphia with new service to many other points in addition to Miami, including Tampa, St. Petersburg, and Jacksonville, Fla., Augusta and Brunswick, Ga., Columbia, S. C., and Fayetteville, Greensboro, Winston-Salem, and High Point, N. C.

IN THE MATTER OF THE NEW YORK-FLORIDA PROCEEDING—EXCEPTIONS OF THE CITY OF PHILADELPHIA AND THE CHAMBER OF COMMERCE OF GREATER PHILADELPHIA TO INITIAL DECISION OF EXAMINER THOMAS L. WRENN BEFORE THE CIVIL AERONAUTICS BOARD, WASHINGTON, D. C.—DOCKET NO. 3051, ET AL.

To the Civil Aeronautics Board:

Comes now the city of Philadelphia and the Chamber of Commerce of Greater Philadelphia, and through their counsel of record, hereby respectfully except, pursuant to the instructions of the hearing examiner herein and rule 30 of the Rules of Practice of the Civil Aeronautics Board, to the examiner's initial decision herein, served on April 3, 1956, as follows:

Exception is taken to the failure of the examiner to find that single carrier service between Philadelphia and New England points other than Boston, Hartford, Springfield, and Providence is required by the public convenience and necessity.

Exception is taken to the examiner's finding that the extensions of United's route No. 1 and TWA's route No. 2 should be subject to long-haul restrictions insofar as service terminating or originating at Philadelphia is concerned.

Exception is taken to the failure of the examiner fully to recognize the needs of the city of Philadelphia for 1-plane, 1-carrier service to the Caribbean area and South and Central America.

The city and chamber, however, specifically concur in the finding that additional service between Philadelphia and the Florida area is warranted as well as the recommended certification of Delta to give direct service between Philadelphia and United States points south thereof. In addition the lifting of the several restrictions on National and Eastern, the extension of route No. 51 of Capital from Norfolk to Philadelphia and the extensions of United's route No. 1 and TWA's route No. 2 are concurred in.

In support of their exceptions the city and chamber rely on the entire evidentiary record, prior board policy decisions, and matters of which official notice may be taken.

The city and chamber will not file a brief in support of their exceptions but seek permission to participate in any oral argument which may be had before the board in connection with this proceeding.

Respectfully submitted.

JOSEPH J. O'CONNELL, JR.,
ROBERT REED GRAY,
Attorneys for city of Philadelphia and the Chamber of Commerce of Greater Philadelphia.

APRIL 19, 1956.

CERTIFICATE OF SERVICE

It is hereby certified that a copy of the foregoing exceptions have been served on all parties of record in this proceeding by mailing a copy thereof properly addressed and postage prepaid.

ROBERT REED GRAY.

APRIL 18, 1956.

H. R. 10765, a Bill To Amend the Longshoremen's and Harbor Workers' Compensation Act

---

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. ZELENKO. Mr. Speaker, the occupation of longshoremen is arduous and dangerous.

There has been reported out of the Committee on Education and Labor and is at present in the Rules Committee, H. R. 10765, a bill to amend the Longshoremen's and Harbor Workers' Compensation Act to provide increased benefits in cases of disabling injuries and for other purposes.

The necessity for this legislation becomes more obvious when one reads the excellent description of a longshoreman's daily routine as portrayed by Jacques Nevard in a feature article in the New York Times of Sunday, May 6, 1956, which I have the pleasure of presenting at this time:

(By Jacques Navard)

More than 24,000 longshoremen worked approximately 945,000 man-hours last week to produce the continuing marvel of cargo handling that has kept the Port of New York the preferred gateway for the Nation's export and import trade.

During the 7-day period, the port handled about 615,000 tons of foreign commerce and 970,000 tons of domestic water-borne freight. This was just part of the work that has maintained the port in the top position despite unfavorable publicity in recent years.

The men who loaded and unloaded a substantial portion of this cargo are members of the International Longshoremen's Association. The union was expelled from the American Federation of Labor in 1953 for failure to rid itself of criminals and racketeers in high posts. But many of the rank-and-file members have taken personally all references to the union's ills ever since.

A reporter who roamed the piers last week was regarded with suspicion by many of the men, some of whom were pungently vocal. Their belief was that newspapers have given too much emphasis to waterfront crime and that no reporter would visit the piers unless it was to do a story "knocking the longshoremen."

WE'RE NOT MURDERERS

When it was explained that the purpose of the visit was to see what working longshoremen do and how they do it, there were still reservations. One man declared:

"I don't care what you say about us, as long as you put in that we're not murderers. Some of my kids' friends don't even talk to them since they found out that I'm a longshoreman."

The dockers are not talkative as a group. But they were quick to say that their work was hard, occasionally unpleasant and sometimes dangerous. Indicative of the hazards is the fact that the workmen's compensation premium rate for longshoremen is higher than for any other industrial category in the Nation.

A wide variety of crafts are covered by the general term longshoreman. There are holdmen, deckmen and dockmen, and those are, strictly speaking, the longshoremen.

But generically the term longshoreman also includes extra pier labor, checkers, clerks, shenangos, sweepers, coopers and carpenters. In addition there are the tractor drivers who man the "hi-los," cranes and mules that scuttle along the piers.

The term "longshoreman" does not include stevedores, who are, in the Port of New York at least, the individuals or companies that employ the various categories of longshoremen.

MORE THAN MUSCLE NEEDED

The work of longshoremen is the unloading and loading of ships. The efficient performance of this work requires familiarity with the multitude of items that can be crammed into the holds of a merchant vessel. But operating staff personnel on piers maintain that the work is not in the skilled classification.

They admit, however, that they would rather have experienced gangs than inexperienced ones.

"Just watch two old timers stowing bags of coffee," one cargo manager said. "Each bag weighs 154 pounds and the men can heft them without working up a sweat. If we had two younger men who didn't know how to handle freight, they would be exhausted in an hour."

And cargo still is a standard employer argument against a rotary hiring system.

General cargo ships are loaded and unloaded by longshoremen who are organized into 20-man gangs. Eight men work in a hatch of the ship. Four are on the deck to handle the winches that raise and lower the cargo. Eight are on the pier at the big door nearest the hatch being worked. In addition, there is the foreman, or hatch boss, by whose name the gang is usually known, and two tractor drivers.

In unloading operations involving bags, boxes, barrels or similarly packaged freight, the holdmen usually place the cargo on large wooden platforms, or pallets. The deckmen then hoist the cargo, now called a draft, out of the hold and onto the pier where the dockmen receive it and remove the rope, or sling, by which it has been lifted.

A tractor driver then lifts the draft on the prongs of his fork-lift truck, or hi-lo, and moves it to the growing stacks of cargo that await loading onto trucks or floating rail equipment.

General cargo loading is handled in reverse fashion, with tractor drivers bringing the freight to pier doors for transfer to the vessel.

For special types of cargo the procedures vary. Coffee is sometimes shipped on pallets, permitting the use of a hi-lo in unloading the vessel's hold. With 12 to 15 bags of coffee, the pallet can thus be moved directly under the hatch opening to be lifted onto the dock.

Bananas present problems of their own. The fruit is not only fragile, but many longshoremen fear being bitten by tarantulas and other bugs that sometimes ride the fruit ships from the tropics. At present many shippers put bananas, by individual 75 to 90 pound stems, into polyethylene bags to minimize these dangers.

In addition, various forms of mechanical equipment are used. The United Fruit Co. employs huge conveyor belts to move the stems from the holds through hatches to its shore-side banana facility. Grace Line uses a conveyor belt system that brings the fruit from the holds through side ports in the ship to the dock and waiting truckmen.

All the complexity of cargo is not on the inbound side alone. Export shipments of big pieces of industrial and transport equipment present their own special handling problems. Sometimes giant floating cranes are used to lift such freight from railroad barges, or lighters, but often ship's gear, operated by longshoremen, is utilized.

Frequently if the piece is excessively bulky, special "cradles" must be built by longshore carpenters to hold the shipment securely in place while the vessel is at sea.

Although longshore work is not considered skilled, the prevailing rate of pay in the New York port compares favorably with that of many skilled and semi-skilled occupations.

Golf Therapy

EXTENSION OF REMARKS
OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, one of the two veterans' hospitals in New Jersey is located at Lyons in the Fifth Congressional District. The services provided there to our hospitalized veterans have been substantial. Under the management of the late respected Dr. Crawford Baganz and now under Dr. A. E. Trollinger, the staff has done fine work. So, too, have the devoted and all but anonymous volunteers at the hospital.

I should like to include in my remarks an article from the New York Times of May 4. This describes an unusual, but successful, activity conducted at Lyons by the American Women's Voluntary Services:

GOLF THERAPY

(By Frank M. Blunk)

Those who return from war whole in mind and body melt into lives of peace and happiness and forget, for the most part, the horror that, by some miracle, passed them by. It is only natural that they should try to erase those memories.

The men who can't forget are those who did not return unmarked. Those are the countless thousands that fill the Veterans' Administration hospitals throughout the Nation.

Never before in American history have our wounded and ailing war veterans been cared for so well. Every medical and surgical aid known to man is provided. The finest minds in the healing sciences staff the modern hospitals in which they wait and hope.

Beyond this there are many voluntary organizations—of women and men—who have dedicated themselves not to forget. In addition to the various national organizations of veterans and their auxiliaries, there are groups whose sole purpose is to bring to hospitalized veterans the reminders of home and family that physicians and surgeons cannot provide.

The programs of those organizations are wide and varied. The main idea is to keep morale at a high point. But in some instances the voluntary groups—whose activities are now coordinated by the Veterans' Administration Voluntary Services—go beyond the regular program and assist hospital staffs with recreation activities of a high therapeutic value.

TWO THOUSAND PATIENTS IN LYONS

An instance of signal success in such activity is provided at the Veterans Hospital at Lyons, N. J. It is in the hands of a group of women who form a unit in one of America's leading veteran-aid organizations, one that made its mark in World War II—the American Women's Voluntary Services. Mrs. Hans Springorum of Cos Cob, Conn., is the national president.

The hospital at Lyons is for mentally ill veterans of all wars. There are more than 2,000 housed in its 60 buildings. It lies on gently sloping ground at the foot of the Watchung Mountains in Bernard Township, Somerset County. There are more than 850 acres in the hospital plot.

An extensive part of the acreage, facing the main building, has been made into a nine-hole golf course. And that is the key to a therapeutic recreation that the hospital staff and the Lyons-Fairway Golf Unit of the AWVS speak of with pride.

For it has proved to be one of the most effective of all the remedies employed in the rehabilitation of Lyons' patients. No mental patient is incurable, experts say. But many factors enter into the curing program. One of those factors, and perhaps one of the main ones, is to bring the patient "out of himself." Once he regains interest in the things and the people about him, he is on the road to recovery.

The late Leo Diegel, one of America's really great golf professionals, was the first to promote the idea of golf for mental patients. He started the first experiment at the Valley Forge Hospital in Phoenixville, Pa. It was a success and Diegel enlisted other pros to carry on the work.

Jack Fox, pro at Glen Ridge, N. J., and the late Harry Nash, a golf writer for the Newark Evening News, started a campaign to raise funds for a links at Lyons. Robert Trent Jones designed the nine-hole course, which was opened in 1947.

Members of the Women's New Jersey Golf Association began to assist by sending members to the hospital to teach and play golf with patients. The response was exceptional. Then the AWVS unit of women's golfers for Lyons was organized under the direction of Mrs. Homer Lichtenwalter of Baltusrol.

ALMOST A THIRD DISCHARGED

The membership of the Fairway group grew with the success of the project and in 1954 and again last year a weekly schedule for the season was made up, with more than 60 New Jersey women golfers participating.

In 1955 a total of 257 patients took part in the golf program. Before the season was over 83 had been discharged as cured. The percentage was 32.2. Dr. A. E. Trollinger, manager of the hospital at Lyons, says that result is one of the most gratifying in his career.

On a recent golf day at Lyons, a delegation of women players led by Mrs. Springorum appeared on the hospital links. Some of the patient-players turned out with new sets of clubs carried in shiny new golf carts. The play started and in 5 minutes a large crowd of nonplaying patients had formed a "gallery."

"Nothing we have here has created as much general interest," said Dr. Trollinger. "The men will talk about this for days. And talk is the finest medicine I can think of."

Also in that group of women players was Mrs. John Farrell, wife of the former National Open champion who is now the top pro at Baltusrol. Mrs. Farrell is chairman of the Lyons-Fairway unit of A. W. V. S. Also at hand were Mrs. Philip Cudone of Montclair, women's metropolitan and New Jersey champion and a member of the 1956 Curtis Cup team; Mrs. James Beckett of Baltusrol, secretary of the Lyons-Fairway unit; Mrs. Lichtenwalter and Maureen Orcutt of White Beeches.

The weekly golf schedule at Lyons will continue through September 17. On several of the days some of the better-known men pro-

fessionals will give exhibitions and instruct patient-players.

The Lyons-Fairway unit is only one of the kind operating at various veteran hospitals throughout the Nation under the aegis of the American Women's Voluntary Services.

One of the patients at Lyons said: "It is wonderful to know that we are not forgotten. We are trying hard to get well. With such kindness from such nice people we'll be returning home in time."

The Incentive of Competition

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I wish to have inserted in the RECORD an editorial from the pen of Mr. Graham Patterson, publisher of Town Journal, appearing in the May 1956 issue. This editorial on the Incentive of Competition is, I believe, a very good analysis of the subject of competition between private business and the Government. The editorial follows:

THE INCENTIVE OF COMPETITION

Among the reasons for America's growth and prosperity and its high standard of living is the freedom of our business organizations to compete for the favor of the public. This competition is the lifeblood of our economic strength, for it serves as a constant spur to better products, better service and lower prices, with resulting benefits to the people.

There are certain fields of industry, however, where competition is controlled by legal restrictions. One of these is the shipment of goods by various means of transport. Many years ago, when competition in this field was largely limited to that among railroads, it became so intense that Government regulation was necessary to prevent unfair competitive practices, and the Act to Regulate Commerce was passed in 1887.

Since then, however, conditions have changed radically. Billions of dollars have been spent on building and improving waterways, and more billions have been spent on improved highways. Today the shipper of goods can choose between railroads, motor trucks and waterways. Each has natural capabilities and advantages in service, or cost, or both, but Government regulation often prevents the public from gaining the benefit of these advantages. If the railroads, for instance, propose to reduce freight rates on certain products in regions where their natural advantages permit them to operate at lower costs than other modes of transport, permission to do so has often been refused because the reduced rates would be lower than other modes of transport offered. Such action has more of the aspects of allocation of business than regulation.

It is not the prerogative of any Government agency to decide how much or how little business any industry or firm may do. That is something that should be decided by the public, whose decision would be based, of course, upon the quality and price of the product or service offered.

The function of Government is to see that there is competition, full and free, not to see that there isn't. The Government's responsibility is to prevent unfair practices and keep services vital to the public interest in existence, but its responsibility should end there. If fair competition for the public's favor is permitted to work, prices invariably take care of themselves. And the quality of services and products does likewise.

Unfortunately for the public as well as for business, Government with its regulations—too often unrealistic—seems to be usurping power it does not and should not have, to the point where it can control prices, instead of permitting normal and natural competition to exert its beneficial force.

The horse and buggy and the horse-drawn wagon gave way inevitably to the automobile and motor truck, because they provided the people something better. All through the history of our Nation are countless examples of products and services being supplanted by others that offered better service or lower price. Our country was built on competition, not on Government regulation. With greater freedom in competition among the different types of transportation, the same as in any other field of business, with each user free to choose that which best meets his needs, the real gainer in the end would be the consuming public.

The Passing of Attorney Patrick J. Flannery, Outstanding Member of the Luzerne County, Pa., Bar

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Tuesday, May 8, 1956, which lauds the outstanding legal career of the late attorney Patrick J. Flannery. Mr. Speaker, Attorney Flannery was a long and honored friend of mine and his sudden passing leaves a void in the ranks of the legal profession in my district, Luzerne County. He was a member of a well-known and highly respected family. His brother, Judge J. Harold Flannery, served with distinction in the United States House of Representatives as Representative of the 11th Congressional District. My deepest sympathy goes to his widow and members of his family.

The editorial is as follows:

ATTORNEY PATRICK J. FLANNERY

Luzerne County Bar lost a foremost member of better than 27 years' standing when death came with shocking suddenness to Attorney Patrick J. Flannery while he was engaged in the trial of a civil suit in Judge John J. Aponick's courtroom yesterday. Attorney Flannery was a lawyer's lawyer in the sense that he had the abiding respect of his associates for his ability and for his conscientious regard of professional obligations to his clients. Colleagues attest that a minor matter or a humble client received as close attention as a major issue or a client of high consequence.

A graduate of Wyoming Seminary, Cornell University and Dickinson School of Law, he was admitted to the county bar on February 5, 1929, and had maintained officers in Pittston with J. Earl Langan and in Wilkes-Barre with William J. Davis, Edward D. Morgan and John F. Boyle. No one could hold him in higher esteem for his professional standing than his immediate associates who knew him from day to day and could appraise his character at its true worth.

He was the studious type and unassuming in manner. Possessed of a subtle and dry sense of humor, he was a bright and delightful companion. A home-loving man, he was devoted to his wife and four children. A communicant of St. John the Evangelist Church, Pittston, he was affiliated with many of its organizations. His part in civic and welfare affairs included the promotion of a comparatively new project, the Greater Pittston Ambulance Association, which he was serving as president.

His family, church, community and profession have lost a member who served earnestly in many useful ways.

Four-Point Plan To Get Scientists

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting in the Appendix of the RECORD an article by James R. Killian, Jr., the president of Massachusetts Institute of Technology, appearing in last week's Life magazine. I believe this is a matter that all Members will want to read and consider:

A BOLD STRATEGY TO BEAT SHORTAGE—MIT PRESIDENT PRESENTS FOUR-POINT PLAN TO GET SCIENTISTS

(By James R. Killian, Jr.)

The current scarcity of scientists and engineers has become one of the best advertised shortages of our time, thanks to eager recruiting by employee-hungry companies and the intelligence that the Soviets educational output in these fields is larger than that the United States industrialists, educators, and public officials are ringing the alarm, and we are flooded with diagnostic studies seeking to explain the shortage. So far, unhappily, the diagnoses have been fine but the remedies few—and ineffectual.

It would be folly to suggest that we can find a sovereirn remedy for the inadequacies of our educational output of scientists and engineers. We can't. Because we believe freedom of choice more fruitful in the long run, not only for human dignity but for excellence, we cannot do as the Soviets do and tell our young people what to study and what careers to choose. If there are deficiencies in the attitudes and performance of high-school students, we cannot change them by fiat. We must use incentives instead of directives. We must marshal public opinion to deemphasize the hot-rodders among our youth and to encourage hot mathematicians.

If there are no easy short cuts to the education of more and better scientists, there is an opportunity for bold action. We need a national program. We need to turn from assigning blame for our educational and manpower deficiencies and to concentrate on the tactics and strategy for strengthening our manpower resources.

There are certain things that we should not do. We must not allow the pressure for scientists and engineers to obscure the need for first-rate talent in other professional fields. We should not let ourselves be bemused by numbers, especially numbers across the sea. We should not engage in an academic numbers race with the Soviets or even with ourselves. We can win through enterprise, efficiency, unexcelled quality, fully mobilized and motivated intellectual resources.

We must not throw standards out the window in order to handle numbers; our shortage is one of quality, properly educated, even more than it is of numbers.

Having noted some of the traps we should avoid as we seek to meet our shortage of scientists and engineers, let me urge four positive moves (a) to get us off dead center now and (b) to develop a grand strategy for the future. So far, remedial efforts have been too piddling and piecemeal, too lacking in boldness to get large results.

First, the Nation should establish several thousand more scholarships to help gifted but needy high school graduates go to college. I would prefer this increase to be financed by private funds as, for example, through a concerted effort by foundations and corportions. But if private funds cannot be marshaled in adequate amount, then I urge a short-term (5-year) federally financed program.

To underline the need for such a program, here are some very rough and very rounded figures. Of the top third of our high-school graduates (about 300,000) only about a third go on to get college degrees and thus qualify for the professions. A third apparently do not want to go to college. A third cannot afford to go. The Nation cannot afford for them not to afford or want to go.

The scholarship funds provided by colleges, corporations, States, and foundations now total between $50 and $60 million annually. Increasing this by 50 percent now would be a great boost. Doubling the present total in 2 or 3 years, quadrupling it in 5 would begin to bring our national student aid resources to the level our growing needs require.

I advocate that we start now by establishing about 9,000 competitive, annually awarded, 4-year Federal scholarships, these scholarships to be of three kinds: (1) 3,000 scholarships earmarked for those of high ability who wish to study science and engineering; (2) 3,000 for high ability high-school graduates who need not designate in advance a field of study; (3) 3,000 to be awarded to students who have taken enough advanced work in high school to have mastered there such freshman college subjects as calculus, physics, and English, in addition to meeting other high-school graduation and college entrance requirements. The need for this third kind of scholarship to give recipients advanced standing in college was recently proposed in a discussion of the Science Advisory Committee of the Office of Defense Mobilization.

Women should be encouraged to compete in each category since there has been a high loss of exceptional talent among girl high-school grduates. We need to encourage more able women to major in science and mathematics, particularly women who are willing then to become science or mathematics teachers in secondary schools.

Such a program would dramatically highlight the need for a lifting of sights in our schools and for more adequate opportunities and rewards for gifted students. It would help to encourage better and more advanced teaching of science in high schools. It would enable students of ability to cover more ground in college.

Such an augmented scholarship program would be a pump-priming, booster effort to break out of our present stalemate. Let us meet immediate needs with a Federal program with the hope and plan that private funds will be adequate to carry the need after 5 years.

Second in my suggested list of remedial measures would be a concerted effort to revitalize the teaching of science and mathematics in the secondary schools. My associate, Professor Jerrold R. Zacharias, has suggested one approach. Let a group of the best physicists in the country come together in a special study group to plan a whole new approach to elementary physics education. Let them set the new goals demanded by modern physics, design new courses, visualize fresh experiments and imaginative demonstrations. Let these plans be reduced to reality by a working group which will design and direct the making of, say, 90 professionally executed movie shorts of 20 minutes each with the necessary accompanying manuals and texts. In this way let us capitalize on the resources of visual technology, the imagination, understanding and zeal of great physicists, to give to the secondary school-teacher a fresh and powerful teaching aid and a new reach. A million-dollar project of this kind might well infuse new life and great teaching art into the teaching of science in thousands of schools. It is my hope that such a project may serve as a pilot plant for lifting the teaching of the other sciences to a new level.

Third on my list of needed actions is a national forum like the recent White House Conference on Education to throw a spotlight on ways whereby the Nation can educate more and better scientists and engineers. The Nation's technological work requires a broad spectrum of abilities and skills, ranging from the technician, who does not need a degree, to the creative scientist or engineer whose education has carried him through the Ph. D. or even postdoctoral study. Men are in short supply throughout the entire spectrum, but our greatest current shortages are at the extremes: we need more technicians to back up the professional scientist and more 2-year terminal programs or technical institutes to train them. At the other end of the spectrum we need more graduate education and more graduate study opportunities to make this possible.

Engineering education, it is felt by many industrialists and educators, is in need of revitalization. Should it not contain more basic science if it is to educate men with the power and versatility required by the growing complexity of our technology, our rapidly advancing science and the growing scope and rigor of the engineer's responsibilities? Do we not also need a new breed of engineer, competent to design and manage great engineering systems and skillful to handle the human problems involved?

Such questions need to be examined and discussed in a national forum where they can be illuminated for the public at large. Either of two committees recently appointed by the President, one on education beyond high school and the other on development of scientists and engineers, might plan and sponsor such a forum.

A GRAND STRATEGY

Fourth and finally, I suggest that we formulate the outlines of a grand strategy for maintaining our technological advance in the United States. We need such a plan if we are adequately to advance our educational and manpower programs.

I recall the great influence exerted by the President's Air Policy Commission through its notable report, Survival in the Air Age. Scientists and engineers advisory to the Government are organizing a comparably thorough report to chart our technological progress in the years ahead. Not only should it deal with manpower and its education, it should look also at the utilization of manpower and the personnel policies in Government, industry, and elsewhere which affect its efficient use and conservation. It should probe for soft spots in our research and development. Is there now too much loss of time between discovery and application? What are the elements of technological strength in the Russian system which hold lessons for us? These are but a few of many questions which could be fruitfully examined in the context of a high-level study devoted to survival in the age of technological contest.

And now one note of caution. While the rising long-term need for scientists and engineers is certain to continue, we may expect to witness adjustments in the current demand, particularly an increasing selectivity and discrimination in employment policies. A slackening off in the feverish, indiscriminate scramble we now are experiencing could, in fact, be beneficial and a relief all around. There is danger that some young graduates in this boom market will acquire an inflated view of their importance and will conclude that the normal rules of competition, compensation, and accomplishment have been permanently suspended in their behalf. I am sure they haven't. There is always the risk of a boom creating distorted values, and this is especially dangerous when the commodity is our young men. But even though the current feverish employment efforts may slacken, this will not mean that long-term supply and demand will have been balanced. We may experience a dropoff in the need for the foot soldiers of technology but the need for flag officers will always be high.

I have been through the experience at MIT of seeing its enrollment nearly double in a decade. I know, therefore, something of the huge new investment of men and money required to expand while at the same time we were seeking to raise standards and keep pace with the explosive development of science and engineering. The question as to whether MIT will expand still more is yet to be decisively settled, but I am glad that MIT already is tooled up to make a greater manpower contribution to the Nation in this critical period and that much of this increase has come at the graduate level where the need is greatest. I am glad that we have been moving steadily toward greater stress on fundamentals and on new fields of technology. But what of the future?

Further expansion means new investment at the rate of about $50,000 per additional student in endowment, buildings and equipment. To this must be added the high cost of all the new instruments, facilities and men required to keep up with technology and industry and to avoid obsolescence. We will have this cost even if we do not add a sinigle additional student. But cost is not the fundamental question, nor should it be the controlling factor in reaching a decision whether to expand. The real problem is to find enough great teachers; the real question is whether or how we can expand without damaging the quality of our education and research.

These are the factors and responsibilities which are being weighed in private scientific institutions across the country. In the exciting atmosphere of rapid discovery and intellectual ferment, of mounting demands for men and ideas, the decisions which are being made require sober and thorough debate, for they affect the future productivity, creatively and intellectual climate of America. It is the glory of American education that these decisions can be made freely, institution by institution, and that out of the diversity of views can come a consensus, wiser because it is unregimented.

It is the faith of America that such free discussions and decisions are the best means for insuring that the education of our scientists and engineers can be made fully equal to the needs of the Nation.

Investigation of Defense Establishment

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, May 10, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent that an editorial en-

titled "Applause From All United States Is Due Air Arm Inquiry," published in the Chicago Daily News of Saturday, May 5, be printed in the Appendix of the RECORD. The editorial is signed by the publisher of the Chicago Daily News, Mr. John F. Knight, who is also publisher of the Detroit Free Press, of a Miami newspaper, and of a newspaper in North Carolina.

The editorial reprimands the administration for its alleged negligence in not building up air power, and praises the work of the Senator from Missouri [Mr. SYMINGTON] in conducting a fearless and nonpolitical investigation of the state of the Air Force.

This editorial is all the more remarkable in view of the fact that Mr. Knight is a leading Republican. His statement is a tribute both to him and to the Senator from Missouri.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

APPLAUSE FROM ALL UNITED STATES IS DUE AIR ARM INQUIRY

(By John S. Knight)

It was natural that an investigation of our Defense Establishment would be launched in a presidential election year.

There is a dearth of good issues and the chairman of the Senate investigating committee is Senator STUART SYMINGTON, of Missouri, our first Secretary of the Air Force, and a man frequently mentioned as the logical compromise candidate for the Democrats.

Having said this much, all Americans who value their skins should arise and applaud the investigation without regard for its political overtones.

For some years now, Senator SYMINGTON has been telling everyone who would listen that the United States was falling behind Russia with respect to certain types of airpower.

At the Chicago Executives Club last fall, he flatly charged that reassuring public statements by Defense Secretary Wilson did not square with testimony given before the Armed Services Committee of the Senate.

The Missouri Senator was accorded a polite hearing, received a good round of applause, but no one looked worried on the way out.

"After all," they may have been thinking, "Ike is President and he must know a great deal more about national defense than some of these guys we listen to on Friday noon."

But developments are proving SYMINGTON to be right.

FACTS DON'T MATCH ROSY REASSURANCES

Gen. Curtis E. LeMay, head of the Strategic Air Command, has testified that—

1. Russia has more than 100 intercontinental jet bombers compared to America's 78, and produced them in much less time.

2. Of our 78 B–52's, costing $8 million each, only 47 have been accepted by the Air Force. The other 31 were rejected because of a serious component failure" which is being corrected.

3. The present United States aircraft program will leave this Nation "inferior in striking power to the Soviet long-range air force by 1958–60."

In describing the steady growth of Red air power, General LeMay said "We believe * * * we can win any war the Soviets might start * * * but not without this country receiving very serious damage. Five years ago, we could have won the war * * * without serious damage."

This candid presentation of shocking facts by our top air strategist is very grim news indeed.

The question immediately arises: Why, considering the billions we have spent annually for defense, is the United States failing to keep pace with Soviet air power?

Why do we get rosy reassurances from Secretary Wilson and other Defense Department officials when the facts seem to be to the contrary?

These are pertinent inquiries which concern us all, and they demand straight answers.

SECRETARY WILSON OWES THE COUNTRY FRANKNESS

It is to be hoped that the Republicans, in their zeal to defend administration policies, will not permit their partisan ardor to becloud the issues nor dismiss the investigation as a mere political maneuver.

To Secretary Wilson's credit, General LeMay's testimony was cleared in advance by the Pentagon, even though Wilson commented that the Pentagon was "erring" more on the side of giving "aid and comfort to a possible enemy * * * than on the side of trying to suppress information."

This is clearly no time to conceal the facts nor evade the truth. Our national security is at stake. Whatever defects exist in our defense program must be corrected, and without delay.

General LeMay, a blunt, hard-hitting airman whose B–29's reduced Tokyo to a shambles, has spoken his piece without pulling any punches.

Secretary Wilson, when he takes the stand, owes it to his country to be equally forthright.

In the past, we have had too much double-talk from the Pentagon, and not enough information upon which to base sound conclusions.

Meanwhile, the country is indebted to Senator SYMINGTON for alerting us to the dangers we face, and the persistence with which he is following through with his investigation of our lagging strength in airpower.

Brief Respite in the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the May 4, 1956, issue of the New York World Telegram alerts us to the plain fact that the recent Middle East mission of the United Nations Secretary General Dag Hammarskjold "did not even scratch the surface of the real Arab-Israeli problems."

While the editorial states that "minorities on both sides shout for war," it is also clear that such minorities, so far as Israel is concerned, do not speak for the Israeli Government which wants only the right to live peaceably alongside her Arab neighbors. On the other hand, the warmongering minorities in the Arab countries are the leaders of the Arab Governments. They, rather than the Arab people, are the belligerents.

The editorial follows:

PROSPECTS STILL GRIM

The unconditional cease-fire agreements between Israel and her Arab neighbors offer the Middle East a brief breathing spell—but no more. United Nations Secretary General Dag Hammarskjold carried out his difficult mission successfully.

But it would be foolhardy to believe anything more than a brief respite from strife has been won. Mr. Hammarskjold would be the first to admit that what he accomplished did not even scratch the surface of the real Arab-Israeli problems.

The Arabs have newly acquired military strength and are rattling the saber. That increases Israeli fears that the Arabs will try to fulfill their propaganda threats to wipe out Israel.

The Israelis continue a major program of Jewish immigration into their tiny, overcrowded state. That increases Arab fears that Israel will have to expand for living space—at Arab expense.

Back of this is what seems to be an implacable hatred between Arab and Israeli—the Arab believing the creation of Israel was a crime and grievous wrong; the Israeli fearing the Arab never will settle for anything short of extermination of Israel.

Minorities on both sides shout for war.

For 8 years emotions have overruled common sense on both sides. It would be naive to expect the new cease-fire arrangements to withstand long the day-to-day tensions unless there are new peace efforts.

An overall settlement is not in sight—and maybe there isn't any real cure for a wound that has festered so long. But there is a moral duty to try again. To dillydally as has been the custom for some years might be fatal.

Order in the Courtroom

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article in the May issue of Harper's magazine which describes the career and accomplishments of the chief justice of New Jersey, Arthur T. Vanderbilt.

Judicial reform is an urgent need in many States. I am proud and happy that my own State, which until fairly recently, had one of the most outdated court systems, now has the most modern court system in the country, and that litigants are being served efficiently, speedily, and justly. The story of court reform in New Jersey is well worth emulating. Because I believe that this article can do great good in alerting people in other parts of the country to this problem, I am inserting it, in its entirety, although it exceeds the usual limit.

The article was written by Jerome H. Spingarn, who is a native of New Jersey, and a practicing lawyer in the courts of New York and the District of Columbia, and is as follows:

ARTHUR T. VANDERBILT: ORDER IN THE COURTROOM

(By Jerome H. Spingarn)

Many lawyers have told their clients that it is cheaper to suffer wrongs and avoid court proceedings than to endure the cost, irritations, and complexities of a trial. New Jersey's Chief Justice Arthur T. Vanderbilt, on the other hand, is one lawyer who has devoted himself—with considerable suc-

cess—to the task of making the path to justice smoother, cheaper, and simpler. In addition to a distinguished career as a courtroom lawyer, he played an outstanding political role in his community—until he became a judge. He did more than any other individual to build up New York University's law center, which now bears his name. He has carried the message of better court administration all over the country and worked to improve law codes. And he was the leader of a popular movement that reformed New Jersey's courts—until 1947 the most flagrantly unsatisfactory in the Nation—and, incidentally, gave the State a new constitution.

The story of the New Jersey courts is a good illustration of the thoroughness of Vanderbilt's achievements. In prereform days the State had 17 different kinds of courts, most of them dating back to Colonial days, all maintaining their own rules and traditions. A litigant waited several years to get into court and sometimes several years after the trial for a decision. There was one vice chancellor who ran an even 5 years behind schedule on his decisions.

Today, thanks in large measure to Vanderbilt's leadership, New Jersey courts are the most efficient in the Nation. There are only 7 courts, headed by the Supreme Court which has the power to promulgate rules for all, and a basically uniform system of procedure throughout the State. A victim of an automobile accident in New Jersey can have his trial before 6 months have passed. Across the river in New York County, a 39-month wait is average, and in nearby Queens County, New York, it is 44.

When Vanderbilt plunged into the battle for court reform, he was, among many other things, the busiest courtroom practioner in New Jersey. His colleagues could never fathom why he was so singlemindedly bent on the destruction of a system under which he was prospering so handsomely. But they overlooked two things: His Methodist impatience with timewasting, and his sublime confidence in his own ability to succeed under any ground rules. Nothing in his life had given him any occasion to doubt either.

He began to harness his energy constructively as far back as his college days at Wesleyan. In 4 years he completed the requirements for both the B. A. and M. A. degrees while he was working his way through as fraternity steward and newspaper correspondent, editing the semiweekly college Argus, managing the football team and the debating council, and ending up as president of both the student body and the senior class. One of his fraternity brothers remembers asking him how on earth he did it.

"Self-discipline," Vanderbilt replied instantly. "A man can do half a dozen jobs at once if he has proper control of time."

From Wesleyan he went on to Columbia Law School to which he commuted daily from Newark where he was teaching 4 evening high-school classes. After Columbia, he took a job as law clerk in Newark in the office of Frank H. Sommer, the leader of the progressive wing of the Essex County Republican Party and a professor and later dean of New York University Law School. Sommer helped Vanderbilt get a teaching position there during his first year of practice and also offered him some memorable advice when, later on, Vanderbilt expressed an interest in entering politics.

"Arthur," he said, "do you know how many people there are in Newark?" Vanderbilt correctly quoted the 1910 census, around 300,000.

"No," said Sommer. "There are just about 300 people in Newark. If you're going into politics, your job is to know them well. They're from different walks of life and different social groups. But these few people are the ones who mold public opinion in this town. Your problem is to find out who they are and to know them."

In 1913 Vanderbilt was admitted to the bar and immediately opened his own offices. A year later, largely on the strength of his $1,400 lectureship at New York University, he married a high school classmate, Florence A. Aithen. Since his bride was musical, he bought her a baby grand piano, leaving the young couple about $100 in cash.

"I should hate to tell you," observes Vanderbilt today, "the sum on which she ran the house each week, but she claims now that she had more money then than she has now."

In any case, by 1920 Vanderbilt had seven lawyers on his staff and counted among his clients banks, insurance companies, and large corporations, enabling him to provide comfortably for the five children who eventually came along. (Appropriately enough, all but one of the children have grown up to have an intimate concern with the law. The twin boys, who are the youngest, are today lawyers in their father's old firm, and each has served in the New Jersey General Assembly, one from Essex County, the other from Union County. The oldest girl practiced law until she married a lawyer and devoted herself to raising a family. The second girl also married a lawyer. Only the youngest girl strayed out of the fold to marry a mechanical engineer.)

As the years went on an increasing part of Vanderbilt's work consisted in trying difficult cases and appeals for other lawyers, who were often former students. He also found time to represent Roger Baldwin of the American Civil Liberties Union in a famous New Jersey civil-liberties case.

In the years following World War I, the Republican Party in Essex County was in disrepute and disrepair. Vanderbilt took on the job of building a new Republican organization—discovering at the outset of the twenties what most politicians have just been learning in the fifties: that the suburban vote must be wooed in an entirely different way from the big-city vote. While Republican and Democratic machines fought each other in the traditional way in the Newark wards, Vanderbilt appealed to the commuters who lived in the Oranges and Montclair. Bypassing the precinct-worker approach, he relied on encouraging newspaper editors to expose graft in their papers and persuading established leaders of the community to accept nominations for office. The formula worked. Vanderbilt's group won 2 of 3 vacancies on the county board in its first fight in 1919.

When the holdover majority of the board still voted to go ahead with some of the very contracts the Vanderbilt group had condemned in the campaign, Vanderbilt countered with a successful taxpayer's suit which stopped the project, saved the county between three and four hundred thousand dollars, and kept the issue on the front pages of the local papers for several months. At the next election, Vanderbilt's "clean-government" league gained control of the board and Vanderbilt became county counsel.

POLITICAL BATTLES

Vanderbilt's bitterest political battle was with a fellow Republican, Harold Hoffman. When Hoffman was governor, Vanderbilt once visited him with the intention of making peace. But after a short talk he ended up by assuring him irritably that there was nothing wrong with him except that he had "no judgment and no character"—an observation confirmed after Hoffman's death when a posthumous investigation revealed he had stolen over $300,000 from the State government.

When Hoffman sought a second term, he was defeated in the primary largely because Vanderbilt, as Essex County Republican chairman, turned in an unprecedented majority of 45,000 votes for his opponent, Driscoll. In 1,100 personal telephone calls, Vanderbilt obtained the pledge of every county committeeman to get out a bigger vote than ever before.

Vanderbilt was always an oddity in New Jersey politics because he was not dependent upon politics for a living and had other claims to local and national prominence, and because politics, even during a campaign, seldom took more than an hour or two of his day. The best five hours of his day were always spent in court. He soon found that political chores took less brain power than any of his other tasks, so he used to reserve the late-afternoon hours for political conferences; telephoning; working on press releases, speeches, and platforms; or attending meetings. At 7, during the law-school year, there would be a hurried meal and a rush to the station two evenings a week. Then, after 2 hours of law classes and 10 minutes of after-class questions, a rush back to the tubes.

At the same time he was active in State and national law associations, and in 1938 he became president of the American Bar Association. He immediately organized seven committtes for court reform and himself made a cross-country tour to preach the gospel of better court administration. And he took a trip to England to visit British courts. In 1941, Chief Justice Hughes appointed him chairman of a committee to draft rules of procedure on criminal cases—which were approved in 1945—and in 1946 he was chairman of a committee which revised the methods of military justices.

REFORMING THE COURTS

The campaign for New Jersey court reform actually began in 1930 when Vanderbilt was appointed first chairman of the New Jersey Judicial Council, an organization of lawyers and judges which was created to keep the courts up to date. Vanderbilt rapidly convinced his colleagues that New Jersey procedures were not susceptible to slight annual improvements and revisions—the fabric was far too threadbare to hold patches. Accordingly the council advanced proposals for constitutional amendments looking toward fundamental reforms. The chief obstacle was Jersey City's boss, Frank Hague, who relied upon the existing rules to protect his power. He exerted enough pressure in 1941 to block Vanderbilt's reappointment to the Judicial Council. But the idea of reform once born could not be quashed so easily; it bounced back the same year in the form of a Constitutional Revision Commission on which Vanderbilt was again the moving spirit. In 1943 the commission's proposals were submitted to a vote of the electorate—unfortunately not until the legislature had so watered them down that no one wanted them.

The proposals were defeated, and the defeat became the signal for an all-out effort by Vanderbilt and his associates. With the help of Democratic Gov. Charles Edison and a Republican successor, Governor Driscoll, and using the familiar Vanderbilt tactics, they lined up the press, the women's clubs, the unions, the employers, the butchers, the vegetarians, and every conceivable group that believed the State should have a court system that could act promptly, fairly, and understandably. In 1947 a constitutional convention met at Rutgers University to adopt drastic court reforms and sweeping changes in the State government organization. And this time, despite the open or covert opposition of lawyers, judges, and Hague, the new constitution was passed by the voters in a landslide majority of 3½ to 1.

Vanderbilt's association with the new constitution made him an issue in the campaign, and a week before the voters went to the polls Governor Driscoll announced that Vanderbilt would be chief justice under the new constitution. Since this meant that he must

be a sitting judge at the time the constitution was adopted, Driscoll forthwith appointed him to the circuit court, and Vanderbilt passed from the arena of partisan politics.

The new constitution set up only the broad outlines of the new court system, delegating the rulemaking power—upon which the system's success or failure would depend—to the supreme court. As chief justice-designate, excused from courtroom duties, Vanderbilt devoted himself to the task of formulating these rules during the 10 months preceding the new courts' opening.

Like many other law teachers, he had covered the ground of ideal court rules many times in the classroom, in articles, and in speeches—had, in fact, as president of the American Bar Association, appointed committees which had worked out minimum standards of judicial administration. His problem now was one of human adjustment—to get the other New Jersey judges and lawyers to accept the spirit as well as the letter of the new rules. With this in mind, he invited a large number of them to assist in the planning and drafting and took great pains to keep the public informed. He also wrote the chief justices of every other State, asking them what they would do if they could start their court systems afresh.

One of Vanderbilt's primary time-saving notions was full use of pretrial conferences at which the opposing parties and their lawyers meet with the judge in open court and, before the trial begins, go through the papers in the case, obtain admissions, and limit the issues. It was also a notion which met with considerable reluctance from both lawyers and judges. To persuade them to give it a fair test, Vanderbilt invited Chief Judge Bolitha J. Laws of the District of Columbia and a team of lawyers to come to New Jersey and demonstrate, in a kind of playlet, how the pretrial conference worked. The audience was sufficiently impressed to give the conferences a try. They soon discovered that by clarifying the issues, eliminating courtroom tricks and surprises, and letting the judge study the documentary evidence in advance, the conferences enabled cases to be tried in one-half to two-thirds the time they took under the earlier system, and there were fewer appeals. They have indeed worked so successfully that only last year Vanderbilt suggested that wider use of these conferences, rather than additional judges, might be the answer to increasingly heavy court calendars, and appointed a committee of trial judges and lawyers to work on perfecting them.

Vanderbilt's changes started in the lowest courts, which deal with the largest numbers of people. A municipal court replaced the justices of the peace in the country and the police courts—which sometimes used to be held by the clerk as an "acting judge" without any authority in law—in the city. All courts were held in public buildings; the wearing of robes by all judicial officers was encouraged. And New Jerseyites, accustomed to long waits in the courtroom for the judge to arrive, noticed particularly that courts opened promptly at 10. (There was muttering over this in the robing rooms, but the Supreme Court set the example.)

Vanderbilt emphasized these superficial changes because he felt they would help him meet a difficult challenge: the new constitution directed him to create a new court system based upon service to litigants, but it also provided that it should be manned by judges carried over from the old system—many of whom considered a judgeship a reward for past accomplishments rather than an active job. The robes, the courtrooms, the time schedules were outward symbols of a new perspective. Along with them went constitutional assurances of tenure, rigid prohibitions against political activity, and rules against taking time off for such activities as pallbearing and speech-making. Previously the New Jerseyite who was carried to his grave without at least one judge to do him reverence was poor indeed. Now judges are excused only for funerals in their own family.

In spite of the fact that it inherited congested calendars and many cases where decisions were long overdue, the new system promptly brought all courts in the State up to date. Special teams of judges were sent in to clean the dockets of courts that were particularly far behind, and when a court began again to fall behind in its decisions, judges from less busy courts were shifted to it. To help it assign judges to where they were most needed, the supreme court required weekly reports from every judge in the State, telling how many hours he sat, how many cases he heard, how far behind he was on decisions, and how many cases were waiting for trial. To many of the older judges, this filling out of a time sheet was the ultimate degradation. To win them to his side, the new chief justice had to exert all of the persuasiveness that had helped him build a political organization, attract clients, and convince juries. And within a few years he had established a new morale. One of the judges who liked him least at the start has become an ardent admirer, and describes him with the profane yet begrudgingly respectful language a marine might use about an exacting battle commander.

Vanderbilt had considerably less difficulty winning over the public. One of his most significant innovations was a rule of court establishing uniform, nonfixable traffic tickets made out in four carbons with each ticket stamped numerically and strictly accounted for. Its effect was immediately apparent. In Newark, during the first quarter of 1948, before it was introduced, there were more than 16,000 unaccounted-for tickets; during the corresponding quarter of 1949, there were only 600, all of them issued to out-of-State drivers.

According to Vanderbilt, "the elimination of the killing of tickets has been the greatest single factor making for increased respect for law in this State. Many times I have been thanked by political leaders of both parties for sparing them the thankless work of killing tickets. The effect on judges has been as great as it has been on litigants, witnesses, and spectators."

He has also made it possible for citizens to complain about judicial shortcomings, at the administrative office of the supreme court. New Jersey is the only State in the Union where one can complain about a judge as easily as about a bus driver. All complaints get a patient hearing. And in 9 cases out of 10, it is possible to convince the complainant that he really got a fair deal.

During the new courts' first year, in 82 percent of the cases, the lawyers' briefs failed to cite all of the necessary precedents, and the judges had to do their own research. An in-job training program in appellate argument—under which Rutgers University, the courts, and the senior members of the bar cooperate in giving a course which includes classwork, brief writing, and actual argument before judges—raised the standards. Today a lawyer may call himself counselor (which in New Jersey is higher than attorney) and appear in appellate courts only after he has passed the course.

One of the bugaboos against which Vanderbilt still inveighs is the appellate court which is multijudge in name only. In such courts, before a case is argued it is assigned to one judge for opinion writing. Free of further responsibility, the other judges pay little or no attention to the argument and vote for the opinion, when written, as a matter of course.

In the New Jersey Supreme Court, by contrast, Vanderbilt has done his best to get maximum participation, by every judge in every decision. Each member of the court is required before hearing argument, not only to read all the briefs, but to come to conference with his own typewritten notes on them. The chief justice is thus able to inform lawyers at the outset of oral argument which points the judges consider most crucial. In the conference following argument, the cases are discussed, and only then are opinions assigned. The opinion writer has the final decision as to whether or not he will accept any suggestions made to him; the other members of the court have a like decision as to whether or not they will vote in favor of the opinion. Supreme court decisions are issued a month after argument.

Aware that he is sometimes criticized as a worshiper of promptness for its own sake, Vanderbilt points out that, he would prefer a slower decision if it better served the ends of justice. But he thinks a prompt decision is usually a better decision: "A judge will never know the case better than he does immediately after he has read the briefs and heard the arguments—it will only grow dimmer in his mind and the opinion become more difficult to write as the weeks go by."

Furthermore he knows that some delays in themselves, create injustice. Shortly after it began to function the new supreme court refused a statewide increase of streetcar and bus fares. Immediately after the court adjourned and the judges scattered on their vacations, the transit company filed an application for a rehearing. Under the rules, such an application automatically stays the judgment until the court disposes of it—which normally would have meant that trolley and bus riders would have continued to pay higher fares until the court convened in September. As a result, each commuter would have been out of pocket about $15 which he could, as a practical matter, never recover. The judges were in Maine, the Adirondacks, the Poconos, on the Jersey shore, and the high seas,, but Vanderbilt, himself in Maine, immediately arranged a special court session by telephone. In this long-distance conference, the court considered, and denied, the application for a rehearing.

The next day a map of the world with the supreme court's telephone circuit was on the front pages all over the State. It demonstrated as nothing else could, that the new court meant business.

BUILDING A LAW SCHOOL

Yet even the titanic labor of reforming New Jersey's courts never took all of Vanderbilt's time. At the peak of his efforts in 1943 he was made dean of the New York University law school and turned his simultaneous attention to a new set of problems. The school's enrollment was at a wartime low ebb and its diploma had no glamor for the large law firms. Characteristically, Vanderbilt wanted to do something to improve the situation at once, and he decided sprucing up the old quarters was a logical first step. So he set out to raise $200,000 among the alumni. At the end of the year, response had been so poor that he realized that a drive to paint and plaster an unattractive building for an unimpressive school fired no one's imagination. What was needed was a new school in a new building.

Accordingly he raised the ante to 5 million, fired the professional fund raisers and took over himself, hiring five young veterans who were recent graduates to help him, got architect Otto Eggers to design a neo-Georgian building to overlook Washington Square, and made plans for a first-rank national law school (now the Arthur T. Vanderbilt Law Center) which would be a center of graduate scholarship and applied legal research to draw students from all over the world.

The first large contribution came from a Vanderbilt client—Davella Mills Foundation, for whom Vanderbilt had won an important case. He asked the trustees for a gift to NYU instead of a fee and received $500,000 on condition that an equal amount would be raised during the year and that the university would contribute the land. The two strings enabled Vanderbilt to put pressure behind his drive. Next he acquired several business corporations for the school, including the Mueller Macaroni Co., whose income the school enjoyed on a tax-free basis—a coup so brilliant that it was instantly copied by schools all over the country until Congress plugged up the loophole in the tax law which allowed charities to enjoy tax-free income from nonrelated activities.

Now one of the best housed in the country, the NYU law school has begun through a scholarship program to attract outstanding students from each of the Nation's 10 Federal circuits. It brings teachers, judges, and practicing lawyers to numerous conferences on legal problems, and graduate students to such institutes as the Inter-American Law Institute for Latin American students, the Institute of Comparative Law for Europeans, the Institute of Judicial Administration for improving the work of the courts, and the Citizenship Clearing House for acquainting the best men in the best colleges and universities with their responsibilities as citizens. It probably has the largest publication program of any law school in the United States.

THE JUDGE'S DAY

Today, at 67, Vanderbilt is still intensely active. He leaves his country house in Short Hills, N. J., at 7 a. m., and drives his 1939 Cadillac coupé to the station.

"I can get a day's work done between 8 and 9 in the morning," he explains, "because there are no interruptions."

His Newark chambers look north to the Oranges and east to the towers of Manhattan. There he busies himself with correspondence—all letters are answered the day they are received, and he has thoughts to communicate with judges and friends all over the world.

On 3 days a week, when he finishes his mail he begins his opinion writing and brief reading. On Mondays and Thursdays he catches the train to Trenton, where he is met by a State trooper and driven with two of his colleagues to the State House Annex. In the pleasantly furnished courtroom the judges' dais is not perceptibly raised and the lawyers sit in comfortable leather chairs arranged in livingroom fashion. Vanderbilt's good-humored courtesy and casual manner reinforce the impression that lawyers and judges participate together in the judicial function.

Like many other law teachers who have ascended the bench, Vanderbilt tends to be impatient with legal pedantries and artificialities. In one case, he joined with his colleagues in striking down an ancient bar against suing one's wife in order to permit a husband to collect unemployment compensation: his employer was his wife. He also avoids pomposity on and off the bench—his clothes tend to be soft and gray rather than stiff and black. He gives the impression of an important and successful man, but not necessarily a Chief Justice.

Recently he has become concerned with the threat to New Jersey's natural beauties and has written a series of opinions enabling New Jersey municipalities to prevent undesirable developments and preserve the character of the State's suburbs and farmlands.

But with all his legal activity, he takes care not to get out of touch with current culture. In 1938, when he was visiting the chambers of British judges, he was astonished to see large piles of new books in colorful paper covers, obviously nonlegal in nature. These, he learned, were being accumulated for vacation reading; and he began to contrast this with the narrow interests of American lawyers and judges who seldom bother with nonprofessional literature. Some years before, he had been forcibly struck by his own illiteracy. During a vacation voyage with his wife, he started to read The Green Hat, then a best seller, and was so shocked by its frankness that he decided he had been given a piece of pornography by mistake, and threw the book overboard. His wife, aghast, assured him that the book was a best seller and that everybody was reading novels like it.

Since that day, a trunkful of current books—mostly biography, history, and essays—has always accompanied Vanderbilt to Maine for his summer vacations, and during the winter he attends the theater in New York frequently.

of the family take out 1 of the 2 family house at North Harpswell, overlooking Casco Bay, three-quarters of a mile away from their nearest neighbors, is a rigidly kept feature of Vanderbilt's year—the one period in which he religiously abstains from office work. Instead, while his wife occupies herself in the garden, and the younger members of the family out take 1 of the 2 family boats, he reads, relaxes, and gets to know his 13 grandchildren.

In 3 more years, according to the words he himself wrote into the New Jersey constitution, he will retire from the Supreme Court. A study in the Arthur T. Vanderbilt Law Center is awaiting him. On a large yellow foolscap pad is a long list of projected books and articles he is eager to start working on—at 8 in the morning the day he steps down from the bench.

Failure of Our Foreign Policy in the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. MULTER. Mr. Speaker, it was my privilege to be permitted to appear before the House Foreign Affairs Committee on May 8, 1956, and present my views to that distinguished committee on the question of the failure of our foreign policy in the Middle East. My testimony on that occasion was as follows:

Mr. MULTER. Mr. Chairman and members I appreciate the opportunity of coming before you again and voicing my opinions for whatever aid they may be to you in connection with the pending bill.

While I appreciate the world-wide importance of the provisions of the bill, and that it does cover many areas of the world, I would like to address myself primarily to the bill as it affects the Middle East, or the Near East, as it is often referred to.

May I by way of preliminary indicate to the committee, that I appreciate that in viewing the testimony of any witness you have the right to ask yourself, what is his background and does he have any prejudice or bias in connection with the subject on which he speaks.

When anyone of the Jewish faith addresses himself to the Middle East, you have a right to take that into account. I want to assure the committee at the outset that my first and primary interest is the same as that of every member of this committee, that is, world peace and the security of our own country.

I hope that in assessing the value of my testimony, you will have in mind not only my religious background but also that I was among the first to look with favor upon restoration or resumption of diplomatic relations with Spain. I think that I can justifiably say that my personal report to President Truman late in 1949, after a visit to Spain, together with the information brought back from there by other members, had at least some bearing upon what I think everybody admits today is a desirable result of resuming diplomatic relations with Spain.

I was among the early advocates of help to Turkey, which, as you know, is a 98 percent Moslem country. Despite the fact that it is quite unpopular among many of my constituents, I have taken the position that the interests of our country require if not a full fledged Ambassador or Minister at least a special representative at Vatican City.

With those preliminaries, let me address myself to the Middle East situation.

Chairman RICHARDS. May I add that I can testify to the correctness of the gentleman's statement on those matters.

Mr. MULTER. Thank you, Mr. Chairman. I trust that the members of this committee will not think that I usurped or impinged upon their authority when during the last recess I made a trip into various countries, and more particularly into the Middle East, where I visited in Lebanon, Egypt, Turkey, and Israel.

I think that we can all agree that the overall problem is the establishment of peace in that area and that anything short of full-fledged peace is obviously a threat to our own security and to world peace.

I think we also agree that the subsidiary problems are the resettlement of the refugees, the lessening of the existing tensions and an agreement about the boundaries.

I think with a period of 8 years of experience behind us now there must be a complete revision of our policy in that area, with much more firmness than has heretofore been shown in our treatment of the peoples throughout that area, or more accurately, our treating with the leaders of the governments there.

The tensions have gotten worse and more bitter. We have had no real negotiations which would lead to peace.

You may recall that as early as 1948, before there was a State of Israel, I said that the only way we will have peace in that area is if we go in there and help all the peoples of that area, the Arabs who are living there, as well as the Jews, to help them to rehabilitate themselves and to improve their economic conditions there.

That directly relates to the refugee problem. We are told time after time that there are 900,000 refugees outside of Israel who must be rehabilitated and must be resettled.

The Arab position has been they will not talk peace until all of those Arabs are returned to the State of Israel. That means never. I think it should be perfectly obvious to anybody and everybody familiar with the situation that you couldn't possibly resettle those 900,000 Arabs in the little State of Israel even if you were going to take all the State of Israel and give it to them.

Before they left there 90 percent of them were living in poverty. The average annual income was from $15 to $30 per year. Thirty dollars per year was high income for 90 percent of the Arabs living in that area.

To take them and send them back there would be utter folly—how are they going to live? Obviously these people must be resettled in places where you can give them a piece of land or an opportunity to earn themselves a livelihood that doesn't even begin to approach our standards, but which will at least improve their prior standards or give them an opportunity to live, if not

decently as we know it, at least better than they had lived when they were unable to eke out a living for themselves and their families.

Today in these refugee camps they are being supported mainly by the bounty of the United Nations and this country, which supports or gives to that fund most of the money that is being used for that purpose.

Why haven't they been resettled? They haven't been resettled because the Arab leaders have refused to permit them to be resettled.

In that connection, our policy must be changed, and I think it must be a condition of further aid going to that area, that something must be done about that situation.

We have talked and talked to the Arab leaders, and we have run up against a stone wall. They will not move in that direction. I think it is high time that our Department of State changes its policy in that regard and makes it known in no uncertain terms that this problem must be solved, that we will no longer continue to permit the Arab leaders to use this as a political problem and to keep those refugees stirred up emotionally against resettlement.

I might say that I have been in that area three times—I was there in 1948, 1949, and again in 1955. After each of my visits there I have been visited at home, unsolicited, by Arabs, Moslem Arabs, and Christian Arabs, indicating that much of the story we get out of there about the unwillingness of the Arabs to be resettled is the talk not of the Arab refugees themselves, but of the leaders of the Arabs.

If we can let those leaders know in no uncertain terms that this problem must be solved, you can begin to move those Arabs out, not en masse, but family by family and resettle them. We will then get rid of this emotional problem that has kept that area stirred up all through the years.

You will find back in December 1947 and January and February of 1948 I was urging things such as, as I called it at that time, a Middle East TVA. I had in mind things like the Aswan Dam that they are talking about on the Nile. I had in mind things like the Jordan Valley project that Ambassador Eric Johnston has done so much to bring almost to the point of closing.

Secretary Dulles told the Senate committee in February that all of the details had been worked out except the political agreement. In other words, every last item had been agreed upon, between Syria, Jordan, and Israel, as to how it would be financed, what would be done there, where the power would go, where the water would go, the division of water between Syria and Jordan and Israel. The only thing that stops the project from going ahead is political agreement or assent politically by Syria and Jordan. Both are pressured by the Arab league not to agree politically.

Israel has indicated here willingness to go ahead. She is ready to execute the formal documents. The Arabs refuse. Israel has several times indicated that she would go ahead without the Syrian and Jordanian consent. Of course, each time she has been persuaded that that is not the thing to do.

I say the time has come when our Government must say, and this is probably the place for it to be said, in this bill, or in the report on this bill. Lay down the policy that if the Arabs will not go along with those projects, Israel will be permitted to do it herself, that there will be no aid to that extent to Syria or Jordan as such, but as long as Israel will make the commitment, the firm commitment, that the power and the water generated there will go in agreed portions or ratios into Syria and Jordan, when they are ready for it, that Israel may go ahead and do the job and we will help her do it.

I think if we took that firm attitude the Arabs would have no choice in the matter but to say, "Let's go ahead."

I was told, as your study mission was told, as evidenced by their report that was submitted to you under date of March 14, 1956 (I met with some of the members of that study mission while we were in that area), that a lot of the tension there was caused by the Baghdad Pact.

The surprising thing is that we were told by Arab officials our American diplomats tell them that the United States did not bring about the Baghdad Pact. Why they should have been told that, I don't know. But it only irritated the situation rather than help assuage their feelings.

There is no doubt but the fact is, and Secretary Dulles has taken credit for and has claimed it was his idea. He says he started some three years ago to set up this Baghdad Pact as a northern tier or frontier as a defense measure against possible invasion of that area by Soviet Russia.

I sat down in this building, in the old Supreme Court room, with General Bedell Smith, who was then Under Secretary of State, and with Ambassador Byroade, who was then our Assistant Secretary of State in charge of the Middle East, when we were talking about this plan three years ago.

I said to them, I think there were several of the members of this committee, I said to those two gentlemen, that you are wasting your time and your energy and money in that kind of venture, because if Russia decides to move in there, all of the money that you are now spending for military aid and economic aid, if it was all used there for military aid, you are not going to stop Russia from moving into that area, when she decides to move.

I didn't anticipate that Russia was going to jump over the northern tier once it was set up. She has done that and moved in, Communist arms having been going into the Arab States for years. Something now must be done to strengthen that whole area. We are not going to strengthen it by sending arms into Egypt in competition with Russian arms. I don't know how much of the facts on that question have been stated to you——

Mr. VORYS. You don't mean into Egypt.

Mr. MULTER. Into Egypt.

Mr. VORYS. By sending arms into Egypt in competition with Russia—I thought you meant into Israel.

Mr. MULTER. Into Egypt, in competition, because the record is clear that for some time Egypt has—it goes back, I think, to 1952, when Egypt first sought arms from the United States.

She has gotten small quantities through the years from the United States. But when she sought large quantities of arms, she was asked to sign the usual agreement, that she would not be an aggressor, not use any of these arms as an aggressor against any nation. She refused to do that. Then, as you recall, in the summer of last year the Secretary of State pretended to be very much surprised with the fact that a deal had been consummated between Czechoslovakia and Egypt for the sale of jets and large armaments. Ambassador Byroad told me in Cairo in November 1955, that he had known of the Egyptian negotiations with the Communists for arms for more than a year before the deal was announced.

I think it should have alerted our State Department to the fact that any country that is looking for arms and will not sign an agreement that those arms will not be used as an aggressor or for aggression, doesn't mean well, but intends to be an aggressor.

Let's analyze that a little further. I understand Secretary of State Dulles said to the Senate committee in February of this year, when he was there, that he didn't know what arms had been sent into Egypt by Czechoslovakia.

When I was there last year, it was known in Turkey, it was known in Israel, and it was no secret to Egypt. I am now talking about November 1955 when she had already received at least 40 jets and 6 submarines. She has today, I believe, 18 battle cruisers. Where will these battle cruisers and these submarines be used, and against whom will they be used? We are told the only fleet in that area is the United States 6th Fleet. Russia has no fleet there, and Russia is not going to supply Egypt with any of these submarines if they are to be used against Russia. Against whom will the submarines be used? Against Israel? Israel has no navy.

What about this preventive war talk we hear? I say to you in all earnestness it has been stirred up in large part by representatives of our State Department, this talk about a preventive war by Israel against her neighbors. Let's analyze it.

The little country of Lebanon to north of Israel is smaller in geographic size and has a population of about a million people, which is just about half of the nimber of people in the State of Israel.

They say that Israel can muster an army of 250,000 men. Lebanon, when I was there in November 1955, could muster a total police force and army of 5,000 men. If Israel had any intentions to move on her neighbors, I think everyone must concede, that Israel could move in on Lebanon and take it over overnight, if she had any desire to wage aggressive war against her neighbors. She has not done it and has no intention of doing it. Of all her borders the Lebanese borders have been the most peaceful.

Most of the border incidents coming from the Lebanese side of the border can be traced to infiltrations from Syria and Egypt.

Persons who have had the same advantage as I had of having been in that area as late as 1949, returning again in 1955, are impressed by the fact that Lebanon is making comparatively the same progress as Israel. Her people are prospering, their standards are improving, and they want nothing but to be left alone. Cross the borders into the other Arab countries and you find that they are practically in the same degraded and degrading conditions as existed all through the years up to 1949. There has been little or no improvement in their methods, their means, their standards, or their opportunities to earn a livelihood.

I was interested to find out where this talk about a preventive war by Israel comes from. I noticed that Secretary of State Dulles indicated in his testimony before the Senate committee that he believed that there was such talk in Israel of a preventive war against her neighbors.

I found in our Embassies in Lebanon, in Egypt, and in our Embassy in Israel, the talk came from our American officials, that Israel might indulge in a preventive war.

I know that Ambassador Lawson in Israel had no such idea. On the other hand, I know Mr. White in that Embassy made it known to anybody who would listen to him that it was his idea that there will be a preventive war by Israel, and to bolster his position wherever possible he would put you in touch with that minority, that small group in Israel who have been yelling all through the years for such a war and for enlargement of the State of Israel.

That definitely is a very small group in Israel. The large majority of the people, and all the responsible officials in government in Israel, will say that they know that, if they were to start any kind of war upon any of her neighbors, they would immediately turn world opinion against them, that

they would be cut off from all assistance of any kind from this country and from our allies, and that, while they might win the first battle, they would have to lose such a war.

In our Embassy in Lebanon, the same talk was going on. In Egypt I confronted our Ambassador, Ambassador Byroade, with the same matter and I asked him pointblank: "Do you think there is a single Arab leader who believes that Israel will wage a preventive war," and Mr. Byroade said, "They don't believe it, but I, Hank Byroade, believe it."

It is that kind of preachment going on by our American officials there that is keeping this pot stirred up.

Unless our State Department is going to do something about it, to stop it, we are going to have more and more trouble in that area instead of less and less.

You will probably recall that Mr. Dulles has been taxed many times with the situation in that area, and has been asked to give his reasons as to why something can't be done about it, particularly with the situation in Saudi Arabia, where they refused to permit American Jews to serve as part of our Armed Forces. There is nothing wrong with the provision in any of these agreements that anyone objectionable to a local government should not be permitted to remain in that country.

That has been the way of governments ever since we have had civilized governments. Today, in the United States, if our Government finds a diplomat here from a foreign country who is objectionable, we send him home. We never find anybody objectionable because of his religious beliefs. When the attempt is made to relate Judaism or the Jewish religion to Zionism, then you get this very fine difference that is drawn by the Arabs and by the Moslems, which even our Secretary of State, however, does not try to draw.

They will tell you, the Arabs, the Moslems, that the Jews are our cousins. They say: "We are all Semites. We have all been persecuted together and we want to live peacefully together." "But," says the Moslem, "while I do not oppose the Jew, I am opposed to the Zionists, and the Zionist is the fellow who wants a Jewish state."

That cannot be an excuse to our State Department for saying that any American Jew in the armed services of our country may therefore be deemed objectionable to Saudi Arabia or to any of these other countries.

Whether you go to Lebanon or go to Turkey or go to Egypt, you will find that there are Jews living there, and living there peacefully with their neighbors. True, they make no attempt to espouse the Zionist cause in the Arab countries or the cause of an independent state of Israel. But all this destroys the substance of the charge that the basic difference in that area is a religious difference.

These people can live together and will live together, and will trade together, and prosper together, if given the opportunity.

I think it is up to the Congress to write the directives into a bill such as this, so that our State Department representatives will do the right thing. They talk about trying to establish peace in this area and couple it with talk about the fact that the boundaries must be agreed upon first.

I say to you gentlemen that if our State Department said to the Arab states: "We will not stand for aggression from either side. We will not permit aggression by Israel against her neighbors. We will not permit aggression by the Arab states against Israel," this problem can be settled. It cannot be settled by saying: "We will guarantee your borders if, as, and when you will agree upon the changes," because that may never come. Unless and until we take the firm position that these boundaries will be changed only by agreement or by arbitration (and there is a method of arbitration) we cannot impress upon both sides the imperative need for them to sit down and agree upon a change of boundaries.

But we must first say, "You are not going to fight about these borders and boundaries." Then if they won't sit down and agree upon it, there is a way of making them go to the World Court and submit the matter there.

Mr. CHIPERFIELD. Haven't we said that?

Mr. MULTER. No, sir; we have not. Mr. Dulles has repeated time and again that we will guarantee these borders and boundaries if, as, and when they agree upon them.

Mr. CHIPERFIELD. The State Department made a statement about aggression, and offered their services, the United Nations, and so forth, to work this thing out; didn't they?

Mr. MULTER. They have not taken the firm position I advocate. There have been intercessions, but there has been no firm statement of that policy by our State Department to this day.

Israel asked for a mutual security pact, and in asking for it she suggested for each of the Arab States the same security pact that she asked for. This, too, is a method of smoking out the evil intent of a potential aggressor. Such a nation not only will not ask for, but will reject such a pact.

The State Department has not seen fit to give, to even negotiate with the State of Israel about such a security pact.

Chairman RICHARDS. ABE, where did you place the line? There is a dispute about the line.

Mr. MULTER. You say to all sides: The lines remain precisely where they are until you sit down around the peace table and agree upon a change, and if you can't agree, then either you are going to appoint arbitrators, and if you don't appoint arbitrators, you go to the World Court and let the court decide. When the court makes the decision, it will be binding upon all sides.

This is an international dispute. It is a proper subject to come before the World Court. It is high time that we as leaders of the world will say that we will stand for no fighting about things of this kind which can be settled either by agreement or by a court decision.

In my opinion, we must take that kind of firm position, and if we did we could very quickly settle these problems in that area. If we don't take that firm position, then we are bound to have trouble there. These people will continue to snipe at each other, and it doesn't matter who is responsible for the first sniping. A shot from one side brings forth two from the other side. It doesn't matter whether it comes from Israel or the other side. As long as you have these people stirred up, they will be sniping at each other. The only way to handle it is for us to take this firm position. I do hope that this committee will, as a part of this bill, say that we want to give aid, economic aid, to all of this area but peace, true peace, is the price they must pay.

You have heard many times from our Secretary of State that he hopes this issue of the Middle East will not be made a political issue in this year's election campaign, because it will stir up the Arabs into again voicing the opinion that in this country we depend on Jewish votes and therefore we are more favorably disposed toward Israel than we are to the Arabs.

I was surprised to learn when I met with the Arabs throughout this area, that not one had ever been told that the Jews in this country are a minority, that in the Senate with 96 Members we have only 2 who are Jews, that of the 435 Members of the House the maximum we have ever had is 11.

As I pointed out to them, in the membership of the study mission that was there representing this very committee, not one depended on a Jewish vote in his home district to get himself elected; that this was not a Jewish problem, nor a Christian problem, nor a Moslem problem, that this is a problem of doing the right thing the humane thing and making people behave and not fight with one another.

When you talk to some of our Arab friends over there, you find the unfortunate part of it is that our American diplomats have never once taken the trouble to tell these Arab officials that this is not a Jewish problem at home.

They talk here at home about making it a political issue, but they never tell the Arabs it is not a political issue, that neither party needs Jewish votes to elect our President, or our House or our Senate.

The shame of it is that our State Department has not taken the forceful unequivocal position and said to these people, "You are wrong. This is not a political problem at home."

The same thing goes for the way that they handle some of these other problems there. You travel through the Middle East and you are told by some of the Arabs that we should stop the Jews raising funds here in the United States and sending them to Israel. They don't understand that charity drives are conducted here without the aid or interference of Government.

Not once has an American diplomat said to the Arab leaders that the Jews have said time and time again in the United States that they will go out and raise as much money to rehabilitate the Arab areas as they raise for Israel, if only there can be peace there; that if the Arabs will sign a treaty, Americans of all faiths will do the same for the Arabs as they are doing for the Jews there.

No one knows better than we people here at home, Jew and Christian alike, that you can't have prosperity in one little corner surrounded by poverty, without creating antagonism in the poorer areas. You have to build up the whole area and give them all an opportunity to live.

Mr. VORYS. Along the line you just mention, on that matter, on August 26, 1955, in an important statement by Secretary Dulles, he said, with reference to the plight of the 900,000 refugees:

"Compensation is due from Israel to the refugees. However, it may be that Israel cannot unaided now make adequate compensation. If so, there might be an international loan to enable Israel to pay the compensation which is due and which would enable many of the refugees to find for themselves a better way of life.

"President Eisenhower would recommend substantial participation by the United States in such a loan for such a purpose."

What do you think of that statement?

Mr. MULTER. That is directly in line with what I have in mind. The Israelis would like to have that. Every right-thinking person would like to see that done, and the only reason it isn't done is because the Arab leaders sit back and say, "We won't let you resettle these refugees anywhere except in Israel."

Mr. VORYS. That is not my understanding.

Mr. MULTER. I would like to suggest that if you would give me, Mr. Chairman, an executive-session meeting I will bring to you Arab-Moslems who will tell you that when you go into these refugee camps you will be permitted to meet only with the leaders. They will tell you how terrible the situation is, how the people in the camps will not be resettled except in their homeland. These witnesses, I can bring to you, will tell you that is not so, that the Arab refugees are willing to be resettled, that they want to be resettled. There have been negotiations time and time again between some of them——

Chairman RICHARDS. I would like to say, Mr. MULTER, that we started a little late. Mr. MULTER told us beforehand that he had a meeting with the Banking and Currency Committee, and he has a notice to inform him that they are going to take the matter up.

Mr. MULTER. I will take just a few minutes more. I would like to answer any questions that the members care to address to me either this morning or at any other time you will invite me back.

Mr. VORYS. As you know, the United Nations resolution said it was the duty of Israel either to compensate or repatriate the Arab refugees. Both of those alternatives are open to Israel.

As far as I know, there has never been any offer by Israel to repatriate——

Mr. MULTER. The 900,000—you are right. As I indicated before, it would be an impossible task to try to repatriate them in Israel. They have taken Arabs back into Israel. There has been some 100,000 families that have been reunited within Israel, people who had been outside Israel and permitted to return.

Israel has always indicated her willingness to compensate the Arabs for their property that was left behind. She has unblocked the funds within Israel that were left behind by the Arabs. They have made that available to them.

I was about to say, as I got this message, that I can bring to you Arabs, Christians, and Moslems who left Israel, who negotiated with the State of Israel for compensation, and when the Government of Syria and Jordan, where they were living, found out that the negotiations were being consummated, stepped in and threatened them with annihilation if they dared to go through with the agreements or to accept any of the money offered by Israel.

There isn't any doubt that people who are entitled to the money, if they are left alone, will be fairly compensated and will get the compensation that they are willing to accept, if the leaders of their home governments would let them take it.

I am prepared to bring to you, Mr. Chairman, persons whose names must be protected because their families are still over there and who would be annihilated if it were known they were testifying here. I will bring you Arabs who will testify under oath that what I say to you is the fact.

Mr. VORYS. The home government of the Israeli-Arab is Israel, the refugee. We all joined in the desire of the Jews to go back to their homeland. The homeland of these Arab refugees is not some other country; it is Israel.

Mr. MULTER. How many of these 900,000 fled from Israel?

Mr. VORYS. I don't know. A lot of them have been born in captivity——

Mr. MULTER. Many of them were born in the refugee camps. You will find that in the Arab refugee camps outside of Israel, among the 900,000, you will find thousands and thousands of them who were poor nomads roaming the Arab lands, eking out a living from the countryside, who moved into these camps because there they are supported by the U. N. and the contributions of the United States to the U. N. instead of continuing to roam.

I don't care how they got there. They are human beings, who should be rehabilitated. They are human beings who should be given an opportunity to earn a livelihood. Something has to be done for them. But it is impossible to take the 900,000 whether they were ever in Israel or not, and move them into Israel, certainly not until there are firm peace treaties entered into between these Arab countries and the State of Israel.

If the peace treaties were consummated, then you might be in a strong position to say, "Those who came out of Israel have a right to return to their homeland."

But as long as they are at war—as late as January 16, Mr. Nasser said, "From the Atlantic to the Persian gulf there is but one Arab nation which no one will succeed in dividing again. After World War II part of the Arab heart was snatched from the Arab body—meaning the State of Israel. Today Arabs from the Atlantic to the Persian gulf will coperate in restoring that part," restoring Israel to the Arab lands.

As long as that condition exists, as long as the Arab leaders join with Mr. Nasser, as they are doing in saying that, surely no one believes that bringing those 900,000 Arabs or any substantial part of them into Israel is going to make for peace.

Chairman RICHARDS. Mrs. KELLY.

Mrs. KELLY. Mr. Chairman, I would like to compliment my colleague from Brooklyn for his appraisal of this Middle East situation.

Is there any question in your mind, Mr. MULTER, that if we could get the representatives of these countries to a peace conference that Israel wouldn't be willing to settle every issue, including the return of a number of refugees, repayment for their land and return of their bank accounts, as was done for Israel refugees who came there from other countries?

Mr. MULTER. Mrs. KELLY, there isn't a doubt in the world that the Israeli Government and their officials will sit down at the peace table and talk about all these problems and try to arrive at a solution of them.

But let's be practical about it. As of today, the Arabs will not sit down with the Israelis face to face. But that doesn't mean that you can't commence these negotiations.

As a matter of fact, word was sent home at my instance to the Secretary of State. I know it was received here. I know it was received in our Embassy in Israel I know it was received in our Embassy in Egypt, that the Arab leaders were ready to sit down and talk, not face to face with Israel, but with American representatives, with United States representatives about the settlement of all of these problems, if the United States will take the initiative and say, "We insist that you sit down and talk about these things."

You could keep the Arabs on one side of the barrier, the Israelis on the other. The United States representative could talk first to one group and then to the other group, and finally consummate an agreement and bring them together to sign it.

It was going to be done, and word was sent back that it would be done, not on the basis of the 1947 partition resolution but on the basis of the 1949 resolution. There is a difference, because now the Arabs say they want to roll everything back to the 1947 boundaries.

The 1949 truce agreements recognized the boundaries set up at that time as armistice boundaries, subject to revision. That word came back, was received here in Washington, was received throughout the Middle East, with the exception of our Embassy in Turkey.

Within 5 days thereafter, Prime Minister Eden of Britain issued the statement that he would be the arbitrator between Israel and the Arabs on the basis of the 1947 partition resolution.

It was an attempt by Mr. Eden to reestablish British prestige in that area. Whether or not he knew that by talking about the 1947 resolution he would blow up the possibility of these negotiations, I don't know, and I won't make that charge against him.

The Arabs sent word that they would talk about the 1949 borders. He wanted to talk on the basis of the 1947, and the whole thing blew up.

Mr. CHIPERFIELD. Mr. Chairman, I was going to ask this: I can't understand how there would be any considerable portion of people of Israel that would advocate a preventive war, because if they fight a preventive war they are going to have to fight the very war that they are going to try to avoid.

It is a good deal like a man committing suicide because he is afraid to die. That would be the case if you fight a preventive war; no one would win.

There is one question that you didn't comment on, and perhaps you didn't do so because you didn't desire to raise that issue; if you do not, do not answer my question.

Do you advocate the United States sending arms to Israel?

Mr. MULTER. Yes, I do, sir. I disagree with Mr. Dulles that to send arms at this time into Israel would be creating an arms race. The arms race is on.

Mr. CHIPERFIELD. Do you think it would be provocative of war?

Mr. MULTER. No; it would not be. I think it would be preventive of war. I think it is much better to do that than send in 1,800 marines from the 6th Fleet. As Prime Minister Ben Gurion said, "Don't send your boys over here; send us arms so we can fight your battle." As long as Israel is strong——

Mr. CHIPERFIELD. I heard Churchill made that statement.

Chairman RICHARDS. And Roosevelt, too.

Mr. MULTER. I am against an arms race. The State of Israel is against an arms race. I think every sensible person is against an arms race. But I think you must keep these parties on an even balance. If they know that to fight one another, will be to annihilate one another, they won't fight.

Mr. CHIPERFIELD. We have a status of forces agreement in all of these countries. We can't make it public, but we do have that information.

Mr. BURLESON. As our able colleague always does, he makes a splendid case, but he starts with the present-day conditions, and I think that many people do, most people do, in justifying a great many things, and it makes an attractive thing, because it is a humane appeal.

But the humaneness is exactly the reason that Israel was created in the first place. But there were some conditions in the Balfour Declaration that we forget a great many times.

There is no need for anyone, the Arabs or this country, to think or to believe that Israel is going to be driven into the sea or to say that it is not a nation and that it is not going to endure from now on. Certainly I have no idea about that, no such concept that Israel will not endure.

Of course, it will. But, nevertheless, going back to the historical facts under the Balfour Declaration, finally when the British threw in the sponge and said, "We will turn this into a trusteeship," which was our policy, and then we abandon that policy.

In the declaration were safeguards for the Arab majority. The great majority were Arabs in the country at that time. There was only 50,000 Jews, or something like that, with hundreds of thousands of Arabs. It was agreed that their right should be protected.

It was also agreed that no people of the Jewish faith would be bound by the Zionist concepts to the State of Israel outside of the State of Israel.

That leads me to say this to the gentleman, when he speaks of Israel as related to Zionism: Would you contend, Mr. MULTER, that there is a distinction, that Israel is not a Zionist state? Do you attempt to set one apart from the other as a political party, or something of the sort?

Mr. MULTER. I think you will concede that Israel, like our country, guarantees freedom of religion. I think you will agree that Israel, like our country, guarantees every one of its citizens the right to vote and to hold office.

There are Arab-Moslems and Arab-Christians in the Israeli parliament. The point I tried to make is that while most Jews are Zionists, not every Zionist is a Jew. There are many Christians who are Zionists. Zionism is the political concept of a Jewish state. Every Jew is not a Zionist.

You probably know that we have in this country a so-called American Council of Ju-

daism. They have been bombarding the Congress with literature for some time. Actually, they represent less than 2 percent of the Jews of this country. But they were against the establishment of a State of Israel.

Mr. BURLESON. If you will allow me to interrupt, they have vehemently denied that they are opposed to the State of Israel.

Mr. MULTER. They may take the position now that they are in favor of the State of Israel. They were not in favor of its originally. They were bitterly opposed to its coming into being.

After it did, they accepted the fact, but in accepting the fact they do everything they can to dissuade Christians and Jews from sending money to Israel or aiding it in any way. They are doing what they can to help destroy Israel.

They take the position that we must lean over backward in favor of the Arabs and against the State of Israel, which I say is not good policy. It is not American policy.

I don't say that we should be anti-Arab. My argument all through the years is that we must be just as pro-Arab as pro-Israel. You have to be fair and impartial to both of them.

Mr. BURLESON. Is that not the announced policy of the State Department today?

Mr. MULTER. It may be the announced policy, but they are not doing anything to effectuate that policy. They are doing much that is contrary to that policy.

Mr. BURLESON. In connection with the funds, let me ask the gentleman, do you agree that contributions, and you reminded me of this, to the United Jewish Appeal Funds for the State of Israel, do you believe that those funds should be a deductible item on the tax account of the American taxpayer as a philanthropic contribution to the State of Israel?

Mr. MULTER. To the same extent that they are deductible for the support of the American University at Beirut, to the same extent as they are deductible to help people who are in distress anywhere in the world, to the same extent as they are Red Cross and the like.

Mr. BURLESON. Do you know of any other instance or any precedent where any contribution by United States citizens to any political entity of a foreign government is deductible for income tax——

Mr. MULTER. These funds are not made available to a political entity.

Mr. BURLESON. But I disagree with the gentleman—I don't throw this out as such a challenge that it could not be refuted, frankly, I don't know, but my information is that the funds collected by the United Jewish Appeal for the State of Israel goes into a common fund and it can be used for any purpose in the world.

Mr. MULTER. Mr. BURLESON, I most respectfully, but just as strongly, disagree with you. The evidence is overwhelming that not a penny of that money goes into the coffers of the State of Israel. Not a penny of that money is disbursed by the State of Israel. Every dollar of that money is used—that which goes into the State of Israel; not all United Jewish Appeal money goes to the State of Israel—that which does go in is used for philanthropic purposes, rehabilitating people, making available to them the means for agriculture, to learn to farm, to learn skills for industry, for hospitals, and the like.

There isn't a dollar of that money that is administered by or paid to the State of Israel.

Mr. BURLESON. Our State Department people were very definite in 1954 in saying that those funds collected went into a common fund in the state of Israel, and the expenditures were not traceable, that they could not give us any assurance that tanks, planes, guns, public housing, health, or anything else were not purchased, that it was administered by the Israeli Government.

Mr. MULTER. Mr. BURLESON, were they referring to the United Jewish Appeal funds or to Israael bonds?

Mr. BURLESON. They lumped them all together.

Mr. MULTER. You can't lump them together, because the United Jewish Appeal money is not money that is used by the government or administered by the government, while the Israel bonds is a bond issue of the State of Israel and the proceeds go to the State of Israel.

Mr. VORYS. And you pay tax on them?

Mr. MULTER. Yes, you pay tax on the income.

Mr. VORYS. And they can't deduct it?

Mr. MULTER. There is no deduction for the purchase of bonds or the income therefrom.

Mr. VORYS. I found that out recently at home.

Mr. BURLESON. I know that is true of the bonds.

Mr. MULTER. I assure you, Mr. Burleson, if any such proof were available, our Treasury Department, the Internal Revenue Service would immediately revoke the tax exemption that is accorded to those gifts.

Mr. BURLESON. They first decided it was not deductible, and then later on they decided it was under an appeals court decision.

Mr. MULTER. I am not familiar with any litigation involving the matter.

I do know very definitely, I have been active in those matters for a long time, on a high level, and I know there isn't a dollar of United Jewish Appeal money that goes to the Israeli government.

Mr. BURLESON. I hope the gentleman understands I was inquiring.

Mr. MULTER. For more than 50 years the Jewish National Fund, an American organization, has been raising funds here and buying land in Israel, which is then leased on long-term leases, to anyone, to any Jew in Israel who wants to occupy the land. That has been going on for 54 years, to be exact.

Chairman RICHARDS. Abe, what is your recommendation about this legislation, that we do not include any money for help to any Arab state unless what?

Mr. MULTER. Unless they will in good faith enter into peace negotiations, either directly or through the United Nations or an agreed intermediary.

I am not so foolish as to think that you can force these Arabs to sit down face to face with the Israelis. But certainly good faith negotiations should be entered into without delay through an appropriate intermediary.

The United Nations would, of course, be the best intermediary. There are antagonisms there, too. Possibly they could agree upon some other intermediary, who could bring them to the peace table where they could sign the peace agreement.

It is not going to be an easy task. And it will not be accomplished overnight or in a day or week. Certainly we ought to say, very firmly, "This is the time to do it."

Chairman RICHARDS. That you have to do so and so or else.

Mr. MULTER. Yes.

Chairman RICHARDS. If they don't do what we say, that is——

Mr. MULTER. We will know where we stand. We will know whether or not we ought to send in any training tanks to Saudi Arabia at a time when there are reserve tank battalions in this country which haven't been able to get a single tank for training purposes.

Chairman RICHARDS. They agreed in writing to provide those tanks, did they not

Mr. MULTER. They made the agreemnet to purchase the tanks in September 1955, and payment was made in November 1955. You and I sitting there would certainly have said, "Well, now, this is not the time to make that kind of delivery."

Mr. JUDD. The basic agreement was made in 1951 that they could buy weapons and training tanks, and so on, in this country?

Mr. MULTER. Yes.

Mr. ZABLOCKI. Mr. Multer, is your suggestion only to this one area or is it your intention that we include such a provision for every area where there is a dispute? For example, would we withhold any aid to Greece or Turkey, for that matter, or Britain, India, Kashmir, or to Korea?

Mr. MULTER. I say, once you find that the parties refuse to sit down and negotiate in good faith——

Mr. ZABLOCKI. Who would adjudicate the situation as to whether the parties are sitting down in good faith?

Mr. MULTER. Don't you think that the question answers itself, when 8 years have gone by and the parties have not yet sat down and consummated an agreement? Isn't that long epough to determine that they are not trying in good faith to arrive at any agreement?

Mr. ZABLOCKI. No, because you would have to withhold, because there is not a settlement over 8 years, aid from both countries, Israel and the Arab States.

Mr. MULTER. That might be the necessary thing. It might be necessary to say to both sides, "You are both intransigent. Neither will talk. We can help neither one of you from here in."

It might be necessary to come to that position. I don't think it will be. But, it may be.

I would like to stay on, but if it is agreeable, I will come back at any time you suggest. I must get to my committee, which is in executive session.

Chairman RICHARDS. Thank you, Mr. MULTER.

It's a War

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 10, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "It's a War," written by David Lawrence, and published in the U. S. News & World Report of March 23, 1956. This editorial presents the basic fact underlying all news of Communist activities.

The editorial is particularly pertinent in connection with the information—which I recently inserted in the RECORD—on the murder of exiled Rumanians who took advantage of the amnesty of last summer, and the protest—inserted herewith—by the Poles and other exiles in London against the grand tour of Krushchev and Bulganin in England.

I echo Mr. Lawrence's question, "When will we wake up?" When will we recognize that the best defense of our country is constant pressure to make the Communist rulers disgorge the satellite nations which they have ruthlessly incorporated into their military machine?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S A WAR

(By David Lawrence)

When the Communists stir up terrorism in Algeria and cause French divisions to be diverted to north Africa from their primary function in the defense of Western Europe, it's a military maneuver. It's the strategy of war.

When the Communists stir up the people of Cyprus to rebellion so as to wrest from the British their most important military base in the Mediterranean, it's the strategy of war.

When the Communists weaken the ties between Jordan and Britain and help to bring the Arab nations together in an antiwestern combination of states, it's a military maneuver. It's the strategy of war.

When the Communists spread their terrorism through north Africa, using Egypt as a base of operations, and when Egypt herself, succumbing to Soviet influence, enters into an agreement to buy arms from one of the satellites of the Soviet Union, it is the strategy of war.

When the Communists deliberately undermine the French Republic as well as the Italian Republic, gaining a foothold in the Parliaments of both—unmolested by any effective restriction upon subversive activities—the objective is to weaken and detach two important allies from the West. It's the strategy of war.

The Communists are infiltrating on every front in Europe, north Africa, the Middle East, and Asia.

Are we in the United States immune? The Communists are striving to break down our security system, to exploit racial disputes, and yet to obtain from us technical information and as much goods as will help them build up their military armament. It's the strategy of war.

The Communists are helped inside the United States by unwitting persons, influential in the formation of public opinion. Many of the so-called liberals, obsessed with an academic argument about the right of dissent, are singularly indifferent to the safety of the Government itself. As Judge Learned Hand once pointed out, there is no right of revolution against the state.

The war in which we now are engaged is a different kind of war from any the United States has ever faced. It resembles the "fifth column" war of 1938 and 1939 that paved the way for the fall of France in 1940. Only this time the operation is masterminded by ruthless Communists instead of skillful Nazis.

Since we are at war, why do we not resist at least by financial and economic means? Why do we sit by while our allies send strategic goods to the enemy and while the Soviets transmit their gold rubles to hidden espionage centers behind our own lines in north Africa, in Asia, and in Europe?

The usual argument made is that our allies must trade to make a living. But we are spending billions for military equipment to aid these same allies. Why should we not indemnify our allied friends for their losses in trade, if necessary, but still keep machinery and other strategic articles from being shipped to our enemies?

We hear colonialism denounced by unthinking spokesmen in America of various causes and groups who parrot the Communist line on the same subject.

Eighteen United States Senators called last week for the liberation of Cyprus from British rule, but the same Senators are not so solicitous about those who once had their independence and now have been deprived of it by the Communists—the people of Poland, Czechoslovakia, Hungary, East Germany, Bulgaria, Rumania, Latvia, Lithuania, and Estonia.

China, too, has lost her freedom—enslaved by Moscow-trained tyrants. In the face of this, there are Americans who advocate policies that would virtually disband the army of 1 million men now on our side in the Far East. For if Red China's gangsters are seated in the United Nations, we shall demoralize the armies of Nationalist China and of the Korean Republic. That's a military maneuver of the highest importance to Soviet strategy.

We are being lulled into inaction on the Communist front by appeals for economic aid to questionable neutrals. Billions of dollars will not instill morality or courage in the minds of those who cringe already before the Communist threat.

When will we wake up? When will we recognize that war now is enveloping us on every side? When will we fight back?

When will we mobilize our moral as well as our material strength and accept the challenge the Communists have thrust upon us? Or must we wait until our allies have been debilitated one by one and then try to battle communism by ourselves?

It's a war—now, in 1956—as it has been for more than 10 years. It is not less dangerous because it is euphemistically called a cold war. It is a war of infiltration and encirclement—a precursor to military conquest.

It's time to recognize the realistic facts as they are and to act in self-defense. It's a war.

Statement of George J. Burger, Vice President, National Federation of Independent Business, Before the House Foreign Affairs Committee on May 4, 1956

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD heretofore granted, I am inserting as a part of my remarks the excellent statement made on May 4, 1956, before the House Foreign Affairs Committee by Mr. George J. Burger, vice president of the National Federation of Independent Business. The subject of Mr. Burger's statement was "Foreign Aid":

I am George J. Burger, vice president and Washington representative of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are committed by their majority vote. No officer or group of officers is permitted to speak or act officially for the federation until our entire membership has been polled.

Our members were polled through mandate No. 216 (official publication of the federation) on the question: "Are you for or against maintaining foreign aid as a permanent feature of our Nation's foreign policy?"

It is to be noted on the mandatae the instruction is given to the members: "Before voting—see arguments for and against."

The argument for:

"In the political cold war, foreign aid almost certainly saved Western Europe from communism. Europe doesn't need more aid, is now expected to help the United States in aiding Asia. Stout defense of United States at Bandung last year is proof that mutual assistance helps can work there, too. Militarily, the United States with annual expense of a few billion has made possible creation of allied forces equal to nine times our ground forces, twice the number of air squadrons, equivalent of our naval forces. Economically, aid has helped sustain the United States economy. Over three-fourths of funds have been spent in the United States. More, the 1954 rise in exports helped float the United States economy through the recession."

The argument against:

"Since July 1, 1945, Unite States taxpayers have pointed up about $69 billion for foreign aid. While the program was 'temporary' at first, it is now on a permanent basis. Meanwhile our Nation has gotten the highest deficit of any country in the world. Those who espouse aid forget that you can't finance or buy friendship. Consider, in Korea the United States bore almost 90 percent of the burden. Where were our European allies? Now the switch is to Asia. But India, an Asian country which has taken foreign and, is flirting with Communist China. Indonesia which would get aid, has indulged in ventures sure to wreck its economy. Question here is just who is kidding whom?"

The result of this poll, as it appears in mandate No. 217 shows 16 percent for, 80 percent against, and 4 percent no vote.

As a matter of record, I request the privilege of having made a part of the permanent record of this hearing, mandate bulletins Nos. 216 and 217 as they refer to our action on the foreign-aid program.

Mr. Chairman and members of the committee, as these expressions come from what can properly be termed the "grassroots" of our Nation, we believe it should be of importance for the committee and the Congress in shaping future action on this major subject.

It has been reliably reported, as late as April 26, over one-half of the present Fedeal public debt can be traced directly to involvement in foreign wars and the extension of aid to foreign governments and peoples.

It is also reported that the worst feature of our foreign-aid programs is the fact that during periods of deficit financing, we have put the American taxpayers deep in debt by borrowing money for the foreign-aid programs. This has cost another $18 billion plus and the interest on the interest of this borrowed money added more than $8 billion to the total of the foreign-aid programs since the end of World War I.

It is to be noted in a recent report appearing in the New York Times of April 21, it says: "NATO costs so far set at $312 billion," and further quoting from the Times: "Seven-year bill for United States alone is $252 billion. Thirteen other lands contributed the balance."

In my executive position with the federation, and in my travels throughout the Nation meeting with the average independent businessman, the question is put to me time and again: "When is Congress going to call a halt to the giveaway program before it wrecks the economic structure of our Nation and breaks the backs of its people?" Mr. Chairman, this is an actual, truthful statement presented to me time and time again, nationwide. I answer: "The question must be answered by the Congress of the United States."

I think it can be said that the public at large is well aware of the fact of the constant inspired, alarming statements used by the various administrations as to the peril we face unless this foreign aid of all descriptions continues. It is my belief that the public now believes that most of these statements are merely smokescreens in an attempt to justify the continuance of this giveaway program.

Mr. Chairman, I have tried to keep this statement as short as possible and, at the same time, present to the committee what could be called "Mr. Citizen speaks."

The argument is now being used for the continuance of foreign aid to combat reported, alleged aid from the Soviet Government. It's beyond me to understand how that government could make good or deliver foreign aid in the same capacity as our own Government has done—where, on the other hand, it is a matter of public record that the Soviet Government has yet to make its adjustments on the lend-lease arrangement our Government so graciously extended during the critical days of World War II. It is my belief, judging on performances, that any pledge made by the Soviet Government can be looked upon as merely piecrust.

Just recently, to my surprise, and it happened within the past 60 days, I found that an American citizen returning from the Middle East after a year or two stay, remarked: "If you want to see some evidence of appreciation of our foreign-aid program, look at what is stamped on the currency of that country, 'Yankee Go Home'."

I wonder how many other recipients of aid from this Government share the same lack of appreciation, all at the expense of American taxpayers. From authoritative reports we are receiving, it is a safe conclusion that this must be happening, either directly or indirectly, in the case of many other recipients of our foreign-aid program.

It is interesting to note in the international section of the New York Times of Wednesday, January 4, 1956, it said: "Booming Europe forced to slow industrial gain—struggle to keep prosperity from inducing inflation believed won in 1955." So there is justification for the Congress to "Stop, Look, and Listen" before continuing this obviously unneeded foreign-aid program.

It would appear to small business generally that the continuance of such extensive foreign-aid program may be a smokescreen to further the best interests of international business corporations—all at the expense of the American taxpayers and small business of this Nation.

Mr. Chairman, I have in my possession a wealth of material taken from the press in recent months to conclusively substantiate the position the federation members have directed be taken as to the discontinuance of the foreign-aid program as it has heretofore existed.

In conclusion, solely in the interest and welfare of our own Nation, and in behalf of the people we represent, independent business and professional men, nationwide, we say: "The time for Congress to close Uncle Sam's international gift shop is now."

Small Business, Not Big Companies, Are Hurt by Tighter Credit Curbs

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. MULTER. Mr. Speaker, a credit study just issued by the Standard Factors Corp. cites another example of how small business is steadily being pushed to the wall. The study, issued April 24, 1956, covers 727 manufacturers in 33 major industries, and 127 banks in all parts of the country.

According to the report, as bank credit tightened, the largest borrowers have supplemented their bank credit by selling commercial paper, or borrowing from insurance companies or the public. This avenue, on the other hand, has been closed to the smaller and medium-sized manufacturers. Companies with a net worth of $5,000 to $25,000 have lost their bank lines during the past 12 months because of tightening bank credit, as well as about half of the companies in the $25,000 to $100,000 group. Companies in the $500,000 to $2,500,000 category were virtually unaffected, 98 percent having bank credit on March 31, or only 1 percent less than a year ago.

Small business could get no relief from the commercial finance companies which also operate with bank credit. These companies operations were also strapped by the tighter controls on loans.

The report concludes that the Federal Reserve System might reconsider whether the country can afford to maintain uniform credit controls which affect industry members so differently and which bankers themselves do not like.

The report follows:

ONE YEAR'S EXPERIENCE WITH CREDIT CONTROLS

The latest move of the Federal Reserve System in raising the rediscount rate to 2¾ percent (and 3 percent for Minneapolis and San Francisco) is the fifth such increase since April 1955. Its avowed object is to hold back the inflationary pressures in our economy. With steel, non-ferrous metal, rubber, and other basic producers working at 100 percent capacity, any further rise in industrial activity would scarcely produce any more goods but merely increase prices, with the inevitable consequences in new wage demands, higher costs, etc. Hence the rise in the rediscount rate which will tighten money still more and slow up the industrial parade, somewhat.

However, since this is the fifth increase within a year, we have been able to gage how credit restraint affects the different segments of business. Since April 1955, when the first rediscount raise was set into motion, until April 1956, when the fifth raise was announced, Standard Factors Corporation has queried 727 manufacturers, and 127 banks. These manufacturers are located in every major city in the country; the banks are equally well distributed through the 12 Federal Reserve bank districts.

Despite the apparent fairness of the Federal Reserve banks' method of holding down credit expansion, we have found that the tightening of the money supply has not affected all businesses in the same fashion. Smaller business has felt the tightness worst; medium-sized corporations have been next in complaining about the money situation; large business has had little to worry about. While it is obviously not the desire of the Federal Reserve managers to discriminate among industrial and commercial borrowers, the net effect has been that as bank credit tightened, the largest borrowers have been able to supplement their bank credit by selling commercial paper, borrowing long-term funds from insurance companies or from the public. The smaller and medium-sized manufacturers, on the other hand, have had to contend with a more desperate loan situation. This situation is clearly evident from the reports to this Standard Factors' survey.

WORST IN CERTAIN INDUSTRIES

This situation, according to our reports from 727 manufacturers, is found to be worst in the following manufacturing industries; machinery (nonelectrical); food and beverages; petroleum refining and chemicals; fabricated metals; transportation equipment; textiles and apparel; electrical machinery; stone, clay, and glass products. Many other manufacturers report the same state of affairs, but the above named industries show probably the worst effect of the uniform tightening of bank credit. In those industries, the smaller manufacturer has been virtually squeezed out of bank credit, while the medium-sized producer has had his line curtailed. Details on these companies are cited below.

On the banks' side, the reports from 127 banks show the utmost good will, and a keen desire to satisfy all their customers to the banks' best abilities. However, while banks are anxious to help all customers, there is a tendency for most of the pressure to work its way down to the smaller customer. For this there is evidently an economic reason: it takes almost as much personnel time and expense to administer a $10,000 line of credit as it does to administer a $100,000 line. Similarly, it take no more time and personnel effort to administer a $1 million line of credit than it does to watch over a $100,000 line.

True, bank rates on small loans are higher than on larger loans. This must be so, because the bank cost of administration (and risk) is higher with the smaller credits. The cost of keeping track of smaller loans and investments in smaller business is high, and even going interest rates on smaller loans do not always cover the expense to the bank. But since lendable funds and bank personnel are at a premium—and since the risk on one $1 million account is less than the risk on one hundred $10,000 accounts—banks tend to hold on to their biggest and more stable customers.

COMMERCIAL FINANCE

The commercial finance industry has endeavored to take up the slack through accounts receivable financing, but even their resources are insufficient to help all the small and medium-sized companies which are worthy of credit. Moreover, since commercial finance companies are themselves in good part dependent on bank lines for their resources, they cannot expand their lending in the face of tightening bank credit.

According to the reports from the 727 manufacturers to this standard factors' survey, we find that prior to the first Federal Reserve Board hike in rediscount rate (April 1955), 89 percent of the companies were regular borrowers from commercial banks. Today, only 53 percent have bank lines. In terms of net worth, here is a breakdown of the experience:

Net worth of companies	Percent of companies with bank lines March 1955	Percent of companies with bank lines March 1956
$5,000 to $25,000	53	18
$25,000 to $100,000	82	44
$100,000 to $500,000	94	79
$500,000 to $1,000,000	99	98
$1,000,000 to $2,500,000	99	98
Over $2,500,000	99	99

It is interesting to notice that the smaller companies (under $25,000 net worth) had felt the most severe effects of the tightening bank credit. Slightly more than half of these companies had bank lines in March, 1955. These lines were used to discount bills, carry inventories for processing or for sale, or to take care of payrolls or current operating bills until payment had been received from sales. While only 53 percent of these smaller companies had bank lines when the credit squeeze began, only 18 percent of these companies were left with bank lines a year later. Loss of bank lines often puts the smaller businessman at a fatal disadvantage.

NEXT IN LINE

Looking at the small-medium companies ($25,000 to $100,000) net worth, the drop here was from 82 percent with bank lines, to 44 percent a year later. Almost half the companies in this category lost their bank lines. This, of course, is not as large a drop as in the smallest class, but severe enough.

When we come to the medium-sized company ($100,000 to $500,000 net worth), the drop is much smaller—from 94 percent to 79

percent. Above the $500,000 net worth class, there is virtually no change in bank credit. The minute shift in the larger companies was due to public financing, or long-term loans from insurance companies to replace bank borrowings.

What did the companies do to replace bank accommodations? Many of them went to* commercial finance companies and accounts receivable financing. But here too they met the other side of the tightening bank credit situation. Since commercial finance companies operate on the basis of their own capital plus bank lines of credit—and tightening bank credit affects commercial finance, companies also—the finance companies could not begin to accommodate the demand. Their own resources were squeezed by tighter bank credit—and only those larger commercial finance companies which have access to public financing, to direct placement loans from insurance companies, and to the commercial paper market, were able to make some semblance of meeting the demand.

BANKS LIKE SMALL BUSINESS

As far as the 127 banks are concerned, their confidential replies to this survey indicate that far from shying away from small business, the average bank is, in itself, small business and is largely occupied with small-business loans. Nationally, most banks are small business, but many of these banks participate in larger loans through larger banks in the major commercial centers.

However, with the loan demand rising all over the country, many of the smaller banks have been withdrawing their deposits with larger banks, and using these funds for their own loans. In addition, all banks have met the expanding demand for loans by reducing their investment portfolios. This they have done by selling their Government securities. This sale has been proceeding (in 1956) at an average rate of about $200 million a week. Sale of investments on such a scale is indicative of a strong pressure of loan demands, for the sales involve losses which banks are naturally reluctant to take. Yet they do take them, in order to be able to accommodate customers.

But when it comes to determining what customers should be satisfied first, bankers (apparently like everyone else) must look to the customer which gives them volume, to the customer most apt to be around the bank in the years to come, and the customer which involves (for the bank) the least risk of the depositors' money. Volume, continuity of business, and least risk, characterize the larger corporations.

While the reports from banks show that bankers lean over backward to continue serving their smaller commercial customers, nevertheless the reports also indicate that when the question of renewal of 30-, 60-, and 90-day commercial loans or notes arises, the decision is apt to be far more severe and critical in the case of the smaller and medium-sized business, than when the corporation is larger.

Whether the country can afford to maintain uniform credit controls which affect the different segments of industry so differently, and which bankers themselves do not like, is something which the Federal Reserve System might reconsider.

The manufacturing industries covered in this study of 727 companies are: agricultural implements; automobile parts; bedsprings and mattresses; breweries; chemicals; men's and women's clothing; confectionery; cloth mills; drugs; electrical machinery; electrical parts; electronics; foundries; fruit and vegetable canners; furniture; hardware and tools; hosiery; lumber; industrial machinery; meat packers; metal stampings; paints and varnishes; paper; paper boxes; petroleum; plastics; radio and television; shoes; soft drinks; steel and metal fabricators; stone, clay and glass products; and transportation equipment.

Behind Courts Racial Ruling

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. FORRESTER. Mr. Speaker, the CONGRESSIONAL RECORD of April 30, 1956, page A3481, contains my remarks that day on the usurpation of powers by the United States Supreme Court. As a part of my remarks on that occasion, I said:

I have the idea that the press and the public intend to do something about it.

On May 5, 1956, Hon. George Todt, editorial columnist, Valley Times, a newspaper covering the entire San Fernando Valley in California, wrote me that he had read my remarks and that, pursuant to my statement that "the press and the public intend to do something about it", he was sending his contribution. That contribution was an editorial dated May 3, 1956, appearing on page 10 of the Valley Times and reading as follows:

GEORGE TODT'S OPINION—BEHIND COURTS RACIAL RULING

"The highest duty is to respect authority."—Pope Leo XIII.

Of even greater significance to the American people than the Supreme Court's dynamite-laden ruling on segregation in the case of *Brown* v. *Board of Education* was the means which the high court used in arriving at its decision. It was a decision based on certain controversial emotions instead of legal precedents. Of the latter, there were none.

In fact, the 9 justices modestly overturned 59 State court decisions, 13 Federal court decisions, and 5 decisions previously made by the Supreme Court itself in favor of the separate-but-equal doctrine. This turned into scraps of paper no less than 77 judicial decrees, all of them hitherto considered valid and lawful precedents in any court of jurisprudence throughout the land, at a single stroke. Incredibly enough, 8 of the 9 justices involved—excepting only Mr. Chief Justice Warren—had all participated in the decisions rendered by the Court in those cases decided less than 5 years before. And with the exception of Mr. Warren, all the others were New Deal appointees, appointed by former Presidents Franklin D. Roosevelt and Harry S. Truman.

What is at issue here is not the merits or demerits of segregation as such. What we are examining is the manner in which the Supreme Court, as presently constituted, decided arbitrarily to overthrow the legal precedents contained in the principle of stare decisis. This means simply that once a decision has been made, it shall not be reversed—except in the case of war, legislation, or a constitutional amendment. Until the event of *Brown* v. *Board of Education*, the principle of stare decisis had been held inviolable in American jurisprudence. It was the heart of our concept of a government of laws instead of men.

Now what was it which the nine Justices substitute for the principle of stare decisis in their controversial decision which has since evoked thunder over America? Strangely enough, while the unanimous decision cited no legal authorities or decisions to justify it, the Court said: "Whatever may have been the extent of psychological knowledge at the time of *Plessy* v. *Ferguson*, this finding is amply supported by modern authorities." The Court, in a footnote, indicated some of these modern authorities by name—and they are shocking.

On May 26, 1955, Senator JAMES O. EASTLAND, of Mississippi, presently chairman of the Senate Committee on the Judiciary, stunned the Nation by exposing the records of the modern authorities referred to by the Supreme Court in its decision on the floor of the Senate. Copies may be obtained by writing the Senator at: Senate Office Building, Washington, D. C. Every thinking citizen should examine these charges without prejudice—and commence to ask some questions.

First cited as a modern authority in this judicial-history-making-without-legal-precedent was K. B. Clark, a Negro, so-called social-science expert, employed by the NAACP—which was the principal litigant in the case. Another was Theodore Brameld, and this modern psychologist was cited by Senator EASTLAND as having been a member of at least 10 organizations declared to be communistic, Communist dominated, or Communist fronts. Likewise, E. Franklin Frazier, psychologist, whom Senator EASTLAND indicated had been cited 18 times by the House Un-American Activities Committee for connections with Red causes in the United States.

Most astonishing of all, the Court stated in the same footnote: "And see generally Myrdal, An American Dilemma, 1944." And just who was Dr. Gunnar Myrdal? Was he an American? Was he qualified to pose as an authority for the United States Supreme Court? Well, consider the facts: Dr. Myrdal, who called himself a social engineer, was hired by the Carnegie Foundation—under Alger Hiss, I believe—to make an investigation of race relations in this country. He was a Socialist who had served the Communist cause.

He admitted he had no knowledge of the Negro question in the United States. He had utter contempt for the principles upon which the United States was founded and for the political system to which the people adhere. One of the most revealing statements of Dr. Myrdal's book is this authority's blasting our Constitution as "impractical and unsuited to modern conditions" and that its adoption was "nearly a plot against the common people." This is hogwash.

Here is the crux of the matter: how in the name of reason and commonsense could the Supreme Court bring its prestige to the level of such "modern authorities" and thereby nullify the doctrine of "stare decisis" at a single stroke? Has this doomed our traditional concept of American jurisprudence based on law and legal precedent? Does it mean that our Constitution is only what the judges may arbitrarily say it is at any given moment? If this is indeed true, then we are actually at the mercy of the whim or caprice of a judicial oligarchy. It is time to ask questions in the highest places.

I reiterate, Mr. Speaker, that I have every confidence that when the press and the public are informed, indeed they intend to do something about it. I have an abiding faith in the people of our 48 States.

Iron Curtain Trade

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include therein a very interesting article by Bernard N. Rossiter

relative to expanding United States trade with the Soviet bloc.

Even a cursory glance at the list of commodities that has been cleared for Soviet trade indicates unquestionably that most of them would definitely increase the war potential of the Soviet Union, since the list contains rubber products, drugs, fiber products, wood, electrical appliances, refrigerating equipment and other articles of clear, obvious value to an economic system gearing for war.

It is stated this list is designed to create conditions which will encourage nations to increase their exchange of peaceful goods throughout the world—an admittedly lofty aim provided that we determine that the goods exchanged are definitely peaceful, and will be used only for purposes of peace and not for war. That is the great question here. The American people would like to have an affirmative reassuring answer. They are entitled to it.

The article follows:

NON-STRATEGIC—700 ITEMS FREED FOR RED TRADE

(By Bernard N. Rossiter)

The Government yesterday took a modest step toward expanding East-West trade, freeing 700 non-strategic goods that United States exporters may sell the Soviet bloc without a license.

Since March 1948, shippers have had to get Commerce Department approval on virtually everything sent to the Russian world.

Trade exports predicted the license-free roster would stimulate only a "marginal" increase in trade. And an analysis of the list shows only a small proportion of goods the bloc bought here last year were freed. Licenses are still required for 6 of the 7 major commodities purchased.

CALLED INITIAL LIST

Commerce officials, however, stressed that this was an "initial" list. They said it would be expanded. Moreover, the volume of licenses approved this year was another sign that curbs are being eased.

In 1956's first quarter, approved applications reached $8.8 million, up more than 75 percent from the $5 million in the first 3 months last year and more than 5 times the $1.6 million in the last quarter of 1955.

Commerce Secretary Sinclair Weeks said the free list "is designed to carry out the Government's objective, first announced by President Eisenhower at Geneva last July 'to create conditions which will encourage nations to increase the exchange of peaceful goods through out the world.'"

Every item on the roster, the Department said, is one that would have been approved for export licensing, and no changes were made in the list of banned strategic goods. The complete embargo on exports to Communist China and North Korea still stands, and shippers must stil get licenses for goods to North Vietnam. "Communist-controlled areas" in Laos and Russia's Far East seaports.

The list covers goods to the rest of the Soviet Union, Albania, Bulgaria, Czechoslovakia, East Germany, Estonia, Hungary, Latvia, Lithuania, Outer Mongolia, Poland, Danzig, and Rumania.

Among the freed commodities are some beverages, rubber products, drugs, fibers, wood, paper products, glass, clay products, cutlery, electric household appliances, commercial refrigerating equipment, office machines, dyes, paints, soil-improvement compounds, soaps, photographic equipment, plumbing fixtures, optical goods, musical instruments, toys, jewelry, lamps, beauty and barber supplies, and dental equipment.

FARM ITEMS OMITTED

Notable omissions were farm commodities and agricultural machinery. Both bulked large in the first-quarter jump of licensed goods, accounting for $7.3 million of the $8.8 million approved.

Commerce officials conceded that the list was inconsistent and omitted goods that have been freely licensed.

One aid said, "This is the smallest possible grouping. We left out any item on which any question had been raised."

Last year United States exports to the bloc were $7.2 million compared to $6.1 million in 1954. Wool rags, corn, and cattle hides accounted for more than half this trade and all remain under license. Of the top 7 only pencil slats, with sales of $350,000, was freed.

The new order will cut redtape for exporters and possibly promote some untapped markets.

A big question mark hangs over farm goods. No surplus commodities are on the roster, in part because the administration still hasn't decided what can legally be shipped.

Regulation of Bank Proxies

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. MULTER. Mr. Speaker, permit me to direct the attention of our colleagues to the following article by Mr. Lewis D. Gilbert, which appeared in the April 1956 issue of the Investor. Mr. Gilbert in the article points up the need for regulating the solicitation of proxies in connection with the operation of our banks.

I am certainly in accord with the views expressed in the article. In this regard on August 2, 1955, I introduced in the House H. R. 7853, which would authorize the Comptroller of the Currency to regulate the solicitation of proxies for voting shares of stock of national banks.

The article follows:

ROUNDUP OF NEW YORK BANK MEETINGS

(By Lewis D. Gilbert)

Leading New York banks, such as Chase Manhattan, First National City, Bankers Trust, and Chemical Corn Exchange, now send out postmeeting reports as a matter of good stockholder relations. They recognize both the basic right of owners to full disclosure and the fact that general press coverage cannot be as detailed or informative as a postmeeting report.

There are still three New York banking institutions which, by neglecting to send out postmeeting reports, refuse to build up an informed electorate among their stockholders. They are Guaranty Trust Co., Manufacturers Trust Co., and Empire Trust.

This year, once again, the writer moved from the floor of the annual meetings that such reports be prepared. Until such time as solicitation of proxies for bank meetings comes under SEC regulation, the vote is of necessity a token one, representing only those few independents actually present at the meeting. In direct contrast is the voting at large corporation meetings already under SEC rules where independents now receive the votes of hundreds of thousands of shares on proposals they introduce.

Fortunately, we are beginning to see proposals for legislation bringing banks under the SEC proxy rules. First to introduce such a bill is Representative ABRAHAM J. MULTER, of New York, an active and vocal member of the House Banking Committee. We hope that Representative MULTER will continue his efforts and that a companion bill will be introduced in the Senate.

Let us now examine the issues covered at those banks which refused to impart the details of the annual meeting to their stockholders. Were there things they did not want the stockholders to know?

DISSATISFIED WITH DIVIDENDS

Perhaps President Henry C. Brunie, of Empire Trust, wanted to withhold the fact that we registered a strong protest against the continued inequitable and arbitrary dividend policy of the trust company. In 1954 earnings were $12.23. Dividends were only $3 a share. In 1955 earnings rose to $14.71 and still only $3 was paid out to owners. Moreover, the management made no attempt to pay a supplementary stock dividend. As we pointed out at the annual meeting: Is it any wonder that the number of stockholders of Empire Trust declined in 1955?

The need for the right of cumulative voting at State banks (national banks already have it) is well demonstrated by the situation at Empire. If it existed, the owners who agree with the writer that larger dividends should be paid, would be represented in at least a minority position on the board of directors. For example, at Denver National Bank this year, thanks to cumulative voting, Maurice Brody, the investment economist, was finally elected to the board despite the opposition of management, thus assuring proper representation for all segments of stockholder opinion. An Empire director, similarly elected, would be able to learn the nature of the investments of Empire Resources Corp., wholly owned subsidiary, which has securities with a market value of $564,000. Mr. Brunie declined to furnish this information at the annual meeting.

Naturally Empire management annually opposes our proposal to allow cumulative voting and demand for the end of the stagger system of electing directors. It opposes them by voting all the proxies, except those in our possession, against the floor proposals. President Brunie claims his views on the dividend question have the support of the majority of the shareholders. We remind him at each session that as long as he refuses to send our postmeeting reports, he cannot properly judge the extent of dissatisfaction among owners.

LOSS OF POSITION

Let us move on to Guaranty Trust Co. In 1940 this bank was third among the leading banks of the country. Today it has slid to seventh place. We asked why this had occurred, and had a postmeeting report been sent out, stockholders all over the country would have been able to read Chairman J. Luther Cleveland's answer to this vital question. The question of why the chairman's son had been appointed a vice president was also raised by the writer, and, of course, there was a floor resolution on the subject of establishing cumulative voting and ending the stagger system.

By not sending out a postmeeting report, the management of Manufacturers Trust actually does itself a great injustice because in many ways this bank has been most progressive in its stockholder relationships. Its meetings are democratic and the chairman leans over backward to see that free speech and shareholder rights are upheld.

HOTEL STOCKS UNDER FIRE

The principal difference of opinion at Manufacturers Trust revolved around the question of what should be done with the Hilton Hotel stock the bank had acquired

as a result of its interest, in former years, in the New Yorker Hotel. Several owners urged the bank to dispose of it while the country is enjoying prosperity. (At this point only 400 shares of the preferred stock have been sold.) Horace D. Flanigan, bank president, presented some valid reasons why the board of directors hesitates to dispose of all its holdings and we personally feel that a case can be made out either way. A postmeeting report would have aired this, and other questions, so that all owners could comment intelligently when returning future proxies.

As we can see from this brief roundup of bank meetings, the issues discussed are important to the owners so the shareholders are entitled to postmeeting reports.

Statement by Hon. William A. Dawson, Republican, of Utah, on Legislation To Correct an Injustice in Present Child-Care Deductions for Income-Tax Purposes

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. DAWSON of Utah. Mr. Speaker, it has come to my attention recently that certain provisions of the new Income Tax Code are working to defeat tax relief for many divorced or widowed mothers who have to work to support their families. The 83d Congress, wisely, I think, recognized that providing child care during working hours placed an unfair burden on divorced mothers, widows and widowers working to provide for their children. As a result, the new income-tax law provides that the cost of child care, up to a reasonable maximum, is a deductible expense for income-tax purposes.

There is a hitch in the law, however, which prevents it from benefiting many mothers whom, I believe, Congress intended it should benefit. I refer to divorced mothers whose former husbands contribute something to the support of their child. There are many instances where these contributions enable the husband to claim the child or children as his dependents for income-tax purposes. The contributions, however, are not large enough to permit the mother to remain at home. In order to supplement the support payments, she must work and while working must pay for care of her children.

As the law is now written, she is not entitled to the benefits of the child care provisions because the children are dependents of her former husband in the eyes of the Internal Revenue Service.

I have today introduced legislation to correct this injustice. Its only effect would be to make divorced women, widows and widowers eligible for a child care deduction despite the fact that another contributor to the support of the children is entitled to claim them as dependents.

This is meritorious legislation. It will create no new discriminations or injustices. It will remove a hardship caused, I believe, by some unfortunate wording in the present law.

The Agricultural Revolution: Who Will Win It?

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mrs. HARDEN. Mr. Speaker, for the better part of the past 2 years, Congress has been engaged in almost ceaseless debate over the form and content of the new farm program. It now appears hopeful that the next few days will see enactment of a soil bank bill which meets most of the objections cited by President Eisenhower in his veto of the omnibus farm bill last month. I certainly hope this is the case, for I believe the soil bank holds great promise for solving the surplus problem.

Yet, it seems to me that the soil bank is at best but a temporary solution. The real solution lies not in decreasing production but in increasing consumption of agricultural products. Only when we do this can we claim to have solved the agricultural problem.

How do we increase consumption? There are several ways, but there are two major methods which hold out real hope for the future of American farming. Expanded trade is one and the present administration is making real strides in finding greater overseas markets for the products of our farms. We need to make greater progress and I am sure we will.

Another means of increasing consumption lies in finding new uses for agricultural products in American industry. Along with several of my colleagues, I have introduced a bill, H. R. 10123, which establishes within the Government an agricultural research agency. This agency would be obligated to develop new uses in industry for the products of our farms. The program makes sense to me, for the long-range solution to the farm surplus problem must lie in new industrial uses for our constantly expanding farm production.

Recently I had occasion to read a speech delivered by Wheeler McMillen, vice president of Farm Journal magazine. Mr. McMillen, a native of my hometown of Covington, Ind., is a recognized expert on agricultural affairs. In addition to his position with Farm Journal, he is chairman of the board of directors of the Council for Agricultural and Chemurgic Research. He has for many years urged increased emphasis, both by Government and private enterprise, on research aimed at developing new uses for farm products.

In his speech entitled "The Agricultural Revolution: Who Will Win It?" Mr. McMillen describes the great changes taking place in American agriculture and the great challenge faced by agriculture now and in the immediate future.

The speech, which is reprinted below, is one which I hope will be read by each Member of this House.

THE AGRICULTURAL REVOLUTION: WHO WILL WIN IT?

(By Wheeler McMillen, vice president, Farm Journal, Inc., and chairman of the board of directors of the Council for Agricultural and Chemurgic Research, before the opening luncheon of the 21st Annual Chemurgic Conference, Congress Hotel, Chicago, April 10, 1956)

One does not apply the term "revolution" lightly. It signifies the complete turn of a cycle, something which is not accomplished in a vast industry by 1 invention or by 1 discovery. Yet no one can question that a revolution is taking place in agriculture. The slow beginnings appeared in the first half of the 19th century. The reaper was its Concord and the steel plow was its Lexington.

Almost without hesitation, invention and science continued to progress. Within the last decade the revolution has sharply accelerted. Engineeirng and scientific developments and their widespread adoption have changed the whole manner of agriculture. Today no man can farm exactly as he did even a quarter of a century ago.

The revolution goes on. Farming has changed, farm living has changed, farm services have changed, and farmers have changed. We have witnessed revolution in machinery, revolution in science, revolution in agricultural education, and revolution in rural ways of living.

Like most revolutions, this agricultural revolution is a hard period for those most directly affected as they struggle through its changes. Because the farm revolution, like a military action, has advanced unevenly, with some salients far ahead of others, the present generation suffers from the economic distortions which have appeared. The production salient has advanced more rapidly than the marketing salient, and far faster than the utilization salient. Unless markets and uses catch up closer to production, the present generation of farmers can lose this revolution.

Industry can lose it, too. Few need to be reminded that unhappy effects can follow behind a continued curtailment of buying power in rural America. When business feels hurt in the countryside stores and banks the pain is bound to reach into city streets, through factory gates and into the payrolls of labor. The countryside half of the Nation will not suffer alone. Industry and commerce and labor can all be losers if farmers lose.

What is the character of this revolution? Obviously it is not reactionary. On the contrary, it is progressive. Improvement, advancement, and efficiency have been its manifestations. Farmers have gained permanent new ground on the production front. They have been winning that battle, but there are others to fight.

It sounds of paradox to speak of anyone losing a progressive revolution. The explanation is fairly clear. Production has been stimulated by war, by price supports, and by innumerable advances that have made it easy to produce more. Meanwhile, new scientific knowledge of nonfarm materials has developed synthetic competitors for farm products. By adoption of American farm production methods foreign competitors have become more formidable. Caught in an uneven complex of progress, enmeshed in a tangle of distorted economic forces, many American farmers look to their immediate future with a degree of apprehension.

For three decades Government has been making a series of legislative attempts to assure agriculture a full share of the national prosperity. The principal result of these efforts has been to demonstrate their distressing futility. Economic puzzles do not accept political solutions. Meanwhile, the misleading myth of a political farm problem has become all too well established in the public mind.

The revolutionary advances in production, the disproportionate lag in uses and markets for the resulting output, the vast changes in nonfarm business, all have combined with other factors to confront agriculture with new obstacles, and with new opportunities as well.

These obstacles cannot be dissolved by political management. Political approaches may be expected to lead to worse farm legislation, more regimentation, higher taxes, and to deeper distresses in agriculture. Their eventual threat to individual liberty in America may be distant, but it is genuine.

The political approach has been essentially negative and defeatist. It has said to agriculture: "Retreat. Reduce your acres. Produce less. Go backward."

No American industry has ever advanced by going backward. Neither will agriculture. Americans have always gone forward. If one route ahead proved to be impracticable, aggressive leadership has found or created other routes.

Farmers themselves as independent Americans have by their actions repudiated the policy of retreat. When limitations have been imposed upon acreage they have increased their yields. Many have taken advantage of new efficiencies to enlarge their farms. Through organized efforts they have battled to work out better ways to sell their output. They have refused to retreat.

The political approach, too, has tended to proceed on the incorrect belief that there exists some single, massive dragon which can be described as "the farm problem." Actually the farm problem is many things—many crops, many products, many regions, many conditions and situations, many farms, many people. Because it is so many things, we do not have to deal with one great and mysterious hobgoblin. We face, rather, a variety of realities—some large enough, no doubt, others not by themselves too formidable.

Because these parts are real, and because they are separable, divisible, and identifiable, they can be handled by the habitual American methods. They can be worked out one or two at a time.

The great advances on the production salient appeared one by one. Nearly every one of them came by the efforts of private enterprise. All were the consequences of research and development.

The tractor for universal use, rubber tires for farm machines, hybrid seedcorn, the soybean crop, chemicals to control insects and diseases in plants and animals, nitrogen fertilizers, antibiotics and hormones, continual improvements in applications of power—one by one all these have contributed permanent gains to agriculture. They have helped to lessen the costs of production, to enlarge the output per man and per acre.

Unfortunately, while enlarging also the total national output they have not in all cases been accompanied by enlarged markets and by new ways to utilize the larger output.

Among the inevitable consequences has been so large an increase in the capital requirements for farm operation that the traditional agricultural ladder—from hired man to tenant to farm owner—no longer reaches. The opportunity for farm-loving farm youth to reach independent farm ownership has diminished. The statistics of output per farm in various classes indicate that a million or so farm families will likely have to find other means of livelihood. These are among the less desirable effects of the imbalance between production and effective demand and, to an extent, of the policy of retreat.

The fact that there is no one solution, and that however glibly one may speak of them there are no easy solutions, does not mean that no solutions exist. Each phase of the situation is a separate challenge, and for each challenge there must be a possible answer. Aggressive effort by many people, each in his own field, will find many of the answers; and, in the American fashion, they will be profitable answers.

For the problems which have arisen because production has overreached demand, practical techniques for finding answers are well known. They have worked when they have been applied. When as much research and as much intelligent energy have been exerted in marketing and utilization as have been expended to increase production, the backward salients will catch up.

Processing and salesmanship may find ways to induce people to buy more of the product, or to induce more people to buy it.

Science may find new uses for it.

Research may find means to lessen further the costs of production so that prices can be more attractive.

Economies may be developed in the costs of distributing the product.

The margin of excess production may be prevented from appearing by providing farmers with new, different and more profitable crops to grow.

No industry or business can fail to find in this constructive and typically American approach at least some points at which it can contribute and by contributing can profit. The primary job of this Council is to keep bringing specific points into view. We have here a common platform where agriculture, science, and industry can compare notes to individual and to mutual advantage.

For two decades, as the National Farm Chemurgic Council, this organization has operated usefully as such a common meeting ground. It has worked, with widespread effect, particularly to encourage new nonfood and industrial uses for farm-grown materials. A compilation of such uses made 6 years ago by competent authority indicated that at least one and a quarter billion dollars in farm value at that time went into industrial uses. The figure may by now have reached $2 billion. With the soybean most notably, but progress also with castor beans, tung oil, sesame, and others testifies that the work with new crops has demonstrated the need for immensely more research in this direction. Corncobs and other farm residues have found markets that formerly did not exist.

Now, under the broader name of The Council for Agricultural and Chemurgic Research, we seek to enlarge and intensify the effort toward a prosperous agriculture and sound national economy.

With the volunteer participation of large numbers of individuals, and with increasing support from many industrial groups, we are beginning to seek out and identify specific situations, to publicize particular challenges, and to set them out in the light where industry and science can estimate the opportunities they present.

Among other steps we have begun the selection of a series of separate product and commodity committees. We have called them "imagineering" committees. Members will include farmers, scientists, manufacturers, processors, distribution experts, and other persons with creative and inquiring minds who will raise questions and suggest new approaches. The Hog Committee, for instance, may find questions to raise that concern breeding, feeding, health, housing, marketing, packaging, nutritive values, possible new uses for pork, products, or questions of still wider range. When a question is good enough to be insistent we may hope that research and ingenuity will find an answer. Then, by that much, the so-called farm problem wil lhave been reduced. The more such answers can be found, the more the problem will diminish.

By working in these directions, searching out new facts to answer questions, inviting those who can profit to seek and apply answers, by using government in its proper functions as a valued servant, I am confident that measurable progress can be achieved.

We expect to pass no miracles. Whatever gains are made will be permanent gains, nonrepealable, nonpartisan, profit-making, tax-paying gains accomplished in the American spirit.

Man has no more than begun to find the uses to which he can put the inexhaustible, ever-renewable abundance which the land can produce. He has as yet hardly glanced at the innumerable plant species growing over the earth's farflung wildernesses from which science will discover new things to sell. Agriculture needs new products and new models in order to avoid producing recurrent surpluses of the old crops.

Aggressive efforts can work out new markets, new uses, new crops, new economies. Let's not retreat. Let's expand. Let's make greater use of our God-given natural and human resources.

A dynamic agriculture can reach out for recovery of balance between output and markets. It can make places in farming and in the related industries for rural youth. It can, we may hope, improve economic opportunities for the smaller farms and thus encourage the family farm to hold its competitive place in a stable America.

The clock will not turn back. The calendar will not reverse itself. Agriculture's true concern is not merely too much of the old; rather, it is not enough of the new.

The agricultural revolution will not be stopped. We must work harder in order to even up its progress. We must apply American energy and commonsense and our capacity for cooperative effort toward guiding this revolution.

Let us endeavor that neither this generation nor any generations of farmers shall lose by it. Let's work together so that industry and labor and the whole Nation's economy shall not lose by it.

Let us not leave the situation to politics nor permit the revolution to be won by socialism in government.

The agricultural revolution can be won. Let's carry it forward in the American way—the only way that will permit everybody to share in the victory.

Marxist Trade in Western Hemisphere

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks I include therein a recent article from the New York Times indicating the growing economic penetration of Latin America by the Soviet Union.

This Congress should note the reasons for this ominous development, some of which are economic and some ideological. Higher price levels, less favorable credit terms, quick deliveries, crop and agri-

cultural surpluses, favorable Soviet exchange rates are among the principal economic causes.

It will be noted that many goods, tools, and machines similar to those made in this country are on the list now being exported from behind the Iron Curtain, and distributed in Latin America by the Soviet. There is also multilateral trade involving the products of other countries.

The area is apparently well infiltrated with Russian salesmen who, unlike diplomatic agents, can move around with great freedom and probably acquire much accurate information as well as increased business.

Under economic law, inflated price levels in the United States as opposed to the much lower price levels at which Soviet goods are exchanged, is a great factor encouraging expanding Soviet trade with Latin America. As this trade grows and more Russian and Iron Curtain goods are brought into that area, more Russian salesmen and businessmen visit the area and thus, not only mercantile, but cultural, ties are established, nourished, and increased.

In view of the ideological penetration that has been visited upon many South American nations over a rather long period and is still continuing, this Nation has reason to be concerned about its future relations with our South American neighbors. We are losing valuable trade links, but we are also losing vital strategic and cultural advantages which could have very serious effects upon us in more ways than one. This is a problem which requires the early, most earnest consideration of this Government at the very highest level.

The article follows:

SOVIET BLOC GAINS IN LATIN AMERICA—OUTBUYING AND UNDERSELLING UNITED STATES—NEW POLICY FOUND DANGEROUSLY SUCCESSFUL

(By R. Hart Phillips)

HABANA, April 30.—The new world peace policy of the Soviet Union has been preceded by a program of economic penetration of Latin America. And many here believe the new policy is more dangerous to the United States than the former bellicosity of the Russians.

The Soviet Union is already stepping into the vacuum created by the inability of the United States to purchase the mounting quantities of raw materials in Latin America and the inability of the Latin Americans to pay the high prices for United States exports. Latin America is a price market and will buy the cheapest product, particularly when the seller is also the buyer of its raw materials.

Cuba, faced with a world surplus of sugar and the continual efforts of United States producers to cut Cuba's sales to the United States, was highly pleased to sell half a million tons of sugar to the Soviet Union in 1955. This year Cuba expects to sell a larger quantity of sugar to the Soviet Union. This situation is being repeated in various Latin American countries, according to commercial reports.

SOVIET BLOC GOODS ON SALE

A walk through Habana's streets reveals where some of the money obtained from the Soviet sugar sales is going. One can buy in the shops Pilsener beer, ham from Prague or Hungary, sausages from Poland, caviar and vodka from the Soviet, tiles and light bulbs from Czechoslovakia. The motorcycle market in Cuba, formerly held by the United States and Britain and later shared with West Germany, is being rapidly captured by Czechoslovakia. The new Skoda automobiles, which recently arrived, are being viewed by the surprised Cuban public.

What makes the business so attractive to the Cubans, are the quick deliveries and long-term credits offered, particularly on machinery, in contrast with the system of advance irrevocable credits placed in New York for purchases from United States exporters.

Not a week passes but that salesmen, engineers, and technicians from countries behind the Iron Curtain arrive in Cuba. These men give the impression of carefully avoiding any contact with Cuban Communists and on the surface are interested only in business. They offer the most attractive prices and terms for the growing exports from satellite countries of tractors, bicycles, machine tools, machinery for manufacturing plants, fertilizer, cement, agricultural and mining machinery, and many cheap industrial products.

The same thing is happening in other Latin American countries. Recently, it is reported, a successful trip was made by a commercial mission from East Germany to the Argentine and to Chile.

These salesmen and technicians easily obtain and take back with them much information that it would be difficult for a Soviet agent to obtain. With a sufficient number of commercial agents traveling throughout Latin America spreading the propaganda of economic coexistence and collecting information, it is plain that the Cominform is no longer needed in this part of the world.

THE AGRARIAN SCISSORS

Some years ago a Russian economist, Eugene Varga, predicted the shift in Latin America toward economic coexistence with the Soviet Union based on a chart that he called Agrarian Scissors of Latin America. He showed the line of the upward trend of inflated United States industrial prices crossed by the descending ine of agrarian prices in Latin America. He pointed out that as the blades of the scissors opened wider, so in the same proportion did the chances of Soviet coexistence with Latin America become better.

Fluoridation of Municipal Water Supplies

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. DAWSON of Utah. Mr. Speaker, at the request of a resident of my district, I am inserting a letter I received recently for the information for other Members of Congress. The letter follows:

DEAR REPRESENTATIVE DAWSON: Congress has been asked to appropriate $2,971,000 to the United States Public Health Service to combat dental disorders. Most of this money would be used by the United States Public Health Service for the engineering of consent to persuade city governments to add fluoridation to municipal water supplies. Whether adding an inorganic fluoride compound to drinking water would be beneficial or would have harmful cumulative effects is a highly controversial issue with eminent authorities on both sides. To use public funds to promote one side of a controversial issue is not good.

Government in the ideal state should gradually wither away, but our Government is not withering away; it is getting bigger and bigger and more expensive. Our Government seems to be whittling away our free agency a freedom at a time. To use the police power to force fluoridation of municipal water supplies over the strenuous protest of those who feel it would harm them is a totally unjustified attack on our freedom to choose what we take into our bodies.

The problem arises partly because food processing and handling methods remove vitamins and minerals, including fluorine, from many foods so they will keep better. If fluorine is important for healthy teeth, then so are others. A better use of that money would be to help educate people to choose better quality, natural, unprocessed foods which are rich in vitamins and minerals, including fluorine.

There are several methods of obtaining the benefits of fluorine about which there is no controversy. There is the topical application of a fluorine compound by the dentist; there are fluorine toothpastes such as Crest; drugstores can supply fluorine tablets which are very inexpensive; certain foods are rich in natural fluorine. The person who is concerned has many choices, you see. Many people are exercising their right to choose the best way. To deprive these people of their right to choose the best way, to force them to take fluorine in their drinking water when they believe it would harm them, is a totally unjustified invasion of our fundamental freedom as guaranteed by our Constitution.

We urge you to use your influence to fight this appropriation for the Public Health Service. I would like to have this letter read to Congress and inserted in the CONGRESSIONAL RECORD.

Sincerely yours,

TED J. PARKINSON.
SALT LAKE CITY, UTAH.

Will Water Become Scarce?

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 10, 1956

Mr. JOHNSON of Texas. Mr. President, I hold in my hand the text of an interview entitled, "Will Water Become Scarce?" The interview is with Lt. Gen. Samuel D. Sturgis, Jr., Chief of Engineers of the Army. The Government Printing Office has estimated that printing the interview in the Appendix of the RECORD will make 6¼ pages of the CONGRESSIONAL RECORD, and will cost $500.

This important and informative article appeared in the U. S. News & World Report. The distinguished senior Senator from Kentucky [Mr. CLEMENTS] desires to have the article appear in the RECORD, and I therefore ask unanimous consent that it be printed in the Appendix of the RECORD notwithstanding its estimated cost.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL WATER BECOME SCARCE?

(Interview with Lt. Gen. Samuel D. Sturgis, Jr., Chief of Engineers, U. S. Army)

Is lack of water a real threat to the United States? Are dust bowls coming back?

What, actually, lies behind the growing concern over water supply?

What about all the floods? Why can't floods be stopped? How much protection will people have against floods this spring?

Answers are given now by the country's top authority—the Chief of Army Engineers.

Interviewed in the conference room of U. S. News & World Report, Lt. Gen. Samuel D. Sturgis, Jr., describes water troubles and the reasons for their upsurge.

General Sturgis explains why a thousand cities were compelled to restrict the use of water by their residents in 1953, why salt water crept up the Mississippi River in 1954, why floods did so much damage in 1955.

Question. Do you foresee a time when we will run out of water, General Sturgis?

Answer. Well, it is fast becoming possible if we don't act. Some two years ago, having looked at our whole national program and having visited so much around the country and talked with people—hundreds or thousands of people, leading citizens, farmers, everyone—I couldn't help but feel the crescendo of interest in this field of water supply and water use.

Question. Were people finding shortages?

Answer. Oh, yes, there were shortages in a great many places. For example, the United States Geological Survey found in 1953 that there were a thousand cities, of fairly good size up to big municipalities, that actually had to go on a very restricted use of water.

Question. Is water supply as big a problem now as flood control?

Answer. I would say "No," not at the present, but it is looming very seriously; and, if something is not done now, then 20 or 25 years from now it may be too late.

Question. Are the big dust storms, like those in Texas, part of the water-shortage picture?

Answer. Yes, definitely. These storms generally follow a period of sparse rainfall in a region, and that produces dry soil and water shortages there. Of course, the variation of rainfall is tied to the general question of weather cycles, so you can't know for sure how long these dry periods will last.

Question. Is the water table—supply of water in the ground—getting lower all the time?

Answer. I'm not particularly an expert on that, but I do know from my military water investigations—because I have to supply camps and so forth—that in the Southwest the water table has just gone way down. It is very ominous in some places. We're worried about some of our military installations down there on account of the future of the ground water supply.

Question. What about the rest of the country?

Answer. The water-supply table is certainly lowered, due to overuse, in many cases; in other cases, I understand, underground supplies haven't been seriously depleted.

Question. Is this mostly out West?

Answer. Oh, no. For example, the only thing that kept the Ohio River in the summer of 1953 flowing with enough water so that it was deep enough for navigation and to prevent the water from becoming dangerously polluted—so dangerous that the city purifying agencies would not have been able to safely reduce the bacilli—was the availability of conservation pools in our flood-control dams which had been built up to that time. Now, those are less than half of the dams that were authorized for the Ohio after the 1937 flood disaster.

Question. You mean the Ohio would have been unfit for navigation?

Answer. It would have been dangerous for domestic water supply, depending upon the efficacy of municipal plants, and there would not have been enough water for navigation to permit passage of barges over the lock sills.

Question. Where was the Ohio's water going in 1953?

Answer. There were two factors. Of course the river was not flowing as much, due to drought. And I think the important thing to recognize is that over the long swing we do have to make allowances for these droughts as they come along, but they all don't occur at the same place in the United States at the same time.

Coupled with the recurrence of another drought was the tremendous increase in consumption. Now that, of course, comes from such factors as the increase in population and the large increase in per capita consumption. And we should have water supplies which are increasing at least on a straight-line basis as compared with the population increase, not only from the viewpoint of expanded municipal needs but, even more importantly, the expansion of all uses—agricultural, industrial, and all other.

Question. Do we have such an increase in our water supply?

Answer. No, we don't. The population in 1900 was 75 million. It is now 165 million. In 1975 it's predicted to be 200 to 221 million, and in the year 2000 it's predicted to be 285 to 300 million.

Question. What will we do for water for those people? Will they be short of water?

Answer. Well, if you're talking about all uses of water, for agriculture, for industry, for domestic purposes, and so forth, I'm afraid the answer is "Yes," unless something is done about it now. I think many people feel that way.

Question. Can't something be done about it?

Answer. Oh, yes, and we'd better start doing it now. In general, we are going to have to develop more water-conservation storage on our streams—bring these streams under better control so we might save the water and have it when we need it—and incorporate measures to achieve that with plans for flood control and other water-resources development.

Question. We have never had a national water policy, have we?

Answer. We've never had a national policy, but let me hasten to say that I think one is now being provided. The Department of the Army has been one agency—rather, I should say, the Department of Defense, but the Army has been the operating agent for Defense—which, together with the Department of Agriculture and the Department of Interior, has been recently developing a policy.

These three agencies have been operating under a directive of the President to establish the President's Advisory Committee of Water Resources Policy. We participated during 1954–55 in the formation of a policy and a recognition of what the problems are, and I think it's been a very fruitful effort. We all don't agree on every detail, and, I think in general, we couldn't be expected to, but there's been a surprisingly high degree of cooperation and agreement, as to the problems that have been worked out.

Question. On the Ohio River in 1953, if those people hadn't had water, what would they have had to do? Would there have been a crisis?

Answer. There would have been a very serious crisis.

Question. If you hadn't had those flood-control and storage reservoirs?

Answer. That's right. You understand, a flood-control reservoir is normally kept empty. But in many cases we provide a small, permanent conservation pool for fish and wildlife recreation and that sort of thing. The water zone between the top of the conservation pool and the top of the flood-control pool must, of course, be kept empty to wait the next flood, but the conservation pool provides a source for use in emergency to augment low flows, and this was done in 1953–54 in the case of our Ohio reservoirs.

I can give you other illustrations. For example, the Fort Peck Reservoir in northeastern Montana helped us meet a crisis on the Mississippi.

Due to the low flow in the Mississippi in 1953 and 1954—which were among the driest years that the Mississippi Basin has ever had, due to the whole central part of the country being dry in those years—the salt-water flow—or wedge, as we call it—came up from the Gulf of Mexico underneath the fresh water flowing into the Gulf below New Orleans. In other words, there wasn't enough fresh water coming down the river to push back the salt water and keep it out of the river. So the result was that, as the fresh-water flow in the river grew less and less, the salt water came up the stream and actually was within a couple of city blocks of the intake for New Orleans.

And New Orleans would, no doubt, then have been in a very serious situation, because they would have had salt water up to their intake. This would not only have jeopardized the city supply until rains fell again and the Mississippi rose, which might have been many months, but you can see the effect of salt-water seepage into the mains.

MONTANA FLOOD CONTROL HELPED OUT AT NEW ORLEANS

Question. What would it have done in the mains? You couldn't have drunk it——

Answer. No.

Question. Would it have done chemical damage?

Answer. It would have corroded the mains. Salt water and iron or steel, and so forth, don't mix very well.

So what we did to meet the situation, brought to our attention by the alarmed city, was to discharge water from the Fort Peck Reservoir in northeastern Montana—some 2,500 miles away—28,000 cubic feet per second of water, running it down the Missouri and into the Mississippi, in order to push this salt-water wedge back down and benefit the city's water supply.

Question. How long did it take that water to get down there?

Answer. It took about 6 weeks.

Question. How long did you have to keep that up?

Answer. For about 3 months.

Question. And that was when?

Answer. That was in 1953 and 1954. Only in 1954 there was this difference: It was deliberate in 1954, but in 1953 we had, I think, heavy rains—as you'll recall—up there in Montana, and we had to let water out for the flood-control purposes, to lower the pool in Fort Peck, so it automatically was available to help out downstream.

But in 1954 we very seriously reduced the Fort Peck pool, which was something we would have preferred not to do, for the reason that we wanted to store as much water in the Fort Peck pool as possible, so that when Garrison Dam was closed we could start filling Garrison from the surcharge of flood waters in the Fort Peck pool.

Question. You created a new problem, didn't you, in taking care of the New Orleans problem, down river?

Answer. Well, I would say, not too serious a problem. In other words, we may have delayed the filling of Garrison Reservoir, which we had originally calculated would take from 5 to 10 years, depending upon the amount of rainfall in the upper Missouri Basin. Well, where the rain might have been sufficient to fill it in 5 years, it will now take 6.

Question. Are there other cases of that type?

Answer. I've used that purposely as an extreme case, because it shows the interrelation of distant water resources and the importance of broad controls. Fort Peck was never

designed, of course, to do such a thing. But by having that water available and controlled, it shows the tremendous things that can be done on the spur of the moment, even though you have not even planned for them.

Question. That also helped your pollution problem along the Mississippi——

Answer. Oh, yes; it all worked out well during those dry years. Around the Kansas Citys it tremendously alleviated the pollution situation there, too.

Question. Were they in danger of pollution there?

Answer. Yes.

Question. Are they still?

Answer. The situation has changed now because of the large dams on the Missouri.

Question. But it can get bad again——

Answer. Yes. We don't have too much water in the Fort Peck Reservoir now, but I believe, even without the Missouri dams up to normal pool elevation, we could prevent any critical situation from developing downstream. When I was out there, Fort Peck Reservoir contained as much as 17.5 million acre-feet out of a capacity of 19 million. Well, we've pulled it down now to around 5 or 6 million acre-feet.

Question. So that a solution such as you used in the Missouri and Mississippi Rivers is not always on tap?

Answer. Certainly not in many other river basins. That's what I'm pointing out, that the more reservoirs we have the more tremendous advantages we have for use in emergencies.

ONE BUSHEL OF WHEAT TAKES 7,500 GALLONS OF WATER

Question. General, what changes should we make to avoid increasing water shortages as population grows?

Answer. Well, may I give you some incidents and figures—I'll remember that question, but I would like to finish, if I could, what I started out earlier to say about the water-supply situation.

During research of recent water-requirement and supply statistics since I have been Chief of Engineers, I was greatly surprised at what I found and it may surprise you. But one bushel of wheat takes 7,500 gallons of water; 1 ton of finished steel takes 65,000 gallons of water to produce; 1 yard of woolen cloth takes 500 gallons, and a pound of rayon takes 100 to 200 gallons of water.

WE CAN'T AFFORD WASTE

Question. And that water is gone——

Answer. That is not entirely correct. But I am glad you asked that for the reason that there has been no real investigation made on the part of the Federal Government with industry, or by industry itself, as to just exactly what the future water problem is with industry. But something should be done, because in some industries water is economically used and re-used. In other industries it's just taken in and it flows right through the plant but with considerable net loss. Now, the point is we just can't afford to waste water in that way.

Question. General, when that water flows through the plant and it has been used and polluted, it goes back into the river and eventually evaporates and comes back in rainfall. You don't really lose the water, do you?

Answer. You lose some of it, but what I'm saying is that we want to find out more about these losses. There are, no doubt, some isolated studies that have been made by industries that have been extremely farsighted, but the studies aren't readily available and they are too narrow and restricted to deduce the broad elements of the problem.

Therefore, I think that a broad investigation in the nature of our original "308 reports" (flood-control investigations) is one of the things that we should do, because the industrial water requirement is getting to be enormous. Moreover, as modern technology develops you can easily discern the trend of requirements for water. Take the introduction of rayon, for example. Its process consumption of water is getting terrific. New requirements are similarly in constant demand.

When I was a student at the University of Minnesota, before going to West Point, we were taught to design a domestic water supply for a city on a requirement of 50 to 75 gallons per day per capita. After World War I and before World War II, this trend jumped up to, say, 75 to 125 gallons per day. After World War II, it has been running from 125 for smaller cities to larger cities like Chicago with 225 gallons per capita. Thus, there's another increase besides the population increase, which is this greater per capita consumption. But that does not include industrial water, which, of course, is also moving up, as I indicated, for new industries.

Question. Can't you use some water both ways: First, for industrial use, and, later, for consumption?

Answer. Certainly, there could be a great deal of reuse—that's right. In fact, that is what happens today. Industry dumps the water and it goes downstream for further industrial and domestic withdrawal.

Then you've got the problem of pollution. Now, I'm looking at the problem of pollution in a long-range way by saying that I think like the Public Health Service. And I think I'm quoting them correctly when I say that they believe ultimately in complete primary and secondary treatment, so that eventually pollution will not have to be considered as another factor infringing on our water supply.

So I'm saying that there's got to be, I think, a sound, progressive and authoritative plan for universal treatment over a reasonable period of time. This, of course, is a responsibility of the Public Health Service, with whom we work very carefully, and we know they are doing a great deal in this direction, for which they deserve more public recognition and support. While it is a Public Health Service job—educating and assisting the States and industry—I think pollution is a State problem primarily. But certainly the Public Health Service has the Federal leadership.

But while I say that full treatment by industry will ultimately have to be provided, it doesn't mean it's not already a problem on many streams, so that treatment must be accelerated right now. Because pollution is getting to be such that even industries can't use the water and reuse the water again in many cases.

Part of the problem also is the heat of the water discharged by industry. I can't give you any figures, but I do know that the cost per degree of cooling water by furnishing additional supply in the Pittsburgh area is something fabulous.

Question. You mean that water heats up as they use it?

Answer. Water heats up very measurably, which has an adverse effect mechanically on the use of water by industry downstream as well as adding to the pollution problem.

Question. Then, is the whole idea to use the water, clean it up, and put it back in the river so somebody else can use it?

Answer. Yes. Of course, there would still be some losses, but in industry, as I said, we don't have much information and we need to know a lot more. For example, let's take irrigation: In irrigation, I understand, the amount of water that is first diverted to the land, and later returns by drainage and percolation to the source of withdrawal, is as low as 30 percent, depending upon the soil. If it's soil which drains very well, the return flow may run up as high as 60 percent.

HOW MUCH WATER IN THE UNITED STATES?

Question. What should we do to increase our water supply?

Answer. Well, there are many things, I think, that can be done, and I'll go to that if I may point up one more thing:

Actually, on the 3-million-square-mile area of this country, there's an average rainfall of 30 inches, which produces rainfall amounting to 4,300 billion gallons per day. Now, of that 4,300 billion, something in the neighborhood of 3,000 billion goes back by transpiration and evaporation into the atmosphere, leaving a total amount running off in rivers and streams or percolating into the ground of 1,300 billion, which is the ultimate limit of supply.

I emphasize that this is the top limit available to our country. And yet, today, we are consuming about 200 billion gallons. So there is a finite limit, and I believe most of us have never thought before that it was finite and limited. We've always assumed that the supply of water is more or less infinite. But it isn't. Specifically based on the above figures, we are consuming today 15 percent of the maximum available supply.

Question. Of the total available water supply—

Answer. Yes. In 1957 we'll use 350 billion gallons, or 27 percent. So, you see, we're actually approaching inexorably that 100 percent, or 1,300-billion-gallon maximum, as our population rapidly increases and our per capita consumption skyrockets simultaneously.

However, that doesn't represent the true picture in each region of the country, because that's averages I'm talking about. Now, out of the 1,300 billion, roughly 1,100 billion runs off and the other 200 billion percolates into the ground. And of that 1,100 billion—to show you the very important differences in amounts of water that are running off in different parts of the country—in the North Atlantic States, the rivers carry 191 billion, but in the basin of the Red River of the North in Minnesota and North Dakota, which is about the same area, it's only 4.5 billion. So, you see, you've got a tremendously unequal distribution.

So when you say, "Well, it looks like we're not too badly off because in 1975 we're only going to be using 27 percent," that isn't true. They're already running short in some areas, and that's what we are hearing about and will continue to hear ominously in years to come. And that's the trouble: They're constantly going through the ceiling of available average supply in a number of regions and we are going to be increasingly going through the ceiling unless we do something effective—and soon.

CROPS AND POWER COMPETE

Question. In what areas are we going through the ceiling?

Answer. Well, naturally, the areas that are going through the ceiling first are many parts of Texas, Oklahoma, the great basin of Utah, and spasmodically parts of the Plains States and several Western States. I have been told that a Utah utility had to quit generating power from his hydroplant at times when they would like to use it to meet peak demands, and were now only using it occasionally because their customers downstream needed and called for the water more urgently for irrigation.

That type of pressure is building up all the time. We have recently encountered it in our own reservoir operations; that is, pressure to keep reservoirs full for downstream low-flow regulation instead of using the storage for meeting power peaks in accordance with project design, and emptying flood-control pools as required to prepare for future flood threats.

THE WATER SHORTAGE IS MOVING EAST

Question. Is the water shortage moving east?

Answer. Yes; it's moving east. For example, on the Ohio River in 1953–54—because it was a dry year—a lot of new water losses in the Ohio came from withdrawals for sprinkler irrigation, which we always had learned in the past applied principally if not solely to the western usage.

Question. But now irrigation is spreading to the East, isn't it?

Answer. Yes, sir. And the reason it is spreading——

Question. They're using sprinkler irrigation on Long Island now——

Answer. Oh, yes. Well, the reason, as I understand it—and I'm no agronomist—is that it is providing the crops with water at the right time and that really increases the yield and quality.

Now, by sprinkler system they can do that. You know, I've been a western boy, and out there in Minnesota or particularly in Kansas—I've spent a lot of time in Kansas—when a dry summer comes the corn dries up, and there you are. No matter how much water you had in the fall or how much water in the spring, when you need that water you don't get it.

But if you're in reach of a steady flow in a creek or river, by the sprinkler system you can apply water to crops as they need it. Sprinklers are coming into the East now, and they're getting some wonderful crops, greatly increasing the acreage yield. So there's another demand on water in the Central and Eastern part of the country on top of population and enormous industrial requirements.

Question. General, is the water shortage caused entirely by the increased use of water? Is it correct that the natural supply of water isn't diminishing?

Answer. I don't believe that the supply of water is diminishing. I think the United States Geological Survey probably could give you a better answer than that, but I've never heard them say so. But I've lived and worked in different basins of the country, like the Missouri Basin, New England, the Ohio, the Lower Mississippi, and so forth, and I've been generally familiar with the long-range rainfall records. I am also somewhat familiar with the tree-growth records, and nobody has ever found a definite cyclic difference over a long period of years. Inevitably, drought and—

Question. The alternating wet and dry cycles are generally very orderly——

Answer. I think it will even up. Of course, there are going to be droughts at different times in different areas—for instance, like a shift to Texas from the southern portion of the Missouri Basin, which was frightfully dry in 1953—but they had lots of water up there in North Dakota, which was one of the worst dust-bowl States in the '30s.

So I think that precipitation will even up, generally, all the way through the country. But you are going to have droughts here and there.

INDUSTRIES WITH A THIRST

Question. Won't industry tend to move where water is?

Answer. Yes, industry is moving. For example, on the Ohio River, which normally does have a lot of water—I was down there as a captain in 1937, and I never saw so much water in my life. Therefore, when I went back there as Chief of Engineers and found a shortage of water, it was rather amazing.

But there have been 7,000 industries located in the Ohio Valley since about 1940—right along the river. Navigation has played a big part in that, of course, by providing cheap water transportation for bulk goods. But I think the availability of the water supply now is fast becoming a problem for the future, and the people in the Ohio Valley already are really worried now about their water-shortage problem. One of the reasons they want the flood-control dams built is not only to prevent the recurrence of the 1937 flood disaster—and less than half of the required and authorized dams are built now—but for low-flow regulation as well.

Back in 1937, everyone was enthusiastically backing flood control for the Ohio. But a war comes along and a new generation, and people forget. Now the people of the Ohio and their leaders have begun to pick up again and see what the story is, and they're going out for dams for water supply as well as flood control.

In fact, one of the main reasons behind this second awakening is because they want their conservation storage for low-flow regulation, realizing the industrial requirements for the water, as well as their own health and domestic purposes.

WE CANNOT RELY ON UNDERGROUND SOURCES FOR THE FUTURE

Question. Coming back to the question of water supply in the ground: How is that water stored? Is it down in the bowels of the earth?

Answer. Yes, there's a previous layer of earth bewteen two impervious or watertight layers, like clay, and it has contact with or is intercepted by a river, lake, or some other source. The water thus enters this gravel or sandy section or it may percolate directly, as in the Nebraska sandhills, down to the lower impervious layer, and then it's stored there.

Of course, if it's constantly tapped by too many wells, the withdrawal is greater than the replenishment and, therefore, the level of the ground water goes down. For example, in an area of reasonably abundant rainfall, like the Chicago area, in about the 1850's or sixties there were artesian wells flowing, I'm told. Now those wells are not only not under pressure enough from adjacent areas to flow freely at the surface, but wells are being sunk 500 and 600 feet deep.

Question. In order to get water——

Answer. In order to get water, that's right.

Question. General, how much of this anticipated need for water would be met by the dams for flood control that you are building?

Answer. Well, since we cannot generally rely on our fast-diminishing underground sources to meet future needs, it seems apparent we must store and conserve the surface water in our streams and rivers. That means dams and reservoirs. In many, many places, flood-control and water-supply storage can both be accomplished by one properly designed dam. So I think a main solution to our water-need problem is to be found in an expanded reservoir-building program, in which all interests must take part.

But there are many facets to the problem. First of all, we really need data. We have got to have information, from people who are not just engineers, on the growth of industry, and what is going to be required in the way of accelerated production, and its nature.

Of course, we can predict more closely the population increase. But there are going to be additional per capita requirements. The standard of living is going up and up, and, as has been evident in the last quarter century, there is more and more water used domestically, and industry will require more for the production needed to meet popular demands.

LAWS ARE INCONSISTENT

Question. Why hasn't the Government done more to control floods?

Answer. I might say that there is a vast growth of public understanding and interest in our flood problems on a national basis, as compared to long-standing interest and knowledge in particular localities and regions, betwen the early 1940's, when I was district engineer at Vicksburg, and today—particularly beginning after World War II. That's reflected, I think, even in the last 5 years, between the Hoover Commission findings and recommendations in the report of 1950, and the Hoover Commission's recommendations of 1955.

There are some very significant differences between those two reports. And I think that the significance is that the 1955 report does not dwell on the foibles, if you want to call it that, of the public departments, but on the fact that the real conflicts and basic problem are caused by conflicting and inconsistent laws, the lack of a comprehensive policy, and the absence of uniform governmental guidance for those departments of the Government charged by law with development of the different aspects of water resources.

I'm not in any way saying that the operations of our Department and other departments couldn't have been improved—and I can assure you they have been, enormously, over the years. But the onus of all the blame and everything you can name in the field of water resources was formerly put on the Government agencies, and that's not true in the present Hoover report.

In fact, this Commission points out this conflict of legislation, and this conflict of public interests which is behind the conflict in legislation arises sometimes from honest differences and sometimes from selfish interest.

For example, in the upper part of the Missouri River Basin the people honestly and naturally feel that the Missouri's water should be developed primarily for irrigation and hydropower. But, in the lower part of the river, they need water equally badly for navigation and water supply. That's a perfectly honest difference, and the problem is to reconcile that difference, which is being done by the present comprehensive program known as the Pick-Sloan plan.

And there are a great many other conflicts of interest. For example, that part of the so-called upper-watershed programs providing for the construction of small upstream dams does not do very much for alleviating floods downstream.

SMALL DAMS NOT ENOUGH

Question. Small dams are not the answer to flood control, then?

Answer. No, not by any means, and I think the Department of Agriculture will be the first to tell you. But they do furnish substantial flood reduction well upstream, whereas the downstream dams preventing or ameliorating floods, like the recent disasters in New England and California, obviously can't affect the upland tributaries.

But there's also this conflict: While watershed programs provide a certain amount of water and percolation down through the ground for the farmers, the people downstream—say, in Texas and other semiarid regions—find that water stays in the dams and evaporates, which reduces the amount that can come downstream and sink into the soil and charge the earth downstream—recharge the water that has been taken out by pumping, or that provides steady surface-stream flow. I'm only giving you that as an example of the conflict of interests.

Now, it's that sort of basic conflict that led to laws, which laws were executed by various departments of the Government. But even if my corps had responsibility for administering the reclamation law, instead of the Interior Department, we would still have had the problems of conflicting laws to reconcile, because we'd be operating under one set of laws for navigation and another set for reclamation, which were mutually inconsistent. So that has been the really basic cause.

Question. How much progress have you made in controlling the major rivers? Do you need more reservoirs along the Ohio and Missouri, for example?

Answer. Yes, in the case of the Ohio, but the upper part of the Missouri is very well protected. For instance, the flood that occurred in 1952, which is the greatest flood of record, was 17 miles wide from bluff to bluff. It was even greater than the flood of 1844, which is the flood of previous record and which, I gather from talking to the grandsons of old French trappers, also stretched from bluff to bluff.

Question. At what point of the river was that?

Answer. That was about 50 miles above Omaha. However, the flood of 1952, if it occurred again today, would not be even overbank, because the upper part of the Missouri is controlled.

Question. With the Garrison and Fort Peck reservoirs?

Answer. Garrison, Fort Peck, and Fort Randall.

Question. Those dams weren't in operation in 1952, were they?

Answer. No dam except Fort Peck was in operation in 1952. And, of course, some critics of the Pick-Sloan plan said that it wasn't worth anything. That was criticism just as if you'd dug the Panama Canal half way and somebody said, "Well, it's no good. You can't get any transportation through it."

That's the upper part of the river. Now, the lower part of the river—we've had a terrific problem down there. You may have heard of Tuttle Creek Dam, where the farm and small-town population of the Blue River Valley has been up in arms. Now, as far as the Corps of Engineers is concerned, I knew very well that situation and we stayed out of it. We said it's something for the people to settle among themselves. We're just engineers and economists, and we're not going out and plug this thing at all.

However, we were and are absolutely convinced of its necessity and we gave all the facts to both sides when asked. So they finally did get together—I don't mean to say that the opposition has been eliminated; I think there are still some people bitterly opposed—but the majority was awakened by the 1951 flood.

TWELVE-INCH RAIN IN 24 HOURS

Question. You mean around Kansas City?

Answer. The Kansas Cities, the Kansas or Kaw Valley, and the Missouri Valley below Kansas City. The Tuttle Creek Dam is on the Blue River, which flows southerly into the Kansas River at Manhattan, and it's the Kansas which produced that perfectly terrific flood where it rained for 30 days and culminated in a 12-inch rain in 24 hours. It centered right on the Kaw River.

That overtopped the levees at Kansa City and deluged the lower Kaw cities like Topeka, and rich bottom lands. Now, of course, theoreticaly, these levees at Kansas City shouldn't have been built until we had built the reservoirs. That's one of the things we often are pressed to do pending reservoir construction, and all you do is just put people in false safety.

They always want the levees built because it protects them against most floods, and for lesser floods these levees had done a fine job. Probably a dozen floods could occur—maybe 50 floods could have occurred—and those levees would have protected the Kansas cities without being overtopped. But this one flood overtopped the levees because the reservoirs on the Kaw, including Tuttle Creek, had never been built—they were all opposed by a vocal minority. Now that's been changed. This minority had certainly their own interests to protect, but, as I have said, it is an honest conflict in which the general interest should prevail.

Question. Are they built now?

Answer. Not yet. But Tuttle Creek is now underway again. You see, it was started, then it was stopped by the opposition, and now it's been started again.

Question. Do you try to build to protect against a flood of that proportion? I think that was the kind of flood that comes only about once every 50 years——

Answer. We estimate that it was greater than a 50-year flood. But, to answer your question, we just don't blindly go in and protect against every conceivable flood in every locality. It all depends upon the local factors. For example, if we have a small dam located in an isolated area where the failure to provide complete protection might occur under some superflood that nobody could ever conceive of, we use a lesser factor of safety than we would up in New England, say, above the town of Waterbury, Conn., where thousands of people are involved, not only in Waterbury but downstream.

So in levees we use a freeboard, sometimes only 1 foot for the flood that we think is the maximum that will occur. Sometimes we use 3 feet. If it's a small agricultural area not highly populated and developed, then we use maybe 1 foot. But if it's a town or city or down on the Mississippi where a breach in the levee can flood—as it did in 1927—areas as big as the States of Massachusetts and Connecticut combined, then we use 3 feet superelevation against the project flood.

Question. Those are levees?

Answer. Those are levees, yes; or flood walls.

THERE ARE FOUR MAJOR WAYS TO TAKE CARE OF FLOODS

Question. But those aren't a solution to the flood problem?

Answer. Levees and flood walls are only one means of solving the flood problem—but a very important means in many cases. Actually, there are 3—or 4—major ways in which floods can be taken care of. Two of them are almost the same.

One is by reservoirs. Two is by levees and/or flood walls. In other words, use the levee where you've got the room, but where you haven't got the room, as in a congested city along the river, you put up a flood wall, a vertical concrete wall. The third method is channel rectification, that is, by cutting through bends in the channel you naturally increase the velocity of the water and therefore the quantity of flow, because the water on a sinuous bend is on a flatter slope than water cutting straight across.

Question. Is that called a "spillway"?

Answer. No, a spillway is part of a dam or diversion works, technically.

HOW SPILLWAYS WORK

Question. Well, down on the Mississippi they built spillways, they built the Atchafalaya spillway—

Answer. Well, yes, but that is a diversion floodway, which is another way of controlling floods in the field of improving channel capacity. That's simply where, when the water gets to a threatening height, you spill it over into another channel.

For example, let's say the Mississippi gets full, and it's about to threaten the levees above New Orleans. We open the Bonnet Carre spillway gates and it goes down a floodway to Lake Pontchartrain and then out to sea. Or the Atchafalaya, you were speaking about: We get to a certain height where it begins to threaten the levees in the vicinity of the Red River and we have a freeboard of only 1 foot left. O. K., we open the Morganza spillway and spill flood water through their floodways into the Atchafalaya Basin, and the excess water goes to sea a hundred miles west to New Orleans. That's diversion, or floodways controlled by spillway gate structures.

And then there also is zoning. We've been criticized a good deal for not zoning more. That involves taking bottom land out of use for homes, businesses, or plants, to provide greater flowageway between flood walls or levees, because you can build the levees and flood walls just so high without risk structurally. By zoning, it is possible to provide a greater channel capacity and lower levee heights, so some people say, "Well, just zone it, keep people out of that area which is the river's natural old ground to wander in. Why build on it?"

Of course, obviously, that's an easy thing for theorists without responsibility to say, but anybody who tried to take the stockyards out of Kansas City—and one fellow did, somebody who was getting up a new plan out there——

Question. And there are the railroads along the river——

Answer. Yes, and you can't put the railroads back on top of the hills. And then you have, at the confluence of rivers, several railroads coming together down the river valleys. That's the heart of the city, and it's physically what permits the interchange of goods from car to car and from car to boat and from rail to truck, and so on. It's very easy to say, "Let's just zone all that," but not many chambers of commerce would enthusiastically support the idea. In some cases, however, zoning may offer the best solution, and we do give it careful study.

Question. Don't these floodways or spillways sometimes accentuate your downstream problem?

Answer. That is correct. And that's a very good question, I may say. Suppose we provide the floodway land and levees for the Kaw River, and no reservoirs. Now, that means that all that flood water, as it falls, is going to peak down there. Now, let's assume it passes the Kansas Citys successfully because we took the stockyards and we took the railroads and put them up in the hills, so you have this big area in which this flood peak can pass——

Question. Right now, doesn't that crest pass more swiftly down the Missouri River than it used to?

Answer. Can I answer that in just a second? I'd like to say that as long as that flood crest passes the Kansas Citys, it floods rich areas for hundred of miles that are not protected below the city, whereas if there were reservoirs, you'd let it out gradually.

With the reservoirs, we would know that the flood waters would be detained and let out gradually in less than bankfull amounts. In other words, our flood-control tunnels and gates for releasing water from behind a dam are so designed that we can discharge through them just as fast as we possibly can without the water going overbank.

HAVOC IN NEW ENGLAND

Question. You've had this same problem up in New England?

Answer. In New England—of course, last year's flood disaster was different in many respects from other floods; not totally, but in the major respects in that it was dynamic in nature. In other words, the rain fell in not much greater quantities than it has fallen in previous storms, but it fell in a much shorter time, which naturally meant that all that water tried to get out at once. And, therefore, it piled up in enormous heads.

Thus, high velocities had the dynamic effect of completely taking houses and everything else and tearing them away from their foundations and smashing them against bluffs, bridges, and dams. Whereas most floods, like on the Mississippi, are inundation-type floods, namely, you have water standing up to around 4 or 5 feet and you suffer a lot of damage, but you don't have the total building taken away and smashed. That's the difference.

Question. Couldn't that damage have been avoided in New England by flood-control projects?

Answer. A great part of it could have been if we had gone ahead with the flood-control plan. That was a $331 million program, of which only 72 million had been spent—and

had been appropriated. And that is not, believe me, any criticism of Congress. I personally feel that Congress has gone ahead on flood control quite fast and they're pushing faster. But the trouble is that in some cases the projects proposed and studied are not economically justified by flood records of the past.

In other words, in probably 25 percent of the cases when we worked out the economics of finding a suitable site, the annual costs exceeded the benefits. Relocating the railroads and the highways—which is a greater cost in highly populated areas than elsewhere—plus the normal taking of reservoir land, and the construction works involved, comprise the principal elements of the total project costs. The annual costs are obtained from amortizing that total amount at 2½ percent interest over the 50 years we give as the life of the project, plus the annual operation and maintenance cost. If this annual cost is more than the annual benefits, the project is not recommended. The annual benefits are obtained by calculating the average annual flood damages prevented, based on such factors as estimates of experienced flood damages, reservoir-operation studies, and the frequency of occurrence of various sizes of floods.

OPPOSITION WASHED OUT

Question. Wasn't there also some opposition to flood control in New England?

Answer. Yes, by far the largest percentage of projects not undertaken in the past was due to local opposition—which, I might say, has practically vanished today. There isn't any that I know of, and if there is, it's completely underground.

Question. Will it slow your program in other parts of the country if you concentrate on New England's problems?

Answer. Well, we are going to have to call on other parts of our organization throughout the country for help, because the engineering force up there in New England is not big enough. We will decentralize to other divisions some of that design—we'll farm it out. Now, I would say that it won't throw us behind elsewhere, for the reason that we're taking those district offices where we would have had to reduce our engineering force and giving them work for New England for which New England does not have the capacity personnel-wise.

Parenthetically, of course, you know our greatest problem is one of engineering personnel—engineering and science these days, it's terrific. But I would say "No," it will not interfere with the New England program.

Question. How about California and Nevada and Oregon?

Answer. I don't know of any new emergency programs for those areas, but there is tremendous pressure from out there, as well as from New England.

Question. Why wasn't anything done in that area, on the west side of the Rocky Mountains, earlier than this?

Answer. Well, we have our active program out there of about $400 million total in the flood area of California, of which——

Question. West of the mountains?

Answer. Oh, yes, in the San Joaquin and Sacramento valleys.

Question. Well, I mean up in Oregon—those rivers that cross——

Answer. Oh, yes. You mean also in the Klamath River in northern California?

Question. Where the recent floods occurred——

Answer. We have certain authorized projects in northern California and Oregon that have not been started. That is the only area in which we feel that the program may not be sufficient.

Now, the reason why that is so is this: The population up there in those mountainous areas, and even along the coast north of the San Francisco areas, is not very large—nothing like the Central Valley of California, where the floods also raged, as you can appreciate. So there just were not enough benefits to justify more reservoirs than we had in the plan. However, by no means had all of the recommended and authorized work been built in California.

Now, since the flood that has occurred in California shows additional damages of a very great nature, like the one in New England, then, as in New England, it indicates that we should reexamine our determinations of annual project benefits in the light of present-day conditions and get enough average annual savings to justify the costs. Because the benefits, which means the damage you save, must be greater than the costs——

Question. Why is that formula applied?

Answer. We are directed by Congress that the benefits must exceed the costs—"the benefits, to whomsoever they may accrue, must exceed the costs." That is provided in the 1936 General Flood Control Act.

COUNTING THE DAMAGE

Question. How do you determine the damages?

Answer. By damage surveys, I thought perhaps you might ask me for a figure for the west coast.

Our first estimates show damages of about $150 million, but they are not final. Those damages are in California, Oregon, and Nevada.

Now, I can illustrate from New England. In New England, the first figures on damages coming out were $1.6 billion, which were the local estimates of the governors and the civic leaders and businessmen of the towns, who were naturally overwhelmed at seeing such destruction of their own or colleagues' businesses and homes. And a terrifying experience for them that never had occurred before.

Actually, the damage is usually less than it first appears, but still a very great sum.

Question. Assuming that, from year to year, until the plan is completed, you're given all the money you need to go ahead as rapidly as possible, how long will it be before you get everything taken care of up in New England, to the extent possible?

Answer. You appreciate that's a hypothetical question?

Question. That's right. But just assuming that you can go ahead as you want to and need to, how long will it be?

Answer. I would say about 6 or 7 years to do it economically. You could push it faster and make a crash program out of it, but that, we think, is not wise, as we keep learning from experience all the time. However, that's on the assumption that we would get all the money we need, we would get all the people we would need, and so on.

Question. But, in another 6 or 7 years, New England should have all the flood protection that is economically feasible?

Answer. Under the present authorized plan. Now, that is not true as far as the extra money we would need to take care of Diane-type storms, because we are making a survey on that storm. Last July, Congress passed a resolution, which resolution asked us to review Diane as to rainfall, just as we were studying all hurricanes as to their tide, wave, and wind effects along the shores. It will take about 2 years to get that report in. And then it will have to be authorized. And only then—when it's authorized—can appropriations follow. So I would say 10 years, including protection from storms like Diane.

Question. Applying the same assumptions to California, what period of time will it take to get that in hand out there?

Answer. Well, I am guessing in this case, but I would say those are bigger dams out there—those are big multipurpose dams. New England dams are essentially single-purpose, flood-control dams. Multipurpose dams run into a great deal more time, and I would say, since it's a very big program, too, it would probably be 10 to 15 years.

SAVING: 90 MILLIONS

Question. Don't you already have something on the Sacramento Valley that showed its worth in this California flood?

Answer. The biggest saver of damages out there was the levees, which saved about $90 million worth of damage.

Question. How about the Folsom Dam and the Shasta Dam?

Answer. Shasta was a Bureau of Reclamation Dam and did a wonderful job, and Folsom Dam, built by the Corps of Engineers, did too—both of them. I can give you the statistics on the Folsom; I don't have them for Shasta.

Question. Would the damage have been about twice as bad if it hadn't been for these dams?

Answer. Perhaps not that much. As far as damage is concerned, it would have been enormous without the dams and levees. The damage actually prevented was about $116 million. Now, there are still authorized dams that could have been built that would have added $22 million savings. All we need is appropriations. If they had been built, a total of $138 million worth of damage would have been prevented.

Question. Can you see the time when there will be no major floods?

Answer. Oh, yes; no major floods. Excluding the year 1955, which was certainly a flood year, and not counting those damages yet, the average annual potential of flood damages, as of 1954, was estimated at $911 million a year.

Now, the amount of that estimated potential damage eliminated by completed flood-control works, like these that we've been talking about, and others throughout the country, is $491 million annually. Which means that about 55 percent of all potential damage has now been prevented by completed works. Projects under construction and those not started, when completed, will add $220 million more of annual damage prevented.

So, if you take the $220 million and add it to the $491 million, you get $711 million, which is around 78 percent of the potential damage each year. That leaves about $200 million worth of damage for which there is nothing authorized now in the way of preventive measures. Of course, these potential damage estimates may have to be revised upward as a result of recent flood experience. Furthermore, these estimates are based only on areas we have studied along main rivers and major tributaries.

But that doesn't mean that more is not preventable as time goes on. For instance, in our resurvey of the Klamath River, we may find projects that, because of the damage that has occurred, now can be justified and built. I don't know what the irreducible minimum is, but I feel certain all major disasters are preventable.

Question. General Sturgis, this long-range program of preventing floods, getting it so that we can be reasonably sure that we won't have these great disasters—what would that kind of program cost? Does anybody have any idea?

Answer. Yes; we have some statistics. I might give you our total for all types of projects of the corps, river and harbor, multipurpose, and everything else. The multipurpose projects would have hydropower, navigation, and other purposes not counted, of course, in the cost of flood control.

The total number of projects that we have are: completed, 2,294; under construction, 304; authorized by Congress but not yet started—awaiting appropriations—610; for a total of 3,208.

Then we have the estimated costs: completed projects over the past 125 years, $3.4 billion; under construction, $7 billion; au-

thorized but not built, $5.6 billion—roughly, $16 billion is the total cost.

Appropriations, so far, against that $16 billion, have been $6.9 billion, of which $3.4 billion has been for completed projects, and $3.5 billion for projects under construction, which still require $3.5 billion to finish. Then, for those authorized but not started, we've spent various minor amounts of money—largely on planning, $21 million—still leaving about $5.6 billion required to complete authorized projects not started.

Or, breaking down the $16 billion total cost in another way: 6.9 billion have been appropriated and 9.1 billion have not. That means they're still to come.

Now, there are authorized, in addition to that, about $2.5 billion worth of projects, but we have screened those out. In other words, we had about $11.6 billion of projects authorized by Congress to be built. And, when I took office, one of the first actions taken by my office was to screen out those poor projects that were either out of date, uneconomical, objected to by people, or needing further study—even though authorized by Congress.

Pulling all of these out left solid projects which were badly needed from a technical viewpoint and desired by a majority of the local people, and which enjoyed much more than a marginal justification, from an economical viewpoint. Thus, we still have $9.1 billion to complete authorized projects now underway, and those highly deserving projects for which construction funds have not yet been appropriated.

Question. Those are projects already authorized, aren't they?

Answer. Yes. Also, in the flood-control field, additional projects have been authorized whose cost runs about $1.9 billion as part of an inactive group of $2.5 billion of projects which we have recommended should not be built, after screening them. We've either made them inactive or deferred them for further study because we are not sure they're sound at this time.

Question. Will the Army engineers ever work themselves out of a job?

Answer. Well, not in my time, anyway, but I don't think that's important. What is important is a water-resources program to fit the present and future needs of this country, no matter who builds the projects.

Question. A moment ago you spoke of these projects having a 50-year life. Does that mean these big lakes behind the dams are going to fill up with silt within 50 years?

Answer. No, it does not. But, from a bookkeeping and cost viewpoint, we have to cut off a project's life somewhere. We merely want all of our projects to pay for themselves in not over 50 years. Take Garrison Dam. We've got a silt pool in that reservoir which can fill up in about 200 years, and that will not, until then, interfere or encroach upon any of the purposes of the project. In other words, we have silt storage purposefully planned.

Question. This 50-year business is just for accounting then?

Answer. Yes. In other words, a 50-year period for returning benefits equal to or greater than the cost of the project. Because you really can't see economic or physical events too far ahead. We think that that's a reasonable period. We know that the project is at least good for 50 years. A few of them, of course, we may class at only a 30-year or 40-year life. But a big dam, a concrete or earth dam—of course, an earth dam, as you know, also has an enormous amount of concrete in it in such features as the spillway, intake structure, outlet works, powerhouse, etc.; for instance, 3 million cubic yards of concrete forms part of these features for Garrison Dam—we give a big dam a life of 50 years for fiscal purposes but we know it will last perhaps hundreds.

The reason is that we provide silt storage. The amount depends upon circumstances, but we like to have storage sufficient for at least 200 years. But if the Agriculture Department gets going and constructs all the small dams needed in a watershed, does extensive contouring and all the planning and other things that they propose to do for soil conservation, then we can expect a longer life, because this will retain silt in the uplands and there will be less silt washed down against the dams.

Question. Isn't that one of the biggest benefits of upstream projects—greater soil conservation?

Answer. Yes; much the greater benefit. The Corps of Engineers, let me say, has always supported strongly this soil-conservation program, primarily because we realize the great value of the soil to the Nation and we want to keep it out of our reservoirs as well.

But in our designs we don't rely completely on that work being done. We allow for a silt pool, and anything that is done by the Soil Conservation Service is over and above that and makes the life of our silt pools longer. Consequently, it assures longer life for the dam.

Question. Whenever we write anything about the Army engineers, we are inundated with letters from people who say that if you'd just dam up every creek or every little spring on every farm you'd solve this problem. Is that necessarily true?

Answer. Oh, no; that's far from true. I believe you will find that the Soil Conservation Service itself and the Department of Agriculture do not claim that the prevention of downstream floods can be accomplished by soil conservation and other upper-watershed improvements. Rather what they say—and I have heard many official statements from members of the Department of Agriculture—is that the two programs are supplementary, neither being able to do the flood-control job of the other.

We have always agreed on this, but again the conflict is between the interests of metropolitan areas downstream and the villages and farmers who live in the upper watersheds. This conflict is based on personal interest in the relative priority in the use of funds—whether first efforts are for projects to prevent great disasters downstream, or to improve the economy upstream.

Read what Dr. Hugh H. Bennett says—a very honest scientist and an original organizer of the Soil Conservation Service—you can't possibly prevent downstream damages on the principal rivers by means of small, upstream dams.

This is the true picture, but, unfortunately, some individuals have let wishful thinking, rather than accepted scientific fact, dominate their utterances in their private interests.

Question. With regard to the future water supply, is the Corps of Engineers doing anything about cloud seeding, and making fresh water out of sea water?

Answer. No, sir; that is out of our bailiwick. We cooperate with the Weather Bureau and with the United States Geological Survey, and we're interested in watching those experiments—but I'm not an expert on that.

Question. Is there any promise to making fresh water out of sea water?

Answer. Yes; I think that's coming along; it's very expensive right now, but I have tremendous faith—I was born in 1897 and I don't think anybody who's lived in the last 50 years would say that there is anything can't be done eventually.

Question. Do you think that in our generation we'll have to break through this research barrier and make fresh water out of salt water?

Answer. I think that that may well happen, but I'm not prepared to say that it will be done in our generation or the coming generation, because I believe there as so many other feasible steps—some of which I've outlined—that can be done and must be done, that large-scale treatment of sea water won't be necessary.

CALIFORNIA'S PROBLEM

Question. Well, in California, is water going to limit their growth?

Answer. I think water is limiting their growth now, and, of course, they're pushing awfully hard.

Question. Is salt water creeping in in California?

Answer. Salt water is creeping in in California due to the fact that the fresh-water head has been reduced inland by the withdrawals from wells and that these porous strata intersect the bottom of the sea, so the sea water creeps inland as the water head inland sinks sufficiently below sea level.

Question. How far back inland is it?

Answer. Oh, it goes back, I believe, as far as the coastal range.

Question. Is there any sea water in any other part of the country?

Answer. Yes, there are other parts of the country affected, but not as yet in a major way.

Question. Is there a way you can move water from one——

Answer. From one basin to another? Well, even in a small tributary area, when you attempt to transfer water and put it over the hill into another drainage area, you run into trouble right off the bat. Everybody is beginning now to see the value of that water.

Question. Well, I did read in the paper that eastern Texas has a great deal more water than——

Answer. Yes, I have heard even that they want to bring it down from the Missouri.

Question. And you can take it out and bring it out through a dam——

Answer. Well, they want to bring it down from the Missouri—were that possible, financially. But the people in Missouri would not play, I can assure you. The people of Missouri even differ among themselves in the priority use of water, but I think the Pick-Sloan system of dams will largely overcome that.

And I might say this: The people, frankly, in the upper part of the Missouri Valley, have been much more foresighted and broader in their concepts for the common Valley welfare than at least some of the people in the lower parts. They have sacrificed a lot of the limited Valley bottomland, which is among the most fertile they had, for large reservoirs of tremendous value to the downstream people. Moreover, their upland soil is not generally as good as it is down in Missouri and Kansas. They've been, I think, very farsighted in providing areas for water storage.

FLOOD THREAT IN KANSAS

Question. They haven't resisted the way the others have?

Answer. No. At last, after much controversy, the green light was given us last year to begin again on Tuttle Creek Reservoir on a tributary of the frequently disaster-producing Kaw River.

We did build a relatively small reservoir, Kanapolis, on another tributary of the Kansas, as authorized back in 1938, but there are relatively few in the lower Missouri and the tributaries compared to what is needed. And I'm just as sure as I'm sitting here that they're going to be hit by a terrific flood on those tributaries, the Grand and the Osage as well as the Kaw, and they're going to be hit by increasing water shortages as time goes on.

I think, as a matter of fact, that the water-supply angle has resulted in more sustained pressure from the people than floods. The

floods are great disasters, not forgetting the loss of life and economic scars on the people in the valley and cities, but for most people of a region they're too soon forgotten. But the increasing impact of water shortage results in a broader and much steadier push. It's not so intense as flood pressure, but it's driving people——

Question. Why is it that Europe, with a much greater density of population, doesn't have the same problem of water supply that we have? Do they have better water-conservation practices than we have?

Answer. Oh, I think they have considerably better conservation practices, generally. After all, their population pressures have been greater than ours for centuries. Now, I think that we've made a lot of progress, particularly in the last 50 years.

I'm thinking of the forestry program. For example, when I was a boy I lived in that wonderful white-pine country in northern Wisconsin, and it was terrible to see the slashings up there of those wonderful white-pine forests. I once saw those marvelous forests of white pine standing—many townships of them—when I was young. Well, that has been all changed and we've got now a national forest up there in this lake region, and in that forest, now, some of the trees are 50, 60 years old, and coming back in wonderful shape.

So I think that we're making great progress. But I don't know that the time has come when there's enough pressure on us to do as the Europeans do, or the Japanese. With the Japanese—part of their religion is that there's a spirit in every bush. And they actually revere nature. But my point is that we shouldn't wait for necessity to compel us to act.

Some Phases of Foreign Policy

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks I include therein a recent article from the New York Times entitled "House Group Hits United States Geneva Role," summarizing a report recently made by a House Foreign Affairs Subcommittee headed by our able and distinguished colleague, Congressman CLEMENT J. ZABLOCKI, and composed of other able and distinguished Members of the House.

The committee report deals with exceedingly vital problems in a penetrating and able manner. It stresses the difficulty of keeping the lines of the free world drawn firmly without a clear consistent policy applicable to all areas.

It is illogical to believe that other free nations can be expected to take a stronger position toward communism than our own. Concessions which we make by conferences, trade concessions, political agreements establish guideposts for the conduct of other free nations and undoubtedly give impetus and stimulation to feelings and policies of neutralism.

Are we being outmatched, outmaneuvered in the diplomatic game? Are we losing strength in the free world because the Soviet tactics of psychological warfare are superior and more effective? Are we losing the confidence and support of present and former subject peoples and races victimized in the past by corrupt, despotic, colonial systems we are alleged, rightly or wrongly, to have sustained and supported?

The report appropriately notes the Marxist basis of Soviet world policy and its determined, unceasing campaign to conquer the world for communism.

The question might well be asked "How can there ever be even a pretext of peace in the world so long as one group of nations is conducting an aggressive campaign against the government and the governments of all other nations, and endeavoring to bring them under its authoritarian rule?"

This Nation has discovered by now, I think, that foreign aid does not insure loyalty to our cause, and that military assistance does not necessarily strengthen free nations that do not possess the "will" to be strengthened. Insofar as the battle against communism is tied in with national security, it is clear that only those nations can be depended upon to remain firmly on our side who are truly determined and possessed of the will to defend their own birthright. Those nations who are receiving our economic and military aid and sitting on the fence practicing neutralism while waiting to see which way the struggle for freedom is going, can hardly be depended upon to be strong, loyal allies. These nations merely weaken the integrity and solidarity of the free world. Another group of nations which, in effect, says to us, "Give us economic aid or we will go Communist," is even more harmful to our cause because they are practicing a form of international blackmail and can hardly be counted upon at any time to stand behind our side in the world struggle.

The problem of helping undeveloped nations also confronts us with most challenging problems. We are facing the prospect of competing with the Soviet in assisting certain countries which, it is clear, will finally line up on the side which helps them most. I do not accept the thesis that all nations will sell their freedom or surrender to slavery for economic aid. To the extent that communism thrives on poverty, misery, disease, and hunger, it is probably true that the alleviation of these conditions wherever they exist, would normally prevent or lessen the growth of communism.

Shall this aid be rendered exclusively by the United States, or will it be a United Nations programs? If the former, how far can we go feeding, clothing and supplying undeveloped countries; bringing up their economic and industrial potential in the competitive sense as well as their social condition without dangerously draining our own resources and creating additional difficulties for our own economy.

If this aid is to be parceled out by the United Nations with major contributions by this Nation how can we justify the Soviet Union designating the beneficiary nations and exercising its veto power over others—a privilege it might have in some circumstances. What will the effects be of these huge grants to underdeveloped nations upon our own economies and the economies of nations associated with us. These are all serious problems for discussion and settlement. They must be considered and decided not only upon humanitarian grounds alone, but upon the basis of the broad interests of this Nation. Under no circumstances should be pursue policies which will strengthen and spread communism and increase the war potential of possible enemy nations. Whatever action we take in this field should be predicated on our demonstrated capacity and the interests of freedom.

The committee has mentioned the necessity of improving our human relations in our various aid programs. That would also apply to our diplomatic policies. The human relations and the human questions are really important ones, if we hope to achieve enduring friendship with the millions and millions of people who are struggling to get out from under the heavy, oppressive blanket of imperialism that has covered and stifled them for centuries. If we would be true to our own traditions, we must not only have sympathy with their problems, but a sincere willingness to try to help them within the range of our ability, to escape tyranny and establish free institutions.

This great moral obligation is all the more pressing in the case of the free nations that have been recently unceremoniously dragged behind the Iron Curtain and are suffering denial of their traditional freedom. I refer to nations like Poland, Lithuania, Latvia, Bulgaria, Rumania and others that are being held tight and fast by Soviet shackles. It is our duty to encourage the aspirations of these people for restored liberty, and render them every assistance we can, because there can be no real lasting peace so long as these nations are dominated and held in subjugation by a Marxist communism choking their spiritual existence.

The recognition of Red China and its admission to the United Nations would be a great setback to democracy and a great victory for communism, as the committee notes. The accomplishment of these aims would mean to many that the Communists had already won their struggle for world power. Let us resolutely and militantly adhere to this cardinal principle of American diplomacy—no recognition of the Chinese Reds, no admission of Red China to the United Nations.

The article follows:

[From the New York Times of May 6, 1956]

HOUSE GROUP HITS UNITED STATES GENEVA ROLE—PARTICIPATION IN PARLEY HELD BLOW TO ANTI-RED EFFORTS IN MIDEAST AND ASIA

(By C. P. Trussell)

WASHINGTON, May 5.—A House Foreign Affairs Subcommittee charged today that the United States had seriously weakened all anti-Communist efforts in the Middle East and Southeast Asia by taking part in last summer's conference of heads of government at Geneva.

The group of 3 Democrats and 3 Republicans said President Eisenhower's attendance at the meeting, in which Soviet leaders also participated, promoted a dangerous neutral-

ism and a distrust of the United States in those areas.

There was a feeling in many lands, the Congressmen added, that it was senseless for them to resist communism if the West was going to accept the Communists into respectable society as at Geneva.

The subcommittee, headed by Representative Clement J. Zablocki, Democrat of Wisconsin, issued today a 213-page report on a 2-month tour last fall that took the study mission through 26 countries from Greece to Japan. The report was unanimous.

SOME ECONOMIC GAINS NOTED

The Congressmen acknowledged they had found imposing economic progress in a number of countries, since a similar study was made 2 years ago. But they were sharply critical of the failure of the United States and the free world to establish a clear and firm policy in the winning of friends abroad.

"So long as this uncertainty and the resulting irresolution exist," the report stated, "Asian leaders cannot be expected to stand up against Communist China."

Meanwhile, the report noted, the Communists are determined and concerted for the mastery of the world, and the new Soviet drive to give economic aid to strategic areas is proving to have many attractions for peoples who in the past received many billions in aid from the United States.

The Congressmen urged a thorough restudy of United States policy with particular attention to divorcing this country from any association with European colonialism.

Referring to the Geneva Conference as a disrupting factor in the world situation, the report said:

"In this tense and critical period, the efforts of the United States to aid the legitimate ambitions of the peoples of the Middle East and southeast Asia were seriously weakened by the holding of the first Geneva Conference.

"The nations of these regions were deeply concerned about what appeared to them to be an about-face in the attitude of the Western Powers toward Soviet Russia. They were shaken by the apparent readiness of American leaders, not merely to accept 'peaceful coexistence' but to strive for friendly intercourse with the Communists."

GENEVA SPIRIT IS CITED

"The 'sweetness and light' campaign, reflected in friendly pronouncements by Americans, in the exchanges of visitors between the United States and the Soviet Union, in the relaxation of our barriers to trade with Communist countries, and in other ways, tended to weaken the anti-Communist resolve of the peoples of the Middle East, southeast Asia, and of the Far East."

Discussing the spread of neutralism, the report said:

"The combined effect of the first Geneva Conference, and of the change in Communist tactics, has resulted in the growth of neutralism in these regions. The people in many of the countries visited by the study mission were of the opinion that the United States was asking them to be more firm, more unbending in their anti-Communist stand than the American Nation itself was willing to be."

The report said the mission "must reluctantly report that it found in many countries profound distrust of the motives and of the stability of purpose of the United States."

"What many fail to realize," the report added, "is the Communist offers of assistance carry with them many expertly disguised and hidden strings intended to open the way for the establishment of Soviet influence and eventual domination over the peoples of the Middle East and southeast Asia."

There was an increasing conviction, the report contended, that in a showdown the United States and the colonial powers of Western Europe would sacrifice the interests of Asian countries "if that seems to promote their own interests and security."

Also, there exists a feeling that the United States, because of Japan's potential might, tends to put Japan ahead of other Asian countries that have "not forgotten their occupation by Japanese armies," the report added.

It stated that the very efficiency with which the United States carries out its aid programs has produced increasing irritations, even resentment.

HUMAN APPROACH HELD VITAL

"We simply will have to do a better job with our human relations in our various aid programs," the report continued. "The key thing is not the amount of aid. It is the manner. It is not enough to analyze figures; we must do a better job of analyzing people. This is where the Communists have left us far behind."

The study mission, which put in more than 2 months in the various fields, stated that the United States must refuse steadfastly to recognize the Communist regime in China and resist its admittance to the United Nations.

"Free Asia," the report said, "will crumble once it believes the Communists are winning. Recognition by the United States or admission to the United Nations of Communist China would mean to Asia, as it should mean to us, the Communists have already won."

Other members of the panel were Representatives JOHN JARMAN, of Oklahoma, and ROBERT C. BYRD, of West Virginia, Democrats; and Representatives WALTER H. JUDD, of Minnesota, MARGUERITE STITT CHURCH, of Illinois, and E. ROSS ADAIR, of Indiana, Republicans. The staff consultant was Albert C. F. Westphal.

Independence for the Handicapped Through Employment

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. DAWSON of Utah. Mr. Speaker, it is with a great deal of pride today that I announce that a young lady in my congressional district placed fourth in the Nation in the 1956 National Essay Contest sponsored by the President's Committee on Employment of the Physically Handicapped.

For the edification of the Members of Congress I am inserting the prize-winning essay in the RECORD and I want to commend Miss Sharon Borg of 605 Grand Street, Salt Lake City, Utah, for her magnificent accomplishment:

INDEPENDENCE FOR THE HANDICAPPED THROUGH EMPLOYMENT

Silence is not peaceful for the deaf mute who watches life passing like a noiseless procession; darkness is eternal for the man who sits idly by, listening to the activity of a world from which he has been excluded; movement is impossible for the useless legs of the young woman doomed to a wheelchair by the ravages of polio. Anxiety and insecurity haunt their days and trouble their nights because they are dependent on the charity of their friends, their families, and their State. Physiologically they are healthy; mentally they are intelligent; and they need and want to work to fill the void in their lives. But who has a job for a salesman who can neither hear nor speak, or for a bookkeeper who can't see the figures before him, or a model who is bound to a wheelchair? They and the 2 million like them don't want charity; they want a chance to be independent.

Vocational rehabilitation gives them the chance they seek. State-Federal programs rehabilitate about 60,000 of the 250,000 who need their services each year. Those who are rehabilitated and returned to work gain economic independence. Of the 64,0000 who were rehabilitated in the fiscal year 1954, 76 percent were unemployed and 24 percent were engaged in temporary or part-time jobs when rehabilitation began. Their total earnings rose from $17 million a year to $115 million and they will pay about $10 in income taxes for every Federal dollar spent on rehabilitation.[1]

As a result of their economic independence the handicapped are also mentally rehabilitated. Because they can become useful, contributing members of socity, they can pick up the broken pieces of their lives and find happiness and satisfaction. Vocational rehabilitation is in vain, however, unless our economic system provides jobs for these people.

Much progress has been made in the field of employing the handicapped, but there is still much more which can be done. Humanitarianism is no longer the only cause for their employment. Impaired workers are advantageous to business because they produce. By employing the handicapped, the Nation builds up its labor force, helps the relief rolls, and turns the disabled into taxpayers.[2] In a country based on the belief that each human being has the right to have the opportunity of developing his potentials, the handicapped deserve the chance to work as well as the nonhandicapped.

Regardless of these basic reasons for employment of the handicapped there are many employers who cannot accept it as a wise practice. There are those who believe that there is no place in some industries for the impaired worker and that working with the handicapped will result in unpleasantness and embarrassment for other workers.

These ideas do not hold up, however, in the face of the results of a joint United States Department of Labor and Veteran's Administration survey of 100 plants employing 11,000 disabled and 18,000 nonimpaired workers. The survey showed that impaired workers produced at slightly higher rates than nonimpaired workers on the same job; they sustained fewer disabling injuries when exposed to the same hazards; they had the same minor injury rate; they had no significant difference in the voluntary quit rate; they had about the same absenteeism records; and they had the same wide range of skills, abilities, and interests.[3]

Certainly any industry can profit by having adaptable, careful, reliable, productive, and capable employees such as these.

Although an individual is physically handicapped, he may not be a handicapped worker. A deaf mute who operates a heavy machine in a factory finds his disability advantageous because it relieves him of the stress and strain caused by the factory noise; the blind man whose highly developed sense of touch enables him to assemble minute parts in a delicate assembly job is one of the most valuable men in his plant and can work more efficiently for longer periods of time than his fellow workers, without the eye strain which plagues them; the receptionist in the doctor's office finds her lifeless legs

Footnotes at end of speech.

are no handicap in the efficient completion of her duties.

When the handicapped are trained for a job for which they are capable, they often perform their duties even better than the nonhandicapped having the same job because they are aware of their disabilities and overdevelop their abilities in order to compensate.

Many employers throughout the country have realized the value of employees who have physical disabilities. Such companies as Bulova, General Motors, Eastern Airlines, and Northrup Aviation have extensive training and placement programs.[4]

Employers of large and small concerns should follow the examples of these companies. They can do this by adopting a positive company viewpoint and by being actively interested in the problem. Careful hiring and wise placement of all workers will result in the decrease of turnover, accidents, sickness, and absenteeism, and an increase in morale.[5] Therefore the extra effort extended to make possible the employment of the handicapped will result in greater efficiency throughout the entire organization.

Silence can be forgotten by the deaf mute whose life is filled with color and activity; the burden of eternal darkness is lightened for the blind man who is a part of the sound and movement of the world; movement loses its importance to the crippled girl who is a contributing member of society. The void in their lives has been filled by economic independence.

It is the responsibility of American society to employ all who desire to work and are capable of being trained for employment. Let's give the handicapped a chance to compete. Remember, it's the ability, not the disability, that counts.

OTC–GATT—H. R. 5550

EXTENSION OF REMARKS

OF

HON. HENDERSON L. LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. LANHAM. Mr. Speaker, under leave to extend my remarks, I include a letter that appeared in the New York Times, May 9, 1956, written by O. R. Strackbein on the OTC issue that is now before Congress.

I fully endorse the views and sentiments expressed in this letter and commend it to the attention of all my colleagues. The letter sets forth the hidden dangers that are present in H. R. 5550 despite the amendments attached to the bill by the Ways and Means Committee as safeguards. It shows how approval of the OTC by Congress would deliver the regulation of our foreign commerce into the hands of GATT.

The letter follows:

REGULATING FOREIGN TRADE—LOSS OF CONGRESSIONAL CONTROL SEEN IF OTC BILL IS PASSED

To the EDITOR OF THE NEW YORK TIMES:

In an editorial of April 25 on H. R. 5550, the Organization for Trade Cooperation bill, you laud the majority report of the House Ways and Means Committee for its thoughtfulness and thoroughness and with equal fervor deprecate the minority report as mere argument, mostly unsubstantiated allegations and simple misrepresentations.

The bill at issue is the one that proposes United States membership in the OTC, which would be set up in Geneva to administer the General Agreement on Tariffs and Trade (GATT). This bill was reported out by the Ways and Means Committee, as you say, before the Easter recess. The majority report that so impresses you is, of course, in support of United States membership in the newly proposed international trade body.

The principal bone of contention is the allegation that such membership would largely set Congress to one side in the regulation of the foreign commerce of this country, including tariff and quota legislation. It is held that this power, bestowed upon the Congress by the Constitution, would be shifted to an international body sitting in Geneva.

SHIFT OF POWER

Your editorial, in full agreement with the State Department and administration position, seeks to brush aside this argument or misrepresentation by simply calling it ludicrous or some similar term.

You say that the United States would retain its freedom of action because no new obligation could be imposed on any OTC member unless that member agreed to accept it.

Now, it is true that so far as our membership in the OTC is concerned, Congress would, thanks to a Ways and Means Committee amendment, retain control; but please note that the OTC is not the GATT. GATT is the General Agreement on Tariffs and Trade. OTC would administer it and seek to carry out its purposes and objectives, whatever these are or might become in the future as a result of amendments.

It is important that it be understood that GATT, in accordance with its own article XXX, could amend itself, including the scope and range of its authority, without regard to the OTC. If it is true that it could not bind this country unless we accepted new amendments, this acceptance could be given by the State Department in the mere act of casting an affirmative vote. Congress would not be consulted.

In other words, the safeguard written into H. R. 5550 with respect to the OTC under which congressional as distinguished from State Department approval is required for acceptance by this country would not control GATT amendments, for the simple reason that GATT is not before Congress and could therefore not be amended by the Ways and Means Committee. And in any case the United States could not unilaterally revise the General Agreement.

BLANKET APPROVAL

I hope that this distinction between the OTC amending process as controlled by the amended H. R. 5550 and the GATT power of self-amendment without the consent of Congress will make it clear that Congress by passing the OTC would indeed open the door to its own loss of control—de facto if not de jure, since approval of the OTC would be regarded as approval of GATT itself. GATT would then be free under this blanket approval to go on its own self-charted course with little reason to pay further heed to the Congress of the United States. That, indeed, is and has been the State Department goal. That is and continues to be the central point of opposition.

O. R. STRACKBEIN,
Chairman, The Nation-Wide Committee of Industry, Agriculture, and Labor on Import-Export Policy.
WASHINGTON, May 3, 1956.

Rumanian Independence Day

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. WICKERSHAM. Mr. Speaker, May 10 is Rumania's Independence Day. To all true Rumanians, that day is to them what July 4 is to all true Americans—the symbol of their individuality as a nation.

The collective leadership of the Soviet Union is afraid of days which recall liberty to the temporarily subjugated European satellites. They were afraid of Polish Constitution Day, May 3. They tried to change the Polish national holiday to July 22. They tried to change the date of Rumania's Independence Day to May 9—when the Russians observe VE-day. How miserably they have failed. Rumanians, in their homeland, take new heart on May 10, remembering the impact of that day on their history, and looking forward to the time when liberty shall be restored to them.

On May 10, 1866, the first elected monarch of Rumania was inaugurated.

On May 10, 1877, while engaged in the Russo-Turkish War, the principality of Rumania proclaimed its independence from the Ottoman Empire.

On May 10, 1881, Charles I was crowned king of Rumania by the will of the people, who had chosen him to govern.

More than half a century of peace, progress, and prosperity followed May 10, 1881. It is no wonder that true Rumanians remember that date. It would be a wonder if they should ever forget it.

Mr. Speaker, I have been in Rumania twice since World War II—in 1945 and again late in 1954. I came away with a strong, well-founded respect for the unbreakable courage of the Rumanian people.

On one occasion I noticed a gang of men in convict uniform building a road. My American diplomatic escort told me that these men, guarded by Communists with machineguns, were sons of former Rumanian leaders in industry, science, and government. When the guards momentarily looked the other way, one of these men stared directly at me and raised his right hand. I recognized in that brief instant the sign of "V for

victory." He had done this at the risk of his life.

On another occasion, a Jewish rabbi—his body unbelievably emaciated from starvation and forced labor—told me in broken English, "the best way to solve the problem of too few jobs for too many Rumanians is to close the eastern border and open up the western border."

It takes the bravery of the battlefield to dare death while engaged in slave labor. It requires a crown of courage to crack a joke in the shadow of imprisonment. But that, Mr. Speaker, is Rumania.

Rumanian oil, Rumanian lumber, Rumanian farm crops are siphoned into the Soviet Union, leaving only a small percentage for home consumption. Since I represent a great oil-producing and agricultural State, Oklahoma, this was of interest to me.

I asked one of Rumania's Communist leaders how the average Rumanian was making both ends meet. He told me, with pride, that the average monthly income for workers was then about $80 per month in our money. Next, I asked him how much the average worker was paying per gallon for gas for his car. His answer was that the average worker didn't have a car. "How much per gallon if he had a car?" I insisted. He finally broke down and confessed that gasoline could be bought at $2.23 per gallon. I also learned that eggs could be purchased—at 30 cents apiece. Actually, they cost more than 30 cents apiece, for 4 out of 5 eggs sold in Rumania are not fit for human consumption.

Eighty dollars a month does not go far at such prices.

I do not know how Rumanians keep alive under such enforced exploitation. But they do. And they keep freedom alive, too.

Mr. Speaker, there is just one thing I wonder as we who are free prepare to honor Rumania's Independence Day. When I was in Rumania in 1954 there was a great deal of pointing with pride to the school, corresponding to our own West Point, that trained officers for the Communist army. It was then called the Stalin Military Academy. I wonder if it is still called the Stalin Military Academy in 1956.

It is my hope and prayer, Mr. Speaker, that on a not-too-distant May 10, we may welcome free Rumania once more into the fellowship of independent nations.

Laos Celebrates Constitution Day

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. POWELL. Mr. Speaker, I wish to felicitate the people of Laos, His Majesty Sisavang Vong, and His Excellency Ourot R. Souvannavong, Ambassador of Laos on the occasion of the celebration of Constitution Day, May 11, 1956.

For the ninth time the flags flutter high over Laos to commemorate their birth of freedom. As nationalism and anticolonialism spread throughout southeast Asia they found fertile soil in Laos. The Laotian people, fired by their own burning desires for freedom and inspired by the examples of their neighbors in the region, actively fought against colonialism and second class citizenship and thus achieved their independence.

Less disrupted by Communist aggression than some of its neighbors, Laos has consequently known a smoother transition from colonial status to independence. The Government established at the close of the colonial era was that of a constitutional monarchy with a king who is popular among his people. A constitution guaranteeing democratic freedoms to the Laotian peoples was promulgated May 11, 1947. Legislative power is exercised by a National Assembly elected by direct universal suffrage. The independence acquired has been gradually shaping up into a more concrete form and has become complete after the signature with France of a treaty of amity and association on October 22, 1953.

Laos has been active on the international scene. She has been a partner in the conclusion of agreements on American military and economic aid to the Indochinese States as well as a participant in numerous international conferences such as the Colombo plan. Laos also cooperates with several of the specialized agencies of the United Nations.

I salute Laos upon her accomplishments during her short period of nationhood and wish for the Laotian people continued success as they embark upon a new year of national life.

Statement of Hon. Augustine B. Kelley, of Pennsylvania, Regarding Farm Legislation

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, under permission to extend my remarks in the RECORD, I am including my statement regarding the farm legislation.

This is such a vital question today, and its solution means so much to the economy of the country as a whole. No real prosperity can exist in this country unless the farmers have prosperity. It is one of the soft spots and is indicative of trouble ahead for our economic prosperity.

The statement follows:

The Congress is making another attempt at passing some farm legislation to help the Nation's badly depressed agricultural sector of the economy. When President Eisenhower vetoed the bill passed last month, it appeared for a while there would be no farm legislation. But the fact that the parity ratio—that is, the relationship of farm prices to farm and living costs—continues to hover around 82 percent, while the farm outlook remains anything but optimistic, has prompted the agricultural committees to try to get something through.

I pointed out recently that the agricultural part of the economy and the coal industry have been experiencing similar troubles—that both are now running at a little more than 80 percent of the parity level of the Truman administration. These do not constitute isolated situations. The economy is so closely tied together that when large individual segments of it run into continuous difficulties, the whole economy eventually is affected.

Some people in this administration act and talk as if it might be a good idea to help the farmer a little, this being an election year. That's why the administration apparently is so sold on the old Henry Wallace plan for paying farmers to take land out of production. They hope to be able to parcel out some of this money to the farmer between now and election day.

But there is a stronger need right now than just being nice to the farmer in an election year and helping him along a little with a handout of something. It is, rather, imperative that we get the farm segment of the economy back into balance with the rest. And we must go after other depressed segments of the economy—and depressed areas, too—and make sure they get the kind of help which will put them back on a parity basis. Otherwise, the whole economy eventually sinks to the level of the depressed parts of it.

Representative E. Y. Berry

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. ARENDS. Mr. Speaker, I have requested permission to extend my remarks today in order that I might briefly outline some of the outstanding accomplishments of our colleague, E. Y. BERRY, who has so ably represented the Second District of South Dakota during his three terms in Congress. I know that you Members of the Congress who have worked closely with Congressman BERRY are very much aware of his fine service while a Member of this body, but I take this opportunity to give permanent recognition to the stewardship of our colleague by inserting the following in the CONGRESSIONAL RECORD:

COMMITTEE MEMBERSHIP

Representative E. Y. BERRY has done outstanding work on his committee and has earned the respect of his fellow members on the House Interior and Insular Affairs Committee. He is the fourth ranking Republican of the 27-member committee.

As indicative of the work he has done, both the Republican and Democratic chairmen of that committee have paid him high praise for his endeavors. On June 15, 1954, after BERRY, as chairman of the Indian Affairs Subcommittee, had held extended joint hearings with the Senate Subcommittee, Representative

MILLER, Republican, Nebraska, chairman of the full committee, said:

I want to say at this point, for the RECORD, in my opinion the Subcommittees on Indian Affairs in the House and in the Senate have done a remarkable job of working with the different Indian problems. * * * Thank you very much (BERRY) for your effort so far, and I hope you continue with as much patience as possible because I believe you are getting results we never had before. I think the joint hearings between the Senate and House Committees have been a healthy thing. If we can work out more of these joint hearings, I think it would save much time and effort and money for the people that come into Washington to be heard on the problems.

It is not only the Republican members of the committee who have paid their tribute to Representative BERRY. At the same time, Representative CLAIR ENGLE, Democrat, California, who is now the chairman of the full Interior and Insular Affairs Committee, paid this tribute to E. Y. BERRY when he said:

May I, too, express my admiration and appreciation to the chairman of the Subcommittee on Indian Affairs (BERRY), who has certainly worked with tremendous diligence and perseverance on what is the most trying problem this committe has. He has demonstrated the patience of a Job equal to anything that Job suffered during his most troublesome days, and he certainly has my sincere admiration and respect and deserves the thanks not only of this committee but of all of the people of this country who are interested in getting a disposition of this Indian problem.

Western South Dakota has many interests, businesses, and resources. BERRY has been active in promoting all of these. One of the principal resources is agriculture.

FARM PROGRAM

BERRY has been an active worker for farm legislation that will give the farmer his fair share of the nationwide prosperity he has helped to create. His insistence on the importance and urgency of the passage of a sound farm bill which would increase agricultural income is evidenced by his statement on the House floor on March 26, 1956—CONGRESSIONAL RECORD 4985—when he said:

Mr. Speaker, I take the floor today to demand that there be no congressional Easter recess unless and until the farm bill has been approved by both Houses of Congress and has been sent to the President.

There is nothing to come before Congress this session that is as important to the economy of the entire Nation as the immediate passage of this legislation. By fast action, the differences between the two Houses could be resolved prior to the Easter recess. If, however, these differences are not resolved, there should be no congressional recess.

Spring planting time is rapidly creeping up on the farmers all the way across the Nation. Time is tremendously important. So far as I am concerned, I, too, would appreciate a 10-day "breather" from our labors here on Capitol Hill, but I want no part of any vacation until the farm bill is passed and signed by the President.

The continued high level of the economy of this Nation rests upon the foundation of a thriving agricultural economy. If the national economy is to remain at its present level, then farm income and the farm economy must be improved. * * *

Mr. Speaker, I demand that the House and Senate withhold any plans for an Easter recess until the farm bill is passed.

SOIL BANK

In line with the President's suggestions, Representative BERRY joined with members of the House Agriculture Committee in introducing a new soil-bank bill within minutes following the vote in the House on the President's veto. BERRY has advocated the soil-bank plan as one of the ways to increase farm income without building greater agricultural surpluses and yet retain the productive areas in conservation programs for future needs of an expanding population.

WHEAT

BERRY has also vigorously urged passage of a domestic wheat plan that would provide 100 percent of parity for all wheat used domestically with the farmer having the choice of selling the surplus on the world market or storing it for sale the following year. He introduced legislation providing for such a program following the President's veto of the farm bill.

WOOL

The Berry wool amendment to annual defense appropriations acts requires the Armed Services to buy only domestic wool in all military orders and has benefited the sheep and wool industry by millions of dollars. In 1952 when Congress was considering this matter the hard-working Congressman made the following remarks:

Mr. Chairman, certainly we must protect American industry and labor through the Buy American provision of this defense appropriation bill, but we must, at the same time, protect our wool industry. The bill provides that the Army buy food and clothing grown and produced in the United States so long as it is available. This amendment simply requires that the clothing be made from domestic wool so long as that domestic wool is available. Is that not fair? Is that not just? Is that not American?

REA PROGRAM

He has assisted REA and RTA groups with loan applications and related matters. On the floor of the House he said:

Mr. Speaker * * * the Rea has done a magnificent job in our State in electrifying our farms and ranches. * * * I salute the pioneers and users, the borrowers and owners, of this vast REA program which has changed the lives and made a brighter future for every South Dakota citizen.

LIVESTOCK

The stockmen of South Dakota have been able to count on BERRY as an aggressive proponent of their best interests. One example is the establishment of a foot-and-mouth-disease laboratory at Plum Island which was championed by the West River Congressman. He helped in obtaining an increased appropriation for the control of brucellosis in the present session and has been very active for several years in obtaining effective brand legislation.

RECLAMATION

BERRY has been very active in promoting reclamation and irrigation development throughout the West. Speaking to the House in support of the small-projects bill on May 6, 1955, BERRY said:

I stated at the outset that this is a partnership bill. It provides more local autonomy in the development of badly needed and financially feasible projects. It is a move to permit the construction of many small projects which are being delayed because of the lack of local financing and which are not of enough magnitude to receive priority consideration by either the Bureau of Reclamation or by special legislation in Congress. It will provide many projects which the local people are not able to finance themselves, but which in the interests of the economy of this Nation should be constructed and can be constructed if this legislation passes Congress.

MINERAL RESOURCES—URANIUM

Last year during the first session of this Congress, BERRY introduced and succeeded in guiding to passage through the House a bill validating the filing of mineral claims for uranium ore deposits located in lignite beds on public domain lands. The bill became law and served as a key to unlocking part of the potential mineral treasure chest in northwestern South Dakota. In his explanation of the problem before the House Interior Committee on June 20, 1955, BERRY said:

Mr. Chairman, Public Law 585, enacted last year, recognized the multiple-use doctrine which would permit multiple use of these public lands in the United States, that is, the right of a mineral locator to obtain a patent to his location, but which would be subject to the reservation to the United States of all leasing materials and the right to enter and remove such minerals. * * *

The purpose of this bill is to bring these areas under the mineral location law with the right of removal upon the payment to the Government of a royalty for fuel minerals that are destroyed as uranium is extracted.

From report of proceedings, House Interior and Insular Affairs Committee, June 20, 1955.

GOLD

A strong advocate of a free market for gold, on March 22, 1956, BERRY called the matter to the attention of the House, saying:

Mr. Speaker, the Canadian Government announcement yesterday that it is going on a free market places the question squarely up to the United States whether it wants to stand on the sidelines alone or whether it wants to follow the free market lead of the other nations. Those of us who are interested in domestic mineral production have been pressing for this action for some time. The present price of gold at $35 an ounce precludes the mining of any low-grade ore resulting in the wasting of our gold resources.

MICA

Western South Dakota produces many more minerals which our Nation must have to be militarily and economically strong. When the domestic stockpile program for strategic mica began to lag because of pricing and grading policies of the Emergency Procurement Service, BERRY vigorously pressed responsible officials for an equitable purchasing program that would give miners sufficient return on their investments. In testifying before the Senate Interior Committee on April 20, 1956, favoring the extension of the strategic mineral purchasing program, he said in part:

The program has been changed very little, the price has been changed none, the grading has not been changed since the beginning of World War II. The result was that miners could not get enough out of their mica to pay them and the grading process was not satisfactory. In my country, at least, there has been very little mica mined recently. But I think under the new buying program this mica is going to come in. I doubt, however, that we are going to be able to fill the stockpile needs prior to June 30 of next year. I urge that this bill be enacted.

VETERANS

BERRY has a splendid record of working for the best interests of the war veterans. He has successfully worked for the improvement of the veterans' hospitals in Sturgis and Hot Springs as well as nearby areas. He has urged increased payments under the GI bill and veterans' pensions. He has represented veterans before military appeal boards and cooperated with the servicemen's organizations.

BUSINESS IN GOVERNMENT

As a businessman himself, BERRY has emphasized the need for business practices in Government:

Mr. Speaker, while this does not involve a too great amount of money, it is, in my judgment, one of the most important bills to come before this Congress at this session because it demonstrates a trend in the program of this administration to put more business in Government and get the Government out of as much business as possible.

From the CONGRESSIONAL RECORD of August 3, 1954, page 13160, 83-2.

NATIONAL PARKS

BERRY has ably represented the best interests of the national parks and monuments in his district. Supporting the Interior appropriation bill before the House on April 6, 1954, he said:

Mr. Chairman, I commend the committee for including in this bill funds for the improvement of Mount Rushmore National Park. This great shrine is one of the great inspirational spots in America. Since this appropriation will be repaid to the Treasury of the United States, it is a good investment. * * * This entire development program is the result of cooperation between the National Park Service, the Mount Rushmore National Memorial Society, and friends of this great shrine in an effort to accommodate the increasing numbers of visitors who come each year.

AIRPORTS AND HOSPITALS

BERRY has spoken out in favor of Federal-aid programs needed for the benefit of the Nation as well as his district where local communities are unable to do the needed job themselves, such as airport and hospital construction.

Mr. Speaker. * * *. Federal assistance in airport construction is one of the most important considerations due general aviation, and I hope therefore that this $22 million item will be appropriated.

And—

One of the services in which our rural communities are most deficient is adequate hospital facilities. Many of our small South Dakota towns have had difficulty interesting doctors because of the lack of needed hospitals. As you know, the authorization for this program was just signed by the President last week. It is one of the important parts of his health program.

INDIANS

The Indian people, not only of South Dakota, but of the entire Nation have never had a better friend or a more aggressive fighter for their rights than BERRY. Believing that the Indian problem can be solved only through education and trades training, BERRY is devoting much of his time to legislation to accomplish these ends. He feels that rehabilitation should be accomplished through loans to those who are able to make a success of operating ranches and livestock on the reservation areas and that a program of training for those who cannot successfully farm must be devised.

BERRY has been cooperating with the Commissioner of Indian Affairs in his effort to bring industrial plants on or near Indian reservations to provide employment. His trades training program will fit these people for such employment. His plan to incorporate rehabilitation into bills providing settlement for damages to reservation areas is a new and effective program since it is handled by the Indians themselves through a business manager with authority to handle these finance programs without the delay of going through the Indian Department itself on each loan.

BERRY has become nationally recognized for his work in behalf of the Indian people. As Mr. ENGLE, chairman of the Committee on Interior and Insular Affairs, has said:

He * * * deserves the thanks, not only of this committee but of all the people of this country who are interested in getting a disposition of this Indian problem.

An editorial appearing in the April 12, 1956, issue of the Rapid City Daily Journal, which is the largest daily in the South Dakota Second District, expresses some of the reasons why the people of western South Dakota appreciate Congressman BERRY's stewardship in his public trust.

The editorial follows:

NO WONDER THE WEST RIVER LIKES E. Y. BERRY

No congressional district in the United States has such a diversity of interests as South Dakota's Second Congressional District, which covers all of the State from the Missouri River west.

The West River district has national parks, national forests, a large strategic airbase, an ordnance depot, a Federal fish hatchery, two Veterans' Administration hospitals, large acreages of public lands with oil and mineral deposits, vast expanses of farm and ranch land, reclamation projects, mining, and 30,000 Indian people with the Federal Government as the guardian for their properties.

It takes a man of patience, balance, and a broad understanding of the multiple problems of this large district to represent the West River in Washington, D. C.

We are fortunate to have just that man in Congress—Representative E. Y. BERRY, of McLaughlin. Born near Philip, a lawyer and a newspaper publisher, BERRY had a fine record of public service before being elected to Congress in 1950.

BERRY'S diversified background made it easier for him to start out right in the difficult job of filling the vacancy FRANCIS CASE left when he was elected at the same time to the United States Senate. CASE was extremely helpful, of course, in briefing BERRY on the many ramifications of representing the West River in Congress. CASE continues to be a helpful colleague—the two have worked closely on legislation benefiting this region during the past 6 years. CASE and BERRY have been close personal friends for years and their association in Washington has only increased this friendship and understanding for the benefit of South Dakota.

HELLO, E. Y.!

During the Easter recess of Congress, Representative E. Y. BERRY returned to his district, where he visited with miners, Indians, Government workers, farmers, ranchers, townspeople—in short, his constituents. The people were glad to see him and to give him their viewpoints. All of us like to have personal contact with the men who represent us in Washington.

BERRY is personable and modest. There are many good reasons, aside from the point that they like him, why the people of the West River were happy to see BERRY. He has done a good job for them.

We checked BERRY's record in the CONGRESSIONAL RECORD, and it is a record of accomplishment for the West River ever since his first term in Congress.

Perhaps you would like to review, as we did, the things BERRY has done.

BERRY BILLS INTO LAW

His bill requiring the Armed Forces to use only domestic wool in the purchase of any material containing wool has meant millions of dollars to the sheep industry during the 4 years BERRY's bill has been the law of the land.

His bill to validate the filing of mineral claims for uranium ore deposits in the lignite beds on public land opened up tremendous possibilities for northwestern South Dakota.

BERRY's bill for the Cheyenne River Indians established a new pattern for the Indian people, giving them a new freedom in handling their own affairs. For the Indians whose land will be inundated by water from Oahe Dam, BERRY's bill provides $3 million for the land plus $5.5 million for rehabilitating the displaced Indians.

BERRY also successfully sponsored a bill providing long-term leasing of Indian land for commercial and industrial purposes.

Another helpful law for the Indians was the BERRY law which authorizes the mortgaging of Indian trust property as the basis for financing Indian ranch units through regular commercial channels.

STRIKES FOR AGRICULTURE

For agriculture, still the West River's major industry, BERRY—in addition to the wool bill—cosponsored legislation which increased durum wheat production outside allotment quotas while durum is in short supply.

He cosponsored the bill which established the Foot and Mouth disease research laboratory on Plum Island—legislation of great significance to all stockgrowers.

BERRY also cosponsored legislation removing ASC acreage compliance requirements for eligibility to receive soil conservation payments.

OTHER ACCOMPLISHMENTS

And that's not all.

BERRY has consistently worked for the expansion and development of Ellsworth Air Force Base, Rushmore Memorial, our national parks and veterans hospitals in the West River.

He assisted in securing the uranium mill at Edgemont, helped straighten out the mica buying mess at Custer, has been active in promoting the Missouri River development program. BERRY successfully led the fight in Congress for increased appropriations for coyote and rodent control and for increased appropriations to curb Brucellosis in livestock.

BERRY has worked closely with REA associations, assisting them to speed up loans to expand their services in our rural areas. He is an active spokesman for Eisenhower's highway expansion program and works closely with the Indian Department in locating small industries on or near Indian reservations.

IMPORTANT COMMITTEE

There is an impressive list of bills, still pending in Congress, which BERRY introduced. All are of benefit to the people and the economy of the West River.

BERRY is the fourth ranking Republican member on the Interior and Insular Affairs Committee which has 27 members. Aside from agriculture, this committee deals with all legislation vitally affecting western South Dakota. The subcommittees on which BERRY serves handles legislation concerning public lands, irrigation and reclamation, mining and Indian affairs.

While E. Y. BERRY is hired to work for all of us, it never hurts to tell an employee he is doing a good job.

Congressman BERRY, we in the West River appreciate your untiring efforts. You'll know how truly we appreciate your worth when the votes are tallied next June 5 and again in the November election.

Testimonial Dinner Honoring Paul Wooton

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. BOGGS. Mr. Speaker, seldom has Washington witnessed a testimonial dinner where there was more genuine love and affection for the honoree than the one held here at the Press Club on Tuesday last honoring Mr. Paul Wooton, long-time Washington correspondent for the New Orleans Times-Picayune, and distinguished representative of the business press of the Nation.

Mr. Wooton has exemplified in his life the tenet of the golden rule. No task has been too difficult or too burdensome, and his friendship has been freely given.

Like so many others, Mrs. Boggs and I and our family were the recipients of his hospitality when we first came to Washington in 1941. It was Paul Wooton who literally took us under his roof, found us a place in which to live, and guided us about this complicated National Capital of ours. He has similarly helped thousands of others.

It was fitting indeed that three Presidents of the United States paid tribute to him, that distinguished leaders in journalism and in public affairs gathered at the Press Club, and that his long-time associate and intimate friend, Mr. George W. Healy, editor of the Times-Picayune, came from New Orleans to make one of the finest presentations of all—a scroll signed by fellow employees of the New Orleans Times-Picayune, with service ranging from 25 to 50 years.

I include herewith, Mr. Speaker, news articles which appeared in the Washington Post and the Evening Star, and an editorial from the Post, all of May 9, 1956:

[From the Washington Post and Times Herald]

Nearly 500 persons attended a National Press Club birthday luncheon yesterday for Paul Wooton, 75-year-old Washington correspondent for the New Orleans Times-Picayune.

Upward of 500 others wired or posted regrets on their inability to attend the tribute to the immensely popular veteran newsman—a bouncy figure on the local scene for nearly half a century.

Typical of the chatty birthday letters Wooton received was one from former President Harry Truman, who remarked that both he and Wooton were born on the same day.

Truman also recalled that his daughter Margaret used to rollerskate on the apartment floor directly over Wooton, who still makes his home at 3016 Tilden Street NW., but that Wooton never once complained. The former President was a Senator then.

White House Press Secretary James Hagerty read a message from President Eisenhower in which the Chief Executive expressed his "warm best wishes for the years ahead."

A third long letter came from another White House occupant Wooton had known in his long tenure—Herbert Hoover, who remarked that Wooton had been his constant friend for 40 years.

His letter also detailed at length the help Hoover recalled Wooton had given him on the post-World War I food-relief program.

The honor guest got a portable TV set from the organizations who sponsored the luncheon: McGraw-Hill Publications, Kruckman News Bureau, Chilton Publications, Simmons-Boardman Publications, Bureau of National Affairs, Inc., and Motor Age, in addition to the Times-Picayune.

A native of Indiana, Wooton went south at an early age and his early newspapering was done in that part of the country. A member and sometime officer of nearly every newspaper organization represented locally, Wooton headed the National Press Club in 1946.

[From the Washington Evening Star]

Paul Wooton, a reporter, made news, himself, yesterday.

On the occasion of his 75th birthday, the Washington correspondent of the New Orleans Times-Picayune heard himself extolled by some of the Nation's great people.

President Eisenhower sent his press secretary, James Hagerty, to read a warm letter of greetings. Former Presidents Herbert Hoover and Harry S. Truman dispatched messages of sincere congratulations.

Vice President NIXON made a special trip to the National Press Club to shake hands with Mr. Wooton. The Ambassadors of Norway, Great Britain, and Guatemala came to pay tribute.

Justice William O. Douglas of the Supreme Court and Treasury Secretary George M. Humphrey were on hand to honor the 42-year veteran of the Washington press corps.

BOSS JOINS IN TRIBUTE

Senator LONG, of Louisiana and Mr. Wooton's own boss, Editor George Healy, jr., of the Times-Picayune, joined in the tribute.

Besides these, Mr. Wooton was surrounded by a host of friends from the news professions, big names and small, who thought it fitting to salute one of their best-known associates.

Five hundred persons crowded the auditorium of the Press Club to participate in the birthday celebration. Many others who sought admission had to be turned away for lack of space.

The toastmaster, Benjamin M. McKelway, editor of The Star, said "there is no hall in Washington large enough to accommodate Paul's friends."

DEVOTED TO THOUGHTFULNESS

He described the honored guest as a man who has gone through life looking for, and frequently finding, an opportunity to do something thoughtful for someone else, especially in his own craft.

President Eisenhower, extending congratulations to Mr. Wooton on his anniversary, said it was a matter of genuine regret that he could not attend the party. Similar expressions came from former Presidents Hoover and Truman.

Mr. Wooton was showered with gifts, including a parchment scroll signed by fellow employees of the Times-Picayune, a medal sent by the Mayor and city council of New Orleans and a portable television set given by those attending the luncheon.

[From the Washington Post and Times Herald]

THE MAN IN CHARGE

To Washington newsmen, Paul Wooton has been, for more years than seem probable, not merely an indispensable man but an indispensable institution. This friendly, easy-going, ubiquitous dynamo who for years has represented the New Orleans Times-Picayune and the Chilton Publications in Washington, has been at one time or another president of the White House Correspondents Association, president of the National Press Club, president of the Overseas Writers, chairman of the Business Papers Correspondents' Committee—and chairman or president of an appalling list of other groups and organizations. But he has been at all times, permanent secretary-treasurer and chief arranger, factotum and driving power of every one of them. Whenever the press corps has had work to do, Paul Wooten has done it.

So there was warm gratitude as well as deep affection behind the luncheon given yesterday in honor of Paul Wooton's 75th birthday. There is hardly a member of the press corps who has not personally felt his kindliness and generosity; and there is none at all who has not been a beneficiary of his talents as organizer of banquets, receptions and celebratory events. When visiting kings or queens or prime ministers have come to Washington, it has always been Paul Wooton who presented them to the press—and always with a simplicity and grace that illuminated the occasions. He has made a career out of helping his colleagues. We congratulate him on his birthday; and we congratulate ourselves on having him among us.

Administrative Changes In Excise Tax Structure

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. COOPER. Mr. Speaker, for the past 2 days the Committee on Ways and Means has been considering an important report issued by the Subcommittee on Excise Tax Technical and Administrative Problems. This subcommittee, under the able chairmanship of the Honorable AIME J. FORAND, of Rhode

Island, has made a thorough and comprehensive study of our Federal excise-tax structure. Based on that study, the subcommittee prepared a report containing 80 specific recommendations for improvements in our Federal excise tax structure.

As chairman of the Committee on Ways and Means, I today issued a press release setting forth the decisions of the committee reached to date in connection with its consideration of the subcommittee report. For the information of the Members of Congress and the interested public, I will insert in the Appendix of the RECORD a copy of that press release. The committee will continue its work on this report in executive session next Monday.

CHAIRMAN JERE COOPER, OF THE COMMITTEE ON WAYS AND MEANS, ANNOUNCES TENTATIVE DECISIONS OF THE COMMITTEE ON THE RECOMMENDATIONS OF THE SUBCOMMITTEE ON EXCISE TAX TECHNICAL AND ADMINISTRATIVE PROBLEMS

Hon. JERE COOPER, Democrat, Tennessee, chairman of the Committee on Ways and Means announced today that the committee had reached the following tentative decisions thus far on the recommendations of the Subcommittee on Excise Tax Technical and Administrative Problems:

I. MANUFACTURERS EXCISES

1. Electric direct motor-driven fans and air circulators should be taxed only if they are of the household type rather than, as at present, if they are of the nonindustrial type.

2. The tax on television and radio components should be applied only to those suitable for use on or in connection with "entertainment type" sets rather than on all sets.

3. The tax on refrigeration components should be repealed.

4. Temporarily passed over, to permit further staff study, the recommendation that credits or refunds should be available with respect to the tax on gasoline destroyed by fire or as the result of a disaster (as so declared by the President) to the extent that the tax losses are not compensated by insurance or otherwise.

5. To remove items of little or no revenue significance, the base of the tax on sporting goods should be revised to delete: (a) curling stones; (b) deck tennis rings, nets, and posts; (c) lacrosse balls and sticks; and (d) sleds (measuring more than 60 inches in length).

6. The tax on trucks and truck trailers which are leased instead of sold should be limited to the tax due where these articles are sold. This is already true in the case of utility trailers. This treatment would be provided, however, only if the manufacturer sells (instead of leases) some of the trucks and truck trailers.

7. The tax on tires and inner tubes should be levied at the time the tire or the tube initially leaves the manufacturing plant or a warehouse within 20 miles of such plant, instead of at the time of the sale by the manufacturer in the case of sales by a manufacturer having wholesale or retail outlets.

8. Temporarily passed over, to permit further staff study, the recommendation that in the case of sales by manufacturers directly to retailers, the manufacturers' price on which the tax is computed should be based upon the price at which the manufacturer sells to wholesale distributors. This alternative to the actual price charged by the manufacturer would not be available where sales to the retailers are the normal method of distribution within the industry and would not be available where the manufacturer does not make a sufficient number of sales to independent wholesalers.

9. Temporarily passed over, to permit further staff study, the recommendation: "Present law provides that the base on which the manufacturers' tax is computed is to be constructed where a manufacturer makes a sale (otherwise than at arm's length) at less than the fair market price. In practice a sale to a selling subsidiary in such a case would be presumed to be not at arm's length. This administrative presumption should be codified."

10. Temporarily passed over, to permit further staff study, the recommendation that the status of cooperative advertising in relation to a manufacturers tax base should be clarified by a specific ruling of the Internal Revenue Service. The subcommittee has been informed that the Service will issue a ruling providing substantially as follows:

(a) The distinction between national and local advertising is abolished.

(b) Where a manufacturer's selling price to his customer contains an unsegregated advertising charge, it is a part of his tax base.

(c) In the case where a manufacturer makes a separate charge to his distributor for advertising and the proceeds are kept in a separate account earmarked for advertising, the separate advertising charge is not a part of the tax base. This separation can be evidenced by showing that the charge is either listed on the sales invoice or billed separately; the contributions from distributors are set aside as a fund to be used for advertising for the benefit of these contributors and the funds are so used, or the unexpended portion is held in trust or refunded to the contributor upon his withdrawal from the program.

(d) Where the manufacturer makes a contribution to the advertising account in the case of a separate fund, the amount of the manufacturer's contribution may not be deducted in computing the taxable sales price. However, the subsequent allowances against such contributions to distributors for expenditures by them or their dealers for advertising should be treated as readjustments of sales price.

11. For the purpose of eliminating competitive discriminations arising from the existing manufacturer's excise tax base—

(a) Gas incinerator garbage disposal units, which are in competition with electric garbage disposal units, should be taxed at 5 percent;

(b) Electric floor polishers and waxers, which are presently taxed under the category electric, gas and oil appliances should be removed from this tax base since they are in competition with untaxed vacuum cleaner attachments suitable for use in waxing and polishing floors;

(c) Tape and wire recorders should be taxed at 10 percent;

(d) Recordplayers, which are in competition with phonographs, should be taxed at 10 percent; and

(e) Tubeless tires should be taxed at a rate 1 cent a pound higher than tires requiring separate innertubes. This is recommended to preserve existing revenues from tires and tubes.

The committee rejected the recommendation that transitors, which are in competition with radio and television tubes, should be taxed at 10 percent.

II. RETAILERS EXCISES

1. Existing law imposes a 10-percent retail jewelry tax upon pearls, precious and semiprecious stones, and imitations thereof. The question as to whether or not a stone is semiprecious should not be decided until a sale occurs after the stone has been cut or polished. A cut or polished stone would then be subject to tax or free of tax, depending upon tests presently applied, such as Mohs' scale of hardness.

2. The so-called basket clause under the 10 percent tax on luggage should be removed and a longer list of articles should be specifically made subject to tax. They would be: Bathing-suit bags; beach bags, or kits; billfolds; briefcases of leather or imitation leather, brief bags; camping bags; card and pass cases; carryall bags; carrying kits; collar cases; cosmetic bags and kits; dressing cases; dufflebags; furlough bags; garment bags; designed for traveling; hatboxes for use by travelers; haversacks; key cases or containers; knapsacks, knitting or shopping bags (suitable for use as purses or handbags); makeup boxes; manicure set cases; memorandum pad cases (suitable for use as pass cases, billfolds, purses, or wallets); musette bags; pocketbooks; purses and handbags; ring binders, capable of closure on all sides, of leather or imitation leather; salesmen's sample or display cases, bags or trunks; satchels; shoe and slipper bags; suitcases, toilet kits and cases; tote bags; traveling bags; trunks; vanity bags or cases; valises; wallets; and wardrobe cases.

The chairman stated that the revenue effect of these tentative decisions will be found in the subcommittee report beginning on page 13. He added that detailed explanations of these recommendations will be found in this subcommittee report beginning on page 16.

Warsaw Katyn Memorial

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. MADDEN. Mr. Speaker, last week, along with other members of the former select congressional committee which investigated the Katyn Forest massacre, I filed a resolution asking our State Department to forward to the Polish Communist Government our testimony and reports establishing former Premier Stalin and his Soviet leaders as perpetrators of the Katyn Forest massacre.

Reports are coming from Communist Poland that the present government is about to inaugurate a special investigation to establish whether Stalin and his coleaders murdered the approximately 15,000 Polish leaders at the beginning of World War II.

Four thousand, two hundred and forty-three of these leaders were imprisoned near the Katyn Forest and the remainder were confined to two other prisons in the western and northern sections of Russia. The bodies of the Polish leaders who were confined to the latter two camps have never been found.

The following letter by Julius Epstein which was published in the Washington Post and Times Herald May 5 sets out a timely suggestion that the American people make a gift to the Polish people in the form of a Katyn memorial to be erected in Warsaw, Poland.

If the present Communist government is so anxious to expose the international crimes of Stalin and his Communist leaders, they should not object to this patriotic gesture to former Polish patriots.

KATYN MEMORIAL

I want to call your readers' attention to the very significant fact that the Polish Government in Warsaw never dared to erect

a Katyn memorial in honor of the 4,243 Polish patriots massacred at Katyn. The reason for this negligence of a moral duty is obvious. The Warsaw Government knows too well who killed the Polish officers on Soviet soil. That government also knows that the Polish people know who the murderers of their brethren were. The unimpeachable result of the great American congressional investigation which fixed the responsibility for this crime—the greatest in modern military history—once and for all, became well known to every Pole on earth, before and behind the Iron Curtain.

I, therefore, suggest that the American people make a gift to the Polish people in the form of a Katyn memorial to be erected in Warsaw. This memorial should bear on its frontside the sole inscription:

"In Memoriam of the 4,243 Polish Patriots Massacred at Katyn."

To carry out this proposal, an "American National Committee for the Erection of a Katyn Memorial in Warsaw" should be formed as soon as possible.

JULIUS EPSTEIN.

NEW YORK.

Booker T. Washington: Builder of Good Will

EXTENSION OF REMARKS
OF
HON. BRADY GENTRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. GENTRY. Mr. Speaker, one of the truly outstanding men of this century was Booker T. Washington. A benefactor of all mankind, he gave the full measure of his devotion and energy to the building of our country.

Sidney J. Phillips, president, Booker T. Washington Centennial Commission, has recently written a most deserved and worthy tribute to this great American. It is as follows:

BOOKER T. WASHINGTON: A BUILDER OF GOOD WILL—HIS POLICIES, PROGRAMS, PRINCIPLES, PROCEDURES, AND PHILOSOPHIES

1. At no time in our Nation's history has there been greater need for racial harmony and sectional good will than at the present time. Booker T. Washington came upon the American scene at the time when the Civil War had left in its wake chaos, poverty, ill will, and misunderstanding among both races. The Negro race was sadly in need of guidance, opportunity, and practically all the material things of life needed to take advantage of the new life of freedom opened before them. The white group was divided, perplexed, and resentful because of the social and economic situation created by the release of nearly 4 million salves. Everywhere in the South there was intolerance and misunderstanding.

2. Booker T. Washington, with wisdom and humility far above the average, and first-hand knowledge of the needs of his people, set into motion a series of programs that made it possible to reach millions of Americans with the sound, fundamental ideas which were to bring order out of chaos, prosperity out of poverty, tolerance and Christian good will out of antagonism and misunderstanding. The effectiveness of his teachings is evidenced by the remarkable progress made by the Negro and the spirit in which the races have worked together to bring progress and prosperity to our land.

3. The recent ruling of the Supreme Court on segregation based on race, has created a situation comparable in many ways with that produced by the Civil War. Now, as then, many can be found in each group, who are filled with bitterness, tenseness, and resentment. Admittedly, there is room for the same calmness, sanity, and wisdom which Booker T. Washington exhibited and advocated at that time, and are necessary to a successful solution of the present-day situation.

4. The establishment of the United States post office at Booker Washington Birthplace, Va.; the issuance of the Booker T. Washington 3-cent centennial postage stamp; the erection of the Booker T. Washington National Monument at his birthplace, together with the proposed legislation for coinage of 100,000 Booker T. Washington centennial half dollars to provide funds for the projected year-long celebration of his 100th birthday, will reawaken the national consciousness to the value of his teachings.

5. Focusing national attention upon Booker T. Washington and all that he stood for can revive interest in the uses of his practical policies, programs, principles, procedures and philosophies as effective instruments today, which, having already proven their worth, can render invaluable service in paving the way to greater good will, greater cooperation and greater opportunity for all of the people of America.

6. Continued legislation authorizing the melting down of 100,000 Carver-Washington half dollars would place in the hands of the Booker T. Washington Centennial Commission a tool which would make possible the carrying out of the centennial program which is nationwide in scope and designed to achieve the results listed above.

Labor Is Critical

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call attention of my colleagues to a statement just issued by the first legislative council of the AFL–CIO on the labor record of the 84th Congress.

The statement follows:

The industrial union department of the AFL–CIO, during the past 2 days, has reviewed and appraised the record of the 84th Congress and the unfinished business before it. Up to the present time, the record of the Congress has been "too little and too late" in vital areas of legislation. We are, therefore, disappointed by what we have found.

Both political parties have promised reform of the antilabor Taft-Hartley Act. There has not as yet been even so much as the lifting of a finger in this area. Instead, this already vicious law is being worsened by administrative decree of the Eisenhower Labor Relations Board.

Millions of Americans are still denied the protection of the wage and hour standards of the Fair Labor Standards Act. These Americans are condemned by congressional inaction to second-class economic citizenship. We commend action by the Congress in the last session to increase the minimum wage from 75 cents to $1 per hour, but point out emphatically that the job is only half complete. We will continue to press for labor's demand for increased coverage and for a $1.25 statutory wage floor to meet the minimal economic needs of our lowest income groups.

While the administration has finally recognized the need for Federal action to eliminate our economically distressed areas, its program is half-hearted and inadequate. Both parties are pledged to Federal action in this area. We call upon them to make good their promise with a program that will answer this problem of chronic unemployment that has afflicted thousands of American workers.

The industrial union department has special concern with the adverse effects of the Fulbright amendment to the Walsh-Healey Act. This has opened up a hornet's nest of litigation and threatens to destroy fair wage standards on Government contracts.

The American farmer has become the forgotten man of 1956 because of administration failure to formulate a satisfactory farm program. The industrial union department is especially concerned because of the continued decline in farm purchasing power. Already, far too many thousands of agricultural implement workers are unemployed and 120,000 auto workers are jobless for lack of customers.

We call upon the Congress to give immediate attention to the establishment of Federal standards on unemployment compensation. A school construction program is past due. It is time to end talk and begin action on an effective road program. There is an immediate and pressing need for a bold housing program to eliminate America's slums. America's elder citizens rightfully expect the Congress to improve our social-security laws. Now is the time for tax revision that will bring relief where it is needed—to the low- and middle-income earners of our land. We also call upon Congress to pass a safety bill for the ferrous and nonferrous mines.

The IUD extends its thanks to that small band of liberals and principled conservatives who in these trying days have fought the good fight for the American people and for all free men and women and who have refused to trade off the people's civil rights and civil liberties for political advantage.

The 84th Congress has 3 months left to go. It can still make for itself a record of which it may be proud, but it will have to work hard and with speed. The 72 affiliates of the industrial union department, having a total industrial membership in excess of 7 million, join with the national AFL–CIO in urging Congress to go forward full steam ahead. We seek those things that are good for all Americans because what is good for America is good for our members.

Opposition to Certain Recommendations of the Commssion of Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution regarding recommendations of the Commission of Veterans' Benefits which I have received from the chief clerk of the Board of Supervisors of Los Angeles County. I insert it in the RECORD because I am convinced after reading the report that the resolution is correct in its judgment and I am also certain that

it represents the will of nearly all veterans who have taken the time to study the Bradley report. This also gives me the opportunity of urging that the President at the earliest possible moment resolve the doubts and anxieties of many veterans who will be affected by such a program by repudiating or at least stating his complete disagreement with the findings of the Bradley report.

The resolution follows:

RESOLUTION OPPOSING CERTAIN RECOMMENDATIONS OF COMMISSION OF VETERANS' BENEFITS AND MEMORIALIZING MEMBERS OF UNITED STATES HOUSE OF REPRESENTATIVES AND UNITED STATES SENATE WHOSE CONSTITUENTS RESIDE IN LOS ANGELES COUNTY TO URGE ECONOMY AND EFFICIENCY IN THE VETERANS' ADMINISTRATION WITHIN LEGISLATIVE FRAMEWORK ALREADY ADOPTED

On motion of Supervisor Jessup, unanimously carried (Supervisor Ford being temporarily absent), it is ordered that the following resolution be and the same is hereby adopted:

"Whereas the Commission of Veterans' Benefits, appointed by the President of the United States, has made public certain recommendations by releasing its report to the press of the Nation; and

"Whereas the report of the Commission has described the system of veterans' benefits now in effect as 'weak' and 'backward looking'; and

"Whereas the Commission recommendations include the following:

"1. That social-security payments be deducted from the pensions of some veterans;

"2. That payments be based largely on need and degree of disability;

"3. That rates for compensation be geared to some average national earning figures and payments be based on loss of earning capacity, physical impairment, social inadaptability and shortening of life due to disability;

"4. That eligibility requirements for pensions to widows and children of veterans be revised and payments based largely on need or disability;

"5. That the World War II and Korean GI loan programs be transferred to the Federal Housing Administration;

"6. That a deadline would be established to determine length of time veterans with government term insurance would have to convert to permanent insurance; and

"Whereas while it is the opinion of the undersigned that efficiency and economy should and must be practiced in the Veterans Administration as it should in all branches and departments of government, the recommendations of the Commission, including those herein enumerated do not assure efficiency and/or economy not already provided in legislation and regulations governing operation of the VA without breaking faith with many thousands of veterans, widows and orphans whose very existence depends upon benefits currently in effect; and

"Whereas it was ever the intent of a grateful Nation to provide for the widows and orphans of its wartime fighting men, to provide hospitals and medical care and the subsistence of those disabled in our wars to keep this Nation free; certainly it was never the intent of our people and our Congress to make "charity cases" of these men and women who went forth into battle; and

"Whereas certain recommendations made by the Commission would, in the opinion of the undersigned, work undue hardship upon many thousands of disabled, aged and unemployable veterans and widows and orphans; and

"Whereas within the county of Los Angeles, State of California, reside almost 1 million of the 22 million veterans of this Nation, many of whom would inevitably become dependent upon county charity should certain recommendations of the Commission be adopted; Therefore be it

"*Resolved*, That the board of supervisors, county of Los Angeles, State of California, go on record as opposed to any recommendations of the Commission that would work hardships upon the men and women who are veterans of this county, including those recommendations herein enumerated; and be it further

"*Resolved*, That the board of supervisqrs memorialize those Members of the United States House of Representatives and the United States Senate whose constituents reside within the county of Los Angeles to acquaint those duly elected representatives of the action of this board, and urge said Representatives to do all in their power to bring about maximum efficiency and economy in the Veterans Administration within the legislative framework already adopted for that department of Government."

I hereby certify that the foregoing is a full, true and correct copy of a resolution which was adopted by the Board of Supervisors of the County of Los Angeles, State of California, on May 1, 1956, and entered in the minutes of said board.

HAROLD J. OSTLY,
County Clerk of the County of Los Angeles, State of California, and ex-officio Clerk of the Board of Supervisors of said County.
By GORDON T. NESUIG,
Deputy Clerk.

The Fight for Conservation

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 12, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend remarks, I would like to insert this eloquent statement on natural resources given in my own State of Oregon by Adlai E. Stevenson. Because they have aroused so much interest and enthusiasm among conservationists throughout the country, I believe these remarks will be of very great interest to those concerned with protection of our natural resources:

If a man sent out looking for a laboratory in which to test the effects of conservation policies, good and bad, I doubt that he could improve upon the State of Oregon. Oregon has become a great national battleground where in the senatorial election ahead two sharply conflicting philosophies will be put to the test. In recent years you have sent to the United Senate to speak for you—and for the Nation—two men who come as close as any I know to consistently giving eloquent voice to the cause of conservation in its broadest sense. WAYNE MORSE and DICK NEUBERGER are concerned with public power, public parks, public lands—all the physical things that make up what we call our natural resources. They are no less concerned with our human resources, and they recognize the first truth that the two are really one. But there also has been another Oregonian in Washington in these past 3 years. You didn't send Douglas McKay—he was sent for by President Eisenhower. And in his 3 years as Secretary of the Interior Secretary McKay seems to have taken his stand squarely against all the things that WAYNE MORSE and DICK NEUBERGER stand for.

And now, in return for services rendered—or perhaps for other reasons—Mr. McKay has been sent back to Oregon by the Republican high command to attempt to unseat WAYNE MORSE who had the courage of his convictions to an extent that the Republican high command cannot condone. He went Democratic but I do not think anybody in Oregon has much doubt about how this challenge to a brave and gifted servant of Oregon is going to come out—with WAYNE MORSE on top.

But this context also has great significance, to you and to the Nation. For here you will see pitted the two conflicting philosophies around which revolve all the big issues of this campaign—the concept of government devoted to the service of a favored few. That's why you will find arrayed against WAYNE MORSE in the weeks and months ahead not only the Republican Party of Oregon but the Republican Party of the Nation, and behind this combination every special interest that ever made a fast dollar out of exploiting the natural resources of this country. I can tell you that getting WAYNE MORSE off the national stage is worth money, time, and effort to a lot of people who have never set foot inside the State of Oregon. And I can tell you that keeping him right where he is—right there in the national spotlight when a matter affecting the national interest is up for consideration—is a matter of great importance to many millions of us who can't vote in your election, but who are counting on you to do the right thing by us, and the country.

When the word conservation came into our everyday language the meaning was exact; to conserve for the future the national heritage that belongs to all of us.

The first objective was to save these lands from the onslaught of commercial interests, and they often lay idle. More recently, we have learned to use them wisely for the common good. Under public management millions of our people have been able to enjoy the unparalleled recreational opportunities of the national parks. And under controlled conditions private interests have been permitted to engage in selective logging, mineral prospecting, and grazing in the public forests.

The practices and the techniques of conservation have been with us so long, and have so proved their worth, that it would seem by now that this is one area of public activity that should have been removed from the political arena.

But the prizes are still tempting and men are still greedy—and, unhappily, politicians are still pliable. And so in the year 1956, we find ourselves still concerned—even as were Theodore Roosevelt, Gifford Pinchot, George Norris and Oregon's own Senator Charles McNary—still concerned with protecting the public lands against those politicians who would give away their bounty to private interests.

While I don't say that everything the Eisenhower administration has done is bad, let me review some of the things which the Eisenhower administration has done to the great natural and national resources which belong to all of us: Our rich offshore oil lands have gone to fulfill Republican campaign promises.

They have given away valuable pine and fir timber right here in Oregon's Rogue River National Forest, on the pretext that the Al Serena Co. was to mine for gold and silver.

They have given away or tried to give away other portions of our national forests for the use of private companies.

The Government's synthetic fuel and rubber plants have been sold at low prices.

The right to exploit our national wildlife refuges has been granted to about as many oil and mining companies in 3 years as in the past 33 years.

They have given away or tried to give away some precious rights of our American Indians.

They have given away one of the greatest water-power sites in the country at Hells Canyon.

They have tried to give away countless other riches which the people of this Nation alone possess—grazing rights on our public lands, Government-owned helium-production plants, and the infamous Dixon-Yates deal to give away a big profit at little or no risk to a private utility company, while at the same time striking a blow at the TVA which President Eisenhower once characterized as "Creeping socialism."

Sometimes I wonder what the great and courageous Republic conservationists like Theodore Roosevelt would say if they were alive today and could see what is happening to the gifts of providence under the regime of men who fear change, but not transfer. Aren't there any Republicans left today who will stand up and fight for our natural resources? There seem to be only 1 or 2, and they have lost favor with the Eisenhower administration. One of them is a man who was trained here in Oregon and received his doctor of science degree at Oregon State University—Dr. Ira N. Gabrielson. While I was Governor of Illinois, I called him in for a special survey of conservation problems in Illinois. He is a lifelong Republican, and his brother Guy Gabrielson was chairman of the Republican National Committee. For many years, Dr. Ira Gabrielson was head of the United States Fish and Wildlife Service. Listen to what Dr. Gabrielson recently told a congressional committee: "This administration and its action on conservation matters comes nearer making a Democrat out of me than anything Roosevelt or Truman could do in all the years I worked under them."

All this is being done, I remind you, in the name of good business. Indeed, it was Secretary McKay who proudly announced when he came to Washington: "We are here in the saddle as an administration representing business and industry." I can't dispute the accuracy of that statement. It has been proved time and again, and confirmed time and again. And I say it's time for this administration to dismount and make room in the saddle for an administration which represents people.

One Hundred Sixty-Fifth Anniversary of Polish Constitution

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. FALLON. Mr. Speaker, I am delighted to have the opportunity to join with my colleagues in paying tribute to the noble people of Poland on this historical occasion—the 165th anniversary of the Polish Constitution of May 3, 1791.

This constitution was greeted by the people of Poland with open arms, for its adoption brought with it tolerance, equality, and justice. The constitution of May 3, 1791, was truly a sincere effort on the part of Polish statesmen to better the existing conditions of the people by establishing a constitutional democracy. This document represented the will of the people and although it is not the law of the land in Poland today, it will never be forgotten.

In World War II, Poland, despite her unpreparedness, struck back at the overwhelming forces of the Nazis with great courage. After their nation was occupied, the Polish people attempted to do all they could to fight for the cause of freedom and the dignity of man. Polish forces were organized outside their homeland, and they fought in battles in France, Italy, Belgium, and Africa.

World War II ended over a decade ago, and the first nation to stand up to the aggressor in the global conflict still remains under the chains of slavery. I am reminded of the statement once made by Lincoln, "Those who deny freedom to others deserve it not for themselves." Poland and her noble people live under a regime that completely ignores the rights and the dignity of man. The conditions under which the Poles live today are appalling and incompatible with the principles of freedom and democracy.

Poland's hour of darkness has been a tragically long one, and today, more than ever, her people need a word of encouragement and of inspiration, to fortify them in their continuous struggle for freedom. On this auspicious occasion, we have the opportunity to tell the Polish people and others who have been enslaved, that we are not resigned to their present fate. We are confident that Poland is not lost forever and that she will again achieve her rightful position among the free nations, to contribute her efforts in the cause of peace and security.

Library Ground Breaking at Orchard Lake Seminary

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. MACHROWICZ. Mr. Speaker, on May 6, 1956, there was held at Orchard Lake, Mich., a very impressive groundbreaking ceremony for the new Orchard Lake Seminary library building, being erected by its alumni association at a cost of $160,000.

It is noteworthy and laudable that a small group of alumni have taken steps to give this institution of learning, with a splendid record of accomplishment in its past, a new library to expand the facilities of book learning and to continue its contribution to the culture of our country.

Under leave to extend, I submit herewith the remarks made at this memorable occasion by one of its most distinguished alumni, the Honorable Frank G. Schemanske, judge of the recorders court of the city of Detroit.

The remarks follow:

We are assembled here this afternoon to witness and participate in a most significant ceremony in the history of Orchard Lake Seminary—the ground-breaking for Orchard Lake Seminary's new alumni memorial library.

To a very proud alumnus, one who has been a devoted admirer of Orchard Lake Seminary and an active participant in its affairs for more than 40 years this moment has tremendous emotional significance.

My life and my professional career have been closely linked with the development of Orchard Lake. Our beloved seminary is a part of my very being and I return here periodically for spiritual and mental regeneration and rejuvenation.

From books comes knowledge—and bear in mind that during the so-called Middle Ages, before the invention of printing, the monastic libraries and manuscript collections of our Catholic church were the sole repositories and reservoirs of Western culture and civilization.

For more than five centuries the collection and copying of books was almost entirely confined to our monasteries. Each monastery had its library—actually a book-publishing factory of monks—who painstakingly hand-copied and preserved the wisdom of the ages.

The Benedictines, the Augustinians and the Dominicans were the chief orders dedicated to this work, devoting untold thousands of man-hours to the preservation and dissemination of knowledge.

All of today's libraries of the Western World, whether publicly or privately operated and owned, had their origins in the monasteries of the church.

The dedication of any library is a momentous occasion, an event probably surpassed in importance to present and future generations only by the dedication of one of the Holy houses of our mother church.

Every phase of civilization, every facet of this world of ours, the records of our past and the hopes of our future will be found printed in the books of the library we will here erect.

The books to be found therein will be carefully selected by the wise and dedicated librarians of Orchard Lake, worthy heirs and successors to those medieval monks whose beautifully hand-illuminated and lettered manuscripts are our invaluable museum pieces of today.

Good books and the love of literature have always inspired the poets.

Longfellow wrote:

"The love of learning, the sequestered nooks,
And all the sweet serenity of books"

Wilbur Dick Nesbit told of the open door to happiness found within the covers of a book:

"Who hath a book,
Has friends at hand,
And gold and gear
At his command,
And rich estates
If he but look,
Are held by him
Who hath a book."

And in the same vein, Andrew Lang wrote:

"The love of books—
The golden key
That opens the enchanted door."

And now if you will indulge me in a bit of personal observation:

For many years my chief avocation and hobby, if it can so be termed, has been my work with the waterfront development of the city of Detroit. I have been a member of the Detroit Memorial Hall Commission for more than 25 years and am presently the president of this commission. The industrial giants of the Nation have worked with us—the Fords, the Chryslers, the General Motors executives—and this matchless beautification of Detroit River's shores is now blossoming into full fruition.

Permit me to take advantage of this occasion to make this public confession to my

friends of Orchard Lake. My personal pride in our billion-dollar Detroit waterfront development is equaled if not surpassed today by my pride in my own beloved alma mater—modest Orchard Lake—and the library we plan for this place.

Without doubt the alumni association—that great body in which the clergy and the laity work on a common level for the good of our school—is entitled to the greater share of the credit for this achievement. The standing building committee of the association assumed responsibility for the planning and the financing and we shall soon behold the material evidence of its labors.

However, we would be seriously remiss in our duties should we fail to also give a full measure of credit and thanks to the many friends of the institution and the parents of alumni who, though having no official connection, contributed liberally to make this great project possible.

Here in this beautiful sylvan setting the future students of Orchard Lake Seminary will have a magnificent library in which they will find "the golden key that opens the enchanted door" of knowledge and receive a broader vision of God's love as reflected in man's progress.

We are invoking God's blessing upon this construction in today's ground-breaking ceremony. Let us also ask for His continued blessing upon all of the activities of our beloved alma mater that she may continue to send forth her well-trained and dedicated sons to enrich our community's culture—thus extending the borders of her influence and spreading the fair fame of Orchard Lake Seminary.

Amending the Refugee Relief Act of 1953

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. MACDONALD. Mr. Speaker, I have today introduced a bill which is designed to amend the Refugee Relief Act by permitting 20,000 persons of Armenian ethnic origin to enter the United States under the provisions of the Refugee Relief Act.

For the past 2 years I have repeatedly urged that the total number of refugees admissible under the Refugee Relief Act should be increased substantially. The bill I have introduced today would do this very thing for 20,000 refugees of Armenian ethnic origin.

At the time the Refugee Relief Act was passed the Congress of the United States was very thoughtful of the oppressed peoples of the world who, because of political and economic conditions, became refugees. These include people from Greece, Italy, Germany, Austria, and Holland.

However, the Armenians in the Refugee Relief Act of 1953 were not included although they have been persecuted and driven from their homes during World War I and in World War II and also on many other occasions have been forced from their homes. It seems to me that their sufferings and hardships are certainly comparable to the sufferings and hardships of any other single minority group in the history of the world. That is why I am asking that Armenians of ethnic origin be included within that 1953 act.

I want to take this opportunity to point out that my bill covers those who have left the area of Turkey which was formerly Armenia either under duress, or voluntary in order to escape religious and political persecution. The coverage of the bill is limited to those who on the date of enactment are registered with a consular officer abroad for an immigrant visa. Their entry must be chargeable to a country that has an oversubscribed annual immigration quota of 310 or less. From the foregoing it is plain to see that my bill seeks to admit those who as a matter of practical fact could never be admitted under the annual immigration quotas established by the McCarran-Walter Act.

Here in the United States, a quarter of a million Armenian citizens of Armenian origin are living proof of the magnificent character and spirit of a virile race. The records show that Armenians have proved themselves worthy of being counted among the most useful and loyal racial elements of our Nation. There are many people of Armenian descent living in my Eighth Congressional District of Massachusetts and it is very true that their contributions to our economic, social, and cultural life have been most welcome and constructive.

When this proposal is enacted into law it will end the persecution of at least 20,000 of those maltreated and displaced ethnic Armenians, for whom their relatives in this country will provide homes and jobs aiding them to become useful citizens of this great country of ours.

Let's Not Be Fooled by Any Shenanigans of the New Soviet Leaders

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. DONOHUE. Mr. Speaker, the history of modern Communist dictatorship filled with repeated retractions of previous pledges and multitudinous betrayals of accepted trusts clearly warns us to beware of any real change in the Kremlin objective of world enslavement that may be implied by the newest Soviet leaders. Until they give to the world concrete evidence of the sincerity of pleas for peaceful coexistencce, we can place no reliance whatever upon their empty promises and we would, indeed, be foolish to be lulled into any feeling of security by the most recent and obvious grandstand gestures of Krushchev and Bulganin in their destruction of the myth of Stalin.

The wisdom of remaining on guard is very graphically pointed out in a most timely article entitled "Moscow Drops Stalin" which appeared in the March 20, 1956 issue of the Worcester (Mass.) Telegram, which I am pleased to include at this point.

The editorial follows:

MOSCOW DROPS STALIN

The current attempt by the Soviet Government to de-glorify the late Joseph Stalin is a major revolution in Soviet political ideology. This campaign may involve the most sweeping readjustments of Communist doctrine to be witnessed since Stalin rewrote Leninism in the late 1920's. But it is always dangerous for us, on the democratic side of the Iron Curtain, to attempt to read special meanings into new internal Soviet policies. The danger always is that wishful thinking may lead us to see in these developments a softening of Communist theory and a weakening of the Kremlin's dictatorship. All too often the Kremlin has merely adjusted its line to fit the current situation a little better and to strengthen the grip of totalitarianism.

We must take it for granted that, despite the utmost efforts of Soviet censorship to keep the Russian people in a state of simple ignorance about the world outside the average Soviet citizen now knows more about the advantages of governmental systems in the free world than he did before World War II. We must also take it for granted that, despite the utmost efforts of Stalin's regime to deify its leader, a great many Russians maintained private reservations about the personal infallibility of that ruthless premier and the political infallibility of his version of Marxism.

As Khrushchev and Bulganin undoubtedly saw the situation they inherited, there appeared to be a great deal to gain from a program which says "let's stop kidding ourselves about Stalin." It would certainly be the kind of campaign which would make Khrushchev and Bulganin appear more plausible to the Soviet populace. The safest course is for the outside world to make no more assumptions than that.

It would be comforting, of course, to let ourselves believes that the anti-Stalin campaign means that Russia's new rulers want to see Soviet communism switch to an honest relationship with the Russian people and to proceed from here on a basis of truth and human decency. Eventually, if such were the real motives, we might expect the new Soviet attitude to carry over into Russia's relationships with the outside world. But there has been little evidence in the methods of Khrushchev and Bulganin to suggest that thy would ever consider such a departure. Until there is such evidence, the only safe conclusion is that the anti-Stalin campaign amounts to little more than routine Communist politics by a new Soviet dictatorship which does not wish to operate in the shadow of an earlier dictatorship.

Rumanian National Independence Day

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. MACHROWICZ. Mr. Speaker, the 10th day of May is a significant one in the annals of Rumanian history. On May 10, 1866, Prince Carol was chosen to the throne of Rumania and a constitution of liberal principles was adopted. On May 10, 1877, on the eve of the war between Russia and Turkey, Rumania signed a convention with Russia which established further progress toward Rumania's freedom and self-rule.

And again on May 10, 1881, Rumania was recognized as a sovereign kingdom and proceeded to expand its ancient culture without interference from her powerful neighboring countries.

Today, 75 years later, there is little cause for rejoicing among the people of Rumanian ancestry. A government has been imposed upon that freedom-loving nation, which has practiced the most brutal acts of tyranny and despotism known to modern civilization.

Actions of that government are wholly contrary to the principles, aspirations and freedoms guaranteed by our American form of democratic government.

Voluminous testimony taken 2 years ago before the congressional committee, of which I had the privilege of being a member, disclosed vividly the firm resistance of the Rumanian people to this autocratic tyranny and their indestructible will to continue their struggle for freedom until it is fully restored to them.

The question of restoring freedom to that poor country is a problem which deeply concerns us in the United States.

The Austrian Peace Treaty, concluded a few months ago, contained provisions that within 90 days thereafter Russian troops shall be withdrawn from Austria and Rumania. The time has long elapsed and Russian troops continue to occupy Rumanian soil.

It is important for us to remember that the peace treaty provisions are guaranteed by the three great powers—United States, United Kingdom, and Soviet Russia—the treaty being a contract between those three powers and the interested countries.

Although, therefore, the violation was merely that of Soviet Russia alone, it is still the equal responsibility of all three powers to implement the provisions of the treaty.

Of course, we had no business to enter into an agreement as partners of the Soviets who had already amassed a record of breaking every treaty it entered into. But, at least, we could show our own good will by demanding forcefully that the Communists keep their pledge and withdraw the Red troops as they obligated themselves to do.

On this Rumanian Independence Day, I sincerely hope that the President of the United States and our Secretary of State reaffirm and prove our friendship to the people of Rumania and adherence to the cause of Rumanian independence, by demanding immediate action from Soviet Russia to keep the solemn pledges it had previously given.

How To Save Asia From the Communists

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. DONOHUE. Mr. Speaker, I would like to include a very timely article commenting upon the attitude that should be taken by this Government toward Asia written by Mr. John Cowles, president of the Minneapolis Star and Tribune, which appeared in the February 23, 1956, issue of the Worcester (Mass.) Evening Gazette.

The article follows:

HOW TO SAVE ASIA FROM THE COMMUNISTS

(From an article by John Cowles, president of the Minneapolis Star and Tribune, who recently returned from Asia)

The American position is progressively deteriorating throughout most of Asia. If we want to be realistic we must recognize that before long we will probably face 1 of 2 alternatives:

1. Either the free world must be prepared to accept the loss to the Communist orbit of most of what remains of free Asia, and with it the tin and tungsten and manganese and other natural resources on which a substantial part of our own national security depends; or

2. We must rapidly adopt a bold, imaginative and appealing policy in Asia.

PARTNERSHIP APPROACH

It seems perfectly clear to me what our policy toward Southeast Asia should be. It is to adopt a partnership approach toward the 600 million people in the 10 new countries there that have won their independence since the end of World War II, a partnership in the cause of world peace and freedom. They have much to give. We have much to give.

Those nations in alphabetical order are Burma, Cambodia, Ceylon, India, Indonesia, Laos, Pakistan, and Phillippines, South Korea, and South Vietnam. Perhaps Iran should also be included in this group. Perhaps Iran should be part of another program for the Middle East area.

Most of these countries are economically and politically extremely weak, but most genuinely want to establish themselves as independent, free, self-sufficient democracies.

LONG-TERM SECURITY

The United States, incomparably the strongest and richest democracy in the world, ought to regard it both as a necessity in connection with our own long-term national security and as a tangible affirmation of our own basic philosophical faith to help these struggling nations raise their living standards and maintain their liberties from totalitarianism.

These nations are all children of revolution. So is America. They all want to escape war, stay neutral and avoid entangling military alliances just as George Washington in his farewell address urged a then weak United States to do.

Should we criticize these politically immature and unstable countries for desiring to remain neutral as between the two colossal power blocs, the Communist world which abuts many of them on the north, and the free world, consisting primarily of the United States and Great Britain, plus a part of northwestern Europe, which is thousands of miles away?

OTHER NEUTRALS

Our own country stayed neutral for nearly a century and a half after its creation. We have learned to respect and esteem other nations which also have wished to remain neutral. Sweden and Switzerland are examples.

Instead of criticizing these new southeast Asian countries for their wish for peace through neutrality, we should give them understanding, encouragement, and financial aid, not solely for reasons of our own national security, but also because of our honest desire to see them succeed as independent democracies, and because of our deep, almost religious, American conviction that all men should be free.

Fortunately, the chance is good that if we act promptly and imaginatively and sympathetically, we can save this vital quarter of the world's population, and probably at only a small fraction of the financial cost of our Marshall plan aid to Western Europe.

WORTH SAVING

But Asia is overwhelmingly worth saving even if the cost should prove commensurate with that of the Marshall plan. Our own eventual freedom may be at stake.

Nor, in increasing our expenditures for foreign economic aid, should we reduce our expenditures to intensify our own military strength, particularly in the field of scientific research and development.

But those Americans who regard foreign economic aid simply as "giveaway programs" and glibly profess ambitions to liquidate them, should be wary that in the process they do not liquidate the whole free world.

Problems Involving Young People

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, May 10, 1956

Mr. DOUGLAS. Mr. President, Chicago, as is true of other large cities, has faced serious difficulties in finding ways and means of resolving the many problems which arise involving young people. In April 1954 the Chicago Youth Commission was established to study the facilities available for youth services and to make recommendations on improvements to existing facilities and additional services which are needed.

The commission, through its chairman, Alderman Al Cilella, has made a very able report, and I request that its recommendations be inserted in the Appendix of the RECORD.

There being no objection, the recommendations were ordered to be printed in the RECORD, as follows:

THE COMMISSION RECOMMENDS

The diverse aspects of the problem of youth in conflict with society has been the subject of research, study, and deliberation by the Chicago Youth Commission for the many months since April 1954.

Accordingly, the Chicago Youth Commission has reached certain conclusions with respect to this all-important problem and makes the following recommendations aimed at its solution:

1. That the membership of the Chicago Youth Commission be expanded to include representatives from all agencies in our community, both public and private, having as their goal the improvement of youth.

This will make possible a unified, intensified, and broadened attack upon the problem of juvenile delinquency.

The following agencies and organizations, the present commission believes, ought to be given such representation:

Association of Community Councils of Chicago.

Catholic Youth Organization.

Chicago Boys Clubs.

Chicago Council, Boy Scouts of America.

Chicago region, Illinois Congress of Parents and Teachers.

Chief Justice of the municipal court of Chicago.

Chief of Police of Chicago Park District.

Church Federation of Greater Chicago.
Citizens Schools Committee.
City Council of Chicago.
Commissioner of Police, city of Chicago.
County superintendent of schools.
Crime Prevention Bureau.
Family Court of Cook County.
Girl Scouts of Chicago.
Junior Achievement of Chicago.
Junior Association of Commerce and Industry.
Juvenile Protective Association.
Kiwanis clubs.
Lions International Clubs.
Mayor's advisory committee on juvenile delinquency.
President, board of Jewish education.
Sheriff of Cook County.
State's attorney of Cook County.
Superintendent, Chicago Board on Education.
Superintendent, Chicago Catholic School Board.
Superintendent, Chicago Parental School.
Superintendent, Lutheran High School Association.
Young Men's Christian Association of Chicago.
Young Women's Christian Association of Chicago.
Welfare Council of Metropolitan Chicago.

2. That police department personnel assigned to the juvenile division of the crime prevention division of the Chicago Police Department be increased to insure adequate attention to each juvenile offender; and that the training and instruction of police department personnel assigned to the juvenile division be continued throughout the years of their work in order that they may be cognizant of new practices, discoveries and developments in the field of helping the young; and that there be provided, in each police station an office or other suitable quarters in which the interviews of young offenders and their parents or guardians may be conducted; and that these juvenile officers be assigned to their respective districts on a permanent basis and that they be adequately compensated.

3. That proposed legislation be introduced in the Illinois General Assembly to fix parental responsibility for financial losses incurred through destruction of public or private property by children. This measure, it is believed, will discourage teen-age vandalism.

4. That the city of Chicago use every means at its disposal to prevent the sale and distribution of undesirable literature to juveniles; and that our city government and community agencies encourage and guide citizens in the boycott of purveyors of such reading matter; and that the censorship code, under which the Motion Picture Censor Board operates, should be reexamined with a view to the imposition of more rigid controls over the type of motion pictures which may be viewed by young people; and, further, that parents make a concentrated effort to supervise the motion pictures and television programs which their children see and the radio programs which their children hear.

5. That the city of Chicago authorize publication, through the Chicago Youth Commission, of a manual of counsel to parents on the subject of the rearing of families, prepared by recognized authorities on youth problems to be distributed without charge to all parents in the community.

6. That the authorities of schools, both public and private, institute immediate studies of the prevalence and the causes of truancy and the means whereby it can be curbed.

7. That the schools, both public and private, be urged to expand their remedial reading programs with all possible speed.

8. That all parents make a concentrated effort among their children to help restore respect for authority in the home, the school and throughout the community.

9. That the Chicago Youth Commission, in conjunction with all agencies and organizations concerned with the welfare of youth, undertake the dissemination among the clergy of the community of information relating to young people and conditions affecting them; this would enable ministers, priests, and rabbis to exert their influence, constructively and with enlightenment, upon the parents and guardians of children of their congregations.

10. That the recreational facilities, parks, playgrounds and play lots now under the separate jurisdiction of the Chicago park district, the city of Chicago and the board of education be made the responsibility of a single adminisrative body in order that unity of purpose and direction may lead to the correction of such omissions as may exist in terms of lack of facilities in highly congested areas; further, that qualified and trained personnel may be retained, under one management, to supervise and guide the leisure-time activities of children. Such a proposal may require enabling legislation, but the Commission feels the matter is important enough to warrant consideration.

11. That serious consideration be given to a return to the practice of assigning police officers to "walking the beat' wherever conditions warrant.

12. That the police forces of the Chicago park district and city of Chicago be consolidated, as has often been advocated, but pending such consolidation arrangements be concluded to effect a closer liaison and more efficient working relationship between the juvenile division of the Chicago Police Department and the juvenile bureau of the Chicago park district police department. The office of sheriff of Cook County should be included in any such arrangement.

13. That the mayor, the members of the city council, and the commissioner of police of Chicago give consideration, to adoption by the city of Chicago, if feasible, of the Police Athletic Association program with which the city of New York has experienced some success in channeling juvenile behavior into wholesome areas, and which consists in the assignment to each police district of a specially trained officer who befriends the young people of his area and guides them in games, sports, hobbies and other worthwhile pursuits thereby engendering not only respect for law and adults generally but a tendency to look upon policemen as friends and helpers rather than as enemies and persecutors.

14. That the curfew ordinance, as it now stands, be strictly enforced with all possible care being taken by the police department to inform parents of violations by their children as promptly as possible through a personal call by a police officer; this would be in addition to the written communication now required under the curfew ordinance.

15. That the Illinois General Assembly should reexamine our penal code and system with the view to determining whether or not they can be made more effective in rehabilitating juvenile offenders as well as in discouraging teen-age crime.

16. That, since the codes of conduct movement has been manifestly successful in many of our community's high schools, it be encouraged and expanded to include the elementary schools and additional high schools in order that teen-agers may be encouraged to solve their own and their contemporaries' social problems.

17. That the social service department of the municipal court of Chicago be adequately supported and given the means to increase its staff and expand its facilities in order to meet increasing demands which are made upon this all-important social agency for the rehabilitation of juveniles apprehended in the commission of crimes and misdemeanors.

18. That the Chicago Youth Commission be empowered to employ a full-time executive secretary to gather, assimilate, and transmit, immediately, such facts of juvenile delinquency as may become available; to maintain communications with other public and private agencies and organizations concerned with juvenile work; to lay the groundwork for new research; to disseminate information in the form of press releases, articles for appropriate publications and news outlets generally; to arrange for the attendance of Youth Commission representatives at meetings and conventions of groups concerned with the young at all levels; and to establish a speakers' bureau in order that all groups desiring information on the subject of juvenile difficulties may receive timely and helpful information and counsel, as speedily as possible.

19. That youth programs be developed in those areas where delinquency rates are high and increasing; or, if such programs already exist, that they be specifically expanded.

20. That our school officials give serious consideration to the immediate assignment of a larger portion of more highly trained and experienced teachers in difficult schools.

21. That a parent education program be formulated and developed coordinated with the school system and based on informal discussion groups focused on the responsibility of parents to youth.

22. That there be an annual appraisal of the year's accomplishment on behalf of youth by youth itself and the adult-dominated agencies concerned with youth's problems. An annual Chicago Youth Conference sponsored by the Chicago Youth Commission and attended by representatives from all our community's schools, by public officials and by members of all groups which work toward the betterment of Chicago, will provide a forum for our youth to be heard, lend encouragement to the young, and inspire the adults.

23. That the Chicago Youth Commission be adequately supported and given the means to carry out its recommendations and to accomplish the objectives for which it was created.

AMVETS Suggest H. R. 10469 as a Solution to the Extension of the GI Home Loan Guaranty Program

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. FASCELL. Mr. Speaker, Mr. John R. Holden, national legislative director of AMVETS, today informed the House Committee on Veterans Affairs that H. R. 10469, a bill I introduced April 12, is an acceptable solution to the extension of the GI home loan guaranty program.

His statements were in reference to the President's Bradley Commission report on veterans' pensions. Mr. Holden's statement follows:

READJUSTMENT BENEFITS

Recommendation No. 45 advocates the transfer of veterans loan guaranty functions to FHA with an extension and gradual decrease of the World War II program over a 2-year period. We recognize the necessity for avoiding a last-minute rush and allow-

ing the orderly termination of the program. The Commission recommendation would certainly accomplish this but it is believed that there are other approaches to the problem that merit your consideration. We suggest as a possible solution H. R. 10469, which would authorize a 1-month extension for each 2 months of military service up to a maximum of 36 months. This would stagger the termination on an individual basis to permit orderly termination of the program.

The Hand That Rocks the Cradle Can Politically Rule the World

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. DONOHUE. Mr. Speaker, I would like to include a most interesting editorial entitled "The Growing Power of Women in the Field of Politics," written by Mr. Robert C. Achorn, and appearing in the February 27, 1956 issue of the Worcester (Mass.) Evening Gazette.

This most competent commentator summarizes the background and development of the participation of women in politics in a very attractive descriptive manner, and I believe the content of his column deserves wide reading.

The article follows:

THE GROWING POWER OF WOMEN IN THE FIELD OF POLITICS

(By Robert C. Achorn)

Recent speculation about Clare Booth Luce as a possible candidate for Vice President provoked some opposition, as well as support.

The striking fact was this: very little of the opposition was based solely on the fact that she is a woman.

Apparently the public was willing to accept that, as it did her appointment to the sensitive position of Ambassador to Italy.

But it was not always that way.

JEFFERSON UNPREPARED

Almost 150 years ago, President Jefferson declared:

"The appointment of a woman to office is an innovation for which the public is not prepared, nor am I."

That philosophy—"woman's place is in the home"—had been brought to America by the early settlers. And it stuck until modern times.

The case of Mrs. Luce is one bit of evidence that it is breaking down.

It was only 36 years ago that the 19th amendment extended the vote to women on a nationwide basis.

It was less than 100 years ago that Kansas started the trend by permitting women to vote in school elections.

And now the ladies can carry the day—if they want to.

MORE WOMEN

The latest Census Bureau figures of persons eligible to qualify as voters show women in the majority.

The American Heritage Foundation, on the basis of special polls and studies, estimated more women than men voted for Dwight D. Eisenhower in 1952—17,600,000 women and 16,300,000 men.

Adlai Stevenson, on the other hand, had the support of an estimated 14,600,000 men and only 12,700,000 women.

There has been a gradual increase since 1920 in the number of women who turn out to vote.

In Worcester, in the early twenties, the number of men registered to vote ran well ahead of the number of women. But in recent elections, slightly more women were registered.

IN THE MINORITY

Still, women have not taken over in politics as many expected them to do once they were given the franchise.

They are in the minority by far at the national conventions which nominate Presidents.

There were only 203 women among the 1,652 delegates to the Democratic National Convention 4 years ago, and 128 women among the 1,206 delegates at the Republican convention.

No one has yet taken seriously the suggestion that one of the major parties nominate a woman for President.

Back in 1872, Mrs. Victoria Claflin Woodhull was nominated for the Presidency by a convention calling itself the Equal Rights Party. Later a party of the same name nominated Belva Lockwood.

NO ONE YET

But the Republicans and Democrats—so far—haven't found a woman even for Vice President. An effort initiated by women to promote Senator MARGARET CHASE SMITH, of Maine, for Vice President 4 years ago fell through. And Ambassador Luce has already disclaimed any ambition for the office in the event of an opening this year.

Three women have been proposed for the Vice Presidential nomination at Democratic conventions: Nellie Tayloe Ross in 1928, and India Edwards and Sarah T. Hughes in 1952. But all immediately withdrew their names.

Mrs. Franklin D. Roosevelt has been mentioned at times. But she herself has commented that women must acquire a great deal more experience before one of them will emerge with undisputed qualifications for the office of President or Vice President.

In Congress, they have done better. So far 60 have served in the House or Senate. There are 16 in Congress at the moment, an all-time high.

About half of all those who have served were first elected to fill out unexpired terms, usually of their husbands who died in office.

This at least protected the seat until the party could build up another male candidate. And some of the ladies did handsomely, becoming more prominent in Congress than their husbands had been.

MORE PROMINENT

Representative EDITH NOURSE ROGERS, of Lowell, and Representative FRANCES P. BOLTON, of Ohio, are two examples. Mrs. ROGERS is 1 of only 2 women to have been chairman of a full committee; and she is presently ranking minority member of the House Veterans Committee.

At the State level, women have not made so much headway. Only two have been governors, Mrs. Ross of Wyoming and "Ma" Ferguson of Texas.

Out of 8500 State legislators across the country, only 300 are women. They include a half dozen in the Massachusetts Legislature.

SECRETARY OF STATE

There are 37 women currently in State elective offices nationally. Secretary of state is a popular responsibility for them. Seven States have elected women to that office.

It has become something of a tradition in Connecticut. Mrs. Beatrice Hancock Mullaney, of Fall River, was the Republican nominee for secretary of state in Massachusetts in 1952. She lost; but it seems likely that was only a temporary setback for the ladies.

President Jefferson's reluctance to appoint a woman to high position stood as the pattern for many years. The first woman Cabinet officer was appointed by Franklin D. Roosevelt. She was Mrs. Luce, Frances Willis was appointed Secretary of Labor in 1933 by Franklin D. Roosevelt. He was the first President to name women to top diplomatic posts.

Under President Eisenhower, Oveta Culp Hobby became the second woman Cabinet officer in history. In addition to the naming of Mrs. Luce, Frances Willis was appointed Ambassador to Switzerland.

LOCAL LEVEL

At the local level, women have played some part in government, particularly in school affairs. In late years, there has always been a woman on the school committee in Worcester.

But none has served in the city council since Mrs. Evelyn C. Bjorkman's term in the old 30-member common council ran out in 1947.

There are about 50 women mayors across the country. A few women have been elected sheriff and even coroner.

Someday, it seems, the hand that rocks the cradle will openly rule the world. But so far most of the ladies seem content to let the men think they are running the show.

Florida's Senator George Smathers Endorses GI Home Loan Guaranty Extension

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. FASCELL. Mr. Speaker, Florida's Senator GEORGE SMATHERS too recognizes the need for immediate congressional action in extending the GI home loan guaranty program.

He has offered his assistance in obtaining favorable action on H. R. 10469 in this session of Congress.

I take this opportunity to call to the attention of my colleagues in the House the Senator's letter of endorsement and to urge them to make their views on this proven program known:

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
May 2, 1956.

Hon. DANTE B. FASCELL,
House of Representatives,
Washington, D. C.

DEAR DANTE: I would like to take this opportunity to commend you on introducing legislation to extend the Veterans' Administration guaranteed home loan program beyond July 25, 1957, the expiration date of the present law, on a sliding-scale basis.

Unquestionably your action will receive the full support of all veterans, veterans' organizations, and industry, for the extension of this program is of extreme importance to the economy of their respective communities.

Few of us realize that there are over 11 million World War II veterans under the age of 35, who have not used their GI home loan entitlement. Since a large percentage of these will be unable to take advantage of the present law unless it is extended, the need for this legislation is readily apparent.

There is, as you know, considerable sympathy in the Congress to extend the program, with adequate safeguards to protect the interest of the veteran home buyers.

I can assure you that I will most certainly cooperate in every way to be of assistance to you in obtaining favorable action on your bill in this session of the Congress.

With kindest regards, I am

Sincerely yours,

GEORGE SMATHERS,
United States Senator.

The Labor Problem

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD a reprint of a portion of a column that appeared in the Arizona Republic on May 4, 1956. This article was written by Mr. Frank Cullen Brophy, a scholar and a gentleman who has few equals in his use of English prose, and I feel this article should be brought to the attention of the Congress:

The labor problem, as I see it, is the human problem. It is the endless tragedy of man's inhumanity to man. Confucius faced it when he urged his fellow Chinese never to do unto others except as one would have them do unto them. When the Son of Man, who loved men as only God can love, came down to this earth, He simply said "Love one another." To those who could not see themselves except in the role of exploiters, He urged: "Seek ye first the Kingdom of God and all things shall be added to you."

These are very unrealistic and impractical words according to the concepts of politicians, financiers, economists and labor bosses, yet they have come down the millenniums of years—challenged, but never erased. Each century has produced its little crop of politicians, demagogs, rulers, and powerful ones. Their words and pronouncements usually precede them into oblivion. They are the constant proof that the foolishness of God is greater than the wisdom of men; but, of course, the kind of men who deceive their fellow man, and thereby rise to seats of power and eminence, never admit anything so preposterous—at least in public.

The labor problem is one that touches all of us—rich and poor, fools and philosophers. Since the fall of Adam, man has been doomed to earn his bread by the sweat of his brow. The laborer does it at the end of a shovel, the corporation lawyer over a desk strewn with books and papers, the executive on a mahogany table with a mind bedeviled by doubts and hopes.

One day, I lunched with one of the richest men in America. He had a lettuce sandwich and a glass of milk. He looked as unhappy as Dives must have looked when he begged in Hell for just one drop of water. I have also lunched with a peasant on a bowl of strong soup, a hunk of French bread and a bottle of wine. He looked as happy as a king is supposed to look, but seldom does. This is the paradox of mankind. It is also the paradox of the labor problem. It cannot be solved by forcing men to join unions. It cannot be solved by strikebreakers and starvation wages. In fact, it cannot be solved—period. It can only be alleviated.

When those strong enough to maintain positions of power and trust will do for those beneath them as they would want it done to themselves were the positions reversed, then progress in easing the pain that gnaws at the heart of labor will be made. When those in authority reject the temptations of pride and greed and try to guide their actions with a spirit of fair dealing and justice, then progress in the labor problem is being made. When the man at the bottom, or in the middle, can face life with a minimum of envy, hatred, and greed, he is helping work out the labor problem though he may little suspect it. I repeat what I said in the beginning. The labor problem is the human problem, and the answer to the human problem will only be found in the mystery that lies hidden in the heart of God.

I frankly admit that my candle of vision is a tiny one; but if it has been lighted by only a spark thrown off from the mighty flame that is the Light of the World, then it will not have burned in vain.

The Agricultural Act of 1956

SPEECH
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10875) to enact the Agricultural Act of 1956.

Mr. MACK of Illinois. Mr. Chairman, as one of the original sponsors of soil-bank legislation, I wish to add my voice in support of this legislation. This appears to be the sound approach to the problem confronting us today. The agriculture industry obviously is not receiving its fair share of the national economy. We are all striving to solve this problem so that agriculture can have a more equitable share of the national income. The "booming prosperity" has certainly failed to reach the farmers in my area. We are confronted with vast surpluses and are continuing to produce more than we are consuming or more than we can consume. This production must be controlled and it is obvious that legislation is necessary in this totally unorganized industry if we are to control this production. In my opinion, the soil-bank program with the conservation reserve and acreage reserve program could accomplish this goal. I am confident that this approach is correct morally as well as economically. It will permit us to conserve our natural resources by restoring our land. At the same time, it would be taking land out of cultivation which normally would be contributing to the surplus problem. In this way we would be conserving our soil for some future date when we will be consuming all we can produce—and that day is not in the too distant future. Therefore, I strongly support this legislation.

Mr. Chairman, I am pleased to state that I also support the amendment offered by the gentleman from Oklahoma [Mr. ALBERT], as the inclusion of grazing lands would conform with the principle of a soil-bank program. This amendment would expand the soil-bank program and would certainly have the effect of reducing the amount of meat being marketed, and, therefore, it would have a stabilizing effect on the agriculture industry. I believe that the soil-bank approach is the only means available for solving the farmers problems today with the exception of, perhaps, a direct subsidy. I have always been opposed to subsidies of any kind, and, therefore, I am not sympathetic to a direct subsidy program at this time. President Eisenhower's proposal, which is being offered in the form of an amendment, in my opinion, is a direct subsidy which is to be paid to the farmers before the money is due. In my opinion, this would be the same as paying the farmers for their grain and produce before they planted the seed. This amendment is obviously political, and, therefore, I am constrained to oppose the amendment. I do hope that the soil-bank bill we are considering is passed, as I feel it will tend to correct the problems confronting our agriculture industry today.

The Taxpayer's Burden Should Be Reduced

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. ANFUSO. Mr. Speaker, it is now generally believed that the United States Treasury will show a much greater surplus at the end of the current fiscal year than that originally estimated by Secretary of the Treasury George M. Humphrey. Last January Secretary Humphrey estimated the surplus at about $200 million. The Joint Congressional Economic Committee predicted in April a $2 billion budget surplus during this fiscal year. Our distinguished colleague the Honorable RICHARD M. SIMPSON, who is a member of the House Ways and Means Committee, has said he believes this year's surplus would be closer to $4 billion.

If the facts bear out these estimates and predictions, I think the time is propitious for serious consideration of a tax cut to benefit the low-income and middle-income sections of our population. Even if the surplus is around the $2 figure, instead of the $4 figure indicated by our colleague, it is still sufficiently large to warrant a reduction in the taxpayer's burden. Mr. Humphrey, as usual, claims it would be unwise, inexpedient, and unjustified to reduce personal income taxes at this time.

I believe the time to consider a tax cut that will benefit the lower income groups is right now, so that it can go into effect at the beginning of the next calendar year on January 1, 1957. In recent years, the low-income groups have not shared fairly in tax reductions, most of the tax benefits have gone to the big corporations, the big investors, and big business generally. The low-income and middle-income groups deserve tax relief without further delay. A tax cut for

low-wage families is desirable as a matter of equity. I fear that if this is not done in the near future, another giveaway of some kind will be found to split up this year's surplus among the rich and big business will walk off with a juicy plum at the expense of the lower-income groups.

Mr. Speaker, for this reason I am now introducing a bill to raise the existing tax exemption from $600 to $800 for all taxpayers and their dependents, including the exemption for old age and blindness. This measure is aimed to aid directly the low-income and middle-income groups by providing added income for each family. For the average wage-earner, adoption of my bill would mean about $3 more each week in his pay envelope, or about $150 additional income per family per year. Incidentally, the added income will undoubtedly augment the purchasing power of the Nation, stimulate greater consumption, help to improve business everywhere, take surplus goods off the shelves, and serve as a boon to the economy of the country.

My bill also seeks to help the taxpayer in another way. It contains an amendment to the Internal Revenue Code which provides for a deduction for parents for expenses up to $1,000 incurred in connection with the education of their dependent children. This deduction is to be in addition to the regular exemption now provided in the law. The bill requires that the dependent must pursue a bona fide course of higher education beyond the high school level, meaning at a college or university or other institution of higher learning.

Of late, we have had several surveys and reports by governmental and private agencies which indicate a growing shortage of scientists and professional people of all types. It is noted that Soviet Russia is educating young people in the scientific and professional fields at a more rapid pace than we are doing. If we continue at this rate, we shall undoubtedly fall far behind and in time endanger the national security and the social and economic progress of our country because of a lack of sufficient trained personnel.

The fact is that we are not lacking in human resources, nor does the youth of America show a lack of ambition or ability. It is simply that we are not doing enough to encourage our people, to afford them with the means and the opportunity to develop their abilities in accordance with the needs and the well-being of our country. It is generally accepted that there exists a great need for increasing the supply of our scientific and professional manpower, which is of such vital importance to the Nation in times of peace or war.

The best way to accomplish that is by encouraging larger numbers of our youth to seek a higher education. But a college education is quite an expensive undertaking these days, and in many instances it is beyond the reach of low and middle income families. The loss in such instances is not merely that of the individual concerned or his family, but it is a loss for the entire country. When added up, it might perhaps affect hundreds of thousands of young people who are denied the opportunity of a higher education, and that means a terrific loss of trained manpower at a crucial time.

For our own self-interest, I believe we ought to help lighten the burden for parents who desire to give their children a higher education. A mere $600 deduction for a dependent who is maintained at school is not a realistic approach to the problem. It costs the taxpayer several times that much to maintain a son or daughter at college annually.

In looking into the figures, I find that the United States Office of Education has made a study of tuition costs at 196 private and public institutions of higher learning and has come up with an estimated average annual tuition of $305 in the academic year 1954–55. A survey conducted by the New York Times and published in its issue of June 22, 1953, estimates the average costs of room and board at about $523 per academic year. To these costs, should also be added such expenses as books, transportation, clothing, and perhaps other expenses, all of which could conservatively be figured at about $500 per year per student. Thus, the average total expense would be around $1,300 annually. My bill, however, would allow a reduction on expenses up to $1,000, although in instances where students live at home and no expenses are involved for room or other costs the figure would be considerably lower.

What would be tax savings to parents, or the revenue loss to the Government? It is difficult to give exact figures, but a rough estimate can be made. The Census Bureau estimated the number of college students in the country through the age of 24 in the current academic year at 1,824,000. Allowing for full-time and part-time students, and also deductions for tuition paid by the GI bill and other methods, the total tuition incurred for tax purposes is estimated at $309 million. For purposes of computation it is reasonable to assume that 25 percent would be a fair tax percentage to use in this instance, yielding a total of over $77 million. This means that about $77 million would accrue to parents of college students as a saving on their taxes which they would apply to tuition.

Even if we include tax savings on room, board, and other expenses, the total loss to the Government would not exceed $200 million annually. This is not a huge sum, comparatively speaking. We shall be spending about 25 times that amount in foreign aid alone during the coming fiscal year.

From the standpoint of our Nation's needs, we must approach this problem in a more practical manner. We must give the taxpayer a fair deduction for educational expenses in order to encourage him to afford a higher education for his dependent children. The resulting loss in revenue to the Government would be made up a hundredfold in the long run and the whole country would benefit by it.

Mr. Speaker, I believe that if Congress could see its way clear to amend our tax laws in these two respects—by increasing the exemption from $600 to $800 and by providing a deduction for educational expenses—the burden of the taxpayer would be considerably reduced.

Highway Bill a Must

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. MACK of Washington. Mr. Speaker, a bill to carry out President Eisenhower's $52 billion expanded highway program has been passed by the House of Representatives. That bill, however, has not as yet been accepted by the United States Senate. This greatly desired and desperately needed roads program will not be law until both House and Senate have agreed upon a roads bill and the President has signed that bill.

Giving a green light to this proposed gigantic expanded highway program is one of the musts of this session of Congress.

Traffic experts say that unless the Nation builds more, better, wider, and safer highway that by 1965 the traffic death toll will reach 50,000 a year and that the maimed and injured in traffic mishaps will total 2 million annually. The same traffic experts say that were the roads, proposed in the House bill, in existence today not less than 10 percent of these traffic deaths and injured would be prevented. In short, the roads provided for in the House bill when constructed will save not less than 5,000 lives and prevent not less than 200,000 injuries a year.

All types of safety crusades are good but the most effective safety measures of all is that of providing better roads, for bad roads are the greatest cause of death and accidents on our highways.

Under leave to extend my remarks, I include the following editorial on the need for highway legislation from the Aberdeen Daily World, Aberdeen, Wash.:

HIGHWAY BILL A MUST

In a year that has not yet produced much constructive national legislation, the United Seates Senate now has a golden opportunity to get things off the ground by passing the $52 billion House-approved highway program.

The measure in question would give this Nation the biggest road-building program in its history. And anyone aware of the scale of our highway problem knows that a lesser plan would be no service to the country.

Under the new program as endorsed by the House, $27.5 billion would be spent over a 13-year period to build a 40,000-mile network of superroads across the United States. The Federal Government would put up 90 percent of the cost, the States the remainder.

The other 20-odd-billion dollars would be devoted to expanding the existing Federal-State highway program under which costs are equally shared between the two levels of government.

To foot the cost the new proposal carries higher taxes on gasoline, diesel fuel, tires, retreaded rubber, and on trucks and buses—the heaviest highway users.

Broken down, it is estimated these levies would cost the average motorist another $6.50 a year, or about 2 cents a day. The truck operators properly would feel a bigger bite, some $400 a year increase for running a large truck.

As the Senate contemplates this huge measure, it has for comparison the 5-year, $18 billion highway program it approved last year. On the face of it, this latter plan is thoroughly inadequate to the kind of long-range projection the Nation's highways need.

The regular Federal-State program has been insufficient for years. The proof is in the growth of the turnpike network built by revenue bonds paid for by motorists' tolls. Drivers have been willing to pay these charges because they meant wonderful miles of express routes free of stoplights, cross traffic, side road handicaps, and the like.

It has been fairly said that with a few exceptions the turnpikes have been the only truly modern highways in America.

The question before the Senate now is whether it is prepared, as the House evidently was, to plan highways in terms as big as the problem. The Government of the United States has a responsibility for this program. Up to now it has abdicated that responsibility.

Billy Hill at 80

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. KEATING. Mr. Speaker, on March 22 the distinguished minority leader paid a well-deserved tribute to William S. Hill on the occasion of his 80th birthday. At that time he obtained permission for other Members to extend their remarks. This happy occasion has only now come to my attention. Belatedly, therefore, I take great personal pleasure in joining to felicitate the one and only Billy Hill.

William S. Hill—as he is formally known—has led a busy, fruitful life.

His contributions to his State, his city, and his party are unequalled. For years he has published the Binghamton Sun, and for over 30 years he served with distinction as a member of the New York State Parks Commission.

Special tribute should be accorded Billy Hill's contributions to the Republican Party. For upward of 60 years his energy and ingenuity have helped to guide the destinies of the party. His claim to the title of grand old man of the Republican Party in New York State is unchallenged.

He has led the Broome County Republican Committee in such a manner as to win unparalleled trust and confidence. Members of both political parties look to him for guidance and advice. He served from March 1919 to March 1921 as a Member of the House of Representatives, and has been a member of the New York State Republican Executive Committee, and a delegate to the Republican National Convention for many years.

Active as his life has been, Billy Hill has never been too busy to fail to win the affection of all who have come in contact with him. His integrity, wisdom, courage, and vigor are legend in New York State. In my mind I always think of him as the "Sage of the Southern Tier."

On this, the occasion of the beginning of Billy Hill's 81st year, I salute him for his varied accomplishments and wish him many more years of activity and good health.

Russian Tanks Crushed 500 Ukrainian Women in the Karaganda Slave Labor Camp

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. FEIGHAN. Mr. Speaker, on Sunday, April 8, 1956, the Honorable Charles J. Kersten, former Member of the House from Wisconsin, delivered a most significant address in Chicago, Ill., to the Ukrainian National Women's League of America, Inc., and Women's Organizations in Chicago. The occasion was a commemoration of the massacre of 500 Ukrainian women by the use of Russian tanks in the Karaganda slave labor camp of the Soviet Union. It will be recalled that Mr. Kersten was the chairman of the Select Committee to Investigate Communist Aggression of the 83d Congress. As chairman of that committee, he gave unselfishly of his time, his many talents, and his rare leadership. The reports of the Select Committee to Investigate Communist Aggression have become generally recognized as the most complete, authoritative, and dependable sources of information on the international Communist conspiracy.

Mr. Kersten possesses a background of experience equaled by few Americans and he has sought to put that experience to work for the safety and security of the American people. As a member of that former committee and one who has watched with intense interest the never-tiring efforts of Mr. Kersten to expose the stark and evil realities about communism, I include his address in the RECORD, as follows:

Ladies and gentlemen, dobri vachir.

At the outset I want to thank those of you here today who cooperated with our Committee on Communist Aggression in conducting its hearings in Chicago in the fall of 1954. The reports of these hearings have gone all over the world and even behind the Iron Curtain. The violent attack made upon them by Moscow is a testimony of their effectiveness.

The good people of Ukrainian origin in the Chicago area have thus delivered a blow to Moscow imperialism the full results of which the tyrants have yet to experience.

Heading the Chicago hearings was one of the country's outstanding champions of the enslaved nations; the Honorable MICHAEL FEIGHAN. His fight for freedom of the captive nations has given the Muscovites many bad moments and will give them many bad days in the future.

I want to pay a special tribute also to the excellent work in support of our hearings by that eminent citizen of Chicago, Mr. John Duzansky. He worked for more than 2 weeks, I understand, in locating witnesses of Russian Communist aggression who now reside in the Chicago area. His support of the Ukrainian cause of liberation has been a lasting one and I'm sure that he, too, is high on the lists of the Kremlin tyrants.

Today we are memorializing one of the latest known Russian Communist massacres in Ukraine. It is one of the most horrible.

While the Kremlin gangsters were making plans for their ultimate meeting at Geneva with the heads of state of the United States, Great Britain, and France at what became known as the Summit Conference, their troops were crushing the bodies of innocent Ukrainian women into the cold earth at Karaganda.

These actions are reminiscent of the line from Shakespeare, "Why, I can smile, and murder whiles I smile."

The long history of Russian Communist atrocities in Ukraine—the unparalleled forced starvation of the thirties, the Vinnitzia massacre, Khrushchev's bloody scourge from 1944–47—are now climaxed by one of the most fiendish crimes of history.

Here is the pitiful story of this latest tragedy as it came from behind the Iron Curtain:

More than 500 Ukranian women labor slaves linked hands and marched to their deaths beneath the tracks of Soviet tanks in a vain attempt to halt an armored attack on a Siberian concentration camp.

The text of the senational broadcast by Dr. Fedor Varcony, a Hungarian physician who was recently released from a Soviet labor camp, was received in New York today. Dr. Varcony's broadcast dealt with the events during an uprising in the immense Kingir camp in Karaganda Province in which prisoners sought to counter MVD machineguns with rock-filled bottle grenades. The labor slaves managed to hold their own until the T–34 tanks punched through the camp defenses. The 500 women slaves, inmates of the camp, desiring to stop the tank onslaught, formed a chain of their bodies. This human cordon did not stop the MVD, who pushed forward with their tanks and crushed these 500 women.

After the uprising had been quelled, 1,600 persons were sent to northern Siberia, some to state prisons, Dr. Varkony said. The strike was not entirely in vain, however, because the 8-hour working day was introduced, some of the invalids and youngsters were set free, and prisoners who had served three-quarters of their terms were given a conditional release. Further, the recent large-scale Soviet Government amnesty was motivated, partly by the Kingir and similar uprisings, Dr. Varkony declared.

This uprising in Karaganda proves once again the tremendous forces of resistance in the nation of Ukraine as well as in the other enslaved nations of the U. S. S. R.

When the free world fully realizes the extent of this resistance and gives it their all-out support we can then successfully cope with Red imperialism and prepare its political defeat.

The free world has no reason whatsoever to put the slightest faith in Russian Communist sincerity.

If the present Russian leaders had the slightest sincerity in their new anti-Stalin line they would denounce Stalin's proclaimed world-conquest role for the Red army as a bloody instrument of Red colonialism and they would stop the vast subversive training centers he set up in the U. S. S. R.

While they piously claim they have no intention of interfering in the internal affairs of other countries, today's Soviet leaders are carrying on full blast the subversive centers set up by Stalin at such places as the Lenin Institute, the Varga Institute, Frunze Military Academy, Voroshilov Higher Military

Academy, and elsewhere, for the training of cadres of subversive agents to take over every country to subject them to the Red Empire of Moscow.

Stalin officially and publicly described the Red forces as "an army of world revolution." Soviet military handbooks contain Stalin's statements that the Communist military machine is an international army of workers and peasants to be used for the liberation of oppressed peoples, meaning to include, of course, the people of the United States of America.

The Stalin-made Red international armed forces and their complementary vast network of Soviet trained cadres for every country are designed to establish world Communist imperialism by advanced techniques of subversion and, if necessary, by force.

These Soviet subversion schools have highly scientific courses in fomenting uprisings, development of conflicts between foreign nations, disguises, poisoning, garrotting, Lenin's tactics in seizing leadership in foreign countries, and so forth.

A special course is taught at the Frunze Academy on tactics in the U. N., designed to turn that forum into a place for Communist political warfare.

Soviet-trained cadres have been operating in the Middle East, for some time. They cover the Far East and north Africa. Cadres for South America, where they concentrate on infiltration of Latin American schools, are directed out of Czechoslovakia and they are able to send 1,500 students annually from South America to Iron Curtain countries for training.

There is really only one answer to world Communist subversion and that is the intelligent implementation of the widespread resistance among the enslaved nations of the Soviet orbit.

Nowhere is this resistance more formidable than among the 40 million people of Ukraine. Molotov in the 1920's was one of the earliest executioners in Ukraine. Khrushchev was one of the later killers in Ukraine. Between 1944–47 Khrushchev drenched his hands with the blood of thousands of his victims in Ukraine.

The screams of the dying women as they were crushed into the earth of Karaganda would not, of course, touch hardened hearts of the Kremlin gangsters. Such screams are the music of hell in which these diabolical characters take delight.

But they should touch the hearts of freemen and awaken the slumbering chivalry of the West to a realization that our lot is with the crushed nations and not with tyrants.

Needless Delay in Tax Savings

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. CRETELLA. Mr. Speaker, I include for the RECORD an editorial from the New Haven (Conn.) Register of May 3 on the subject of the recommendations of the Hoover Commission.

It is discouraging to note that these proposals, made after months of careful study and research, do not appear to be welcomed by Congress. It does not seem likely that reductions in taxes will be brought about unless additional progress is made in cutting the burdensome costs of running our Government. Congress should give serious and active consideration to the recommendations which could bring this about and at the same time maintain the high level of Government efficiency:

NEEDLESS DELAY IN TAX SAVINGS

Ten months have passed since the Hoover Commission for Government reorganization made its report to the President. Taxpayers have heard repeatedly, from supporters of the Commission's findings, that adoption of all of the reforms urged by this group could save the country close to $5 billion.

Why, then, should the executive department and Congress postpone putting such money-saving recommendations into effect?

The proposed reforms are seldom openly criticized. Their adoption is urged by prominent Democrats and Republicans alike. James A. Farley, the former Democratic Postmaster General who served on the second Hoover Commission, is one of the more vigorous champions of early action on these dollar-saving proposals. Yet Congress itself still appears to form the biggest roadblock in the reforms' path:

Approximately half of the Commission's 314 recommendations require legislation to be made effective. Twenty-two percent of the Commission's formal proposals have been adopted thus far—18 percent by executive action and only 4 percent by congressional legislation.

It is difficult to understand this apparently lethargic attitude in Congress toward reforms which would go far toward restoring the traditional congressional control over Government's purse strings. That control has been largely lost through the years of obsolete appropriations procedure.

The Hoover Commission stresses the need for making a business-type cost accounting system effective throughout the Government. One would expect an alert Congress to leap at the opportunity to regain purse-string control by such means.

But Congress has yawned, rather than leaped, thus far.

Perhaps what's needed, among other things—and those other things might well include some prodding by the White House—is a rising clamor from the people back home, in every Congressman's district, urging enactment of the Hoover reforms.

The opportunity to save $5 billion may look like peanuts to legislators accustomed for many years past to toying with appropriations of almost unimaginable proportions.

Five billions are not peanuts, however, to the people who have to foot Government's bills. Five billions less, out of the people's pockets, would mean an appreciable lightening of the tax load—a consequent addition to take-home pay for which almost all of us could find some worthwhile use.

Comment on Statement Regarding Admiral Radford

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include my newsletter for the present week regarding a statement by Admiral Radford and the press.

I think it is time cognizance should be taken that the freedom of the press should in no way be interfered with:

The newspaper editors of our country must be puzzled, indeed, by the reported statement of Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, that our free press is partly responsible for confusing and perhaps alienating our allies.

The admiral's position is that the free press—which he seems to regard as something of a necessary evil—digs around and comes with so much divergent and contradictory material on national policy that it is difficult, if not impossible for friendly nations abroad to follow the ins and outs of our policies. In contrast, he told the House Foreign Affairs Committee, the Communist line is more definite and consistent.

This may or may not be true as between our country and Soviet Russia. After all, the highest Communists in the Soviet hierarchy seem to have been very busy lately rewriting their own line to suit the newest conditions arising out of their devaluation of Stalin. But at least when Khrushchev puts out a policy statement, nobody else in the high command dares to dispute it.

On the other hand, we find numerous instances day after day in our own Government when one official disputes another, when one department's policy position is contradicted by another, and when the President and his Cabinet are not only disputing each other but changing their own statements in a few days' time.

This may be inefficient from Admiral Radford's point of view, but unfortunately it is the situation. What probably puzzles the newspaper editors, however, is what the admiral thinks they should do about it.

Should they edit the President's statements? Should they censor Cabinet officials who stick their feet in their mouths? Should they suppress the comments of high-ranking Government leaders just because their honestly held views might confuse people abroad?

The fact is that whenever the free press acts as if it considers itself the protector of a particular administration in office and considers its functions that of presenting the administration always in the best possible light—even to the extent of editing the President's statements, censoring Cabinet members or suppressing dissenting views of top officials—then the less it fulfills is obligations to the people of this country and to the cause of American democracy.

FAULT LIES NOT WITH PRESS

I would say to Admiral Radford that if there is confusion abroad about our policies, that is not the fault of the American press for reporting the contradictions in high policy. The fault would lie in the indecision and the wide diffusion of authority and in the lack of central direction and control over the farflung agencies and functions of government.

The Government of our country just can't be run successfully along the military chain-of-command principle. Mr. Truman used to point out, with a little slogan on his desk: "The buck stops here." It can't successfully be passed down to lesser officials. Policy must be centered at the top.

This is not to say that there should be no room for disagreement or controversy within an administration. The experts in the staff positions should certainly have an opportunity to voice their views and get them to the top through the regular channels. No one is infallible, and each high official should be big enough to listen to all the arguments—and even to pass along to the President the fact that there is disagreement on some important policy matter.

Instead, we have found by reading the resourceful American press, and through

congressional hearings as well, that the President is frequently unaware of disagreements in his official family on some of the vital issues confronting the country. Dissent seems to be hushed up and kept from him. That is a bad policy.

On the Road to World Government

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Chicago Tribune of May 4, 1956, entitled "The So-called Atlantic Community." Expansion of NATO can only mean, as I see it, the first step on the road to world government:

Business of very serious import to Americans may arise at the meeting of the North Atlantic Treaty Organization's council in Paris this week. Secretary of State Dulles suggested at the Associated Press meeting that the time has come to "advance NATO from its initial phase into the totality of its meaning." He expanded that at his press conference a few days later by admitting he was thinking of broadening American involvement in NATO through both political and economic ties.

A couple of union-now enthusiasts have taken this up. Lester Pearson, the Canadian secretary for external affairs, stopped off in London on his way to the NATO meeting to tell the English-speaking union that NATO can become the foundation for "the Atlantic community of the future." He suggested an immediate extension of NATO's powers into the political field.

"It surely does not take much hard thinking to come to the conclusion that in their own interests nation states should work toward supranational communities," Mr. Pearson said.

In Oregon, where he is campaigning, Senator KEFAUVER, who for several years has introduced an "Atlantic unity" resolution in Congress, remarked of Mr. Dulles' proposal that "it's about time." He said that he was addressing "a challenge" to Dulles to produce "a sound transformation of the grand alliance."

The nature of this "transformation" is suggested by KEFAUVER's resolution, calling for a convention of NATO member delegates representing the principal political parties of each member country to study the extent to which the peoples of each of these countries would go in forming "a more enduring union."

What this amounts to is a proposal that the United States become a province in a super-government, along with 14 European countries. Mr. Pearson is talking about the same thing when he refers to "the Atlantic community of the future" and urges the desirability of nation states working toward "supra-national communities." And that is what Secretary Dulles is talking about, too, when he uses the same phrase—"Atlantic community" [originally produced by the New Deal secretary of state, Dean Acheson]—and says that NATO "reflects the spirit of western civilization."

We find it most peculiar that a secretary of state should so easily manage to forget the counsel of George Washington that "Europe has a set of primary interests, which to us have none, or a very remote relation," and that her frequent controversies "are essentially foreign to our concerns."

We find it both odd and startling that a United States Senator should seek Presidential nomination on a platform of liquidating the sovereignty of the United States, and should, moreover, be indorsed by his party electorate in more than one State.

But the fact that a variety of men of some political standing all seem to agree at the same moment that the time has arrived when it is safe to discuss the disappearance of the United States into a super-government suggests that a danger exists which is not trifling. For never since the War for Independence has it seriously been proposed that Americans might be called upon to pay their loyalties to any political entity other than their own government.

GI Home Loan Commitments May Be Stopped After January 1, 1957

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. FASCELL. Mr. Speaker, an Associated Press news article appearing in the Washington Post last Sunday calls our attention to the possibility of a January 1, 1957, cutoff date of the GI home loan guaranty program.

Thomas J. Sweeney, Director of the VA's Home Loan Guaranty Service, says this will be an absolute necessity unless Congress acts favorably on legislation proposing an extension beyond the present July 25, 1957, expiration.

Mr. Sweeney's recommendation to Administrator Higley for cutting off commitments after January 1, 1956, should cause concern among the members. My colleagues should join in urging immediate consideration of pending legislation which would extend this program which has proven so valuable to our entire economy.

H. R. 10469, a bill I introduced April 12, 1956, would prevent this abrupt cutoff.

The Associated Press article follows:

GI HOME LOAN COMMITMENTS MAY END BY JANUARY 1

The Veterans' Administration is considering cutting off commitments for GI home loan housing after January 1 in the event Congress does not this year extend the loan program.

Thomas J. Sweeney, Director of VA's Loan Guaranty Service, informed a reporter that he had made a recommendation to that effect to Harvey J. Higley, Veterans' Administrator.

Sweeney said he is not campaigning for an extension of the program beyond July 25, 1957, adding that decision is entirely up to Congress. He explained he is looking ahead to what administrative action will be needed if Congress does not act this year.

"The VA can guarantee only those GI loans which are completed and made by July 25, 1957, under the present law," he explained. "It can only guarantee those loans closed and filed by the private lender with VA before the expiration date."

Sweeney said his recommendation to Higley was that in the event the program is not extended this year, public notice should be given all interested parties on or about January 1 that no new commitments for proposed new housing units will be made.

He explained that usually it takes as much as 60 to 75 days to get big housing projects underway after a builder seeks VA approval. Under existing law all such projects must be completed and the GI home loans must be completed by July 25, 1957, unless there is an extension of the program.

He stressed there must be sufficient time to complete such projects and process the loan before the cutoff date.

The 8-Year Campaign of Representative James E. Van Zandt, of Pennsylvania, To Increase Coal's Share of Fuels Used by the Atomic Energy Commission Is Now Producing Encouraging Results

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. ARENDS. Mr. Speaker, since his election to Congress in 1938, my colleague from Altoona, Pa., Representative JAMES E. VAN ZANDT, has been zealous in his efforts to assist the coal industry in maintaining its acknowledged position as the most dependable fuel available in any emergency from the standpoint of low cost, abundant supply, and dependable performance in supplying energy requirements.

As a member of the Congressional Joint Committee on Atomic Energy, Representative VAN ZANDT has directed his efforts toward increasing coal's share of the fuels used at Oak Ridge, Tenn., by the Atomic Energy Commission.

The following article from the March 1956 issue of the Coal Herald reveals the success of Representative VAN ZANDT's campaign on behalf of King Coal whose survival means the preservation of one of the basic industries of the Nation and especially of the great State of Pennsylvania:

REPRESENTATIVE JAMES E. VAN ZANDT'S CAMPAIGN IS PRODUCING ENCOURAGING RESULTS

The 8-year campaign of Representative JAMES E. VAN ZANDT to increase coal's share of the fuels used at Oak Ridge, Tenn., is now producing encouraging results, according to the Atomic Energy Commission's latest fuel-purchasing policies at that installation.

A letter from the AEC to the congressional Joint Committee on Atomic Energy, of which Congressman VAN ZANDT is a member, reveals that a modification of contracts with suppliers of natural gas enhances coal's prospects to the greatest degree since 1948, when arrangements were made to bring in substantial quantities of gas. The revision sharply reduces the firm contract for gas supply, thus practically assuring a marked upturn in the use of coal.

Under the new contract, either the supplier or consumer is permitted to reduce the Oak Ridge gas commitments from 60 million to 20 million cubic feet per day. The AEC letter to the joint committee thus noted that "coal procurement will be increased as required to maintain the desired levels of operation."

Congressman VAN ZANDT said today, in making the letter public, that the change in policy had been brought about by (1) economic advantage of coal over gas in the Oak Ridge area and (2) recognition by the Federal Government of the coal industry's ability to guarantee adequate supplies.

"An economic analysis by AEC shows that revising the firm gas contract will result in lower fuel costs at the AEC facilities so long as coal prices do not exceed 35 cents per million B. t. u.," Congressman VAN ZANDT explained. "With this clause providing for such a large percentage of the gas supply to be served on an interruptible basis, the coal industry is given an opportunity to supply these energy requirements."

The Government's contract for a daily supply of 60 million cubic feet of natural gas at the Oak Ridge plant was negotiated in 1948, and Congressman VAN ZANDT registered his first objections before the joint committee a short time later. He protested that the move would create unemployment among coal miners as well as railway workers who depend upon coal traffic for their jobs.

A report on a joint committee hearing in May 1949 records this warning from the Pennsylvania Congressman:

"I think we are doing an economic harm. I am thinking of the coal miner and the railroader, and I am thinking of the taxes that are paid by them and by their employers."

At that time Congressman VAN ZANDT also pointed out that coal should be given a favored position by all Government facilities adjacent to coal areas not only because that fuel would be available in emergency periods, but because of its abundance. An AEC representative at those hearings defended his agency's position by stating that gas reserves were then set at about 30 years.

In recalling that statement, Congressman VAN ZANDT today added this comment:

"Since that day when the Atomic Energy spokesman referred to the 30-year supply of gas, almost 7 years have elapsed and the life index of natural gas has gone down to a greater extent than he had anticipated. I intend to familiarize my colleagues on the joint committee with a closer analysis of the reserves supply of both coal and natural gas, and I hope that we shall be able to prevail upon the AEC to turn to coal for an ever-increasing portion of its energy requirements.

"The Oak Ridge developments as regards fuel purchasing are highly encouraging to both the coal operator and coal miner, as well as to everyone connected with the railroad industry, and I feel that the AEC is to be congratulated for its forthright approach to the fuel supply problems under present conditions."

Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 27, 1956

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include a press release of the Independent Voter of Illinois regarding the enforcement of the Supreme Court's school integration decree in connection with the bill to provide aid for school construction:

In a letter sent to President Eisenhower today concerning the bill to provide Federal aid for school construction, the Independent Voters of Illinois called upon the Chief Executive to commit himself to withhold Federal funds from school districts not acting in good faith to comply with the Supreme Court's school integration decree.

The full text of the resolution adopted by the IVI board of directors and sent to the President follows:

"1. IVI recognizes the urgent need for Federal appropriations to aid construction of public schools throughout the Nation.

"2. At the same time we would deplore the use of such Federal aid funds to further segregated public schooling contrary to the spirit of the United States Constitution and to the substance of the recent Supreme Court decision.

"3. In view of the ruling of the Supreme Court, we ask that the President of the United States issue a statement clearly pledging that he will use the powers of his office to withhold Federal funds from any school district not acting in good faith to comply with the minimum requirements of the Court's decree to 'make a prompt and reasonable tsart' toward integration.

"4. We believe such a pledge would be preferable to, and would alleviate the necessity of, an antisegregation amendment to the school construction bill. However, in the absence of such a declaration, we would favor such an amendment."

Red China Must Not Be Admitted to the United Nations

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, there is a deliberate move throughout this country to admit Red Communist China to the United Nations. I do not believe that the American people will ever tolerate such a move and remain a member of the U. N.

I am inserting as part of my remarks an article by Mr. Constantine Brown, feature writer for the Washington Evening Star and which appeared on Friday, May 4:

BITTER PILL POLICY: LET'S BE REALISTS—TENDENCY TO FORGET PAST CRIMES SEEN IN TREND TO ADMIT RED CHINA TO U. N.

Ambassador Wellington Koo, the distinguished career diplomat who has held up the flag of Nationalist China for so many years in Washington, has paid his last official calls at the State Department.

He is said to have left the Department with the distinct impression that not only will Chiang Kai-shek have to bury whatever slim hopes he may have entertained of returning to the mainland, but also that it is highly doubtful Formosa will remain much longer as the beacon of the oppressed Chinese people.

There are as many ways to tell an ambassador in veiled words and by innuendoes that his country's goose is cooked as there are to skin a cat. The United States, of course, does not intend to renege on its diplomatic and military commitments to the Nationalist Government. We have a formal treaty and the Eisenhower administration would be the last to reconsider it.

But it is pointed out diplomatically that world conditions have changed in the last 2 years and there is an irresistible force in the United Nations—the supreme body on international policies—to overlook the crimes of the Peiping government and take that country to its bosom.

The vast majority of the U. N. members who joined us in 1950 to repel aggression suffered relatively little loss from the bloody Korean war instigated by Moscow and fought to a diplomatic victory by the Chinese Communists. America bore the main brunt of the losses: more than 164,000 casualties and upward of $16 billion in cash. But the feelings of the United States and its opposition to bringing Communist China into the ranks of civilized and law-abiding nations are subject these days to the will of the majority of the members of the family of nations.

Our policymakers, who still strongly oppose the impending move to take Communist China into the U. N., say we no longer have the votes to prevent such a flagrant disregard of the charter.

The decision to liquidate the irksome Chinese problem became evident with the announcement from U. N. headquarters in New York that the next session of the General Assembly will open after the American presidential elections instead of in mid-September. The official explanation is that some of the American representatives might not be able to attend because they would be busy campaigning. Actually, the British, French, and Soviet delegations intend to press this year for a vote on admission of Peiping to the assembly.

In view of past utterances that unless Communist China cleared herself of the censure voted by the U. N. 5 years ago and shows definitely that she has become a peace-loving country we would strongly resist her admission, the Republican Party might be placed in an unpleasant spot if China were cleared before the ballots are counted in November.

An unofficial survey shows that votes in favor of admitting Communist China are about 3 to 1.

In days gone by, a number of countries which have wished to win the favor of the U. S. S. R. and the Arab-Indian bloc by voting for Peiping were discouraged from doing so by the fear that under such conditions the United States might quit the U. N. Among these were Britain and France. The former has recognized Communist China for more than 6 years; the latter still recognizes the Nationalist regime. Both are now on record as favoring Peiping.

The Senate was strongly opposed in the past to the admission of the People's Republic, either in the General Assembly where the majority rules or in the Security Council where we can exercise the veto. When in 1954 the wind was blowing strongly toward admission of the Communists, a number of leading Senators of both parties told President Eisenhower that in the event the General Assembly made such a move the Appropriations Committee would cut off all funds for further American participation in that organization. There were more than sufficient votes in the Senate for that purpose. Mr. Eisenhower convinced the Senators not to use such drastic measures and assured them that the administration had mustered sufficient support from other nations to defeat any attempt to bring that officially condemned country into the society of so-called peace-loving nations.

Things have changed greatly since. The Russian smiles have affected most of the members of the world organization. The trend toward the proposed Soviet coexistence and an ill-disguised peace at any price on the part of the allies is making big strides. There is a tendency on the part of leaders of the free world to forget past crimes in the hope that there will be no similar outrages in the future. The present diplomatic slogan is "Let's be realists." And this involves realism toward the Chinese Communists. Their recent brutalities to American prisoners are for diplomatic rea-

sons kept hidden from the American public by the State Department lest the prospective rapprochement with Peiping may be disturbed.

Fluoridation of Water

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. DONDERO. Mr. Speaker, I offer for the RECORD a letter from Dr. Walter L. Godsell of Pontiac, Mich., in my congressional district, dated May 7, 1956, protesting an appropriation of approximately $3 million to combat dental disorders believing that a fair amount of such an appropriation would be utilized in spreading misleading information in support of fluoridation.

Dr. Godsell states that during the past several years much additional information has come to light showing harmful effects of prolonged ingestion of fluorides and that serious harm can come to certain individuals drinking water containing fluorides at even the so-called "safe" concentration of 1 part per million.

This letter should be read with care. The appointment of a joint congressional committee to make a thorough study of this item before further appropriation is made for this purpose seems feasible. Dr. Godsell's letter follows:

PONTIAC, MICH., *May 7, 1956.*

Hon. GEORGE DONDERO,
Congressman, House of Representatives, Washington, D. C.

DEAR SIR: It is my understanding that the United States Public Health Service is currently requesting an appropriation of approximately $3 million to combat dental disorders' Just what activities are financed by this money is a matter of deep concern to many Pontiac voters. From observations of United States Public Health Service activities in the past, it appears that a fair amount of this dental disorder appropriation will be utilized in spreading misleading information to support their campaign favoring fluoridation.

In the past several years much additional information has come to light showing harmful effects of prolonged ingestion of fluorides. One researcher on this subject is one of our own Michigan physicians, Dr. George Waldbott, of Detroit. Dr Waldbott is an investigator of unquestionable integrity, and one of the Nations leading allergists, as shown by having been elected vice president of the American College of Allergists.

The findings of Dr. Waldbott indicate that very serious harm can come to certain individuals drinking water containing fluorides at even the so-called "safe" concentration of 1 part per million. Amazingly enough these findings from such a reliable source as this have been completely ignored by the United States Public Health Service. In their zeal to promote their objective they are apparently disregarding any research which opposes fluoridation. Such an attitude is hardly scientific and certainly not for the good of the general health and welfare of the American people.

Because of this attitude on the part of the United States Public Health Service I have the following request: Before any further action be taken on this aforementioned appropriation, that a joint congressional committee be appointed to investigate the attitude of the United States Public Health Service in suppression of information opposing fluoridation. This committee, of necessity should be independent of any individuals interested in the promotional aspects of this program.

I would further like to request that this letter be read before Congress and inserted in the RECORD.

In closing, I would also like to take this opportunity to thank you for the many years of service you have faithfully given to the people of this country, and Michigan in particular. We shall surely miss your representation in Congress.

Respectfully,

W. L. GODSELL.

Union Leaders Do Not Control Individual Union Members' Votes

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, union labor leaders would like to have the politicians believe that they control the votes of their members. This is a considerable exaggeration.

As part of my remarks, I am including a news article prepared by an outstanding and prominent newswriter in the State of Wisconsin, Mr. John Wyngaard, in which he indicates that State election results show union leaders cannot control the individual votes:

STATE ELECTION RESULTS INDICATE UNIONS CANNOT CONTROL INDIVIDUAL VOTE

MADISON.—The Wisconsin CIO council, as ardent a political pressure group as exists in this State, found the recent election returns less than happy, by its own account.

The organ of the CIO put the best light on the results when it headlined what it called the heartening vote of confidence given to Mayor Frank Zeidler, of Milwaukee, who turned back the challenge of Council President Milton McGuire and the conservatives of the Wisconsin metropolis, and was returned to the mayor's office.

But Zeidler had been counted as the favorite throughout the intensely fought Milwaukee campaign. If there was anything surprising in the vote result of the mayoralty contest, it was his slender margin of victory. McGuire, in fact, got more votes than most independent observers had reckoned.

THE OTHERS

At the same time, however, the CIO News was obliged to admit that its candidate for a Milwaukee circuit judgeship, CIO Counsel Max Raskin, was "snowed under" by his opponent, and that President Eisenhower's convention delegate slate "carried Milwaukee County and showed disturbing gains in workingclass wards."

Both of these developments probably have considerable meaning for the State at large.

Mr. Raskin, a former Socialist and a labor lawyer during an extended professional career, has sought a judgeship before. His latest failure, in a district which is as highly organized by labor unions as any in Wisconsin, and in a campaign in which the CIO and its political affiliates did the utmost in campaigning for him, perhaps shows that Wisconsin voters, whatever their ideological complexion, don't want judges to represent special interest groups.

The failure of KEFAUVER and the triumph of President Eisenhower in what the labor organ calls working-class wards was perhaps as surprising and gratifying to the Republican campaigners as it was frustrating to the leaders of the union political headquarters.

It probably shows that union political leagues are unable to get out their vote, or if they do, they cannot really rely upon the actions of the union men when they get into the privacy of the polling booths. Probably it shows a little of both.

FINANCES

The labor commanders are convinced, they have said many times, that the machinations of the Republican legislature have succeeded in crippling their political activities. They mean the new Wisconsin law that prohibits the use of union funds for politically partisan purposes—but does not prohibit the individual union member from contributing.

A university student recently put that statute into contex when he mailed a $1 bill to a Democratic candidate who had been complaining about the union spending contribution. He accomuanied the donation with the advice that the candidate could get similar contributions from union workingmen anywhere in the State. Obviously if he got even a $1 contribution from only a fraction of the union members in the State, he could raise as much campaign money as he could reasonably spend. What the situation suggests to many outsiders is that the unions cannot rely on voluntary contributions of their members for political activities, and must reach into the involuntary union contributions.

And what the Milwaukee election returns suggest, as the CIO News has so candidly conceded in its post-election account of Milwaukee politics, is that the assumptions so often and so blandly made about Wisconsin voting habits are sometimes in error.

Stonewall Jackson Memorial

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article written by Miss Mary Meares Galt, of Lexington, Va.:

May 10 is the anniversary of the death of the famous American military leader, Stonewall Jackson. Thomas J. Jackson, graduate of West Point, after the Mexican War, turned his back on the military career in which he had already achieved marked distinction, to devote himself to education. As a faculty member at Virginia Military Institute and as teacher of a class of Negro children in a Lexington, Va., Sunday School, Jackson served his fellowman in peace as he had served his country in war. When called to arms again to defend Virginia, he won immortality in military annals. His untimely death from wounds came at the age of 39, on the 10th of May 1863.

But his influence as a devoted citizen and Christian leader goes on. Today, at last, there is a national shrine in Lexington, Va., where the Stonewall Jackson Memorial Foundation has bought Jackson's own home as a museum. Open free of charge every day in the year, this shrine houses over 50 items,

furniture and other objects that belonged to Stonewall Jackson and his family, and its collection of Jacksoniana is growing all the time. Through the efforts of the Foundation, the Legislature of Virginia has given $25,000 outright to the project, and the Legislatures of Alabama and Mississippi have appropriated money for Stonewall Jackson scholarships to perpetuate among their own young people the influence of this great and godly man. So Lexington, where Jackson had his home and where he was buried, now has its Stonewall Jackson shrine, in the simple home he loved and fought for.

Doctor Shortage Called Critical

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. DORN of New York. Mr. Speaker, I should like to call the attention of my colleagues to a news article and editorial both of which appeared in the New York Times of May 9, 1956, concerning the doctor shortage in the United States, and the suggestion made by Dr. Dominick F. Maurillo, chairman of the New York State Committee on Licenses of the Board of Regents of New York State.

I should also like to add that I am having prepared a bill, enactment of which would implement Dr. Maurillo's suggestion for the formation of a commission to study fully the problem. I expect to introduce it in the very near future, and because of the seriousness of the situation, I should like to ask for full support of the House membership:

[From the New York Times of May 9, 1956]

DOCTOR SHORTAGE CALLED CRITICAL—UNITED STATES HOSPITALS SEEK INTERNS IN ASIA AND EUROPE, REGENT OF STATE TELLS SOCIETY—FEDERAL INQUIRY ASKED—DR. MAURILLO URGES STUDY OF POLICY OF MEDICAL SCHOOLS IN LIMITING STUDENTS

Competent young doctors are said to be so scarce in this country that hospital authorities are searching Asian and European medical schools for interns.

That declaration was made here yesterday by Dr. Dominick F. Maurillo at the 150th annual meeting of the New York State Medical Society in the Statler Hotel. He is chairman of the New York State Committee on Licenses of the Board of Regents of New York State.

Dr. Maurillo said the present policy of limiting the number of students in medical schools here should be examined by Congress. He proposed that it establish a commission to study all phases of medical education.

Dr. Maurillo called the shortage of doctors in the United States very critical.

In 1956, Dr. Maurillo estimated the number of foreign-trained doctors allowed to take examinations for licenses in the entire Nation will amount to about a third of the number of doctors graduated by the Nation's 72 medical schools in the year.

THIRTY-TWO THOUSAND DOCTORS IN STATE

New York State has about 32,000 registered physicians, of whom 25,000 are in active practice. Dr. Maurillo estimated that a fifth of the practicing doctors in this State were foreign trained and a third of the doctors doing general practice had been educated in foreign countries.

The physician said American medical schools last year graduated less than 7,000 doctors, all serving internships, but leaving a shortage of 7,000 internes.

"Some hospital administrators or their representatives travel to Europe and Asiatic countries to invite doctors for the purpose of interning in their hospital," Dr. Maurillo said. "These foreign doctors work on an equal basis with graduates of our medical colleges, carry out the same duties, and have the same responsibilities."

The physician reported that some of the foreign doctors here were visitors, some arrived under the quota system, some were invited, and most of them remained here.

More United States citizens who cannot gain admittance to American medical schools are going abroad to study, Dr. Maurillo declared. He said New York State had taken the lead in setting up procedures for licensing foreign-trained doctors under the education law.

LIMITATION TO STUDENTS

"The present policy of limiting the number of students for admission to our medical colleges" Dr. Maurillo contended, "is responsible for the very great increase in foreign doctors in the United States, the 2,000 or more American students studying in foreign countries, the growing shortages of general practitioners and the discouragement of many potential medical students to study medicine.

"Congress should pass a law creating a commission of experienced persons in this field to study fully this problem and make a substantial grant of funds available to the commission. Such study should be comprehensive, realistic, unhampered, and unbiased."

—/

[From the New York Times of May 9, 1956]

THE DOCTOR TRAINED ABROAD

The only medical member of the New York State Board of Regents, Dr. Dominick F. Maurillo, presented some interesting figures yesterday. In an address to the 150th annual convention of the New York State Medical Society he said that there was now a shortage of 7,000 internes in United States hospitals, after graduation of fewer than 7,000 doctors in this country last year.

Dr. Maurillo estimated that 25,000 licensed and registered doctors were practicing in New York State, of whom more than a fifth are foreign trained. Nationwide, the number of foreign doctors admitted to examination has risen steadily in the last 5 years: 799 in 1950, 1,463 in 1953, at least 2,000 in 1955, and an expected 2,500 in 1956.

There are now about 5,500 unlicensed foreign doctors working either as internes or residents in hospitals in the United States, and about 30 percent of them are in hospitals in New York State, Dr. Maurillo reports. He adds that "some administrators and doctors who have worked with these foreign physicians and who have formed a favorable opinion as to their abilities * * * cannot understand why some States deny these physicians the right to take medical licensing examinations."

Some fairly obvious conclusions can be drawn: even with scheduled expansion American medical colleges cannot meet the demand for doctors needed or for admission of above-average students who want to study; 2,000 American students are studying medicine abroad and this source of training will become increasingly important; more States might well take a leaf from New York's book on methods used to examine foreign medical schools and to make judicious use of their product.

South Florida Home Builders Favor H. R. 10469, the Fascell Bill To Extend the GI Home Loan Guaranty Program

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. FASCELL. Mr. Speaker, Congress must act now.

The GI home loan guaranty program for World War II veterans must be continued beyond the present July 25, 1957, termination date. The abrupt termination will affect, not only the veteran, the home builder, the lender, and the real estate dealer, but also the furniture, hardware, electrical appliance and building industries as well.

If the program is allowed to end as is presently provided by law labor, too, would be seriously affected. Millions of veterans and nonveterans alike are currently gainfully employed in constructing, producing, manufacturing, and selling materials and household furnishings which go into the newly constructed and furnished homes.

Both veterans and nonveterans have been able to purchase a home for far less money as a direct result of this program and the mass production techniques that it has enabled us to employ.

Every American has prospered due to the benefits granted the veteran. The veterans GI home loan guaranty program has produced the greatest home, furniture, and electrical appliance buying spree that America has ever known. If we are to continue this prosperity, all of us must join in urging the Veterans' Affairs Committee to immediately extend consideration to pending legislation which would effect an extension.

The real estate editor of the Miami Herald newspaper at Miami, Fla., Mr. Frederic Sherman, recently conducted an opinion survey among the home builders in the greater Miami area. The result of this survey is included in his article which follows:

SOUTH FLORIDA BUILDERS VIEW GI HOME BILL

(By Frederic Sherman)

There's going to be some tough legislative in-fighting before Congress comes up with the answer to extending the GI housing program that expires July 25, 1957, for veterans of World War II.

The House has passed a bill that in reality gives these veterans an extra year. It keeps the deadline on applications, but gives a builder until July 25, 1958, to make a VA sale.

Only about 25 percent of World War II GIs have filed for so far, so there is a tremendous backlog of demand for VA homes.

Last week, Representative OLIN E. TEAGUE introduced a bill to liberalize the FHA program on single-family residences. The Texas Democrat, chairman of the powerful House Veterans' Affairs Committee, has made it plain from the start he is against any kind of extension of the GI bill. This despite pressure from the American Legion, the VFW and builders.

TEAGUE'S bill would allow down payments from 2 percent on FHA-backed loans less

than $10,000, to 15 percent on loans from $24,000 to $30,000.

Present FHA schedules call for 5 percent down on the first $9,000, and 25 percent on the remainder up to ceiling of $20,000.

SLASH IN DOWNPAYMENTS

If you were buying a $16,000 house now, you would need at least $2,200 as a down payment. Under Representative TEAGUE'S proposed bill, you would have to come up with only $1,120.

Despite this new proposal, it is a good bet the House will prefer to go along with a bill nearer to the one introduced by Miami's Representative DANTE FASCELL.

This calls for an extension of the bill with new deadlines depending on a man's service in uniform. The maximum extension would be 3 years.

Because this VA market is such a vital part of South Florida's economy, I asked several of our top builders for their views on the year-off deadline and the legislative battle.

BENEFIT TO THE COUNTRY

The Mackle Co. has built about 6,000 GI houses in Dade County. Sixty percent of the firm's work is VA housing.

Here's the comment: "The Mackle Co. is proceeding on the expectation that the GI housing bill will be extended. We feel sure that if the Government decides to extend it, it will do so in full understanding that the county as a whole will benefit.

"A veteran able to purchase one of our homes in Westwood Lake, for only 2 percent of the total cost as a down payment, is making an investment in the future of Dade County and in his own future financial security.

"Our mass production building methods provide inexpensive housing and are responsible in great measure for the fact Dade County in the so-called suburbs is devoid of slums. No slovenly trailers or tar paper shacks will be built as long as we can make good homes available in the wage range of the average worker."

SMALL BUILDERS EASED OUT

R & R Builders reported a very active market in VA homes. Last year the firm built 800 houses in the Palm Springs area of Hialeah, 750 of them GI.

Sales Manager Sydney Zwirm had this to say: "We really don't know what is going to happen in Washington, but we understand there will be an attempt to cut off VA from World War II veterans.

"The Government over the past year has been forcing the small builder out of the VA business in a move that seems to signal an attempt to consolidate VA and FHA housing programs.

"R & R sells in advance of construction, so we don't fear an abrupt change in demand. And there are the Korean war veterans who have another 10 years to apply for GI homes."

PLANNING AHEAD FOR 1957

Century Homes is projecting plans through this year on the premise that the GI bill will be extended.

The company has built 2,500 houses in the past 6 years and Office Manager Hartley Gilbert says at least 95 percent of them have been GI.

The company now is building out on Coral Way at 82d Avenue and has bought land for a new development in Cutler Ridge.

Because land values in Dade County are rising so rapidly, builders must gamble on what Congress will do.

PUSHED INTO A CORNER

F & R Builders figures GI housing is 95 percent of its business, Arnold Rosen says his company would like to plan ahead for 1957, "but we are being pushed into a corner not knowing what Congress will do. We have land for 400 more houses and we have an eye on 2 or 3 good pieces of property, but we can't move until we have an idea what kind if any extension will be voted.

"If the GI bill is not extended and if people are going to have to put down $2,500 down, there is going to be a considerable slowdown in house construction here in Dade County."

The firm has built about 2,000 VA homes since it started operations in 1946. It now is operating in Coral Way Village out on 84th Avenue.

A VOTE FOR LIBERAL FHA

Blue Ribbon Construction Co. has sold 3,500 houses since 1949 and 98 percent of them have been VA.

Bob Pollack reports it's hard to tell now what Congress will come up with on the GI bill extension.

"If they stop VA, they stop 98 percent of my business.

"I wish they would liberalize the FHA program. A higher mortgage and a lower downpayment, maybe 5 percent plus closing, would take care of both civilians and veterans."

Pollack says his company has some 1,800 lots now, divided among Dade, Broward, and Palm Beach Counties.

The firm expects to build about 400 houses this year, never gets more than 20 or 25 houses ahead of sales.

Radio and Television Address by Hon. Estes Kefauver, of Tennessee, Station WEAR, Pensacola, Fla.

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert a radio and television address given by Senator ESTES KEFAUVER, Democrat, Tennessee, in Pensacola, Fla., on Monday, April 30, 1956:

I want to talk with you this evening about a significant new development, which is now in the process of formation in the foreign policy of our Nation.

It is important that we consider it, because foreign policy—the question of peace or war—is by far the over-riding question with which you and I are faced today or any day.

Our economic structure, our jobs, our farm income, the highways and roads that we build, the schools that we construct, our social-security system—all of these are of necessity tailored to the question of whether we are in the shadow of war or on the brink of peace.

The peace and security of your family and mine is based as much upon decisions that may be made 3,000 miles from here as they are on the decisions that we ourselves made at our breakfast table this morning.

Therefore, I wanted to talk with you about some of those decisions this evening.

Tomorrow the Secretary of State will leave Washington for Paris to attend a session of the North Atlantic Council. He has said that he has some thoughts to exchange on the question of transforming the North Atlantic Alliance into a broader association of free nations. He has said that without cutting back western military strength, the foreign-policy accent of the United States should be shifted to the economic and political fields.

My reaction is, it's about time.

This is the emphasis that I have been seeking to achieve in our policy toward the Western nations ever since I became a Member of the Senate.

It is most certainly the emphasis that I would pursue should I be chosen as the next President of the United States.

Therefore, I can wholeheartedly give my support and encouragement to the Secretary in his present mission—and say that this is at least one trip on his part which I consider is necessary.

In adopting this new attitude, it is my feeling that the Secretary of State is at long last expressing the kind of sentiments which find their birth within the mainstream of American thinking and culture. A brief review of the development of our North Atlantic relationships will, I believe, bear that out.

Five years have passed since a President of the United States who has been much abused and much criticized, but who will go down in history as a man who made the right decisions on the big issues, signed the NATO agreements. I am speaking, of course, of President Truman. This NATO agreement was a dramatic—and a highly successful—step in the effort to control and contain militant communism.

From its very inception, it seems to me, these Western democracies which entered into the NATO agreements were taking a step which inevitably would grow and develop into a new concept of relationships among nations.

In the North Atlantic Treaty itself they declared themselves "determined to safeguard the freedom, common heritage, and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law."

They agreed, in article 2 of the treaty, to "contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions." They agreed to "seek to eliminate conflict in their international economic policies." They agreed to "encourage economic collaboration between any or all of them."

Now why was it that they could do that? The reason was simply that we are so much alike—we residents of the United States and Canada and England, and the free nations of Europe. We may have differences in accents and languages, but we are alike in our love of freedom, in our respect for the dignity of every man, in our fierce belief in democratic institutions, in our pursuit of liberty.

Basically, however, despite these larger concepts the NATO agreements were and have remained treaties of military agreements.

For a long time I have thought they should be more. You see, wars do not just occur. More often than not we stumble into them. Like all disputes, an action here, a word there, a misunderstanding, an underestimation—thee are the things of which wars are made. I therefore felt that since we were binding ourselves, one to the other, to fight one for all, we ought to have some kind of channel—some kind of arrangement—by which we could also forge common policies for peace.

Shortly after I entered the Senate, I filed a resolution which would have inaugurated the grassroots search for methods of accomplishing the kind of political and economic cooperation which the treaty envisoned and which the Secretary now seeks in his talks beginning tomorrow.

This resolution called upon the President to invite the democracies which sponsored the treaty to name delegates, representing their principal political parties, to meet with delegates of the United States in convention. There they would explore how far their peoples might go in applying the principles which our own States applied when they formed an enduring union.

I secured among the cosponsors of this resolution a broad and non-partisan backing among Members of the Senate. I am proud that so many distinguished southerners appeared on this resolution. The South has never failed in its traditional leadership in matters of foreign policy. The resolution was not adopted, however.

We did, nevertheless, maintain excellent relationships with our Western friends for the succeeding few years. Then our entire Atlantic policy went into eclipse. Why was this?

In the first place, with the advent of the Eisenhower administration, those of us who believed in an enlightened foreign policy, including the President himself, found it necessary to spend a great part of our time in a type of guerrilla warfare against powerful go-it-alone and isolationist elements within the GOP itself.

The isolationist, the go-it-alone exponents, had a curious counterpart within the Republican Party in those who preached the doctrine of preventive war. It was their influence, I feel, which contributed toward the Secretary of State's unfortunate pronouncement of the doctrine of "massive retaliation." This seriously deterred the progress we had been making in our Western relations for it understandably frightened our allies in Europe. In event of a global hydrogen war, they would stand exposed to massive annihilation.

Another great obstacle in the path of real Atlantic cooperation during those first years of the Eisenhower administration was the single-minded obsession of United States policy with the European Defense Community. It was rather obstinate on our part to try to force upon the European nations a union which many of them did not want, and which we and Great Britain would not join.

Well, the French refused to ratify EDC. We had no alternative to propose, but the British did. Through the London-Paris agreements, far superior to what was proposed in EDC, Western Germany became an equal partner in NATO, NATO was strengthened in many respects and for the first time a sort of international control over armaments was established among a group of sovereign States.

I then felt that the time had again come when we should push forward toward these economic and political goals and when the present Congress convened, I introduced again my proposal for a convention of the NATO sponsors.

The world is ready for this move. A former great Secretary of State and military commander, Gen. George Marshall, endorsed my proposal. He wrote: "There is no blinking that fact that this country now stands at a turning point in its relations to its traditional friends among the nations of the Old World."

Another great statesman, Robert Schuman, former Premier of France and the author of the Schuman plan joined the author of the Marshall plan in endorsing my proposal. He said:

"If the American Congress accepts the Atlantic proposal of Senator KEFAUVER, all the democratic European nations should be happy to accept the invitation to send delegates to such a Study Commission. Should there result from the work of this conference and from later proposals the outline of an acceptable plan of union * * * we would then certainly have made a great step toward world peace and general prosperity."

Paul-Henri Spaak, foreign minister of Belgium; Paul Van Zeeland former prime minister of Belgium; Gaetano Martino, foreign minister of Italy—all sent words of encouragement and endorsement.

Said Mr. Spaak:

"I personally hope that such discussions will take place between the citizens of the Atlantic nations very soon."

Said Mr. Van Zeeland:

"To sum up, it would be a major step toward peace and prosperity throughout the world."

Said Mr. Martino:

"I agree with Senator KEFAUVER that the peace of the world cannot be assured by methods of formal diplomacy alone."

Last year a step in the direction in which the Secretary is now going was taken. A resolution which I sponsored resulted in the United States participation in an association of NATO legislators, then being formed, which held its first successful meeting in Paris last summer, and which formed itself into a continuing body.

Therefore, I would say to the Secretary as he leaves tomorrow that he will find the ground already well-plowed for his mission. Four years ago Dwight Eisenhower, called for "bold and imaginative" steps to further develop NATO. President Eisenhower was then General Eisenhower, commanding the NATO forces. Since he has been President there have been none of these bold and imaginative steps and indeed I believe this is the first major speech on NATO. But this, it seems to me, is the President's and the Secretary's great opportunity. They can leave on the pages of history a chapter comparable to the United Nations, the Marshall plan, NATO itself.

I would commend to them the method of exploration which my resolution proposes—a convention to be attended by representatives of the people of the nations involved. I fear that cautious discussions between cautious diplomats will result in nothing if they occur in a vacuum—but coupled with simultaneous exploration on the part of the people in convention—then we might take that step toward world peace and general prosperity which we all seek.

Address by W. Lyle Bull Before the New York Chapter, Alumni Association of the United States Merchant Marine Cadet Corps, at the Downtown Athletic Club, New York, Friday, May 4, 1956

EXTENSION OF REMARKS
OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by W. Lyle Bull before the New York chapter, Alumni Association of the United States Merchant Marine Cadet Corps, at the Downtown Athletic Club, New York, Friday, May 4, 1956:

Mr. Chairman, distinguished guests, and members of the New York chapter of the Alumni Association of the United States Merchant Marine Cadet Corps, by your invitation to address you this evening, on this happy occasion, I feel that you have honored me beyond my merits. A simple "thank you" seems hardly adequate; yet, there are no other words that express more deeply the sincerity of my appreciation.

Your testimonial to the distinguished legislators who carried the fight so successfully to bring about the statutory recognition of Kings Point as a permanent Federal academy is, indeed, most appropriate. At best, however, this tribute is relatively small recompense for the many months of work and effort they devoted to the cause held dear by most of us in this room.

I wonder, frequently, whether the average citizen has even a vague conception of the demands made upon the time of our Senators and Congressional Representatives. In general, they seem to be considered as capable of being all things to all men and the workers of miracles. They become the repositories for the most astounding variety of problems and, when they fail of solutions satisfactory to the appellants, they are exposed to possible retaliation at the ballot box.

One has to be associated with a Government agency in Washington for a better understanding of the extent and nature of the appeals made to Members of the Congress. Sometimes I feel about Congressmen like I do about Ogden Nash's Purple Cow: "I'd rather see than be one."

I have a purpose in mentioning the arduous and complex burdens of the individual legislator. It is to emphasize the real measure of the debt owing to the distinguished gentlemen you are honoring here tonight and to those of their colleagues whose generous contributions of time and energy made possible the happy result you are celebrating.

The bill these kind friends guided, with such skill, through the tortuous legislative channels of both Houses, has brought new hope and encouragement to many more than the alumni of Kings Point; or to the students now enrolled; or to the administrative staff and faculty of the academy.

It has restored the confidence of the countless thousands who adhere to the advocacy of a strong, modern, and vigorous merchant marine as essential to our national welfare.

The Kings Point bill has told these people, in effect, that the Congress meant what it said when it incorporated, as a preamble to the act of 1936, the declaration of our national policy to foster and maintain such a merchant marine.

It has assured them, further, of congressional recognition of the often overlooked fact that more than just ships alone are needed to produce and successfully maintain a merchant marine; that a paramount requirement is for men of the highest order of technical proficiency and demonstrated leadership qualities—and with a sense of dedication to the best traditions of the maritime profession.

Shipping is about the oldest of our industries. It is also one of our most complex. While operated as a private enterprise, shipping is not a business in the usual sense of the word. So far as the United States is concerned, it is an instrument of national policy, maintained, in large measure, by public funds to serve the needs of our commerce and defense. The appropriations for Kings Point and the four State academies are a part (albeit a relatively small part) of this Federal support.

Unfortunately, this industry-Government "partner" relationship is not sufficiently understood by the great mass of the public. The further inland we get from our seacoasts, the less it is understood.

To the great majority of people, if they think about it at all, the American merchant marine is something that operates in faraway places. Its problems, its work and its service to our industry and agriculture are remote things that are of little interest and miles removed from their everyday affairs.

Because of the diverse activities and opportunities in this broad land of ours, and the comparatively few directly engaged in, or affiliated with, maritime affairs, we are not a ship-minded people in the sense that

the British and Scandinavians are. Mother Necessity compels their understanding that their entire economies depend upon the ocean highways and that they must own and operate ships to survive.

It is evident that in the attempt to "sell" our merchant marine to the American people, the proper approach has not been found. Or, perhaps, the same old record has been played so often that the sense of the message it attempts to convey has been entirely lost.

Later this month we will observe Maritime Day. There will be gatherings in many cities throughout the country where countless speakers will orate on the poor old *Savannah* as the first steam-powered ship to make an Atlantic crossing. This happened 137 years ago, and, if the truth were told, the *Savannah* covered a much greater distance under sail than by steam power. Others will hold forth on the glories that were ours in the so-called Golden Era of the Clipper Ship. When I listen to these things, year after year, I instinctively liken them to the reminiscenses of an aging theatrical star while reviewing the yellowing, dog-eared press notices extolling her conquests and triumphs of the past.

There is no doubt that these historical facts are of interest and are things of which we should be proud, but I question their effectiveness as propaganda to win friends and supporters for the Merchant Marine of the 1950's. It seems to me we have available much more convincing material for this purpose.

Except for those directly connected with the industry, there are few people who appreciate what real progress has been made during the past few years toward putting our Merchant Marine on a firmer footing.

The more tangible evidences of this are the new construction programs of the Moore-McCormack and Grace Lines; the "Mariner" conversion programs of the American President and Pacific Far East Lines; and the projected revival of the Oceanic Steamship Co.'s passenger service between our west coast and Australia for which two "Mariners' are being practically reconstructed. At present the United States Lines is negotiating for the acquisition of 8 "Mariner" ships and the American President Lines for 2 in addition to those they have. It appears that the remaining "Mariners" of the original 35 completed within the past 4 years will soon be in private hands.

These are but the initial steps in the programs of replacement tonnage to which several steamship companies are committed to implement over the next 10 years.

There is talk now, too, of the possible building of a sister ship for the S. S. *United States*.

As to tankers, the trade-in-and-build law has stimulated much new construction—and of tankers of much greater tonnage and higher speeds. The Navy, through MSTS, is aiding private industry in this field, by its program for the construction by private interests, of fifteen 25,000 DWT, 18-knot tankers to be charted to MSTS for 10-year terms as replacements for equivalent tonnage in Government-owned T2-type tankers now in operation.

Perhaps the most significant development in new building—and to my way of thinking, one of the most encouraging—is the planned construction of several so-called roll-on-roll-off ships for the carriage of loaded truck trailers. These will be employed, primarily, in our coastwise and intercoastal trades which are sadly in need of rejuvenation. I believe the Pan Atlantic Lines has plans for 7 and the American-Hawaiian Line, some 6 or 8. For some of these ships, speeds of up to 25 knots are being discussed. In addition, the Alaska Steamship Co. has in contemplation two ships of this type as combination truck and rail car carriers, while only last week it was announced that certain Hawaiian interests have plans for the introduction of ships of this type into the west coast-Hawaiian service.

The thing that impresses me most about this new type of ship is that we are finally doing something constructive toward improved means of handling cargo. We are finding that there are ways of doing the job other than by the old block-and-fall method handed down to us from sailing-ship days.

All of these things are products of the industry-Government partnership to which I have referred. And the encouraging part of it is that they are progressing without the whiplash of the stress of war, which has been the principal motivating force over the past 40 years, insofar as our merchant marine is concerned.

It seems to me that our Congress has rarely displayed such a keen and continuing interest in our maritime affairs as during the past 2 or 3 sessions—and nothing but good can stem from this.

I know, of course, that you consider the passage of the Kings Point bill the most important of their accomplishments, but there have been other things. The extensive hearings and the prolonged debate on the so-called 50-50 law is a case in point. It is beyond my poor comprehension to understand why there should have been so much opposition to the provisions of this bill, seeking, as it does, to reserve to American shipping, only 50 percent of the movement of cargoes owned and/or financed by our Government.

Another accomplishment, and the one with, perhaps, the most far-reaching effect, is the comprehensive review of maritime labor and management relationships developed in the hearings conducted by the House Merchant Marine and Fisheries Committee under the chairmanship of Congressman BONNER, of North Carolina.

While no new legislation has resulted from these hearings, it is my conviction that, notwithstanding occasional flashes of acrimony, they were of real benefit to both labor and management in promoting a better understanding of the problems and aspirations of each. Mutual respect and understanding in this area is a prime requisite for the successful fruition of our maritime endeavors and, day by day, this is developing in a most encouraging way.

I have tried to give you tonight, an outline of the sort of "sales talk" I think should be adopted to let the American people know about our merchant marine. Let us get away from reliance upon flag waving and emotional appeals. These sort of things lose their effect almost as soon as your listeners' blood pressures return to normal.

Present the merchant marine to our people as a dynamic, progressive undertaking that, for their economic well-being and own best interests, deserve their enthusiastic support. People have a peculiar, but natural, concern for their pocketbooks. Give them assurance that they are getting value received for the tax dollars used for shipping subsidies. And don't be apologetic about such subsidies.

"Subsidy," nowadays, is not the dirty word it once was. While, actually, the subsidy idea has been a part of our economic structure for years, through tariff applications, land grants, farm aid, and other means, the subsidy concept has come to be generally recognized as essential to maintaining the high living standards with which our country is blessed. And, speaking of farm aid, I suggest that, except for nudging Congress once in a while, when dealing with the public we get away from that time-worn comparison between amounts appropriated for shipping subsidies and those for Cheddar cheese.

You will have sensed, by now, that I am assigning to you Kings Pointers, the job of "selling" the merchant marine. Of course, this has been your mission since the day you entered the cadet corps. It is now an even more serious obligation as a part of the debt you owe our congressional friends to justify their confidence in having made Kings Point a permanent institution.

You can do the job, I know. Your salesmanship qualities have been demonstrated amply by the untiring devotion displayed and the hard work done by so many of you in "selling" Kings Point to the Congress.

I realize it is dangerous for me to single out any one individual for special mention in this regard, but I cannot refrain from suggesting that particular thanks are due to Joe Baker, whom I well remember as a bewildered plebe. Were I to expand the list, I would be here for hours, but those of you who gave your time, and refused to acknowledge frustration, may carry on with that most comforting inner satisfaction that comes from the knowledge of a job well done.

As a matter of fact, I hold to the belief, very strongly, that a Kings Pointer is capable of doing about anything he sets his heart and mind upon—and doing it well. My duties during the past 5 years or more have necessitated a lot of traveling—over our own country and to places abroad. At practically every place I have visited, I have encountered Kings Pointers—as officers on merchant ships—as naval officers on active duty—as responsible officials of steamship companies—in Government departments—as students in my classes at Georgetown—and in a variety of other endeavors. I have never met one without experiencing an inner welling of pride and admiration. And I have heard many flattering things said of Kings Pointers by senior naval officers and shipping executives.

I consider myself fortunate to have had the opportunity to observe so many graduates in action, afloat and ashore, in so many diverse locations. Their generally fine performance is rather convincing evidence to me that the Kings Point concept of merchant marine officer training is basically sound in principle.

Such was the belief of Admiral McNulty when, over 30 years ago, he conceived the idea of a Federal academy for maritime training and, thereafter, expended unwavering devotion to bring such an institution into being.

Although the concept may be basically sound, this should not be taken to mean that it is not susceptible of refinements and improvements, and subject to prompt adjustment to adapt it to the necessities of whatever changes may arise in the industry's operating techniques.

To me, the academy at Kings Point is something more important than just a group of attractive buildings and a beautiful campus. It has the potential to be something more than just a place of instruction. It holds marvelous possibilities as a national center of research and experimentation in all fields related to the maritime industry and its problems. I earnestly hope these possibilities will be explored thoroughly and that full advantage will be taken of all that Kings Point has to offer.

I have studiously avoided any reference to the vital importance of our merchant marine to our national security, or as an auxiliary to our Armed Forces. My purpose in this deliberate omission is to emphasize the economic considerations, because I believe it is on the basis of such considerations that our merchant marine should be "sold" to the American public.

To me, our need of a thriving merchant marine as an essential instrument of national defense is so self-evident as to require no discussion. Our experiences in two

world wars and the recent Korean incident have pointed up this fact in a manner much more convincing than any words of mine might convey.

As most of you know, I am connected with the Military Sea Transportation Service—probably the least understood of any of our defense activities—and, also, one of the most consistently badgered on all sides by legislators, shipping industry associations, and labor representatives alike. It is usually described as a Government-maintained competitor of the American shipping industry. Actually, it is the best customer-shipper most of the lines have.

The misunderstanding about MSTS stems, principally, I think, from a lack of knowledge or appreciation of the scope of our present-day international commitments, and the extent to which we are maintaining military installations in the farflung reaches of the world, from the Arctic to the tropics. These commitments and the uncertainties of the existing world situation make it mandatory for our security that the Department of Defense have under its direct control, and immediately responsive to military authority, ships of appropriate types in sufficient number to meet minimum logistic needs in the event of sudden emergencies and as a base for prompt expansion under conditions of war.

In the more than 5 years I have been with MSTS, I have become firmly convinced that while the private shipping industry can serve the ocean transportation needs of the Department of Defense to a substantial degree under present conditions, it has definite limitations. Certainly, it is to be hoped we may look forward to an easing in world tensions and the full resumption of normal channels of trade sometime in the future. In anticipation of such a happy state, the shipping industry cannot, or should not, relax in continuing concentration on the maximum commercial utilization of its fleets if we are to attain and retain that place in world shipping to which we all aspire.

Agribusiness

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am inserting at this point an editorial from the Town Journal of May 1956, on the subject of Agriculture. This is a timely editorial and points out the extent of agriculture and its effect upon our economy:

IT'S AN AGRIBUSINESS PROBLEM

Nearly two-fifths of all business in this country connects with agriculture. That includes every enterprise that sells things to farmers and every enterprise that handles what farmers produce.

"Agribusiness" has come into use to describe this whole range of activities. It extends from iron mine to hardware store, from corn field to supermarket meat counter. Dr. John H. Davis, of Harvard Business School, formerly Assistant Secretary of Agriculture, has invented this useful word.

Dr. Davis has logically pointed out that the so-called "farm problem" is in every way an agribusiness problem. Farmers are not its sole owners. Directly involving 40 percent of our economy, indirectly it affects all. The merchant on Main Street, the motor manufacturer, milkman, miller, miner, and meat packer all operate in agribusiness. The people who work for salaries or wages for these people are directly involved in it, too.

Two major developments have created the present farm problem.

One has arisen because high price supports were continued much too long. They prevented farmers from making normal adjustments to changing demand. Worse, they piled up the more than $11 billion mountain of products in Government hands, where they can't be sold in this country while they depress prices.

Congress, approaching the matter in a highly political mood, produced a conflicting, unworkable bill which the President vetoed. Congress can yet, if it will, adopt the useful soil-bank plan, and take other steps. Governmental mistakes built up the mess and have badly hurt farm income; Government has a responsibility for correcting its own mistakes. All agribusiness has a stake in seeing that this constructive action is taken.

The other major cause of the unbalanced situation has grown naturally. One farm worker now produces enough food and fiber for 18 consumers—twice as many as 30 years ago—and each acre yields more. Research and ingenuity have improved power, machinery, seeds, fertilizers, chemicals and other means to raise output. Farmers know how to use them.

The trouble arises from the fact that means to increase production have grown much faster than ways to expand markets and increase utilization of the farm output.

This, too, concerns agribusiness. Every town where farmers do their trading can be helped by better markets and more uses for what farmers sell.

Millions of people drink frozen orange juice now who bought but few oranges 10 years ago. That is only one example of how research has greatly enlarged the market for a farm product. Vastly increased research on the marketing and new-uses fronts is needed to catch up with the marvelous job that production research has done. The actual dollars and manpower in such newer kinds of research are pitably below what we've spent to help farmers produce more.

Sensible Government action to remedy past mistakes in legislation must be taken. But by itself no law will bring farm incomes up to proper levels. The agribusiness problem has a multitude of parts. Aggressive salesmanship, aggressive research, along with constructive legislation, can work it out, one part at a time.

Our farm surplus is only between 4 and 5 percent of the total farm output. Surely American ingenuity can find markets and uses enough to handle that much. Why not try that approach to the "farm problem"?

A Method To Encourage Employment of the Aged

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. MORANO. Mr. Speaker, in recent years science has made tremendous advances in the conquest and control of infectious and degenerative diseases. Life expectancy of Americans has increased as a result.

The average age of persons eligible for gainful employment has also increased. However, American employers have not revised their long-standing prejudice against hiring people of middle age and beyond, even though such persons are otherwise well qualified to perform the duties of the job.

Of course legislation might be enacted to prescribe discrimination against job applicants because of age but such legislation would undoubtedly be difficult and expensive to enforce and would probably not be very effective.

I have therefore introduced today a bill whose purpose is to effectively encourage the employment of mature and qualified citizens by a fair and persuasive but noncoercive method which would be practicable and inexpensive and self-operating.

The present revenue act allows employers, in computing taxable income, to deduct 100 percent of all wages and salaries paid to employees. My bill would amend the revenue act to permit employers to deduct from gross income, in computing taxable income, 101 percent of wages and salaries paid to employees between the ages of 60 and 61; 102 percent of wages and salaries paid to employees between the ages of 61 and 62; 103 percent of wages and salaries paid to employees between the ages of 62 and 63; 104 percent of wages and salaries paid to employees between the ages of 63 and 64; and 105 percent of wages and salaries paid to employees between the ages of 64 and 65. Thereafter, the tax deductions could rise by 1 percent as the employee increased in age beyond 65 and remained employed. The maximum deduction should not exceed 115 percent of such wages or salaries paid—but to reach 115 percent the employee would have to be 75 years old. The foregoing increased deductions should apply only to the first $5,000 of wages and salaries paid to each such employees in any tax year; and employers should be limited to the usual 100-percent tax deduction with respect to that part of any wages or salaries in excess of $5,000 paid to any such employees in any tax year.

Of course, such proposed increased tax deductions would slightly affect Federal revenues but this would be offset by the taxes on the income of citizens who otherwise might not be employed at all. More important, however, than the effect on Federal income is the immeasurable benefit to the country by effectively encouraging the employment of its mature and qualified citizens at a time when the number of our mature citizens is constantly increasing.

Unionism: This Is Big Business

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks the following article by Mr.

Russell Turner which appeared in Human Events for May 5 entitled "Unionism: The Growing Big Business":

Whether it's good or bad depends on the individual point of view. But whatever the view, the fact remains that unionism has become one of the Nation's biggest businesses; that its influence is reaching into every nook and corner of the Nation's economic and social structure; that it is achieving a political power rivaling anything known in American history.

Nowhere is this more true than right here in the Nation's Capital, which now houses the headquarters of 42 national labor unions representing some 6,500,000 workers, plus the national offices of the newly unified AFL-CIO and 2 additional unions which are moving their headquarters here this spring from other cities. Of major significance is the fact that 11 of the 42 have moved their headquarters here from other parts of the country in approximately the last decade.

The explanation of union leaders for this Washingtonward trek is that it facilitates maintenance of relations with other unions headquartered here and with governmental agencies with which they must deal, such as the National Labor Relations Board and the Department of Labor.

The explanation of all realistic observers is that the unions want their headquarters handy to the seat of Government, so that they can impress that impressionable Government with their economic and political power and influence.

It is by being here in Washington that union leaders can exercise their most effective influence on the policies of Government, both legislative and administrative. They need not even bother registering as lobbyists to do it. Cocktail party or luncheon conversations with legislators or executive department functionaries are far more effective in putting across a union's point of view than testimony before a congressional committee or a quasi-judicial agency hearing.

Furthermore, the same legislators and functionaries cannot help but be impressed when they see unions spending multiple millions of dollars for swank new buildings just to house their headquarters offices.

For example, the bumptious, freewheeling International Brotherhood of Teamsters, with a claimed membership of 1,400,000 (and growing rapidly) last year moved its headquarters into an ultramodernistic, marble-faced, plush-officed edifice three blocks from Washington's Union Station, on the construction of which it had just spent $5 million. It is directly across a small park from the Senate Office Building.

The teamsters' union has no legislative representative, none of its officers or employees even are registered as lobbyists. They piously profess disdain for such out-of-the-union-line activities.

But if a Senator happens to look out his office window on a contemplative moment, and sees the roof-gardened, tinted-glass-windowed Taj Mahal across the park, his thoughts may stray back to views on some pending legislative matter which were expressed at X's party a few days ago by an official of the teamsters' union. Quite conceivably, it might pass through his mind that he should consider carefully before crossing an organization powerful enough to erect such a structure just to provide office space for some 100 headquarters employees.

A Representative driving by the building, or viewing it from a back window of the Capitol itself, might well have the same reaction.

Other union headquarters' buildings may not be quite so strategically located, but they are impressive nevertheless. Some $3,500,000 is going into the soon-to-be-completed AFL-CIO headquarters building just across Lafayette Park from the White House. The Machinists Union has just moved into its still-being-completed $2,500,000 building on Connecticut Avenue just off famed Dupont Circle; the operating engineers are erecting a $2 million structure across 17th Street from the Mayflower Hotel; the electrical workers are being relatively pikerish with the $750,000 job they are putting up on 16th Street, one block up from the Statler Hotel. Old buildings presently are being razed to make way for a new home for the Bakery Workers Union across the street from the Statler; the United Steel Workers have bought property in the same block for a reported $1 million on which they apparently plan ultimately to erect a headquarters.

Some unions admittedly and openly indulge in lobbying, and so register under the 1946 Federal Lobbying Regulation Act. A congressional quarterly compilation of lobbying registrations and spending reports for 1955 shows 20 unions thus listed; 6 of them, however, are post office employee groups which in effect must bargain with Congress on such matters as wages and hours.

The AFL and CIO filed separate reports for the 11 months of 1955 prior to their merger, and a third report covering unified activities in December. Together, the three reports listed 1955 expenditures for the purpose of influencing legislation totaling $236,011—which would have been twice the amount so spent by any other oganization. The leading lobby spender for the year was the National Association of Electric Companies with $114,835. The six postal workers' unions, in their separate ways, together spent a total of $226,757.

These reports, in a major sense, are highly misleading, in that, as mentioned above, much of the most effective lobbying comes on a person-to-person basis and is far beyond the reach of any lobbying-expenditures report. That person-to-person influence, however, is tied in not only with the open manifestations of union power to be seen in such ways as luxurious new office buildings; it is tied in perhaps even more directly with the growth of another arm of the octopuslike power of unionism—its burgeoning political activities.

The political power of the labor union movement is becoming so great that, in effect, it threatens to topple of its own weight if given a more-than-gentle legislative nudge. For that weight is growing to the point where it is arousing much resentment in the minds of millions of Americans, including millions of unwilling dues-paying union members—resentment against union bosses who are trying to dictate a form of socialistic welfare state in lieu of the traditional free-enterprise system under which this Nation has prospered and grown for nearly 200 years.

That resentment is comparable to the unrest of a half to three-quarters of a century ago over the conduct of avaricious industrial and financial tycoons—unrest which led to enactment of such regulatory statutes as the antitrust laws and the Federal Corrupt Practices Act. The present-day resentment is headed in the direction of comparable regulation of union activities.

The union bosses realize full well that such feelings are developing throughout the country. Yet, even as they seek with one hand to allay the public fears and resentment with protestations about labor merely seeking to protect its rights, they drive ahead relentlessly with the other hand toward their goal of outright domination of all legislative and governmental processes.

For example, the official political arm of the AFL-CIO is its committee on political education, purportedly financed entirely by voluntary contributions in order to get around the Taft-Hartley law's ban on expenditure of union funds for political purposes. It is known as COPE.

The March 31 issue of the AFL-CIO News bore this headline across the top of its front page: "COPE Opens Dollar Drive to Protect Labor's Gains."

What this quaintly euphemistic union-ese means is that the AFL-CIO bosses would like a $1 contribution to the COPE campaign kitty, please, from each of the roughly 15 million AFL-CIO members.

No one seriously believes there is the remotest possibility that COPE will succeed in its dollar-per-member drive. But union bosses are persuasive; shop stewards, for instance, are highly influential among, and frequently greatly feared by, their constituents. It is entirely conceivable that COPE may gather in a dollar a piece from a third, perhaps a half, of the 15 million AFL-CIO members; some will give more than a dollar.

That will mean a COPE campaign fund of somewhere between five and ten million dollars, to be parcelled out as its managers see fit; a truly substantial sum, as campaign funds go.

This kitty will be used to promote the candidacies of liberals who, as legislators or executive officeholders, would be amendable to suggestions from the AFL-CIO or its affiliates. The major point of amenability this year in State races will be adamant opposition to right-to-work laws; in congressional races, support for repeal of the Taft-Hartley law's section 14b, which legalizes such State statutes. This is the big issue of the moment, to labor unions. This also is what the AFL-CIO News means when it says, "To Protect Labor's Gains."

But as substantial as it is, this prospective five-to-ten-million-dollar COPE kitty takes no account of other millions which will be siphoned from regular union treasuries into political channels by various means.

When it wrote the ban on union political exependitures into the Taft-Hartley law in 1947, Congress thought it would keep unions out of politics, just as corporations are prohibited by law from engaging in political activities. The ban has failed.

As a "for instance," there is the case of the United Automobile Workers, headed by the far-left Walter Reuther. The UAW for some time has sponsored regularly certain radio and TV news programs in Detroit. During the 1954 Congressional campaign, the UAW's commentator presented several Democratic candidates on these programs, interviewed them in the most favorable light, and openly stated the union's endorsement of them.

The UAW was indicted on charges of violating the Taft-Hartley law's no-politics clause; the violation, on the surface, appeared clear. But appearances can be deceiving a Federal judge in February ruled that since the UAW paid for the programs regularly, its endorsement of the Democratic candidates was not a political activity but rather was a valid exercise of its freedom of speech.

The political organization financial reports, filed with the clerk of the House of Representatives in compliance with Federal law, also indicate other means of evading the Taft-Hartley no-politics clause. The Senate Republican policy committee staff has gone through those reports, and compiled a full listing showing that union political arms spent $1,978,564 in connection with the 1954 congressional campaigns.

Theoretically, all of this money was accumulated through voluntary donations. But even here there are gimmicks. Again, we cite the UAW as a case in point.

The CIO-PAC reports are broken down into two sections—an "individual contributions account," and an "educational account." Presumably the first is for outright politics, the second merely to educate union members.

During the year 1954, and prior to election day, the UAW made six contributions to the national CIO-PAC educational account totaling $150,769. Coming from the union, the money must have come out of its general treasury and thus from its regular dues and initiation fees.

During the same period, there is listed an expenditure from the CIO–PAC educational account of $5,000 to the Michigan State CIO Council. Under the individual contributions account are listed these expenditures for 1954: May 17, Moody (the late Democratic Senator) for Senator committee, $2,500; August 13, 2 items to the UAW–PAC for $15,000 and $10,000; October 6, $5,000 to the (now-Senator PAT) MCNAMARA campaign committee, $3,000 to the Wayne County (Detroit) CIO committee, and $1,000 each to 3 Democratic congressional candidates in Detroit.

On their face, these reports seem to show the UAW contributing financially to the campaign funds of various candidates through the CIO–PAC. There undoubtedly are a substantial number of Republican members of the UAW who take a dim view of having their dues payments go for such purposes but, being a minority, they are unable to stop their union's leftist bosses.

Like the lobby reports, the political expenditures reports also are misleading, in that they give no hint of the amounts being ladled out by unions for the succor of favored candidates in local and State campaigns. Nor do they give any hint of items such as the UAW news program endorsements.

There is a growing tendency for Members of Congress, in private conversations, to say they think the time has come when unions should be subjected to the same antitrust and Corrupt Practices Act regulations as now apply to corporations. But Members of Congress are human; they face elections this fall; they are loath to incur new enmity by expressing these thoughts openly.

It should not be so. Few Americans quarrel with the Corrupt Practices Act ban on political expenditures by corporations; there should be no more quarrel with imposing the same ban on unions whose funds are collected from members required to join in order to hold their jobs.

Only by such a ban—and an effective one, with teeth—can the dangerously growing political power of unions be curbed. The national welfare demands that it be curbed.

Realtors, Mortgage Brokers, Savings and Loan Associations, and Private Citizens Endorse H. R. 10469

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. FASCELL. Mr. Speaker, an early extension of the GI home-loan-guaranty program has been endorsed by newspapers, veterans' groups, labor, homebuilders, mortgage bankers, the President's Bradley Commission, and appliance and furniture manufacturers, wholesalers and retailers.

Realtors, mortgage bankers, savings and loan associations, and private citizens have now joined in urging that immediate consideration be given to an extension of this important program.

H. R. 10469, a bill I introduced April 12, would accomplish this extension and provide for a gradual, rather than an abrupt, termination. The following are a few of the comments which I have received from business people in the Fourth Congressional District of Florida:

DEAR DANTE: Congratulations.

Just finished reading your speech on extension of GI home-loan program.

Magnificent.

Only last week at the Miami Board of Realtors meeting we discussed your brilliant action and I felt proud to add my humble voice to all the others, praising you.

As always.

Sincerely,

RENZO ABBONDANDOLO,
Realtor.

CORAL GABLES, FLA.

DEAR MR. FASCELL: Mr. Keyes has been on an extended trip from which he will return to Miami around May 9, but rather than wait until he returns to the office he asked that we express to you now his hearty commendation of your introduction of H. R. 10469 and your active interest in seeing that it is passed. You deserve much credit for your efforts and Mr. Keyes wants you to know that he appreciates very much the work you are doing on behalf of this matter.

Cordially.

KATE CONSTANCE,
Secretary to Kenneth S. Keyes.

MIAMI, FLA.

H. R. 10469

DEAR SIR: In behalf of this association I should like to inform you that we are pleased to learn of your introduction of the above bill for extending the GI home-loan program.

For all of our 95-member brokers please let me take this opportunity of extending to you our congratulations on your fine presentation for extending the GI home-loan program.

Respectfully,

SOUTHWEST REAL ESTATE BROKERS' ASSOCIATION,
WILLIAM W. FLANAGAN,
Executive Secretary.
LESTER R. MAXWELL, *President.*

MIAMI, FLA.

DEAR DANTE: I think you've taken a wonderful step in the right direction in introducing H. R. 10469. It certainly would be a terrific blow to the veterans and to the building industry in south Florida, and throughout the country if the home loan benefits to veterans of World War II are not extended.

Sincerely,

J. I. KISLAK MORTGAGE CORPORATION OF FLORIDA,
JAY I. KISLAK, *President.*

MIAMI, FLA.

DEAR DANTE: On behalf of the Greater Miami Federal Savings and Loan Association, I wish to compliment you for the introduction of bill No. H. R. 10469. This bill will be of great benefit to the veterans and I know will be greatly appreciated by the veterans.

With kindest personal regards, I remain,

Yours very sincerely,

GREATER MIAMI FEDERAL SAVINGS AND LOAN ASSOCIATION,
(BOB) ROBERT M. MORGAN, *President.*

MIAMI, FLA.

MY DEAR CONGRESSMAN FASCELL: Thank you very much for the copy of your speech made in the House regarding the extension of the GI home-loan program. I have read a newspaper summary of the legislation you have introduced and wholeheartedly support your recommendations.

Many of us realtors feel that any attempt to spread out the GI housing program will be beneficial. Our land costs have risen so fantastically in Dade County that it has become economically impractical to construct houses in the $8,500–$10,500 price bracket for which there is a tremendous demand. Certainly a rush to utilize the VA guaranty before the 1957 expiration would aggrevate this unfortunate land situation beyond imagination. Somehow there must be a restraining influence; your bill will be a major contribution.

There are many of us younger builders and realtors who are giving a great deal of thought to tomorrow.

Sincerely yours,

SUBURBAN REALTY CO.,
JOSEPH A. FRIEDMAN, *President.*

NORTH MIAMI, FLA.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. DODD. Mr. Speaker, May 10 is Rumanian Independence Day. It is only fitting that we should remember this day, for it serves as a grim reminder of Communist aggression and subversion which made captive satellites out of the once free nations of Eastern Europe.

An unwilling pawn in the power struggle of Nazi domination and Soviet Communist conquest, Rumania has long been a land of suffering. The high hopes which Rumanian patriots had for their country when on May 10, 1866, they crowned Charles, Prince of Rumania, and thus founded the Rumanian dynasty, have been badly shattered. Today, Rumania lies prostrate in the tight grip of the Soviet Union, which not only enslaves these proud people, but robs them of their national resources to help pay for the Communist trade offensive.

The Kremlin's tyrants who rule the country are trying their best to eradicate May 10 from the memory of the people. They have replaced Independence Day with the Day of Soviet Victory, which falls on May 9. But when the alien flags are hoisted on May 9, it must remind the Rumanian people of their own Independence Day. To them it is but a sign that the day will come again when they will rid themselves of the foreign oppressor and the local quislings who take their orders from the Kremlin.

I believe that the days of party boss Gheorge Gheorghiu-Dej and of his henchmen are numbered. They came to power under Stalin. But Stalin himself has now been toppled from his exalted position, and with him will topple all those who owe him allegiance. We have seen it happen in recent weeks in Bulgaria, in Poland, in Czechoslovakia. Though the Rumanian Communists are trying to postpone the day of reckoning, though they still are slow in following the de-Stalinization line prescribed by their masters in the Kremlin, they cannot escape the inevitable. As Stalin rid himself of those who became inconvenient to him, the new Kremlin bosses will not hesitate to liquidate those of their underlings who have become politically inexpedient, for communism devours its own children. May its appetite increase.

On May 10, we salute a suffering nation which has lost its independence through no fault of its own, but was the

tragic victim of brute Communist force. On this anniversary of their independence, we assure the Rumanian people that they do not stand alone, or abandoned, in their aspiration for freedom. Let us remind them of our pledge, which is part of official United States foreign policy, that the people of America will never consent to their continued enslavement; that the United States will continue its efforts to correct the wrong, and relieve the suffering, which has been brought upon helpless nations by Communist aggression, subversion, and betrayal.

A Lamentable Performance

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Daily Globe of May 8, 1956:

A LAMENTABLE PERFORMANCE

The meeting of the Council of the North Atlantic Treaty Organization, at Paris, has ended lamely indeed. Far from revealing any bold confrontation of the urgent problems weighing on the alliance, the foreign ministers of the 15 member states have returned to their respective capitals trailing wisps of diplomatic fog.

Through these it is possible, nevertheless, to perceive the realities they failed to tackle, and the devices by which they would disguise the meagerness of their achievement. To understand the situation it is necessary to take note again of the issues NATO faces because of Soviet Russia's shift of policy last year. For it was then that NATO first began seriously to experience difficulties.

NATO was conceived as a purely military counter by the West against a very real threat of armed aggression from the East, in 1949–50. It now faces a Russia which, while continuing to build military power assiduously, has altered its entire political approach to the outside world.

This substitution of the diplomacy of trade, conciliation, and repudiation of Stalinism does not, however, proceed in a void. Simultaneously, Russia is swiftly integrating her European satellites, has endowed them with new 5-year plans, and already has begun to utilize the massive economic resources the process makes available further to buttress her diplomacy.

While this consolidation proceeds, the impact of her maneuver has made itself felt throughout the world, especially in Europe and the Middle East. At the same time, circumstances have tended to loosen NATO's military and political ties in Europe. Its professed military goals in strength have been tacitly shelved as no longer realistic.

Worse: Member Iceland demands elimination of NATO bases; member France is forced to drain away her NATO military components to north African wars; Denmark and the Low Countries flatly reject NATO's plea for 18 months' military service; West Germany's rearmament is tangled in threats of dislodgement of Chancellor Adenauer from power, while Bonn's finance minister flatly refuses any longer to support NATO forces on German soil. Member Greece is quarreling with member Britain. It is needless to continue.

This situation points up the three tasks which the latest conference of NATO foreign ministers—the NATO Council—obviously should have tackled with imagination and statesmanlike courage. They should have taken immediate steps toward rethinking NATO's military role, adapting it to the altering problems it faces; devised a method of coordination on the political level which would be limited, workable, and immediate in application; and defined clearly NATO's role vis-a-vis Russia's economic offensive. They did none of these.

Instead, the Council contended itself with platitudes. NATO's military posture, for instance, according to Mr. Selwyn Lloyd, the British Foreign Secretary, "is virile and robust." On the political side (doubtless with the election campaign in mind) Secretary Dulles proposes a vague continuous cabinet for NATO, endowed with powers "only a little below those of foreign secretaries," to assemble, sometime, after "three wise men," solemnly appointed for the task, bring in a study next winter about NATO's possible political and economic policies.

The simple, practical expedient of having the NATO Council meet quarterly to face issues apparently seemed too dangerous. Contradictory interpretations of all this nonsense are already rising among NATO members. The performance will scarcely disturb Russia. It should very seriously disturb all friends of NATO.

UNCLE DUDLEY.

Pennsylvania Salutes the National Gallery

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the April 1956 issue of Readers' Digest:

OUR NATIONAL TREASURE HOUSE

(By Andre and Assia Visson)

No visit to Washington, D. C., is complete without a tour of the National Gallery of Art, the impressive, dome-crowned building of pink-white marble that stretches over three city blocks on the north side of the Mall which connects the Capitol with the Washington Monument and the Lincoln Memorial. Through its heavy bronze and steel doors, 40 feet high, more than 24 million visitors have passed since the gallery was opened in 1941. Now recognized as one of the world's 4 or 5 great art museums, the National Gallery belongs to the people of the United States; but it owes its existence to one man.

When Andrew William Mellon came to Washington as Secretary of the Treasury in 1921, he was reputed to be the wealthiest man (banking, steel) ever to hold a Government job. A man of vision, he predicted that Washington would become the center of the Western World. He wanted it also to be one of the world's great cultural capitals, a source of pride for every American. No one, however, suspected that he would use a large portion of his wealth to that end.

One day in 1927 Mellon disclosed a scheme he had been turning over in his mind. To David E. Finley, his young Special Assistant at the Treasury, he said: "Washington should have a national gallery to rank with those of London, Paris, Rome, and Madrid. Since a congressional appropriation is unlikely, I'm willing to put up the building myself and offer it, together with a collection of paintings, to the American people. I want you to head up this gallery."

Finley accepted the assignment, and during the following years helped plan the bold project.

The millions who visit the National Gallery today can hardly imagine the effort that went into assembling its treasures. It took most European museums centuries to gather their priceless collections. They inherited the art treasures of Europe's royalty, and European governments have always found funds to preserve and increase their national collections. But American museums must depend on donations from private collectors.

Andrew Mellon had started his own collection as a young man. Traveling abroad in 1882, he bought an old painting for $1,000. His business friends were shocked. How could this astute young industrialist pay so much for a canvas?

Mellon went on buying paintings, however—but only those that appealed to him. He turned down a portrait by Raphael merely because the sitter had an "evil face." The French 18th-century masters were too lavish with their colors and their nudes for the Pittsburgh Presbyterian. His preference went to pleasant Dutch and English paintings, which he found both inspiring and relaxing.

Soon, as his momentous project got under way, his approach to collecting changed. For his country he wanted nothing short of the best.

He learned that the Soviets were willing to sell a few masterpieces from the Czar's famous collection at the Hermitage Palace. So, in 1930 and 1931, Mellon acquired 21 of the paintings at a cost of more than $7 million. Among them was Titian's Venus With a Mirror, a nude which he would not have hung in his own house, but which he knew should have a place in a great gallery, and for which he did not hesitate to say $544,000. He gave $745,000 for Raphael's 8 by 11 inch St. George and the Dragon, and $838,000 for Botticelli's Adoration of the Magi. His top payment, $1,166,000 went for Raphael's famous Alba Madonna.

When Mellon left the Government in 1933, after 11 years as Secretary of the Treasury and 1 year as Ambassador to England, he decided the time had come to push his long-cherished project to completion. He chose famed architect John Russel Pope to design the gallery. "Never mind the cost," Mellon said, "it will be a building to last for centuries."

Together they selected the finest building materials: Tennessee pink-white marble for the walls, because it absorbed the sun instead of reflecting it like white marble; Italian dark-green marble for the 24 columns in the central rotunda; green marble from Vermont, gray marble from Tennessee, American fumed oak for the floors.

"It will be quite expensive," warned Finley.

"Just so it doesn't look expensive," answered Mellon, who hated ostentation.

As a result of the constant search for the finest materials and the latest air-conditioning and air-purifying equipment—to protect and increase the life span of the old paintings—Mellon had to raise his building budget from $9 to $15 million. In addition, he gave a $5 million endowment for new acquisitions and other expenses. Then, 1 month before announcing his donation, he suddenly decided that the masterpieces he had gathered during half a century were inadequate. Certain schools were not sufficiently represented.

Laid up with a bad cold, he called David Finley. "Take the first train to New York. Go to Duveen [Lord Duveen, one of his favor-

ite dealers] and pick up the best pictures he has been concealing. I know he has bought many masterpieces during these depression years."

Finley spent 3 days with Duveen, and together they brought to Washington 30 paintings and 21 sculptures—masterpieces of the Italian, Flemish, and English schools from the 14th to the early 19th century. Duveen rented an apartment below Mellon's, and there placed all his treasures under armed guard. A month later, at the luncheon table, Mellon concluded the greatest single art transaction ever made. He bought 18 sculptures and 26 of the paintings—for $11 million.

A few days later Andrew Mellon, now 81, sent a letter to President Roosevelt offering the Nation his $35 million collection of 126 paintings and 26 sculptures, together with funds for building the gallery.

He set only two conditions: First, his name was not to be connected with the gallery. A genuinely modest man, he did not want America's National Gallery to be thought of as a memorial to him. Second, the trustees should see to it that all art collections donated later were of the same high quality as his.

The opening of the National Gallery of Art on March 17, 1941, was a national event. It brought to the Capital 8,800 invited guests from all over the country. Unfortunately, Andrew Mellon could not hear their lavish praise. He had died in 1937.

But his hopes were already being fulfilled. In 1939 the gallery had received another great collection: 375 paintings and 18 sculptures of the Italian school from Samuel H. Kress, another multimillionaire originally from Pennsylvania. It was the most complete collection of Italian art ever brought together by one person. Kress had intended to establish a museum of Italian art in New York, but Finley persuaded him to bring his collection to Washington. Finley, Mr. Kress, and John Walker, a young scholar of Italian art who had been appointed chief curator of the gallery, selected the Kress masterpieces to come to Washington. With recent additions from Rush H. Kress and the Kress Foundation, Kress paintings and sculptures now form the largest collection in the gallery.

Curiously enough, a third highly important donation also came from a native Pennsylvanian. Joseph Widener, of Philadelphia, presented his collection of 100 paintings to the gallery in 1942. Among them were 14 Rembrandts, 2 of the rarest Vermeers, 8 Van Dycks, 1 Raphael, and 2 El Grecos. And with them came magnificent Italian Renaissance sculptures and an invaluable assemblage of rare furniture, small bronzes, tapestries, prints, and Chinese porcelains.

Another important collection is that of Chester Dale, now president of the gallery's board of trustees. A New York investment banker, Dale began in the 1920's to invest several million dollars in great French impressionists and post-impressionists, including Renoir, Degas, and Cézanne. Incidentally, the canvases he bought rose higher in price than any other paintings—modern or old.

The National Gallery also brought together an important collection of 763 American paintings. Covering 2 centuries of United States art, it contains works by America's best painters—from Gilbert Stuart and John Copley to Winslow Homer, James Whistler, Mary Cassatt and Childe Hassam. Among the canvases are nine contemporary portraits of George Washington.

On its opening night the National Gallery had on view 555 paintings and 61 sculptures. This year, on its 15th anniversary, it offers its visitors 960 paintings, 209 sculptures, a collection of 1,306 small bronzes, as well as antique furniture, tapestries and china. Moreover, it has in storage about 800 additional valuable paintings. And its print collection, thanks largely to a gift from Lessing J. Rosenwald, another Pennsylvanian, has jumped from 399 items in 1941 to 21,618 in 1956.

The setting in which these collections are placed is impressive. Entering the 100-foot-wide rotunda of the central hall, with its 16th-century Italian bronze fountain and 24 massive marble columns, visitors hush their voices is if in cathedral. Right and left from the rotunda run two long halls with French and Italian sculptures. These open into two garden courts, which feature 17th century French lead fountains that once stood in the gardens of Versailles. Around the halls and garden courts are 90 exhibition rooms. On Sunday nights the gallery's orchestra gives a free concert in one of the garden courts to audiences of as many as 1,000 persons.

A question frequently asked by visitors—"How much are the collections worth?"—is not an easy one to answer. Masterpieces are priceless because they cannot be replaced. But the market value of the collections is estimated to be about $300,000,000. To replace the building itself would cost more than $50 million today. For all this, American taxpayers have laid out only $15 million, for upkeep.

But the educational and spiritual value of the National Gallery is infinitely greater. The permanent collection as well as the loan exhibitions from French, German, Austrian, Italian, Japanese, and Spanish museums have offered millions of Americans an opportunity to become acquainted with the world's cultural past without leaving their own land.

The National Gallery was one of the first museums in the world to open an educational department on a national scale. School children are brought in by busloads, and the gallery also sends prints, slides, and film strips to schools all over America.

Many art students from abroad now come to Washington to study old masters of their native lands. Visiting statesmen take time from their official schedules to admire the collections. German Chancellor Konrad Adenauer told a reporter, "I have visited all the European galleries, and I think this one should be a model for them all."

Immediately after its opening in the war years, the gallery had 6 times as many visitors as the National Gallery in London, 6 times as many as the Paris Louvre in the prewar years. One soldier wrote in the visitors' book, "From 37 months of jungles to the rare beauty of art brings tears of joy from my heart to live again." A servicewoman wrote what millions of other visitors must have felt: "I'm proud of America."

Twice a month a group of wives of Government officials comes for a guided tour. Mrs. Sherman Adams and Mrs. Harold Stassen pay frequent visits to paint copies of the gallery's masterpieces. Many Government workers drop by during lunch hour. A riveter from New York who recently took up painting visits the gallery every year; having helped construct the dome, he has a personal pride in the place.

Washington taxi drivers taking their fares to the gallery no longer call it the "Mellon Galley," as they did 15 years ago. Andrew Mellon would have been pleased at this: his great objective has been achieved. The gallery he donated to the American people is now truly national, and it has made Washington one of the great art centers of the world.

Series of Hearings To Be Held by Joint Committee on Atomic Energy

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. DURHAM. Mr. Speaker, I wish to announce to my colleagues of the House a series of hearings to be held by the Joint Committee on Atomic Energy starting Tuesday, May 15, to explore ways and means and develop, if necessary, legislative assistance for expediting the critically important program for the peacetime application of atomic energy. I feel impelled to make this announcement—as did the chairman of the committee yesterday in the Senate—because of the extremely important nature of these proceedings.

For many months the Joint Committee on Atomic Energy has been carefully studying the progress of commercial application of atomic energy both domestically and in foreign countries. Last summer, for example, members of the committee attended the Geneva Conference as official observers and had an opportunity to study the status of progress in foreign countries.

When the current session of Congress reconvened, the committee conducted a series of comprehensive hearings to explore the development and status of peacetime applications of atomic energy here in the United States. These hearings were held under the statutory obligation of the committee to conduct such a review during the first 60 days of each session of Congress.

In addition to the foregoing, the committee a year ago established a panel of outstanding representatives of industry, science, and labor to study this same problem. The committee has before it for its consideration the report on the status of the peacetime applications of atomic energy of this group of men together with their recommendations.

As a result of these detailed studies and hearing one problem assumes major importance and that is the question of the financial liability of manufacturers and operators of nuclear reactors to the public in the extremely remote event of an operating accident.

Previous testimony received from representatives of the manufacturing and operating companies was to the effect that this was a major roadblock to further progress in the construction of reactors for power generation. For this reason the committee held an informal seminar of these representatives, together with spokesmen from the leading insurance firms and other interested organizations. This seminar was most beneficial in that for the first time, the committee was able to receive directly in an atmosphere of informality the views of all interested parties on this extremely critical problem.

As a result of the committee's long and thorough study of the problems involved, certain legislation has been introduced by members of the committee which have been designed to cope with these problems. The committee has before it for consideration during the forthcoming hearings to which I referred to above, commencing Tuesday, May 15, four bills: H. R. 9701, introduced by my colleague the gentleman from Illinois [Mr. PRICE], and H. R. 9802, introduced by the gentleman from New York and former chairman of the Joint Committee on Atomic Energy [Mr. COLE], both of which deal in different ways with the insurance problem. These two bills in effect would obligate the Federal Government to assume varying degrees of liability up to—in one instance—$500 million, in the rare event of an accident to a privately owned power reactor. The problem here, Mr. Speaker, is the apparent inability of regular insurance companies to provide at an economical price sufficient liability insurance to cover manufacturers and operators of reactors, in the highly unexpected event of a major accident during the course of operation of these facilities.

It is generally the opinion of members of this Joint Committee who have studied the problem over a long period of time and in great detail that the United States is ahead of our competitors on both sides of the Iron Curtain in the development of atomic energy for peacetime purposes. It is just as generally held by members of this committee that this lead is rapidly becoming very tenuous. We feel as time goes along and more information becomes available, that there is an increasing need for additional efforts by this country to maintain this leadership.

Therefore, another purpose of the forthcoming hearings is to develop additional information as to what, if any, other conditions exist both now and in the immediate future which are delaying or could prevent a rapid acceleration of our effort in this field.

Two members of the committee feel that the most rapid progress in the construction of large scale power generating nuclear powerplants can be accomplished by the Federal Government. To this end, identical bills have been introduced during this session and are now before the committee for consideration. My colleague, the gentleman from California [Mr. HOLIFIELD], has introduced a bill—H. R. 10805, which is identical to the bill introduced earlier in the Senate by the junior Senator from Tennessee [Mr. GORE], identified as S. 2725. These bills would authorize and direct the Atomic Energy Commission to build six nuclear power reactors at various locations around the United States to assure advancement of the art, in addition to or in the absence of similar activities of private industry.

If I may, Mr. Speaker, I would like to outline briefly the manner in which the committee plans to proceed in this matter.

Firstly, we are convinced that there is a considerable body of knowledge and fact as yet undeveloped and which needs to be made available as to what the potential hazards are in the operation of large scale power reactors. More specific information must be had as to what the standards are for the safe and efficient operation of such reactors. As an integral part of this problem is the need to know much more of the details of the methods and bases used by the insurance companies in computing the cost of and the limits to insurance coverage which this industry has made available up to the present time.

The committee also needs to develop information on any other roadblock that may now or in the future affect the most rapid progress in this program. The committee's attention has been drawn to the requests being made by private industry for changes to existing laws. For example, hearings have been recently held on a bill to amend the Holding Company Act so as to exclude those private utilities which join together in a common effort to construct a nuclear powerplant, from the provisions of that act.

Many of these same companies feel strongly that any funds they expend for research and development in the atomic energy field should be given special tax treatment.

Secondly, the committee plans to examine in executive session the most recent and up-to-date information available about progress of foreign governments in the peacetime applications of atomic energy in order to make the most current and factual comparison of our position vis-a-vis that of our competitors. To the maximum extent possible following these executive hearings, the committee will endeavor to make public this evaluation insofar as possible.

Thirdly, the committee will receive testimony from all interested parties on the Holifield and Gore bills in an effort to determine if the only manner in which the most rapid progress can be made is by means of a program of governmental construction of nuclear powerplants. To do this in the most impartial and effective way the committee needs to know much more than has been made available to it up to now about specific progress being made on the several projects initiated and financed by private industry. We hope that spokesmen for these organizations will come to us and frankly and candidly discuss their problems, their progress, and their plans for the future.

There are indications that the full responsibility for our progress in the field of peacetime applications of atomic energy may be too large and too technically complex for private industry to carry alone. I refer again to the report of the panel of civilian experts mentioned earlier—known as the McKinney panel. One of its most important conclusions was that if private industry does not or cannot assume the full risks and burdens of the nuclear power development program then the Government must do the job. Therefore, if it appears at the conclusion of these hearings that Congress must make unusual and far-reaching concessions to private industry in addition to providing large-scale insurance or indemnity coverage to bolster up the lagging program, it may very well conclude that a substantial program of direct Government sponsorship and initiative is required to get the job done. This does not necessarily mean that it must be done by means of complete governmental financing and construction of atomic powerplants. It could mean a cooperative undertaking, for example, similar to the arrangements made between the Atomic Energy Commission and the Duquesne Power Co. which will result in the nuclear powerplant now under construction at Shippingport, Pa. Here the Government is building and financing the reactor and private industry constructs and pays for the generating facilities and will operate the whole plant.

At the conclusion of this series of hearings, Mr. Speaker, I am confident that the committee will be able to report to both Houses of Congress what in its collective judgment needs to be done in order to maintain the world leadership by the United States in this vitally important field of the peacetime application of atomic energy. We dare not delay the necessary action any more than we dare to shirk our responsibility in this matter. The Congress will then be in a position to take such steps as it deems necessary to keep our country in the forefront—not only for the great economic benefits to our citizens but to all freemen.

A Remedy for Delayed Sugar Legislation

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. MILLER of Nebraska. Mr. Speaker, I hesitate again to take the floor to plead for action on the sugar bill, but because of the extreme delay in submitting a conference report to the House I feel that I must do so.

To reiterate, last July 30, 1955, the House, at the urgence of the chairman of the House Agriculture Committee, passed a bill amending the Sugar Act so as to give our domestic producers a more just and equitable share of the American sugar market. A part of the market that has been going to the Cuban and Puerto Rican sugar industry would be apportioned to the beet and cane sugar producers in the United States. Congress adjourned before this measure could be considered by the Senate, but promptly after the second session of the 84th Congress convened the other body began consideration of the bill, and on February 8 passed a bill which, in my judgment, is more satisfactory than the one approved by the House. Senate conferees were appointed that same day.

For some reason the gentleman from North Carolina failed to appoint House conferees until March 15, some 36 days after this action was taken by the other body, and then only after he had been repeatedly urged to do so by myself and

other colleagues who are interested in this legislation.

I am now extremely disappointed to learn that the conferees, some 55 days after they were appointed by the House and more than 3 months after they were appointed by the Senate, have not made a report to the House; and, as a matter of fact, they have not held a single meeting. This is hard to understand, because the chairman of the House Agriculture Committee, on July 30, 1955, when this bill was passed, said of the bill: "It is of far-reaching importance because it affects people in far distant places and it vitally affects every one of your constituents."

The fact that the gentlemen have other important legislation to consider does not lessen the urgency or importance of the sugar legislation. It is the farm program to many of my constituents in the Fourth Congressional District of Nebraska, and because of its importance and the extreme delay I may feel constrained on Wednesday next to ask that the matter be brought up on a motion of privilege. I hope, however, that the conferees will make this action unnecessary. I understand the conferees have a meeting scheduled for this weekend. If progress can be made by the conferees then the motion of privilege may not be necessary. I hope a bill can be promptly reported. It is long overdue.

Nickel: Out of Control

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks, I place in the RECORD an exchange of registered letters between Mr. Charles F. Honeywell, Administrator of BDSA of the Department of Commerce, and Mr. Willard F. Rockwell, chairman of the board of the Rockwell Spring & Axle Co. It is to be noted that the Administrator of BDSA has "requested and required" that Mr. Rockwell supply full and complete answers to a number of questions. It is also noted that Mr. Rockwell has stated:

We are glad to learn that the responsibility for obtaining information and for law enforcement pursuant to the Defense Production Act of 1950, as amended, is in your hands, but we cannot understand your order to us to furnish full information about the sources of our purchases of gray market nickel supplies. You have the power to get this information, and we do not.

Mr. Speaker, a few months ago I became aware of the fact that the nickel plating industry which uses some 15 percent of civilian-consumed nickel was suffering a severe squeeze on account of the real or artificial shortage of nickel. Some responsible members of that industry advised me that the allocation system imposed by the producers under an implied delegation from BDSA was not working. As a result it was necessary for them to buy nickel on the black and gray markets at a cost of 300 percent or more of the market price of nickel—64½ cents per pound.

More recently I have learned that other industries which use nickel have also felt the pinch—especially the smaller concerns. It is to be noted from the letters I insert in the RECORD that the Commerce Department has received over 1,000 complaints from businessmen in 1955 respecting the nickel situation.

Not only have businessmen suffered from a situation which has gone out of control but millions of consumers are receiving inferior plating jobs on cars and other products, whether they realize it or not. All taxpayers, likewise, are suffering since they have subsidized Government-owned plants and purchases of premium price nickel under lucrative contracts and research contracts to the extent of hundreds of millions of dollars.

It now appears that the only solution to this problem will be more expansion type contracts with fast amortization write-offs whereby the contractors are well protected through Government financing and guarantees to buy the companies' products at prices sometimes double the regular market price of nickel.

One interesting facet of the nickel situation deal with the Government's $100 million investment in the Nicaro processing plant came to public attention yesterday at the President's press conference:

William McGaffin, of the Chicago Daily News: A House subcommittee has been trying for months to obtain a file of confidential material relating to the Government nickel plant expansion in Cuba. The allegation has been made that the Department of Justice, which has the file, is simply sitting on it because it would embarrass your administration if it were made public.

"Is there any prospect that this matter will be cleared up any time soon, sir?"

Answer. "You had better go and ask the Attorney General as to why he is sitting on this particular thing that you say he is sitting on, and then after you have gotten all you can out of him, why, probably I will be able to add some light to it."

Question. "Sir, I already have asked the Attorney General."

Answer. "You go and tell him that I asked you to see."

DEPARTMENT OF COMMERCE,
Washington, May 4, 1956.

ROCKWELL SPRING & AXLE CO.,
Pittsburgh, Pa.
Attention: Mr. Willard F. Rockwell, chairman of the board.

GENTLEMEN: Your letter of March 23, 1956, addressed to the Honorable JOHN W. McCORMACK, which was inserted by Congressman McCORMACK in the CONGRESSIONAL RECORD for April 10, 1956, has come to our attention. As I believe you know, the Business and Defense Services Administration has certain responsibilities for obtaining information and for law enforcement pursuant to the Defense Production Act of 1950, as amended. Under the act and executive orders and delegations of authority issued pursuant to it we are empowered to obtain information, require reports and take sworn testimony as may be necessary or appropriate to the enforcement or administration of the act and regulations or orders issued thereunder.

In the exercise of this authority and because certain statements contained in your letter of March 23, 1956, above referred to, appear to disclose knowledge by you of matters which may require additional investigation or action by this agency, you are requested and required to supply full and complete answers to the questions hereinafter set forth.

In your letter of March 23, 1956, the following statement appears: "* * * our company paid over $750,000 in 1955 directly for the purchase of black-market nickel * * *."

With respect to this statement you are requested and required to supply the following information:

1. The names and addresses of your vendors of "black-market" nickel and the dates, prices, and quantities of each purchase.

2. Was any of this nickel acquired by you with the use of Government priority (DO) ratings?

3. If your answer to the foregoing question is in the affirmative, what nickel was so acquired, giving names and addresses of your vendors, and dates, prices and quanties of each such purchase, priority rating applied or extended, and authority for use thereof.

4. To your knowledge was any of the nickel purchased by you in 1955 acquired by your vendors by the use of Government priority (DO) ratings?

5. If so, state what nickel was so acquired, giving names and addresses of vendors, and date, price and quantity of each such purchase by you.

Your letter of March 23, 1956, also contains the following statement: "The alloy steel mill which furnishes our requirements is the fourth largest in the country, and their management tells me that they are buying 75 percent of their requirements in the black market at $2.80 per pound, and the balance at the market price of about 70 cents per pound for nickel alloy material."

With respect to this statement you are requested and required to supply the following information:

1. To what steel mill does this statement refer?

2. The name of the person or persons in the management of this mill who gave you this information.

Your letter of March 23, 1956, also contains the following statement: "We have absolute proof that some steel companies have sold nickel which they received in excess of their requirements for military orders."

With respect to this statement you are requested and required to supply the following information:

1. To what steel companies does this statement refer?

2. Specify in full detail the absolute proof of sales by such companies of nickel which they received in excess of their requirements for military orders, giving pertinent names, dates and quantities, together with all documentary and other pertinent supporting evidence or proof.

The information required herein should be in our hands not later than May 15, 1956.

Sincerely yours,

CHAS. F. HONEYWELL,
Administrator, Business and Defense Services Administration.

ROCKWELL SPRING & AXLE CO.,
Coraopolis, Pa., May 8, 1956.

DEPARTMENT OF COMMERCE,
Business and Defense Services Administration,
Washington, D. C.

(Attention: Mr. Chas. F. Honeywell, Administrator.)

DEAR SIRS: Your registered letter of May 4 was received today. We are glad to learn

that the responsibility for obtaining information and for law enforcement pursuant to the Defense Production Act of 1950, as amended, is in your hands, but we cannot understand your order to us to furnish full information about the sources of our purchases of gray market nickel supplies. You have the power to get this information, and we do not.

Since we brought the attention of your department to our difficulties, several of the scrap market dealers who sold us gray market nickel are no longer making offerings to us, and we would like to have you tell us if you know the reason.

Our books are open to your investigators at any time, but our executives are so busy trying to find gray market nickel that we do not believe we should be called upon to make reports to you when you have failed to find out what becomes of the nickel which is turned over to the distributors of the International Nickel Co. According to our information, you were authorized by Congress to obtain records and ordered to maintain records covering nickel production and distribution, in order to prevent the gray market which is costing this company $10,000 a day.

The steel division of the Timken Roller Bearing Co. is asking us to pay a higher price for 3½ percent nickel steel, and both the chairman, Mr. H. H. Timken, and the president, Mr. William Umstattd, told me that they are forced to buy 75 percent of their nickel requirements in the gray market at the excessive cost of $2.80 per pound.

You must know that we cannot tell the source of the gray market nickel which is offered to us by scrap dealers, but we have been told by some how they acquire it, which is entirely secondhand information. We have heard that one of the AEC contractors offered 25,000 pounds of nickel anodes, and one of your assistants told us at the March 29 meeting with Secretary Weeks, that they knew of such a transaction and that you were considering a prosecution. No name was mentioned, and because we did not buy the nickel anodes, we can only tell you that 7,000 or 8,000 pounds of it was described as brand new anodes. Under the big loophole in the law, if these anodes had been immersed in the plating tanks, they could have been sold as scrap without any violation, even though they were received on DO or AEC orders, and were, to all intents and purposes, as good as new.

On March 29, 1956, accompanied by Mr. John Budinger, I talked with Secretary of Commerce and four assistants, at which time I disclosed most of the information which you are asking me to confirm. May we ask why you are following up at such a late date, in view of the critical situation exposed? You told us then that over one thousand complaints about nickel supplies had been received in your department, mostly from small business firms.

We think it is a rank imposition on us to be asked to do the work which your department has the authority to do. It is our intention to file a suit against the administrators of the law, because we believe that the gray market, and certainly the black market, would not exist if the administrators had followed the letter of the law.

Very truly yours,

WILLARD F. ROCKWELL,
Chairman of the Board.

[From the Wall Street Journal of May 1, 1956]

STRATEGIC STOCKPILE NEARS GOAL ON SOME ITEMS—PRODUCERS ASK FURTHER BUYING

The loudest outcry comes from tungsten firms. Federal stockpilers will achieve their objective on this metal by August at the rate they're buying. Uncle Sam pays domestic producers $3.15 a pound for tungsten, about $1 more than the world market. "In our area alone, about 25 small mines and the 5 mills may have to close if the Government stops buying," says Abram McCoy, president of the Tungsten Refining Co., of Boulder, Colo. Alloys containing tungsten are used in armor-piercing shells, jet engines, tool steels, lamp filaments.

Bills to extend the purchases of columbium and tantalum already have been introduced in Congress—the stockpile goal has been reached on both these metals. Although chrome and mica buying will likely continue until June 1957 producers of these materials also strive to get purchase programs lengthened. Even the South African cartel worries about a possible surplus of industrial diamonds when stockpile buying ends.

The Government now has $6.3 billion invested in strategic commodities, or about 56 percent of the $11.2 billion goal.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Daily Digest

HIGHLIGHTS

Both Houses received President's message on budgeting practices.

Senate passed, by vote of 61–7, bill on flood disaster insurance, and also passed bill on U. S. information and educational exchange.

Defense Department appropriation bill unanimously passed by House.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 7052–7073

Bills Introduced: 8 bills and 3 resolutions were introduced, as follows: S. 3830–S. 3837; S. J. Res. 170; and S. Res. 260–S. Res. 261. Page 7053

Bills Reported: Reports were made as follows:

S. 3332, changing name of Joint Committee on the Economic Report to Joint Economic Committee, requiring President to submit his report by January 15 of each year, and committee to submit its report to Congress by March 20, with amendments (S. Rept. 1961);

S. 2967, adding certain lands to Superior National Forest (S. Rept. 1962);

H. R. 7228, to amend title II of the act authorizing construction of bridges over the Potomac River (S. Rept. 1963);

H. R. 8130, designating bridge to be constructed over Potomac River at Jones Point, Va., as the Woodrow Wilson Memorial Bridge (S. Rept. 1964); and

H. R. 10660, the Federal Highway Act of 1956, with amendment, together with supplemental and individual views (S. Rept. 1965)—referred to Committee on Finance. Pages 7052–7053

President's Message—Budgeting and Accounting: Message from President urging early enactment of legislation to implement recommendations of Commission on Organization of the Executive Branch of the Government for improvements in Federal budgeting and accounting practices was received—referred to Committee on Government Operations. Pages 7051, 7164

Farm Program: Committee on Agriculture and Forestry was authorized until midnight Friday, May 11, to file report and minority views on H. R. 10875, Agricultural Act of 1956; and

Committee on Public Works was authorized to file reports during recess of Senate. Page 7056

Bill Recommitted—Nuclear Ship: S. 2523, to authorize construction of a nuclear-powered prototype merchant ship for operation in foreign commerce of U. S., was by unanimous consent recommitted to Committee on Interstate and Foreign Commerce. Page 7056

Funeral Expenses: Senate adopted S. Res. 260, providing for funeral expenses of the late Senate Barkley. Page 7053

Contempt Citations: Senate adopted S. Res. 253–257, citing the following individuals for contempt of the Senate: Robert Shelton, Seymour Peck, Pauline Feuer, Alden Whitman, and William A. Price, respectively. Pages 7073–7074

Information and Educational Exchange: Senate passed, after adopting committee amendments en bloc, S. 3638, to promote the foreign policy of the U. S. by amending U. S. Information and Educational Exchange Act of 1948. Pages 7074–7078

Juvenile Delinquency: Senate adopted S. Res. 261, printing of 2,000 additional copies of report of Committee on the Judiciary on Juvenile Delinquency (No. 62). Page 7053

Investigations Subcommittee: Permanent Subcommittee on Investigations was authorized to hold hearings in New York City on May 14. Page 7105

Flood Disaster Insurance: By 61 yeas to 7 nays, Senate passed S. 3732, Federal Flood Insurance Act of 1956, after taking the following actions on amendments:

Adopted: By 39 yeas to 31 nays, Knowland amendment limiting insurance coverage only to property in those States which participate, and providing that after June 30, 1959, each State shall pay into disaster insurance fund an amount equal to half the difference between fees charged for insurance issued thereafter on property in such State and the amount which would be charged
